The wind changing to the east, very cold and dry weather. The sport has been very poor. On the 1st, Mr. Gillhespie, Morpeth, 1 doz.; on the 3rd, the Rev. Mr. Oliver, curate, Long Horsley, 2 doz.; on the 4th, Mr. Joseph Jobling, 1½ doz., Mr. John Jobling, 1 doz., both of Morpeth. Hofland's fancy, Hardy's favourite, and the blue upwright are the flies that have killed best this week. The Easter holidays brought us a great many old sportsmen, Messrs. Lang, Ismay, Milburn, J. Dixon, W. Dixon, from Newcastle, and Mr. Edwin Brown, of Burton-on-Trent, arrived on Thursday. At 5 a.m. on Friday the day was all that could be desired for angling, and about 7 the anglers began to arrive in conveyances of all kinds. About 8.30 the first start was made, and before 10 o'clock over forty anglers had left the inn to fish for the day, which was quite of a June character. All the anglers had very fair sport, the smallest take being five brace. Mr. J. Ashton, of Abbey Mills, took 9 lb. of trout, Mr. G. Lawson also had a good basket. On Saturday the takes averaged from six brace to fifteen brace. On Monday the Coquet was very low and bright, and a bright sun, not encouraging; but Messrs. Lang, Ismay, and Milburn had about eight or nine brace each, Mr. Brown fifteen trout, and Messrs. J. Dixon and W. Dixon fifteen brace each. On the 11th Messrs. Whalley and Marshall, from Dublin, had very fair baskets.—A. GLASS.

Dove.

We have had a great number of anglers out on our river during the holidays. Sport has been good, the weather being bright and warm, causing the trout to rise much more freely than I was enabled to report a week since. The water was in grand condition, and continues so at the time of writing (Thursday), though I fancy before long we shall have heavy rains, which may produce an alteration. The average of dishes this week amongst the expert rods would be about five or six brace. The most remunerative sport was obtained with the March brown, the bumble, the February red, the cowdung, and the cockwing, and the places where the trout rose best were in the five-feet-deep lay-byes.—THE SPLODGER.

Exe (Exeter).

Variety's the very spice of life
That gave it all its flavour.
—*Old Couplet.*

Considering the changeable state of the weather during the past week, sport has been by no means so very bad, viz., with regard to salmon. Messrs. Lee, Coucher, Pearson, and Baker, still keep well to the fore; Mr. Coucher, perhaps, being the more successful, having taken three splendid clean-run fish. Commencing at 1 p.m., by 4 p.m he had landed the above, weighing respectively 13½ lb., 7¾ lb., and 7½ lb. Unfortunately, he lost another after twenty minutes' hard fight, which was left in its native element. Trout-fishing has been very indifferent indeed, owing to the freshets from the late rains, and the water is still very dirty. Should the weather clear up, fishing will be in first-class trim for the Easter, when we hope to see many old as well as new faces whiping the streams of beautiful Devon as of yore.—FRANK GOSDEN.

[The minnow is not new in any way.—ED.]

Exe (Tiverton).

The river is in good order for fishing: the occasional showers we are getting will improve it, and good sport is looked forward to. Very little has been done during the past week, the weather has been so bright, except Wednesday, which was a cold raw day, with a south-east wind and drizzling rain; small dark flies killing best, halfstone, blue upright, and iron blue.—WM MUDFORD.

Ilfracombe.

Streams are now in good condition for fishing. Trout more plentiful than they have been for some time; the general run of them are small, though on Wednesday, the 5th, some fine trout were taken from the Wilder stream, weighing from half to three-quarters pound each. Sea-fishing this week. A few fine lobsters and crabs have been taken from the lobster pots, which they haul morning and evening. Very few fish have been taken this week with ground lines, though some nice pollack has been caught off the jetty with rod and line, and good sport with hand lines. On Wednesday our trawling skiffs returned from Barnstaple Bay; they report fishing very slack, a few pairs of small soles, some plaice, and a dozen or two of thornback, being all the fish they brought up. Weather at present very fine.—E. COMER.

Lee (Cork).

During the Easter recess there has been a great flight of Waltonians to the haunts of the trout and salmon. The river has been in very good order, and with favourable weather no reason for disappointment has been felt. Very good baskets of trout have been taken; one gentleman, on Good Friday, bringing home three dozen of good-sized trout. Salmon anglers have been also fortunate. On Good Friday the brothers Haynes succeeded in landing five, Mr. Dale three, Bill Connell two, D. Reardon two. A large number of fish were had during last week on Fargus, the preserves of Sir Oriel Foster.—ANGLER.

Lyn (Lynmouth, N. Devon).

Water rather too clear, but fair baskets being taken; one gentleman had 2½ dozen very nice trout yesterday. This water is now strictly preserved, tickets are now issued to visitors.

North Devon.

The east winds and frosty nights have not been any good to the fly fishing: On Good Friday and Bank Holiday many rods were upon all the streams, the largest catch I hear of is two dozen and eight, and the catches run from one dozen to two dozen and six. Major Lovell and Sir W. Williams had a good dish each last week. Mr. Payne caught two dozen last week. One gentleman, in a small brook, caught thirty fish, but the majority of the fish are small. Salmon fishing has been very good, and some fresh run fish have been caught, Mr. Batsom caught one 10¼ lb., with sea lice on it. One gentleman landed seven in one day (one a passable fish), many two and three, and I have heard of six good fresh-run fish up to date been caught. The salmon have been taken both with fly and minnow. The trout take to grannon, march brown, blue palmer, and blue upright.—RUSTY GAME.

Severn (Shrewsbury).

The river is now in very fine angling condition, but fish are not to be taken in any large numbers. The flies are on the water in immense quantities, the grannom having come out during the last three or four days; still it does not kill, owing, I should say, to the point from which the wind has been blowing, *i. e.*, north and north-east. I heard on Good Friday of a salmon netter having taken at Shrawardine, a spot that lies about 7 miles from Shrewsbury, five fine fish, one weighing 27 lb., between that date and the previous Saturday.

Suir and its Tributaries, Clonmel.

The river was in splendid order last week for the fly, and it is well stocked with salmon; we have a flood to day from last night's rain. Doctor Campbell got twenty-one salmon in twelve days. Thomas Philan, of Kilmanahan, on Lord Donoughmore's preserves, got three fish last week and two this week. Ned Butler got one 10 lb. at Dudley's, and lower down the river Ned Farrell got one of 9 lb.; several others were very successful. The trout fishing is very good. Mr. N. Bagnell had some good sport on the Anner. Major Herbert got fourteen trout at Grove yesterday, and Mr. Boyd seventeen on the Suir. We hear of good baskets got on the different streams.—DORA.

Test (Hampshire).

Rain commenced to fall this afternoon (Wednesday), and seems likely to last. The fish rose well in it, but were most difficult to please. It is the first time this season I have seen them well on the rise. How is it that one seldom makes a good basket when it is raining? Once only do I remember being able to make a bag when it was coming down a steady downpour: it is many years ago, but I recollect killing twenty-seven dace one afternoon, with an apple-green fly, on the Alresford water. Sport for the last week has been wretched. Weather bright and clear and not a fish to be seen. A brace and a half of fish was very good work. Next week I hope to send you a line as to the way I fasten on the eyed hooks. I think it is easier than Mr. Hall's method, and I find the knot never gives.—HAMPSHIRE.

Thames (Windsor).

Although weather has not been conducive to sport with Thames trout still those that have been had shown a marked improvement in weight to those had first week of the season. The best fish taken in this neighbourhood this season was had last week from Egham Weir, going 7 lb, another from the same place going 3 lb. In the old Windsor Weir, on 9th inst, a very nice fish was had, going between 5 and 6 lb. At the Eton Waterworks, Paice, jun., of Eton, had, on 9th inst., a pretty fish of 4½ lb., and the same angler secured another on 10th inst. at Boveney Bridge, going 3½ lb. Mr. Langfield, of Windsor, had a small fish with artificial bait in old Windsor Weir, going 2 lb. 2 oz. Several smaller fish have been had and duly returned. This morning, although wet and inclined to be rough, is better than the east wind we have had. Water is in good condition at time of writing.—B. R. Bambridge.

Tweed and Teviot.

The past week has been a most unsuccessful one for salmon anglers. On Wednesday last Mr. Pringle Elliot was successful in killing one fish on the Hendersyde water. On the Sprouston water, on the same day, Mr. C. Kerss killed one fish. Owing to rain in the west the Tweed came down on Thursday a little, but not enough to stop angling, and on that day, on the Hendersyde water, Mr. P. Elliot killed a very pretty little fish, but on Saturday the salmon fishing was *nil*. On Monday, on the lower Hendersyde water, Mr. J. Kerss killed one fish and landed three unclean ones. Trout anglers have, however, during the week, had a glorious time of it, and some really good baskets have been got. On the Junction and at Maxwheel on Monday, Mr. P. Elliot killed 9 lb.; on the Teviot, the same day, Mr. R. Robertson killed about 8 lb. On the Tweed, on Wednesday, Mr. John Walker, Kelso, killed a rattling good basket, nearly all his fish having been got with the 'Digby Cayley'—a splendid killer. On Saturday Mr. Thomas Pringle, Kelso, had about 5 lb., and a like basket was got by Mr. D. Brown (both killed on Tweed); while on the Teviot Mr. Richard Newton had also a very good basket—all got with fly. Mr. John Croall, Kelso, had a capital basket of 8 lb. on the Tweed on Thursday; and Mr. John Wood had 6 lb. on the following day; on Saturday he had 5 lb., while on Monday he again killed 5 lb. On the Teviot, on Tuesday, Mr. John Walker had about 9 lb., while Mr. John Ferguson had 5 lb. Mr. Brown of Rosebank, had a fair basket on Sprouston watar, and Mr. G. Allan, saddler, had 6 lb. on Tuesday. On Tuesday, on Teviot, Mr. J. Mechie, sen., had a very nice basket, the number was not large, but the trout were good, and in excellent condition As the weather is now getting milder, trout angling may be said to be fairly on for the spring months. These fish, however, notwithstanding the very open and mild winter, are far from being in good condition, being lean and lanky, and not such as one has been accustomed to handle at this time of the season. Smolts, the bane of the trout angler, are now in, and are greedily rising to the fly, and a rattling good flood is wearily looked for so as to remove in measure these pests by sweeping them off to sea. Angling on the Blackadder opened on Saturday. During the day a good number of anglers were on the water, and obtained several good takes. Mr. James Hislop, of Greenlaw, in the course of about three hours' fishing, secured upwards of 9 lb. of trout. Some time ago a riparian proprietor of the Blackadder, Sir Hugh H. Campbell, Bart., at the suggestion of the Greenlaw Fishing Club, adopted a close time, and the great advantage of this is now being seen in the numbers and quality of the trout. Not for a very long time has there been such a number of trout in the Blackadder as at the present.—Maxwheel, Kelso, April 5.

[Received too late for last week.—Ed.]

Wye and Derwent.

Both weather and water have been everything that anglers could wish for, but with it being Easter and bank holidays all our Derbyshire rivers were pestered to death with great quantities of both anglers and pleasure-seeking excursionists from all over the country, which causes the trout to rise very short at the artificial fly, and only small baskets were the order of the day. Both the bumble, furnace, duns, and sand-flies, also the February red, have all taken fish. The sand-fly is a capital good evening fly for trout the season through. It is made from the butt of the landrail's wing as a hackle fly, dubbed with small portion of hare's ear upon light orange silk, long Nos. 1 and 2 Kendal hooks. Some people wing it, using a red cock's-hackle, giving it two turns, and the same body. This fly kills well on the Dove this month and next, especially on rough, windy days. The following natural flies have been on both rivers during the past week:—Flat-winged browns, duns, cowdung fly, little black, cow-lady, or beetle. The last-named fly is my favourite fly to see it abundantly on the water. Trout are particularly fond of it. I make the imitation from the furnace hackle, orange floss silk body, ribbed with peacock harl, and sometimes a little gold twist in the body for bright days, dressing on No. 1 Kendal best hooks. A few good trout have been taken by spinning with the Derby trout killer between Darley Bridge and Whatstandwell, one fish weighing 1 lb. 6 oz. The bottom fishers have done but middling on the Derwent during the past week. I am truly sorry to say that the grayling have the fungus disease amongst them again, both on the Wye and Derwent. Several fish from half a pound each to a pound have been both picked up dead and dying of the disease. Sport with the artificial fly has been very good on the private ponds during the week. The March brown red and spider fly proving killers. To-day (Thursday) we have had a good deal of rain fall, which has caused both the Wye and Derwent to have a nasty white colour in them from the limestone roads. This rain falling will improve fishing much.—George James Eaton.

CLUB REPORTS.

THE BRUNSWICK PISCATORIAL SOCIETY.

A visit will be paid the above society, which is held at the Brunswick Arms, Brunswick Street, Stamford Street, Blackfriars Road, on Wednesday, the 19th inst. The chair will be taken at eight o'clock. The presence of as many as can conveniently attend will be esteemed.—Esox Lucius.

DUKE OF NORFOLK ANGLING SOCIETY.

The above society had its return visit on Wednesday, April 5th, when a very pleasent evening was spent, our worthy chairman, Mr. Whitehall, in the chair, faced by Mr. Heckford, of the Duke of Cornwall, both dukes coming out strong in harmony. After several capital songs had been sung, especially one by Mr. Bernelt (our fishing tackle maker, of Church Street), Mr. Osmon, the district officer, called the roll, when eight clubs responded.—J. Amos, Sec.

April 12.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

We had a good attendance at our concert on Wednesday last, Mr. J. Obbard in the chair, Mr. Calder vice. Members of the following clubs kindly attended and rendered some excellent songs: Original Clerkenwell Piscatorial, Eustonian, Phœnix, King's Cross United, and Odds and Evens. Mr. G. Bentley will take the chair on Wednesday next, vice, Mr. J. Dingley.—J. Fitch, jun., sec.

April 13, 1882.

GRESHAM ANGLING SOCIETY.

The meeting on the 6th inst. was thinly attended, doubtless in consequence of the proximity of the Easter holidays. Messrs. Ghurney and Field attended as a deputation from the Anglers' Benevolent Society to open the collecting box kept on behalf of that very deserving institution. This was found to contain about £2 2s., making, as Mr. Ghurney remarked, some ten guineas contributed during the year, being the largest amount yet given in that time by any one society. Mr. Jardine, Mr. Crumplen and other members put forward the claims of the society, to which all anglers and angling societies ought to subscribe, and the box was returned to the secretary with a substantial beginning for next season. There was a much larger meeting on Thursday, 13th inst., and the usual discussion on angling topics took place, Mr. J. F. Clarke efficiently occupying the chair. The members have so far been fairly successful with the trout, and it is fully expected that some good samples will soon be weighed-in. The evening terminated with an excellent musical selection, Mr. Jardine taking part in several duets, each being greatly appreciated. Mr. H. C. Brown presided very ably at the piano. It is intended to have a literary and musical evening on the occasion of the general visit of angling societies at the end of June, that the Gresham may hold out the hand of friendship in true piscatorial fashion.

SHREWSBURY SEVERN ANGLING SOCIETY.

We had our first outing on Monday last, when we went down to Creassage, starting by the 6.40 train, and I think a great many of our party envied those who were then comfortably sleeping in their cosy beds, and who intended following by the next train at 11 o'clock, for no sooner had we left Shrewsbury than we were surprised to see the fields covered with white frost, and a very heavy fog concealing the surrounding country from view. I must confess I did not much like the prospects before us, but in less than an hour after we had been on the banks of the river this had all passed away, and the sun began to remind us that the hour was still early. The fish did not begin to rise for a considerable time, but by the time the second party arrived they had shown some signs of life, but none of the party could find the right fly to entice them to the fray. Eventually Mr. F. H. Morgan captured a nicely-made fish of six ounces, which was the only trout taken by our party; but Mr. Ellis, sen., was waiting for our return with two very nice fish, one weighing about ½ lb., the other about 5 oz. The same gentleman on Wednesday last showed what I and most of our members call a grand dish of six trout, but he considered he had had very poor sport, which can easily be understood when we look back a few years and remember that he then invariably brought his fifteen and twenty pounds home as the result of his day's labour; but since the weirs have been built such baskets as those are a thing of the past so high up as Shrewsbury. We returned home by the 835 p.m. train, when the members sat down to a supper in the clubroom provided by the hostess, Mrs. Morgan, and every one testified their approval of the same by doing ample justice to it. After the usual loyal and patriotic toasts had been duly honoured, song and sentiment prevailed, and they kept it up until one o'clock on Tuesday morning when everyone went home thoroughly satisfied with the day's proceedings, and with the hope that it was the first of many more of the same kind to follow.—W. H. Morgan, hon. sec.

STAMFORD AND WARRINGTON ANGLING CLUB, STALYBRIDGE.

On Saturday, the 8th inst., the members of this club fished their opening contest of the season, in the preserve of J. J. Wilkinson, Esq., at Stayley. The fish were not particularly partial to the inducements held out to them, but the whole of the prizes were taken, and in the following order:—1st, John Thomas Abrahams; 2nd, Matthew Leigh; 3rd, John Shaw; 4th, John Simister; 5th, Samuel Greenwood; 6th, Thomas Hurst. Afterwards the member adjourned to the club house (the Guide Post Tavern), where, after full justice had been done to a substantial repast provided by the host (Mr. Simister), the remainder of the evening was passed in that good old recreation known only to the "knights of the rod," under the chairmanship of Mr. Wm. Thorpe, the president.

April 10.

FLIES ON THE EYED HOOKS.

JUST as we are going to press, we have received from Messrs. Alfred and Son, 20, Moorgate Street, several samples of flies dressed on Mr. Hall's "Eyed Hooks," including the various palmers, alders, duns, quill-gnats, &c. We may say at once that these leave nothing to be desired in the matter of dressing, and will certainly kill trout in any water. We intend to use them shortly, and will report further. In the meantime we advise our readers to call and see them, or write for samples. The price is only 2s. per dozen.

THE PROPOSED AMENDMENT OF THE FRESHWATER FISHERIES ACT.

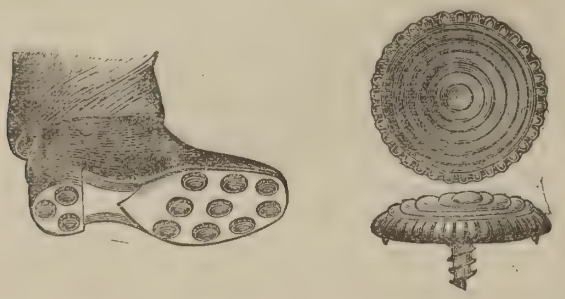
UNDER L. B's. "Club Jottings," this week, will be found Mr. Geen's letter embodying the views of the associations regarding the proposed alterations in the Mundella Act. The concessions made go a long way towards removing the objections we, in common with many others, have had respecting the present fence times. If the proposed Freshwater-fish Inspector is appointed—and if we all vote for him, he must be appointed—the whole of our machinery for preserving and protecting and increasing our coarse fish will be improved, and will run smoothly and easily.

If we were asked who would make the best inspector, we should say that, for practical experience, inexhaustible energy, and that all-important element, tact—it would be difficult to find any one to equal Mr. P. Geen.

Thames Rights Defence Association.—We beg to acknowledge with thanks 2s. 6d. from "Kingfisher" for the above. We will be glad if Mr. Crump will send us a few of the new window bill for distribution.

ELLIS'S PATENT BOOT AND BROGUE STUDS.

THE Ellis Boot Stud Company have sent us samples of their patent studs, for the protection of all kinds of boots—especially walking and fishing boots—and for brogues. They are undoubtedly a vast improvement over the old nails and screws, and will be found perfect for wading boots and brogues, for which purpose we recommend the smallest size. They are made of the hardest steel, combined in a most ingenious way with wood, leather, and indiarubber. The accompanying illustrations show the peculiar shape of the studs; the smaller sizes are all the same shape.



The advantages these studs offer are:—

1. The flat shape of the stud does away with all the side leverage which so frequently causes the old square brogue screw to work out.
2. The flat shape prevents their pressing through the sole of the boot—a great drawback with the ordinary screw, especially when the sole is soft from wading—causing corns on the soles of the feet, and frequently damaging the fishing stockings.
3. The ease with which they are put on, and their firmness and durability when on.

We can strongly advise our readers to give these studs a fair trial. Samples and prospectus can be had of the Ellis Boot Stud Company, Congreve Street, Birmingham, or they can be seen at Messrs. Woolgar, fishing brogue and stocking manufacturers, on Ludgate Hill.

OILING THE WATERS.—A HINT FOR ANGLERS.

IN the current number of the *Nineteenth Century*, in addition to an invaluable article in favour of vaccination by Dr. W. B. Carpenter, F.R.S., which ought to convince even Mr. P. A. Taylor himself, there is a most practical and interesting paper by Miss C. F. Gordon-Cumming, entitled "Oiling the waves—a safe-guard in tempest." The writer proves most convincingly that by the expenditure of a few shillingsworth of oil a vessel is enabled to ride out the fury of a gale, or make her way through the heaviest breakers and the wildest surf without shipping a pailful of water. It is only necessary to fill a few small canvas bags with oil, make a few punctures in the bags, and then hang them overboard astern of the vessel. The effect is magical, all around the ship the sea is lashed into foam, the enormous billows rush on threatening to break on deck and smash everything, but no sooner do they reach the thin film of oil which is spreading round the vessel, than their fury is taken out of them; they cannot form crests and break until they have passed harmlessly under the vessel and beyond the oil sheet. Every vessel—and especially every life-boat—should carry a keg of oil. The many marvellous facts which Miss Gordon-Cummings quotes ought to be published in every newspaper seen by seafaring men.

But may not we anglers take a hint from these facts? Try Dr. Franklin's experiment when next you are fishing in troubled waters on some lake, or pond, or river. Perhaps there is such a gale blowing you can find no sheltered spot, and you cannot detect a bite on account of the waves. Throw an ounce or two of olive oil on to the water, so that the wind will spread it over the space you wish to fish. Here is how Dr. Franklin did it.

Dr. Franklin observed that whenever whaling vessels were lying in Newport Harbour (Massachusetts) the water was always smooth on account of the leakage of blubber. He accordingly tried sundry experiments to test the working of this phenomenon. On a stormy day he went to a large pond, which was so much exposed to wind as to form waves, and on these he sprinkled a small quantity of oil. At first he took up a position to leeward, but observed that though the oil instantly spread in all directions it could not effectually work against the wind, as it was quickly driven back to the shore; so he went round the pond to windward, where he found that one teaspoonful of oil produced an instant calm over a considerable space, and, spreading rapidly, soon made an oily film over an extent of at least half an acre, which became as smooth as a looking-glass. One drop of oil forms a film of about four feet in circumference.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

FISHING IN THE ARDENNES.

SIR,—As a reader of the FISHING GAZETTE, I see that you give details concerning fishing of the different parts of the country. It will, perhaps, be interesting to your readers to know how fishing goes on upon the Continent. The trout season begins here upon April 1. The country I speak of is the Grand Duchy of Luxemburg, and there are here a great quantity of trout rivers, especially in the part called Ardennes, such as the Wiltz, Clerf, Our, Attert, &c.

Upon April 1 four gentlemen were fishing in the Wiltz and the Clerf, two little rivers that flow down through the Ardennes into the Sure, near the little town called Diekirch (in which place you have a very good accommodation at the Hotel des Ardennes; manager, Mr. Heck). These gentlemen left the hotel at seven o'clock a.m., and came back at six o'clock p.m. They took, in this time, with fly, 270 mountain trout, weighing exactly 80 lb.

In Ettelbruck, a little town about two miles from Diekirch, is a fish culture establishment, which furnishes every year a quantity of trout and salmon trout, which are put in these rivers.

If any of your readers wish to have more details concerning the fishing of this country, I should be very happy to furnish them.—I am, &c.,

ROBERT TUDOR.

Chateau de Rosport, April 9, 1882.

[We are sure our readers will be very glad to hear more more about such good fishing so near home, and we are obliged to Mr. Tudor,—ED.]

SPECIMEN FISH *v.* GROSS WEIGHTS.

SIR,—The difficulty J. M. D. and his many friends see in the substitution of the specimen-fish for the gross-weight system would vanish if they were content to fish for sport, and sport only. But the gist of the whole question is, in my opinion, contained in the first paragraph in J. M. D.'s letter of April 1. I thank him for the additional weight he has given to my description of angling competitions, viz., a "specious form of gambling;" and I cannot help thinking that it would be very much better for the fish, the inexperienced angler, and others, if the prizes were raffled or tossed for in the club room. Also that it is anything but a generous action to admit an unskilled person to any competition in which the chances of success are unequal. And I think it also shows, and very plainly, the desire to discount their superior angling skill for something more substantial and exchangeable. Yet I can well imagine the scorn and contempt these same gentlemen would bestow upon any person who might presume to offer to purchase a specimen fish, or fish caught by any of them in a competition before weighing-in. I contend that the person who can angle for and bring to bank an adult fish of 1, 2, 3 or more lb., is quite equal in angling skill to one who can grass a dozen babies of four or five to the lb. I have great respect for the Lea roach-fisher, and have often read, and more often heard, of their skill with the rod; and perhaps I may be pardoned for saying here that I am deeply indebted to one of them for any knowledge I may have of the gentle craft; but I have yet to learn that any Lea, or other fisherman, would not prefer to catch and show ten fish, averaging 1 lb. each, than forty fish, weighing altogether 10 lb. If the ten fish were preserved, would not the case be pointed to with pardonable pride? and might not the angler, who had the forty "set up" as a specimen of his skill in angling, be considered a curiosity? If J. M. D. and his friends will admit that as argument, I will ask them if it does not show that the reward (if one is necessary at all) should be given to the angler who captures the smallest number yet the heaviest fish—"the specimens"?

A very little knowledge of arithmetic should be sufficient to convince J. M. D. that, if prizes are given for, say, first and second largest fish of any species weighed in their club during the season, the "temptation to commit fraud" will be limited by the weight of the first specimens shown; small fish being of no value to the angler (so far as the prize is concerned), and there being no gross-weight prizes, it leaves to the member of the club the great pleasure of returning to their own element all but his two or three largest fish, and so proves that he has provided future sport for himself or brother anglers.

My chief objections are against the "go where you please," or "open matches," as they are sometimes called, and the prizes given by some clubs for the greatest weight of fish shown in the club during the year, or, in other words, "gross-weight prizes." I have very little to say against the so-called "pegged down matches," as they produce very little fish in more than one sense of the word—in fact, they are so small and so carefully weighed that they require an addition to our standard weights—viz., shot; but we are not told what shot they are, or their size? I will now endeavour, with our Editor's permission, to show J. M. D. and his friends why I think the first named match and the gross-weight prizes a specious form of gambling and a temptation to commit fraud. Perhaps I had better first describe the making of the match, so that all who read may judge.

Mr. Z., a member of some importance, will rise and say that he will give a sum of money to be fished for by the members of the club, and proposes that the club fish a match. Mr. X. seconds the proposition, with the remark that the club has not had a good show of fish lately, and he hopes they will agree to have an open match. Those members who subscribe a certain sum are then eligible to compete; the money is then divided into so many prizes, the day is fixed, and the intending competitors are much troubled in their minds as to which is the best place for this occasion—*i.e.*, where they can get the most fish; the man who can show the greatest weight to take the first prize, the next heaviest weight the second prize, and so on, until the number of prizes is exhausted. The day arrives, and within two or three hours of its expiration the members who have been out return, some to show specimen fish of one species, which for a short time are the admiration of the members and their friends present, until some one empties his bag and displays to the wondering gaze of those looking on samples of trout, perch, roach, chub, bream, and dace—changing the direction of one's thoughts to where the water can be that contained fish so kind, and so well mixed, and so very ignorant of the deceptive nature of the proffered bait. By the time that show has been weighed and duly entered, some of the—well, I'll call them the inexperienced members—show up, and emptying their bags into the trays, show conclusively that they have been where the fun was fast and furious; fast it must have been indeed, for there was no time to use the standard measure, or notice the difference between small chub and the dace; thus leaving this portion of their duty to their more experienced brethren, who know too well that they (the small fish) might have made good fish and good sport at some future time, and also see the wisdom and necessity for limiting the size of fish weighed-in. The time having now nearly expired, all present are in a state of excitement and anticipation, awaiting the arrival of Mr. So-and-So, the great ——— fisher, who has gone to his old spot. A few minutes more to pass away and he will be too late to weigh. There he is! shouts some one, hearing a footstep; no, it's only the waiter with the lubrication. Another minute, and a busy one it is, for the man in the corner who, unobserved himself, is taking stock of the anxious looks of the four or five prospective winners of the prizes. At last, just as the book is about to be closed, the door opens and in walks Mr. So-and-So from the seat of war, his weapons in his hands, and his wounded and stifled prisoners on his back. The dead and the gasping contents of this bag are quickly handed to the officer in command for description and weight, and the noble warrior is declared to be the victor and hero of the day by half an ounce. A vote of thanks to the gentleman who presides, and the meeting separates. We are then treated to a spasmodic report in our "own paper" of the great capture of fish by Mr. So-and-So, &c., &c., of the Undefined Angling Society. These contests are, I have no doubt, considered by some people very harmless, but my opinion is that in clubs where these matches are most popular the primary object of the members is good business—sport may follow.

The gross-weight prizes differ from the above-named matches insomuch that the competition will last throughout the season, and, although the excitement may not be so intense, the principle is the same, viz.:—A sum of money given to the member who weighs the greatest weight of fish during the year. Some time ago I saw a club list of twelve prizes for the heaviest weight of twelve different species of fish. Who, I ask, can say these are not inducements for the average angler to retain all the fish he may catch within stretchable distance of the standard? a premium for coarse cunning? a legitimate cause for complaint from the unattached angler? and diametrically opposed to the efforts of the leading men of the several angling associations who spend much time in obtaining permission, and, when obtained, in netting waters inaccessible to the general body of the anglers, and turning the fish into waters to which every angler may have access? I will venture to say, that, notwithstanding the efforts of these gentlemen to keep up the supply of coarse fish—and having in view the remarkable increase of the popularity of the gentle craft and the ever-increasing facility of reaching angling stations, also obtained by the same gentlemen, and there being no efficient coarse-fish culture scheme introduced to keep up the supply—I believe that at the end of the next twenty years or so specimen fish, now so called, will be very hard to catch, or, as my preceptor in piscatorial matters suggests, as extinct as the dodo.

But with the disappearance of gross-weight prizes and angling matches, the following may make their exit from all societies:—The man who thinks the fish shy that are left in an empty shop; the man who can imagine that waters are as inexhaustible as was the "widow's flask of oil and tub of meal;" the man who would weigh-in fish he had not caught himself; and, last but not least, the man who makes this complaint. In conclusion, may I assure J. M. D. that I have no wish to be ungenerous to his "typical sticker;" that I do not know of any club that would allow fish to be weighed that are undersized; but that I have heard of persons who think the standard too high, and seen many evils caused by the systems against which I write. Fears of lack of space induce me to withdraw, after thanking "Mark Antony" and you, Mr. Editor, for the support which you have given the question.—I am, &c.,

KINGFISHER.

GROSS WEIGHT *v.* SPECIMEN FISH.

SIR,—"Mark Antony's" account of Trent-side anglers, in your last issue, reveals a state of things which all true lovers of the sport must deplore; but, as our friend himself confesses, "the great mass of the London club men are above this kind of thing," and it is in defence of a large majority of that great mass I have "ventured" to speak. That there are black sheep among them goes without saying—we are told there are spots on the sun. These black sheep, however, are expelled whenever detected in dishonesty, and at once lose all the advantages of club membership, including cheap railway travelling; they have small chance of entering another club, from the difficulty they would experience in answering the two almost stereotyped questions, "Have you ever belonged to another club?" and, if so, "for what reason did you leave it?"

With the risk of being laughed at, I must give up the conundrum contained in the quotation from a certain paper respecting a roach match for £10 a side. I know that such matches are talked about a very long time before they really occur, and that in many cases paragraphs concerning them are inserted in some papers more for the purpose which they seem to have served in "Mark Antony's" case, viz., amusement, than anything else. On the other hand, it must be remembered that this is the age of competition, and that many London club men pride themselves as much on their power of detecting and killing almost imperceptible bites, as on their ability to turn out a good piece of cabinet work or carpentry. What is more natural than for one of such to talk rather loudly of his prowess with the rod, and to be overheard by another who considers himself his equal or superior at the game? The result is a match to decide the knotty point, and for my part I fail to see any great harm in such contests if betting is discountenanced, or limited to very small stakes, and so long as club standards are observed—as I am certain they generally are, "Mark Antony's" hint to the contrary notwithstanding.

In consideration of "greenness," which is, perhaps, more apparent than real, I must tell "Mark Antony" that it is almost an invariable custom for every member of a London club to give at least one prize to be fished for each season; of course, those who have most opportunities and perseverance take the lion's share on distribution night, but nothing at all equal in money value to the amount expended in the pursuit of their sport during the year; they are satisfied to have demonstrated to their brother members their angling skill and ability to find the fish in all the varying conditions of wind, water and weather incidental to this climate, and to be able to take home to their wives and children a few ornamental or useful articles as some small compensation for many Sundays' absence from home. This, I contend, is, in main points, a true account of the working of the prize system in most London angling clubs, and what, in the name of justice, is there to complain of in it? "Because thou art virtuous, shall there be no more cakes and ale?" especially when it is shown that the cakes and ale afford amusement and satisfaction to so many.

"Mark Antony" seems to lose sight of the fact that although a looker-on may see most of the game, he does not necessarily comprehend all its intricacies, and further, that my idol, as he terms it, has been in existence ever since angling clubs were started. Whether or not the knocking-over process has really commenced, is a matter of opinion, but, so far as I can discover, not even a small piece of paint has as yet been chipped off my idol's nose.

To return more particularly to the gross-weight *versus* specimen argument, I have a rather unpleasant task forced upon me by Mr. Crumplen's letter in answer to L. B.'s remarks on the subject. Mr. Crumplen says:—"I understand specimen fish to be fish of exceptional size or weight shown to a society by a member as the best samples of his take, the smaller fish being returned to the stream." The question I wish to ask is, are the smaller fish returned to the stream by all the members of the Gresham? My reason for asking is this: a member of my club, who also belongs to the Gresham, had a few days' fishing in Huntingdonshire last summer, and not only brought to our clubroom and weighed-in the gross total of one day's catch, and thereby secured a prize, but also weighed-in at the Gresham some of the specimens taken during his holidays. When I and my fellow-clubmen heard this, as we did for the first time last Wednesday, we were, to say the least, very much surprised; but when this piscatorial jack-of-both-sides informed us, in addition, that other members of the Gresham did the same, and that it was a recognised thing in that society, a much lighter missile than the proverbial feather would have been sufficient to knock us down. Now I sincerely hope I shall be acquitted of the slightest desire to set class against class, or to depreciate the good work which the Gresham society has done, and will without doubt continue to do, in the interest of all anglers; but it appears to me that a society aspiring to perform the same functions for fishing as the Marylebone club does for cricket, and declaring the abolition of gross-weight competitions to be one of its objects, should require all its members to uphold its principles, and especially this particular one, in practice as well as in theory, even at the risk of considerably reducing its muster-roll.

Personally, I shall be very glad to hear that I have been misinformed, but, judged by the light of the above-mentioned incident, the Gresham society, or at any rate some of its members, may be likened to a man who, while walking down Bishopsgate Street, loudly declares his honesty, and keeps his hands tight in his own pockets; but who, on turning into Houndsditch, shuts his mouth, and transfers his hands to the pockets of the passers-by. Rather severe, perhaps it may be said, but I consider the moral contained in the quotation "No man can serve two masters," will apply as well to this as any other subject.

Though last, not least, Mr. Editor, I must remind you that your suggestion as to giving a prize for the three largest fish taken in a day, although a very good one, is rather outside the argument, inasmuch as it has not yet been adopted, so far as I am aware, by even the most enthusiastic admirers of the specimen system, and if applied to our one-day competitions, would often leave the prize undecided, supposing the standard to be exceptionally high; indeed it would be well if the opponents of gross-weights could see for themselves how often such contests give ridiculously small results, and as to individual takes of 150 lb. of pike or 80 lb. of roach, many of my gross-weight friends would be perfectly satisfied with such totals for a whole season's fishing, and often enough put up with much less.—I am, &c., J. M. D.

Highbury Angling Society.

THE GRESHAM AND THE ANGLERS' BENEVOLENT.

SIR,—Being aware of the very great interest you take in the Anglers' Benevolent Society, I beg to inform you that on Thursday evening last, April 6, Mr. Ghurney and myself attended at the Gresham Angling Society to open a box which is kept there for contributions to the above society, and we were very pleased to find the sum of two pounds in it, which Mr. Ellis kindly made into guineas. This is not the first time we have had help from the Gresham since they were founded, now about twelve months. They have contributed in all over ten pounds to the funds of the Anglers' Benevolent Society.—I am, &c., G. H. FIELD.

P.S.—You can make any use of the above, and I hope it will be an example to other societies to lend a helping hand.

105, Camberwell New Road, S.E., April 10.

THE YARE ANGLING STATION.

SIR,—Whatever may be the piscatorial merits of your Norfolk correspondent "Angler," or however well acquainted with the mysteries of "liggering" on Hoveton Broad, he is either marvellously oblivious of what is going on at Brundall, or maliciously intent on misrepresenting facts. We trust to your sense of justice to enable us to give an emphatic denial to his statement *in re* the new boating station at Brundall, but especially the following:—"A smaller concern has, I believe, been started near the company's grounds; but I am informed their object is more for the purpose of advertising than anything else." Now, as our station is in course of completion, and that of the projected company not yet commenced, and as it has been for some weeks publicly notorious that the area of our ground is TWELVE ACRES, while the projected company is barely ONE! acre, we need not comment upon "Angler's" "belief" that the lesser is the greater, or the minor the major. The "advertising purpose" to which your correspondent refers relates to our large and valuable frontage next the railway (nearly a quarter of a mile) being offered as advertising sites; an advantage which the promoters of the company, having no frontage whatever, do not possess.

We have no fear of honourable competition, but we protest against being made the victims of misrepresentation; and that the readers of your valuable journal may not be hoodwinked, we enclose you our advertisement for insertion in your next and such following issues as we may hereafter require.—We are, &c., H. FLOWERS AND CO.

Brundall, April 12.

ANGLING DURING FENCE MONTHS.

SIR,—Having read a letter of the 8th inst. under the above heading, and being a member of the same society (the Anchor and Hope), I beg to inform your readers that the notice of motion was given in the usual way, and a special general meeting called, and it was passed unanimously that the rule be abolished, not because one or two members had the chances of fishing in private waters, as stated, but because the rule was a very hard and unjust one. Now, does it seem possible that such a rule should be abolished, for the benefit of one or two members, with a meeting of upwards of thirty members present? I fear that Mr. Bodell is labouring under some misunderstanding, as I do not believe that there is any member belonging to the club that would take fish during fence months from any public or subscription waters, more especially as fish are not acknowledged in the club during fence months. If a member could get permission to fish a private water, and the fish were in good condition—and I believe carp are in their prime in the months of March and April—I fail to see where the brotherly feeling is that is supposed to exist amongst club members if one member would envy another the sport which he is unable to obtain himself.—Apologising for having trespassed so much on your valuable space, I am, &c., DANIEL DAVIS.

350, Rotherhithe New Road, April 12th, 1882,

TROUT IN THE THAMES.

Sir,—I am very glad to find from Mr. Marriott's letter in the Fishing Gazette of Saturday last, and from the remarks of L. B. in the previous week, that the Lower Thames is free from the imputation inferred in Mr. Marriott's letter on the 18th of March. I can assure him that the opinion was not altogether my own, but that of others, that, as no one else on the Thames was engaged in "trout propagation," it appears to point distinctly to Chertsey Bridge. From what I have heard since, and from the letter of last week, I am quite satisfied there was nothing intended for Mr. Forbes; and had Mr. M. used the term "Wycombe blue-bottles," which L. B. did, nothing would have been said, as I had not remembered that portion of the sound practical remarks which appears in the "Jottings" of L. B. in reference to that subject. I have always maintained that the Thames is essentially a jack river, and my ideas published years ago have always been that the real Thames fish are the only trout that should be propagated, and that they should not be put in the river until they are of a good size. I therefore quite agree with the opinion expressed by the Editor in his remarks in connection with Mr. M.'s letter. If my evident misapprehension has been felt in the slightest degree by either L. B. or Mr. M. I am truly sorry for it; and as I am sure all three of us are aiming at the full accomplishment of one grand object—the preservation of rivers and the true interest of anglers—I trust nothing in the future will disturb either of us in the unselfish desire of benefiting not ourselves but our brother anglers.—I am, &c.,

B.

FISHING IN SUFFOLK.—HINTS TO ANGLERS.

Sir,—Having booked from Liverpool Street to Bures, I felt at least that I could enjoy myself this journey. Arriving at Bures, piscators will find comfortable accommodation at Mrs. Parsons's, Croft House, Bures, or Mr. Thompson's, the Bells, who is an adept with rod and gun, and will take gentlemen out in his punt and devote his time to them if they take their abode there. Mr. Thompson knows every inch of the water, and a better fisherman it is hard to find. If anglers find accommodation at Mrs. Parsons', they will get permission, through Mr. Parsons, to fish a private lake, belonging to a gentleman. On my last visit I fished this lake, and in the space of four hours I took 112 roach, from a quarter up to three-quarters of a pound. There are many there of enormous size; the huge carp, bream, jack, and rudd I certainly think cannot be surpassed anywhere. The lake is teeming with fish. Peak and Frean's biscuit is the favourite bait for roach, worked into a paste. I should think King's natural bait would prove very destructive among them. The main river is the Stour, which is alive with fish of all kinds. It is very common for Mr. Thompson and his patrons to take a hundredweight of bream in a day. From the bridge to the mills one can find swims 14 feet and upwards at the tanworks. At Bures one can get quarts of gentles for a small sum.—Hoping I have not taken a great space in your valuable paper, I remain, &c,

A Wandering Piscator.

ANGLING IN IRELAND.

On a bright evening in March, I started with a good deal of pleasure from London for a visit to Lough Melvin, to try my hand for the first time this season at the salmon. I knew from the heavy rains of the previous few days, that Old Father Thames was somewhat out of condition, and as the close time would commence on the 15th, I thought ten days would be well spent in Ireland. The train leaves Euston at 6.30 p.m., and you arrive at Belleek, the nearest station. on the following day about 6 o'clock p m.; then a drive of five miles and you are at a nice cosy little hostelry at Garrison, on the borders of the Lough, kept by Mr. Archibald Scott, who in every respect is most kind and attentive to his patrons. A good dinner and a night's rest put me in good condition for commencing the attack; and while I was breakfasting the following morning, my two boatmen, whom Mr. Scott had engaged for me, set up my rods, put on the winches and made allready in a thoroughly competent manner. The weather was all that could be desired, but there was not sufficient ripple for fly-fishing. I therefore decided to troll. It was really so warm, it was more like midsummer than March, and my face was blistered through the sun and glare on the water. The first day neither troll nor fly had any effect and we finished that day with nothing more than one or two trout, caught on large salmon flies. I felt well satisfied that nothing had been left undone, either on my part or the part of the boatmen, and knowing how uncertain salmon are, returned to the hotel, hoping better luck for the morrow. The morrow came, weather again summer. On this and two subsequent days, making four days in all, I neither rose or ran a salmon. I decided that I had arrived at the Lough too early in the season and the boatmen thought so too, although they expressed themselves confident there were salmon in the Lough. With rather gloomy thoughts, thoughts of returning to London on the following or next day, I took down my salmon cast and put up a trout cast, so as to try and catch a trout while the men were rowing me gently to the quay. I do not think I had cast my flies more than half a dozen times, and being tired had done so in rather a leisurely manner, when, all of a sudden, I saw a salmon rise; I struck. Was in time and he ran off some twenty or twenty-five yards of my line. Something told me by his weight I should not get him as my flies were very small and my cast suitably fine. He stopped and gave himself a shake, then suddenly rose and sprang about a couple of feet out of the water; he was a fresh-run fish of some 12 to 15 lb. in weight. As he sprang I lowered the point of my rod. In another instant I felt him and then I put on a slight strain with my rod well elevated. I played him as gently as possible for between 15 and 20 minutes and then considered it was time to have a look at him. I put on the least extra strain to raise him, when to my great chagrin, the hold of the hook gave way and my first hooked fish was again free. This was a real disappointment, but it removed the impression I had previously entertained of there being no salmon in the Lough. We were out early the following morning, and by eleven o'clock I had the pleasure of securing the first salmon of the season in Lough Melvin, he weighed about 12 lb. I worked very hard the remainder of the day and caught two small brown trout and a small *salmo ferox*. The next day I got two salmon, the largest 16 lbs., he was in fine condition and they have duly sent off to be weighed in at the Piscatorial Society. The weather had become very stormy and I was prevented from fishing part of one day and the whole of another. The news had now got abroad that the salmon were taking and two more boats joined in the fishing. I stayed three more days. One day I had a blank. One day, one salmon, and the last day fortunately two salmon. I hooked several other fish, some of which were kelts and were duly returned to the water. The season is now full on for the spring salmon, and all fish you catch, you are at liberty to retain. Certain portions of the Lough are preserved and can be fished either by permission or payment of daily tickets; but the portion of the Lough where I caught my salmon was the public portion. The fish run from 8 lb. to 20 lb., in weight and they have often caught larger that that. Salmon fishing, we all know, has been and still is getting more difficult to obtain each season, and here by a twenty-four hours' journey you have good salmon fishing in public water.

Any gentleman addressing a letter to Mr. Archibald Scott, Garrison Hotel, Lough Melvin, Co. Fermanagh, Ireland, will receive full information and replies to any queries he may ask. The cost of living at the hotel is very moderate. The boatmen 2s. 6d. per day each, their lunch and their whisky. Should any reader decide to visit the Lough, he must not forget to make arrangements with Mr. Scott, previously to going, or he may find the hotel full on his arrival and I do not know of other lodgings to be obtained.

Thos. Huggett

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices; Point Flies, 2s. 6d. per Dozen; Dropper Flies,. 2s. per Dozen. Orders punctually attended to.—[Advt.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

1st AWARD MELBOURNE EXHIBITION, 1881.
DAY, SON AND HEWITT'S
STOCKBREEDERS'
MEDICINE CHEST.
FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP, AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.
"RED DRENCH," for Cleansing Cows and Ewes, &c.
"RED PASTE BALLS," for Conditioning Horses.
"BRONCHOLINE," for Husk, Hoose, or Cough
'GASEODYNE," for Heaving or Paining.
"ALCOHOLIC ETHER," for Colds and Chills.
"CARMINATIVE CHALK," for Diarrhœa in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

ROACH & BREAM FISHERS

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY.

CAPITAL ACCOMMODATION AT WARNER'S.

BOATS, PUNTS, &c.

"Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

TROUT FISHING

IN THE PRIVATE WATER

OF THE

EARL OF CARNARVON.

Rivers EXE and BARLE.

FREE to Visitors staying at the Carnarvon Arms (and his Hotel being also nearest to Tiverton Association Water), DULVERTON STATION.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the Fishing Gazette. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid. The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr T. Mullarkey, at Glendalough Hotel, Recess, Galway Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

THE GRAND HOTEL,

The Fishing Gazette.

SATURDAY, APRIL 22, 1882.

THE EASTER RAID: A LAY SERMON.

By Fay Ranglre, Esq.

USING the columns of the Fishing Gazette as a pulpit, perhaps I may be permitted to preach a short sermon to my brethren of the angle; to those of them, at any rate, to whom it will apply. My text is a certain holiday, not a hundred days ago. The application of my discourse, which, reversing the usual order, I will use by way of introduction, may be thus set down:—Even the humblest angler should consider, when he goes a-fishing, that he ought not to discredit the general body of which he is a member; ought not to offend, disgust, and defy landowners and occupiers; ought never to be guilty of unsportsmanlike practices, simply because there happen to be no penalties to enforce wholesome regulations.

It is necessary perhaps, brethren, for me to explain that when—signing the transfer which divorced me for ever from the business by long devotion to which I had at last secured a moderate income in four per cents.—I retired to this village, and christened my bit of freehold, in grateful remembrance, by the name of Cursitor Rise, I was as fond of a piscatorial outing, or country ramble, as town-born, town-bred man could be. As the years rolled round, a little rural trip at Easter and Whitsuntide seemed the proper thing to do. Thus did I foster that love for the country which has registered me, though in a modest way, one of the Home Counties landholders. The sight of the holiday-keepers turning the railway stations into a scene of confusion, crowding the omnibuses, overloading the steamers, and swarming to the suburbs, gave me lively satisfaction. To see so many people joyous warmed my heart. I blessed them, and wished them God speed in the woods and meadows, on river, sands, and sea, to which they were bound. But just now that we, in our later *role* of country residents, are suffering from a raid of town excursionists, the general question of holiday outings wears a different aspect. By the short single line which connects us with the main system of railway came, at nine o'clock, perhaps a hundred third-class passengers—men, women, and children—to taste the sweets of the country, no doubt, but also to invade our repose and ignore the sacred claims of property in a really alarming manner. No boy has a right to thrust his arm through the railings and grab at my lilies of the valley; nor should his father respond to my interruption by contemptuously referring to me as an "old bloke." By what argument, too, can the honest man who followed soon after, justify his two sons in pelting my pet spaniel, placed in the front garden to repel further inroads? Yet these things happened on this joyful holiday morning, as a small contingent of the invaders, bound for a canal a mile or so distant, passed along the high road, chivying the peaceful fowls right and left into everybody's gardens and yards, irritating the village dogs, and leaving in their wake quite a ground-swell of disturbance. The great feature of Cursitor Rise is the garden at the rear of the house, with its lovely lawn sloping down to a river, and an aspect that catches the morning sun. Across the river are meadows, beautifully green, and beginning to be gaily decked with flowers. It so happens that the further bank, for the distance of a quarter of a mile, was many years ago a towing path, and there has been for a long time a perpetual warfare as to the right of fishing between certain London anglers 'and the farmer who at present rents the water meads. There is no necessity for me to enter into the dispute, although during the past season I have been ashamed of the manner in which some London anglers have defiantly fished in waters which are undoubtedly private. One Sunday, three men used the foulest language to the farmer, and threatened to throw him into the water if he did not leave them. The three men are probably not aware that within half an hour of their departure by the train, the outraged proprietor appeared with a constable on the scene of their exploits. But let that pass. I would like, after all, to make my sermon as agreeable as I can, consistently with plain-speaking.

And now to return to our discourse. On the morning of the holiday to which I am referring, after being ruffled by the epithet "old bloke" and so forth, I retired to the rear, and took my favourite chair on the lawn, close to the river. Along the old towing-path the other side, four or five anglers were already at work throwing in groundbait and plumbing the depth. The women and children were dispersing to the hedgerows and over the grass land, pausing at the ditches and foraging along the margins of the watercress beds. There was no great harm in this, though, if the lessee of the land had not happened to be holiday-making on his own account, there must have been something in the shape of a collision between him and the trespassers. The excursionists, I have no doubt, enjoyed themselves in the fresh country air, and unbroken sunshine. The sights and sounds were all calculated to raise the spirits and charm the senses.

To people lately arrived from courts and alleys, what with the cattle grazing in deep content, the lambs frisking with the ewe-mothers, the birds in full song, and, pervading all, that gracious odour peculiar to growing grass and leafing hedges (though no perfume of flowers enters into it), every prospect must have pleased. Shall I add the rest, and say "Only man is vile?" That would be too harsh. Indeed, I would drop the subject altogether, but for the hope that my grumble may act as a warning. Why, then, O brothers of the angle, did you deem it worth your while to send your wordy, and sometimes vulgar chaff across the river to me, the harmless gentleman, perusing his paper on the lawn of Cursitor Rise? You friend, wearing the straw hat, seemed doubtless to make a telling point by your "He's got 'em on." But what did you mean? Your comrade, the red-haired fisherman with a cold in his head, must needs also indulge in occasional references to what he called my "'at," which, truth to confess, is a very respectable article of French manufacture, and only remarkable from its sensible breadth of brim. Judge, then, of my feelings when, at intervals, a strident voice would loudly enquire, "I say, 'ooze yer 'atter?" But I took no apparent notice of these unfriendly efforts at witticism, and, receiving no encouragement, you at length forbore to insult the meek individual who had not only given no cause of offence, but who was full of sympathy with you in your temporary escape from London. However, let me hasten to finish my catalogue of complaints.

My good friends, the excursionists, listen to me in all kindness. After an experience of some dozen holiday raids, I can understand the dislike felt by the countryfolks against the "Cockney excursionist." I grant that it is only a small percentage of your number that brings you into contempt, but always remember that a little leaven leaveneth the whole lump. The character of the whole flock is generally estimated by the conduct of its few black sheep. So, the thoughtlessness of just a handful of your band at this Easter outing, stamps you all as selfish and ill-mannered. What will my neighbour of the water-meads say when, on his return, he finds the stakes torn from the hedge, paper and broken bottles strewed upon the grass, and the ashes of your camp fire staring him in the face? The chasing of the four white ducks out of the river and into the meadow I admit afforded the children plenty of fun, but the proprietor of the water-cress bed—along the whole length of which the heavy birds floundered in their anxiety to escape the sods so gleefully hurled at them—will pay for that amusement to the tune of fifteen or eighteen shillings, The damage will not be a farthing less. The water-cress was in its most tender stage, and of the rich brown tint so much admired by connoisseurs. It had been weeded and nurtured into an even, healthy, and extra valuable bed. In a few days it would have been cut and sent to London; and so superlative was its quality, that it ought to have been purveyed only amongst the nobility and gentry. But those four white ducks, having been driven into it by some of your children, remained there all day, paddling pleasantly to and fro, but trampling down the water-cress beyond redemption. Then again, there was the removal of the staple from the post. Believe me, that gate was not chained up as a joke, When the staple was hammered in, it was to signify to all comers that there was a special reason for keeping the barrier closed night and day. I am free to confess, my pale-faced friend with the baby in arms, that your wife could not clamber over those five bars, as you and the boys did. She looked much too weakly for that feat, I was sorry to note. But you surely could not be aware that the probable consequence of your battering out the staple with a big stone, would be an irruption of live stock into a meadow from which a particularly excellent crop of hay was expected? It was nothing, may be, but thoughtlessness on your part, though it did occur to me that there was an unnecessary fierceness in your exclamation, "What the doose do they mean by fastening up a gate in this way?" My advice is this:—Come into the country as often as you can, take your reasonable fill of its lawful pleasures; but *do* respect other people's property, rights, and feelings. In a word, on these excursions, simply do to others as you would others did unto you.

On the whole, worthy excursionists, you must have had a long, glorious day in the country. Will you bear with me further, while I correct a few erroneous impressions some of you formed? The blossoms which whiten my kitchen garden, as if a snow-storm had swept the trees, and which afforded so much delight to the anglers opposite, who kept summoning their non-angling friends to look at them, are not, as you supposed, those of the apple tree. They are cherry, plum, and pear blossoms. The apple trees will blossom later, with a pink and white bloom to which none else can compare. The flowering sprigs which, spite of prickles, some of the youngsters plucked out of the copse hedge, are not from the may, or hawthorn bush. The hawthorn is in full leaf when it flowers. It is the blackthorn which blossoms before the leaves appear, and they were blackthorn branches which the gatherers seemed so determined to preserve for introduction to their London neighbours as veritable may. There is really no resemblance between the two trees: the hawthorn, or whitethorn, being, if not imposing, still neat and compact; while the blackthorn, or sloe-tree, is a ragged, rambling bush of little account. I must put your women-folk and children right also as to the so-called buttercups. The glossy yellow flowers of which they gathered so abundant a store by the ditch-sides were the wild marsh marigold, which, as Tennyson truly says—

> " Shines like fire in swamps and hollows grey."

There are three other flowers which, from their family likeness, pass as buttercups, and our Easter visitors had a specimen of each. It is early yet for the buttercup *par excellence*, or bulbous crowfoot, which in June will powder your boots with its golden dust, but I fancy I saw one or two precocious specimens. Early also would it be for the greater celandine, or swallow-wort, were it not so forward a season, but they have this year hastened to open their petals as an Easter offering. Next we have the lesser celandine, or pilewort, which may be distinguished from the other by the number of its petals, which vary from eight to twelve, while those of the greater are four in number. The little shade-loving pilewort was in flower during the first week of February. If the two damsels carrying the small basket had crossed the plank over the brook, and pushed on to the open pasture beyond the clump of elms in whose tops they saw the busy rookery, they would have found some cowslips. Perhaps, however, it is well that they did not, for there are a few oxslips coming on, and they might have been sacrificed while yet in the bud. Finer primroses were never seen than those gathered during the Easter of 1882.

The jolly anglers opposite—to whom, in conclusion, I will call attention—seemed to have had a most indifferent day's sport, as indeed they were almost certain to do in the east wind, bright sun, and clear water. They fell into that very common fault of roach-fishers, and threw in too much groundbait. Nor did they appear to be at all aware that the shadows of their bodies and long bamboo rods were upon the water. I am aware that they could not have faced the sun without coming to my side; but they might have sat farther back. But for their ill-timed merriment over my broadbrim, I would in all kindness have informed them that to my knowledge a brace of jack were lying in the hole. The red-haired man found this out for himself in the afternoon, for, a small roach being hooked, one of the pike, tempted by the artistic manner in which it was played by the fisherman, made a dash, and broke away roach, tackle, and top joint. I forgive the angler for swearing so lustily; most of us might have done so under the circumstances. One word more. The two fish said by the oldest angler of the three to be dace were nothing of the kind—they were chub, as the black tail fins might have shown. Had they been dace they should have been returned to the water, such fish being, from their recent spawning, quite out of condition. The anglers were not overweighted with fish on the homeward journey; but the women and children had great quantities of such spring flowers as had come in their way, and they were all happy, and tired. Finally, brethren—good luck be with you. Ponder my sayings. Be happy.

THE EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

EVERY day that the exhibition remains open, greater interest is exhibited in it by the public, and the attendance on each day recently has ranged from seven to ten thousand; amongst the visitors from London are Messrs. F. C. Clench, Francis Francis, Brookwell, Sachs, Natrell, &c. We understand Mr. Morgan's time is fully occupied in answering questions relating to the London Angling Clubs' exhibit, which is admitted on all sides to be *the* show of the show.

From amongst the list of awards we select the following:—

Club Collections.

The Piscatorial Society of London.—Thirty-three cases of Thames, Collne and Wandle trout, Itchen grayling, Thames pike, Elbe pike, perch, Thames barbel, chub, carp, tench, bream, char, perch, Colne and Waveney roach, &c. Gold Medal.

The Good Intent Angling Society.—Thirty-nine cases trout, tench, roach, rudd, dace, perch, bream, jack, carp, and chub. Gold Medal,

The Edmonton and Tottenham Angling Society.—One case Thames perch. Diploma.

The Hammersmith United Angling Society, Bridge Road.—Eleven cases Thames roach, bream, perch, chub, barbel, and carp, Colne carp, Ripley jack, Elstree tench, Colne dace. Silver Medal.

The Reform Angling Society.—One case Thames carp. Silver Medal.

The Richmond Piscatorial Society.—Silver Medal.

Private Collections.

Mr. H. Brookwell, 4, 'Morpeth Street, Green Street, Bethnal Green.—Eight cases pike; three cases roach; two cases tench; one case barbel; five cases trout; two cases chub; one case bream; one case perch. Gold Medal.

Captain Alfred, 20, Moorgate Street.—Silver Medal for his exhibit of paintings of salmon.

General Exhibitors.

Conroy, Bisset and Malleson, 65, Fulton Street, New York.—Silver Medal for fishing rods and tackle.

W. Cochrane, 4, Grove Place, Edinburgh.—Diploma for fishing tackle.

J. Graham, 19, St. Giles Street, Edinburgh.—Diploma for salmon angler's case.

Magoria, Giuseppe, Locarno, Switzerland.—Silver Medal for assortment of rods and artificial flies, the latter are chiefly on the barbless hooks, as recommended by Seth Green (we fail to see the advantage in a barbless hook and have frequently lost fish on account of the barb being absent in some badly made hook); the flies are dressed nicely and small.

Hardy Brothers, Fenkle Street, Alnwick.—Silver Medal and Prize of £5, for fishing rods and collection of inland fishing-tackle.

Hearder and Son, 195, Union Street, Plymouth.—Silver Medal and Prize of £5, for sea-fishing tackle, mounted lines, &c.

C. Playfair and Co., 142, Union Street, Aberdeen.—Diploma for rods, reels, gaffs, and flies.

R. C. Steven, 15, West Street, Berwick.—Silver Medal and special prize of £10. The money prize being given by the Waverley Angling Club for the most complete outfit suitable for the Lochs and Rivers of Scotland.

W. Dickson and Co., 15, South Frederick Street, and Gilmore Park, West Fountainbridge, Edinburgh.—Silver Medal and £5 for fishing rods, reels, lines, and tackle.

Redpath and Co., fishing-tackle manufacturers, Kelso.—Gold Medal for exhibit, £10 of No. 12 prize for inland fishing tackle; prize 26 (£5 5s.) for collection of materials for flies; and £5 (prize 27) for collection of flies suitable for Scotch lochs.

D. Wells, Leith Street, Edinburgh.—Diploma for inland fishing tackle.

Wm. H. Wigley, Cheltenham.—Diploma for the registered Gloucestershire spinner for salmon, sewin, trout, bass, pike and perch.

Joseph J. Armistead, Solway Fishery, Dumfries.—Silver Medal and £7 10s. for various kinds of fish-hatching apparatus and plans.

Max von dem Borne, Berneuchen, Custrin, Prussia.—Silver Medal for deep and plain Californian troughs.

Howietoun Fishery, Stirling.—Gold Medal and £10 for models and plans of apparatus for transporting live fish; and £10 of prize 14 for fish-hatching apparatus.

Byram Littlewood, Cecil Street, Huddersfield.—Silver Medal and £7 10s. for apparatus for hatching and rearing salmonidae; and diploma for *Salmo Corpioni*, the first of the species in England.

Constantine Mussynki, 54, Nevsky Prospect, St. Petersburg.—Silver Medal for apparatus for transporting young fish long distances.

We shall next week describe the most novel and useful exhibits connected with pisciculture and angling, but may say at once that there is very little really new of importance.

A WATERPROOF KNAPSACK.

MR. W. BOSWELL, of 48, London Street, Norwich, sends us one of the bags which he is advertising in our columns. It is hardly a fishing-bag in the ordinary sense of the words, but any one who wants a thoroughly strong knapsack for an angling tour will find this the cheapest thing in the market; in fact it cost 18s. originally, and appears to be surplus stock from some Government army contract. The leather is worth the price now asked for the bag.

George James Eaton, of Sarkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard **FLIES** for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day, All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

PISCATORIAL SONNETS.

II.

Retrospect.

Upon the triumphs of the days of old
When memory turns her gaze what trophies rise
And bring the sparkle back into the eyes,
And stir the joyful tongue till it hath told
The tale of the good fight, how—brave and bold—
Game to the last—the noble victim dies!
On-wandering, under ever-changing skies,
Roaming the banks of rivers manifold,
The shore of many a lake, we take *our share*,
Full toll and tribute of the finny tribe—
Until not Egypt's highest pyramid,
And all its great gross-weight can *quite* compare
With the grand score we to our rod ascribe—
So wondrous doughty were the deeds it did.

The Fishery Hotel, Harefield, Bucks. A.R.I.E.L
April 18, 1882.

THE EYED HOOKS FOR FLIES.

FROM several letters we have received with specimens of night-line hooks, and other old-fashioned hooks with eyes, it appears that some of our readers consider there is nothing new about, the eyed hooks, made to Mr. Hall's pattern. If the eye were the only feature we should have no reason for calling attention to them; but it is the general shape and size and make that give these hooks so much value, as well as the fact that they are eyed. The wire is about a third finer than the ordinary wire, and yet strong enough for anything; the colour is a neutral tint—much better than the decided black or blue.

THE LONDON INTERNATIONAL FISHERIES EXHIBITION.

HIS ROYAL HIGHNESS THE DUKE OF EDINBURGH presided on Thursday afternoon at a public meeting, assembled in the Egyptian Hall of the Mansion House, in support of the International Fisheries Exhibition, proposed to be held in London in 1883. Among those present were Earl Ducie, the Marquis of Exeter, the American Minister (Mr. J. Russell Lowell Mr. J. Pender, M.P., the Prime Warden of the Fishmongers' Company, and the Master of the Mercer's Company, Sir John St. Aubyn, Sir Henry Parkes, Professor Huxley, Mr. S. Walpole (Her Majesty's Inspector of Fisheries), Mr. E. C. Marjoribanks, M.P., Mr. Edward Birkbeck, M.P., Sir Brandreth Gibbs (director and secretary of the Exhibition), Mr. Towse (assistant secretary), Sir J.C. Lawrence, M.P., Alderman W. Lawrence, M.P., Professor Leoni Levi, Sir Alexander Gordon, M.P., Mr. A. Pease, M.P., Sir John Bennett, Mr. E. Collins, Mr. R. B. Marston, Mr. A. Jardine, Mr. J. Knechtli, Mr. Benningfield, &c., &c.

The Duke of Edinburgh, in opening the proceedings, said: In the absence of the Lord Mayor I have been requested to take the chair, and I do so with great pleasure, as the subject we are met to consider is one in which I take a very great interest. This meeting is held for the purpose of bringing the object before the notice of the City and I hope the result will be to help to secure the success of the exhibition. (Cheers.) This exhibition is one which it would be impossible to carry on without a guarantee fund, such as was obtained for the Great Exhibition of 1851, and that subsequently held in 1862, You will have to-day an opportunity of assisting in the formation both of a guarantee fund and a prize fund for the awards to be given to the exhibitors. I am empowered by the Prince of Wales to inform the meeting that he has every reason to hope that her Majesty will either inaugurate or visit early in its commencement the proposed exhibition. (Cheers.) I am careful in saying that the "Prince of Wales " has every reason to hope" that such would be the case, because it is utterly impossible for the Queen, at so long a time in advance, to tell positively what she would do. When Mr. Birkbeck (chairman of the executive committee) informed me that the exhibition was likely to be held on the lands of the Exhibition Commissioners of 1851 at South Kensington, my thoughts reverted immediately to the point to which I alluded in the address I had the pleasure of making at the inaugural meeting at this exhibition—namely, that I hoped there would be ample opportunity given for conversaziones or meetings for the reading and discussion of papers which are important in regard to fishery matters connected with the United Kingdom. I look upon this feature as one of the most important adjuncts to the Exhibition—(hear, hear)—and I hope many papers will be prepared, dealing with the improvements or extension of the fisheries around our coast, or with the condition and the protection of the lives of our fishermen. (Hear, hear.)

The American Minister moved: "That this meeting, having regard to the great and increasing importance of fishing industries throughout the world, cordially approves of the proposal for a great International Fisheries Exhibition, to be held in London in 1883, under the patronage of her most gracious Majesty the Queen."

Earl Ducie, in seconding, expressed the belief that the exhibition would be of scientific importance, and productive of great economic results.

The resolution was adopted unanimously.

Sir A. Galt, High Commissioner of Canada, then moved: "That, in the opinion of this meeting, in order to ensure the success of the proposed exhibition, it is desirable to secure the support of those interested in the Colonial Dependencies of the empire, and cordially recommend its objects to the attention of those citizens of London, merchants and others, who are connected with the Colonies." He said he knew that the Government of Canada intended to do its utmost to give efficient support to the exhibition.

Sir H. Parkes, Prime Minister of New South Wales, seconded the motion, and pointed out that the fisheries in Australia had been neglected, and there was much need of improvement.

Professor Huxley (one of Her Majesty's Inspectors of Fisheries) moved: "That this meeting, considering the great importance of promoting the fishing industries, and the welfare of the sea-faring population of Great Britain and Ireland, recommends the exhibition to the citizens of London for their cordial support." He remarked that, whether in regard to quantity or delicacy of fish, there was no parallel to be found to the fishing grounds around our own coasts and the western frontiers of Europe. There could be no question either as to the importance of the fishing industry to the country or as to the interests of the population engaged in it. As in the case of the land, there were three F's in the fish question—the first "Freedom," the second "Fair Play," and the third "Facility." If these three F's were carried out consumer and producer might well be satisfied. He had reason to know at present they were by no means satisfied, and he considered the only remedy for existing evils was to bring the full blaze of public opinion to bear upon the question, and that could be best done by means of such an exhibition as that proposed.

Mr. T. F. Brady, Inspector of Irish Fisheries, seconded, and the resolution was adopted.

On the motion of Sir J. Lawrence, M.P., seconded by Alderman Fowler, M.P., it was resolved: "That the citizens of London be and are hereby invited to contribute to the two subscriptions lists already opened, one for the 'General and Prize Fund,' of the proposed exhibition, and the other for the 'Guarantee Fund.'"

His Royal Highness then read a list of the leading contributions to the two funds.

Sir John St. Aubyn moved, and Mr. Oscar Dickson seconded, a vote of thanks to the Lord Mayor for convening the meeting; and, this having been accorded, a similar compliment, on the motion of Lord Exeter, seconded by Mr. Birkbeck, M.P., was paid to the Duke of Edinburgh for presiding.

Mr. Fawcett, M.P., and Mrs. Fawcett are spending a few days at Salisbury. During the past week Mr. Fawcett had some good fishing in the neighbouring streams. In Lord Normanton's water at Ipsley he caught a fine salmon weighing 18 lb. During his stay Mr. Fawcett has been waited upon by a deputation from the city Liberals and requested to attend a meeting of the Liberal association, but he declined, as he had promised to deliver no speech until after he had addressed his constituency at Hackney.

For the Little Readers of the Fishing Gazette.—What is that we see down by the stream? Is it a man? Yes, it is a man. What is the man doing? He has a fishing rod in his hand and he is looking up into the tree? What does the man see in the tree? He sees a collar, two flies, and about twenty-five feet of line, How came the collar and the flies and the line in the tree? The man saw a large trout rise at his fly and he gave a fearful jerk and thought he had the trout, but he has the tree. Is the man pleased with what he has got? Oh, yes! he is much pleased, but we will not go near him.—*Forest and Stream.*

Fresh-water Fish at the Aquarium.—An experiment which has never previously been made on any large scale is being tried at the Westminster Aquarium, under the superintendence of Mr. John Carrington, F.L.S. In the tanks, which until lately have been tenanted by various specimens of sea fish there have been placed a number of trout, pike, carp, and other species of fresh-water fish, some taken from the Thames, but the majority presented by Sir Robert Bateson Harvey, who allowed his lake at Black Park, Slough, to be netted for the purpose. Amongst the fish taken by this means are some splendid carp, the largest weighing upwards of 14 lb., and the smaller ones not less than half that weight. The pike comprise some particularly fine specimens, the largest being the 28-pounder caught some few years ago by the Duke of Edinburgh at Eastwell Park, and presented by him to the chairman of the Aquarium Company. All the fish appear in good condition, but, owing to the change of water, some are slightly affected by mould, which is rapidly disappearing under the treatment of Mr. Carrington. The trout do not show, however, any signs of this malady, and, despite the fact that many of them were caught by hook and line in the upper Thames, they have in no respect lost their colour, and to lovers of the piscatorial art they are well worth a visit. —*Morning Post.*

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

SPECIMEN FISH *v.* GROSS WEIGHT.

Sir,—In reply to L. B., in your last issue, that gentleman says:—"I shall continue to hope 'Mark Antony's' information has been derived from an unreliable source." Now, it is a most extraordinary fact that on the 5th of the present month (and before my letter appeared in your paper) I received a letter on this very question from a man who has lived near the Trent all his life, and he ought to know; and, without my having even referred this matter to him, he says (I enclose his letter). "they are going to charge 5s. for fishing in Bisthorpe Fleet, and the Trent here is entirely spoilt (*i.e.*, between Langford and Bisthorpe on the one hand and Cromwell and Sutton on the other); the banks are full of Nottingham men, who, when the season is on, not only net, but are up to all sorts of games to catch a basket of fish." Now, out of these, we will say hundreds, there must be scores of club men, and, as L. B. truly says:—"I, however, hope we may yet have an explanation from Trent-side club men." So do I with all my heart, and the sooner it comes the better; but let us have a thorough explanation. The question is a very simple one. Do the Trent-side club men push three or four good-sized dace into the stomach of a jack, or shove three or four ounces of swan or B B shot down the gullets of bream and dace, &c., to make them weigh heavier? Do all the fish weighed-in by members of the Trent-side club men or London club men, all through the season, always belong fairly and squarely to those members? Are these matches, &c., free from humbug? Are there never any fish purchased in town, or, for the matter of that, from puntsmen and others, and shown at the club as fish of members' own catching. If not, then I am very sorry I spoke. But, as "Kingfisher" truly says, "these contests are, I have no doubt, considered by some people very harmless, but my opinion is that in clubs where these matches are most popular, the primary object of the members is good business, sport may follow." Comment is really unnecessary. Certainly the implicit trust and confidence J. M. D. seems to place in members of fishing clubs is, knowing what human nature is, very remarkable.

Since January 1 of the present year, I think the "Trent Otter," in your paper, referred to the practice of netting in reference to some bream, and that they were shown at the clubs by certain immaculate gentlemen as their own catching. I think he said he was afraid this was the case.

In paragraph 2, what J. M. D. means when he says, "I must give up the conundrum contained in the quotation from a certain paper respecting a roach match for £10 a side," I cannot conceive. I know the match did come off.

I only wish I had all the money lost and won in fishing matches in one season in my pocket now. Well, never mind what I would do.

Does J. M. D. think the proprietor of a certain paper is in the habit of paying a gentleman to report imaginary matches? Or are his reports like, it seems to me, a good many things connected with clubs and club men—I cannot help saying it—rot, horrible rot?

Last Sunday week I read—J. M. D. can *rede*—in the *Referee* that the total weight of fish caught by the Larkhall Lane Angling Club for the season was 1327 lb. 3 oz. Will some member of L.L.A.C. kindly inform me (1) If these nearly 12 cwt. of fish were all above the club standard—how interesting to know how many of each sort and weight; and (2) if this is the usual weight caught by the London clubs in general? Because, if it is, I begin to think with "Kingfisher" that at the end of the next twenty years or so specimen fish, now so called, will be very hard to catch; or, as his preceptor in piscatorial matters suggested, "as extinct as the dodo."

Only last year, I recollect reading an account in the *Sporting Life* of a grand angling match that came off in the North of England. Now listen. There were 400 competitors—reaching over four miles—and the angler who took first prize in this grand affair weighed-in something like 4 lb. 13 oz.

But perhaps, as J. M. D. suggests, it was only inserted in the *Sporting Life* for amusement. I expect it was far from amusing to about 390 idiots who sent their halfcrowns and got a piece of pasteboard in return.

In one of these grand matches, one of his immaculate club men had got two fine bream covered over with pastry in a dish—nice pie that, sir! This was the very match that a near relation took the third prize.

In conclusion, supposing these 400 so-called anglers had not caught a single fish, will J. M. D.—upon my word, I am really obliged to J. M. D., for he has told me more about clubs, club men, prizes, specimen fish, gross weights, "typical sticker" (what a fine name), angling matches, competitions, &c., than I ever knew or dreamt of. I say, if these 400 anglers had not caught a single fish, will J. M. D. inform me who would have had those 400 half-dollars? I want to know. I shall be in the North of England, near a canal, in the summer; and if he reports well, I might do a leetle business myself.

Hoping J. M. D., L. B., and our good friend "Kingfisher" will forgive all the terrible shortcomings necessarily to be found in an unpremeditated epistle of this description.—I am, &c., Mark Antony.

[If "Mark Antony" were a club-man he would know that the Larkhall Anglers are, like his friend Cæsar's wife, "above suspicion."—Ed.]

GROSS WEIGHT *v.* SPECIMEN FISH.

Sir,—It so happens that there is very little in "Kingfisher's" letter appearing in your last issue, which is not answered by my own, which immediately follows it; there are, however, a few exceptions to which I should like to draw attention.

In the first place, the man who, according to "Kingfisher," "can grass a dozen babies," is quite as ready as any other to tackle and land any larger fish which may fancy his lure. Again, I must remind our friend that a competition decided by the two largest fish taken in a day is a different affair to the large takes fo so-called specimen pike and perch, which B. so triumphantly referred in this paper dated 28th January, as examples to be followed by erring gross-weight anglers. This letter of B.'s induced me to express my own ideas in print—ideas to which "Kingfisher" in his turn took exception.

I then thought, and am still of the opinion, that if after years of talk and persuasion, B. had no better examples of self-denial, or, I will say, of a higher sense of piscatorial duty to refer to than those he quoted, his theory stood very little chance of general adoption; indeed, if "Kingfisher" will only explain how a man in a day's competition is to tell whether a certain good-sized specimen fish caught in the morning will be the largest one of his take during the day, or how is he to keep alive all he catches to enable him to select the largest over a certain standard, and return the remainder to the water, which I take to be the great desideratum, to him, and to his club will belong the chief credit of popularising the theory, if it ever becomes popular, and will go further towards bringing it into practice than any reports of sensational catches from private or very prolific waters—catches which are gross weights in reality, if not in name. I am the more inclined to this belief after "Kingfisher's" assurance that the members of his club are working men, who, it is fair to assume, can rarely afford the luxury of a punt, from the well of which the smaller fish can easily be returned to their native element. To pursue this subject further, it seems to me a difficult matter to ascertain whether a fish weighs an ounce or so under or over a pound when first caught, and for the purpose aimed at by the specimen theory, it is no use trying to find it out when the victim reaches the club trays; in this connection perhaps I may be allowed to suggest that the system of measurement on the spot, in vogue among the misguided gross-weight men is far preferable, inasmuch as it affords no excuse to any one for taking undersized fish.

Let not "Kingfisher" and his friends, however, imagine that in giving prizes for the "first and second largest fish" they have found a panacea for angling dishonesty; I think I can show that to the few men whose motto is "prizes first and sport afterwards," it would simplify matters considerably, especially if allowed to go where they pleased. Take the following example, which I am afraid is not a solitary one. One day last summer I was plying the rod with scant success at a well-known spot on the Arun, when a slouching native came behind me, and asked if I wanted to buy any fish, adding that he had taken a fine lot of carp from a pond the previous night; of course I refused to deal with him, and very much regretted that my fighting weight comes under the denomination of 'feather,' and that in a fistic contest as arranged for endurance, Mr. Chawbacon would very probably have knocked me out of time. Now supposing I had been one of those dreadful individuals at whom both "Kingfisher" and "Mark Antony" have pointed the finger of scorn, how easy it would have been for me to have selected the largest of the countryman's carp, to have glorified myself therewith at my club, and to have secured the prize for the largest specimen, and all without the fatigue and trouble of carrying a large gross weight from my swim to the country station, and from the London terminus to my club house.

So far from the unattached angler having cause for complaint against the promoters and followers of gross-weight contests, I think the boot is on the other leg, for my own experience goes to prove that these same unattached anglers are far worse offenders in the matter of taking undersized fish than any club men, and that club men often come in for censure on account of offences for which unattached men are alone responsible. Again, I believe that the gentlemen who are now working so hard in the cause of anglers, obtaining railway privileges, &c., will be among the first to admit that, although they are perhaps devoting more time and energy to the matter, the idea originated with, and the working of it was for a long time confined to very humble members of society, many of whom were, and still are, gross-weight men.

In recording his opinion as to the class of men who will disappear with gross-weight competitions, "Kingfisher" has forgotten the advice of a famous man, "Don't prophesy unless you know," or, at least, I hope he is a false prophet in that portion referring to myself. Let me assure our friend—and I say friend in all sincerity, notwithstanding difference of opinion—that the love of the sport, which I imbibed at a very early, would not be affected in the least if I never take another prize for gross weight or specimens, and if all prizes are abolished I shall continue to visit my favourite swims, unless rheumatism puts in a stronger claim, until I "shuffle off this mortal coil."

Now, as to my thinking fish shy that are left in an empty swim—rather an Hibernianism by the way—I am still of opinion that many swims are credited with emptiness when the bad sport in them is due to the shyness of the fish from continued fishing, &c. Of course I may be wrong in this opinion, but if so, I am content to err in such good company as "dear old Izaac" in the past, and, among others, I will take at random Mr. Balderston in the present. Let any readers of this correspondence peruse the last two paragraphs of that gentleman's paper in this week's Fishing Gazette (April 15), entitled "Thoughts on the Theory of Flies," and then say whether many of the opinions there expressed are not equally applicable to coarse fish, and whether they do not in part bear out my theory.—I am, &c., J. McD.

GROSS WEIGHT AND SPECIMEN FISH.

Sir,—Just a few lines to endorse J. M. D's remarks in this week's Fishing Gazette. I am pleased to find the gross-weight system so well defended. I certainly doubt any one being found returning to the river every fish but a specimen, or even "Kingfisher" leaving off fishing when fish are well on. I never found the angler yet who would do it. If I do find such a man, I shall vote he be put into a glass case instead of the fish.

How few would believe what we did if we could not show the fish we caught. What man ever made a big bag but has said, or at least thought, "Ah, if I had only, &c., &c., it might have been larger."

If a man publicly states his intention to angle for specimen fish only, I venture to say he will think very little of himself when he finds his name at the bottom of the list, that is if he be a genuine working member. In all clubs there are a number of lazy members who would then have the opportunity of sheltering themselves under the specimen excuse. I venture to say these are not the sort of men we care to see in clubs. Fancy a namby-pamby fellow going out catching but few fish, and then saying, "Oh, I only fish for large fish." Paugh! I have just been informed—Mr. Editor—by an old angling friend of a recent take of trout (50 fish), weighing about 30 lb. I ask "Kingfisher" would he not feel proud to see his name to such a day's take. I fancy seeing him return the bulk to the water, selecting only one or two fish.—I am, &c.,

A Working Man Angler.

P.S.—Alter the size of takeable fish if they are found still too small.

[After all is said, we think this short letter of "A Working Man Angler" hits the mark; there is no end of truth in it.—Ed.]

GROSS WEIGHT *v.* SPECIMEN FISH.

Sir,—J. M. D. cleverly diverts attention from the point he professes to discuss by calling in question the consistency of a member of his own society, whose personal conduct can have nothing to with the principle at stake. Writing from (and I suppose, therefore, on behalf of) the Highbury Angling Society, J. M. D. asks a question I will endeavour to answer, and makes an assertion I desire to correct. He wishes to know "If the smaller fish are returned to the stream by all the members of the Gresham?" As a rule, I know they are, but I am unable to answer for every one of some two hundred or more individuals. J. M. D. is equally unable to answer any similar query for the members of even his small society, for he has but just discovered an incident which happened, he tells us, in the summer of last year.

So far as I can make out J. M. D.'s complaint, it is that a member of the

Highbury Angling Society, who happens to be a member of the Gresham, has, in strict conformity with the rules of both societies, taken a gross-weight prize in the one case and shown specimen fish in the other, these being two distinct takes, and weighed-in, in each case, to one society only. So much the worse for J. M. D.'s argument, because, on his own showing, it is quite possible for the prize winners of the Highbury Angling Society to take fish of a respectable size; a fact he appears elsewhere to question.

There follows an imputation I need not repeat, but which I repudiate in the plainest possible terms. The Gresham Angling Society offers no encouragement for the retention of small fish; but, according to J. M. D, the Highbury Angling Society does, and a number of fish below the Gresham standard have been awarded a prize by them.

The case quoted by J. M. D. is decidedly not "a recognised thing" in the Gresham Angling Society, for this is the only instance I have known or heard of. J. M. D., therefore, need not feel again in danger of being knocked down, even by the proverbial feather, and his respiratory organs may still perform their functions undisturbed.

J. M. D's fear seems to be that if all the members of the Gresham were to devote as much attention to the retention of the smaller fish, as they do to the larger ones, there would soon be many less for himself and admirers to take, and in this I cordially agree.

If all advocates of the gross-weight system would only be as logical as J. M. D., it would soon come to an end, and I thank him very heartily for again drawing my attention thereto.—I am, &c., T. Crumplen.

London, N.W., April 17, 1882.

AN EARLY STONE-FLY.

Sir,—On the 11th of this month I caught a splendid specimen of the stone-fly (*phryganea*). Is it not very soon for this fly to be out?—I am, &c.,

Shutterskelfe Hall, via Yann-on-Tees, April 17. J. Alison.

[Very early.—Ed.]

BLACK BASS.

Sir,—A great deal has been written lately about this fish, both for and against its introduction into English waters. The chief fear seems to be its voraciousness. This, to a great extent, is groundless; for five months in the year they eat little or nothing, remaining in deep water and feeding but very little; this is from the end of November until the following April. It is when they are recovering from spawning that they are so voracious; at this time nothing comes amiss. The way that they will rush off when hooked is a caution, and the chances are that the first one hooked by a novice will escape, leaving the disciple of Isaac Walton to deplore its loss, and very likely with a smashed rod and tackle.

There are really two kinds of black bass, the *grystes nigricans* (which I had the honour to bring from America for the Marquis of Exeter), and the *grystes salmoides*; the former has the largest mouth and is thicker in the body, but they are both equally game. It is when they are spawning that they differ generally from other fish. A male trout will ascend a stream and assist three or four females in making nests, and if any ova comes in their way it is eaten up. Now, black bass pair off by themselves, and take up quarters in some quiet nook where the water is about 18 inches to 3 feet deep, with generally a bunch of weeds, or a hole to retire into when disturbed. This generally takes place in May. They commence operations by rubbing off all the mud on the bottom of the nest. This is nearly twice the length of the fish. After the eggs are deposited, they stick to the stones or weeds that are nigh, and lay in rows, as if glued together. They will hatch out in from nine to twelve days, according to the temperature of the water. It is now that the conduct of a black bass is different from a trout. The bass will guard the nest night and day, until the eggs are hatched out and all the fry disappear under stones or into the weeds. When first hatched out they are nearly transparent, and appear like a thin gauze veil floating close to the bottom. In three or four days they rise and gradually spread, and it is not until this time that the old fish leave them. During all this time the fish do not feed, and all other small fish must keep a respectful distance. This duty accomplished, they sally forth to recruit, and it is at this time that they are so voracious; and no wonder, after their long fast. But still I would never advocate their being placed in either a trout or grayling stream. The trout and grayling being the weaker fish would simply have no chance with them; but where there are plenty of coarse and small, worthless fish, there would be plenty for them to eat, and they would replace a lot of small trash with one of the boldest and gamest fish that ever rose to a fly or snapped up a worm.—I am, &c., W. T. Silk.

Burghley Park.

FISHING IN SUFFOLK.

Sir,—The following is continued from page 178 of the Fishing Gazette, of April 15:—Anglers should not pass the mills, as excellent sport is to be obtained when the mills are working. The only advantageous place to fish from is off the mill-bridge. No float is required, but a small leger placed a few inches above the hook will be sufficient; running tackle is required, as heavy fish haunt the mill pool, such as perch, roach, bream, chub, jack, &c. When your fish is hooked, it is advisable to work it towards the shallows, some 30 yards on your left. Anglers who are having a week's holiday this summer I should advise to spend it in Suffolk. The scenery is beautiful, hilly and ancient. There is a piece of water up the river called the Decoy; traditions speak of this place, where entrenchments were dug out and a pitched battle fought. The main river has found its way into the entrenchments, and bringing fish as well, which have spawned. If you enquire for Mr. Birch, he is the keeper over this decoy, and it is only through him you can fish there. I fished there last August, and had capital sport; I caught the roach as fast as I could bait my hook, in fact I caught a whole swim numbering thirty-eight, the largest was $1\frac{3}{4}$ lb. My friend and the keeper were catching bream as fast as they could pull them out; the way the floats went down was a caution. I was fishing for bream with a tight line; to my sorrow, I learnt a lesson. I hooked a bream about 4 lb., when he made for the punt and went under, and sawed my line at the bottom of the punt, the consequence was I was left bemoaning a favourite 5-yard gut line. Anglers should take plenty of jack tackle here. My friend threadled a roach and dropped the line over the punt, and in less than five minutes he had a perch of 2 lb. I am happy to say the fence months are in force here. Another hint: the inhabitants don't care to see any one fishing in the river on Sundays. I must now conclude, thanking you, Mr. Editor, for your valuable space.—I am, &c.,

A Wandering Piscator.

[We like that expression, "the scenery is beautiful, hilly and *ancient*"; evidently none of your suburban landscapes.—Ed.]

THAMES TROUT-FISHING.

Sir,—You state that "most of the Thames weirs are open to the public." I have reason to believe that upon official enquiry you will find that without exception the lock-keepers have strict orders not to permit angling from these places, and that any departure from such instruction will be met by summary dismissal. I believe there is only one gentleman to whom the Board of Conservancy have granted this privilege, and this is likewise endorsed by Captain Etheridge, with special instructions to the lock-keepers, although I believe he has not as yet availed himself of this concession.—I am, &c., Creel.

[We did not say that angling was permitted from the weir itself. Our correspondent wished to know if he could fish in the weirs for trout. He can fish the weir streams from a boat or the bank.—Ed.]

THE BRACKEN-CLOCK OR FERN-WEB.

Sir,—I enclose the pattern of the bracken-clock which I mentioned. The dressing, taken from the "Northern Angler," published at Carlisle, is as follows: "Peacock with black ostrich-harle for body, and a black hackle for legs, and the red feather of the partridge's tail for wings" (query brown); "or it may be made of a fine brown feather from the cock pheasant's breast, with a little tip of starling's wing feather at the tail to represent the underwings. The red or upper feather must, of course, be tied down at the head and tail, to give it the appearance of a beetle. The body must be made full, as above described, with a black hackle for legs." This is the dressing which is appreciated in the north. Robert Balderston.

BIG MINNOWS.

Sir,—I send you by this post a few very large minnows, some of them over 4 inches long. Had not time to get the measurement. Will you please take them and publish the different lengths, as the sizes are something unusual—at least in this neighbourhood. S. Howard.

Burton-on-Trent.

[The longest is nearly $4\frac{1}{4}$ inches, the others vary from three to four inches in length. They are very fine minnows; but Mr. J. H. Keene, who has seen them, says he has seen and previously described a catch of this beautiful little fish, some specimens of which were quite $4\frac{1}{4}$ inches in length.—Ed.]

LINES MADE OF HUMAN HAIR, &c.

Sir,—Does "March Brown" realise the width and depth of the task he would set me? I am always ready to devote my time and thoughts to the service of my brother anglers, but to comply with the queries given *seriatim* by "March Brown" would involve, at least, an expenditure of two or more days. Moreover, "March Brown" is just as capable, and, mayhap, has more leisure to enter fully into such a question than your humble servant, Creel.

THE HELGRAMITE.

Sir,—I send you an imitation of the beastie called ye helgramite, about which Mr. Gosling makes some inquiries in the Gazette of March 11th.

Hallock, in his *Gazetteer*, says helgramite or dobson somewhat resembles a centipede.

Dr. Henshall, in his "Book of the Black Bass," defines them thus:—"Helgramite, *corydalis corunta*, belongs to the order of Neuroptera; vulgate, helgramite, dobson, grampus, dobsell, kill-devil, crawler; is a curious repulsive worm that exists a long time in larva state, and is found under stones, rocks, old roots in running streams, and in decaying timbers."

We fishermen call them part bug, part beast. They have a peculiar jumping way of getting through the water, by contracting their tails under them and then suddenly straightening out, propel themselves from stone to stone along clear running streams. Against the current they seem to crawl along the bottom with their many legs.

When a Bass is hunting a dobson it is good fun to watch him, but you must be quite motionless if you wish to do so. Mr. Bass elevates his broad tail-fin and roots with his nose. He is as quick as a terrier after a rat, and his continual pushing and fanning the water seems at last to frighten the dobson for he makes a bolt for a neighbouring stone, but Bassey is too quick for him and gobbles him in.

The imitation is made of hard rubber or gutta percha, and is not a killing bait as a rule. Bass take the bait fastened to a hook better than any imitation. He is generally hooked just above the two long legs, below the crablike head. I never handle them without a feeling of repulsion, and a cold chill somehow creeps down my backbone.—I am, &c., W. David Tomlin.

Captain Alfred, 20, Moorgate Street, has been awarded a silver medal for his exhibit of fish paintings at the Edinburgh International Fisheries Exhibition.

We learn that the annual dinner of the Yare Preservation Society is fixed to take place at the Royal Hotel, Norwich, on Wednesday, May 3rd, the president, C. L. Buxton, Esq., to preside. Preference for tickets is to be given to members up to April 19; after that date such of the public as desire to be present will be served according to the seats that may be vacant. The number of tickets must necessarily be limited, so that an early application to the honorary secretary, Mr. C. J. Greene, London Street, is advisable. We have no fear about the success of the dinner, for the society is large and influential; but we trust that interest in its work will be increased, and that it may be more generously supplied than it hitherto has been with money, without which its labours cannot be as effective as all true anglers desire.—*Norwich Argus*.

The International Fisheries Exhibition.—For the purposes of this exhibition, which is to be held next year, it is in contemplation to apply to the corporation for the use of the vacant land on the Thames Embankment at Whitefriars, it being one of the very few eligible sites which present themselves for such an object. The request, if granted, would have the effect of delaying the permanent utilisation of the land; on the other hand, it would draw attention to the spot, which seems to have escaped the attention of those who may have contemplated erecting large buildings on commanding sites such as this undoubtedly is. The corporation, by granting the use of the land, would be supporting an object of even more than a national character, and would add to its historic repute in lending a helping hand to movements which have for their aim the promotion of commerce and the good of the people at large.—*City Press*.

RIVER REPORTS.

MID-THAMES.

The river has been in prime fettle for trout work during the past week, and the wind, with only a few exceptions in the south-west. At Boveney and Bray some three brace of decent fish have been had, and at Maidenhead six or seven fish, amid which number was a beauty of 7 lb., taken by a patron of the veteran "Kingfisher," Harry Wilder. From Cookham two beauties, not quite in their teens, have eloped with separate gay Lotharic piscators, but there are plenty of spotted relatives who are not left lamenting, and who are only too eager not to "leave well alone." The Marlow fishermen have all been busy, and White is so far credited with the best take of the season, having had six fish from Hambledon and district, the best fish going 7 lb. odd. At Henley, I glean that Mr. Halcomb has taken a trout of 4½ lb. near Bolney Court, by spinning a lobworm, and Mr. A. C. Johnson lost a 9 lb screamer and another unguessed-at weight by his "Bell's Life" parting with its thread of existence at the last gasp of the fish. At Henley I hear lately there is every chance of establishing soon a perfectly sound and business-like protection society for those glorious waters—it has long seemed a sin that such a hiatus should have exieted on the Thames between such energetic associations as the Great Marlow and Reading. The High Wycombe Trout Preservation Association recently held its annual meeting, and has made new laws, regulations and subscriptions, and phœnix-like, will rise from the ashes of its great and recent loss. Thursday evening: weather glorious; wind—a glorious soft west; water—a glorious tint.—Marlow Buzz.

Ballynahinch.

This week has been much better for angling than the two previous. To-day we have quite a spate, and every appearance of more rain. Lord Douglas has fished these two days; got one salmon yesterday and lost another. Mr. R. Mecredy, sen., got one early in the week about 10 lb. Wind south and south-west since the 16th inst.—Walter Blackadder.

Coquet (Weldon Bridge).

On the 13th and 14th the river was flooded, running from bank to bank, and on the 16th came down to her level. On the 17th four fishermen started, expecting good sport, but about ten o'clock the river came down a black colour, with the snow melting on the hills; it made the sport very poor. The only basket was Mr. Oliver, the curate, Longhorsley, 7 lb.; Mr. Marsh, Durham, five and a half brace; Mr. Nelson, Newcastle, three and a half brace, Mr. Swinney, Morpeth, four brace. On the 19th Mr. Wood killed a good basket, 6 lb.; Mr. Murray, West Moor, six brace. The water is a good colour for minnow.—A. Glass.

Dove.

The weather keeps very unsettled but our river is not in bad order, and though sport this week has hardly been up to the average of previous seasons about this time of the year, still anglers have by no means gone unrewarded. The biggest dishes of trout have been secured in tributary brooks, the Manifold and Henmore proving the best. The apple-green shade of the olive dun, and the March brown have been the most destructive flies. The May fly is beginning to appear in sheltered places, but I do not think it will come out generally before the middle of May, especially should the present raw weather continue. There are a great number of salmon "picking" about at the Dove's junction with the Trent, and several have been captured lately in the Notts river; amongst others, Mr. John Heard, a well-known devotee in the "city of lace," getting hold and landing a seventeen-pounder the other day.—The Splodger.

Exe (Exeter).

Having been so much engaged during the past fortnight I really have been unable to send on reports; at the same time, no information has been lost sight of. We have had some heavy floods during that time, perhaps the heaviest we have had during the whole of the winter, if we may so call it, but of which, in reality, we have had none. These floods have completely swept all the ketts and slats seawards, and myriads of smolts, which previously were a great nuisance to the trout fishermen. Several fine salmon have been taken respectively by Messrs. Coucher, Pearson, and G. Lee; but during the past week sport has been at a standstill. A few trout have been taken from the dirty water with the worm and real good ones they were, averaging half a pound each. I was out on Thursday last with a friend fishing the Teign, who, in the short space of twenty minutes, secured six splendid trout, the largest weighing half a pound, when we were overtaken by a tremendous storm lasting over two hours, which completely spoilt the remainder of our sport, which probably would have proved a great success. As soon as the weather settles—which it is not likely to do for a few days from all appearances—we may expect something worth catching and recording; at the same time one need never be daunted whilst we have such comforts as "Strawson's waterproofing" and "Steed's invaluable corn killer."—Frank Gosden, Exeter.

Exe (Tiverton).

The river is now in excellent condition for fishing, and very fair baskets are being made. The flies killing best are the usual ones for this season of the year, viz., iron blue, blue upright, green tail, aller bud, and halfstone.—Wm. Mudford.

Ilfracombe.

There is good fishing now to be had at the reservoir, and the streams are in excellent condition for trout and eels. Sea fishing is still very slack, a few boats out, their catches of fish average about 10lb. per boat per tide of tamlin, cod and whiting. Sunday five crabs were taken from the rock at Killage. Monday, four crabs, two lobsters, from pots set outside the harbour, and nineteen crabs from holes, seven from the rocks between the jetty and Capstone Parade, seven from rocks between Rapparee and Hilsborough, and five from Beacon Point. Pollack are larger and more plentiful, and good sport can be had for them, also for whiting, pout and dabs from the pier and jetty with rod and hand lines; weather still very fine.—E. Comer.

Swale.

I was unable, owing to holidays and press of work, to send off my usual report last week. The loss to the readers of this journal will, however, be a slight one, as owing to the generally unfavourable state of the weather during the Easter vacation, the catches were very moderate. The best dish was by an old friend of mine, who, by request, shall be nameless. He had thirty one day, all taken with the fly; the best fly was the March brown, the others light and early browns and royal Charlie. He had other catches of two figures, these were all caught with a batch of flies that I sent him as an Easter gift. Your correspondents, Mr. Editor, often get into hot water. If we report anything good there is forthwith a rush to the place, or a dozen applications for permits to gentlemen named. A complaint comes from Swaledale that owing to my notes several anglers went that way last season, and some of them did not care what they did. They broke fences, trampled down mowing grass, left open gates, and defied the landowners. This is, to say the least, a very unworthy return for the trouble we take for their benefit.—Thomas Ford, Caistor.

Taw and Tributaries (N. Devon).

The small streams are in good condition. The Taw and Mole are too thick, and water high. It is almost impossible after the floods to find any kelts left. New salmon are in the Taw, and are daily seen trying the weirs. Good fishing will be had for some time, as the waters are up. Some good fish were taken in the river Yeo the last week. Mr. Dennis got two dozen and six; a gentleman fishing the higher part of the Yeo with minnow got two dozen. Some dishes, but small, were taken in Barle and Exe, but there has been too many rods out; this station seems to be overworked. Good fishing will be had in the Taw, either at Eggesford (Fox and Hounds Hotel) or Southmolton Road (Fortescue Arms Hotel), This station is on the London and South-Western Railway, and it is perhaps the best in the neighbourhood; tickets 2s. 6d. a day, landlord's name Harris. A Mr. Beagley got thirty fish from the Bray Monday and a dish since. I heard of a gentleman spinning with a leaded minnow in the Taw in thick water and got an hitch, but after hauling and tugging for an hour found he had hooked another minnow.—Rusty Game.

Test (Hampshire).

Wind very changeable, and rather too strong. Plenty of fly on daily from about twelve to two p.m. The grannom has been up strong at Stockbridge for last few days, and fish took them very well; to-day being very cold, not one was to be seen, consequently very little sport. A lot more rain is wanted before the weather becomes settled. Last week Mr. Fry had very fair fishing on Bransbury Water, in two days he killed seventeen fish, and put back several under sized.

P.S.—The printer made a bad error in my last, he makes me say I caught twenty-seven dace, instead of twenty-seven brace—trout, of course.

Thames (Maidenhead).

Trout have been showing themselves again; there has been a quantity of small ones taken, the greater part returned. Captain Haynes, with Harry Wilder, came down and took the trout that has been feeding so long at the top of the island. It was a beautiful Thames fish, all 7 lb. I saw him after it was taken. I believe there is another fish quite as large within twenty yards of the same place. I should think with nice mild calm weather there will be some good trout taken, for I believe there are as many trout in our neighbourhood now as there are jack, and some rattling good ones.—R. Plummer.

Thames (Walton).

The only take that I have heard of is one trout of 4 lb. by Mr. Luckin, at Sunbury Weir; but not only have I seen several disporting themselves, but I hear from several sources that there is every chance of getting a good fish for the trying. Geo. Hone says he knows where to put any clients on the trail, and only waits his time. Referring to the perch ova, I am pleased to say that it is now quite safe from its enemies the swans, and all anxiety on the part of that very energetic and painstaking fisherman, Geo. Hone, is over, and he has been enabled to take his nights' rest in peace. The weather is improving, and I hope to have a better report to send you as to the trout shortly.—Henry Wood.

P.S.—After sending you my report, I learn that Mr. Bishop, of the T.A.P.S., with John Rosewell, has hooked a fine trout of 5 lb., at the Tumbling Bay, after twenty minntes' play. J. R. says he saw three others at Walton Bridge.

Tweed and Teviot.

During the past ten days only some half dozen salmon have been killed—three on the Lower Hendersyde water by Mr. James Kerss last week, and one on Monday by Sir G. Macpherson Grant, of Ballindalloch Castle; and one by Mr. T. Pringle, Kelso. While on the Sprouston water a brace of fish fell to Mr. Charles Kerss. The Floors Castle waters have not been fished for a fortnight, and the reports from all the other casts are that salmon killing is *nil.* Trout anglers, however, have been getting rare sport, killing baskets of from 3 lb. to 12 lb., the best baskets, generally, being got in the Teviot, although one of fully 10 lb. was got with "creeper" in the Tweed. To-day angling has been put a stop to by a three-feet flood—much desired and anxiously looked for—and capital sport is sure to be got once the river subsides. The weather is fine and mild, with the wind southerly.—Maxwheel.

Wye and Derwent.

Both rivers are now in first-class order for all kinds of angling. Sport during the past week has been very good on both the Wye and Derwent, and baskets from four to nine brace per angler have been made off the Wye between Bakewell and Filleford Bridge. There has also been some good dishes killed off the private water (the Rowsley Meadows length). The fish have been killed chiefly with the claret body bumble, red and spider flies, the bumble killing the greatest portion of fish. The disease is still very bad in the Wye amongst the grayling; great quantities of fish, both dead and dying, can be seen all up and down the river; also a few trout are affected. We have very many anglers down here fishing on the Wye; last Tuesday I counted nearly twenty anglers on the Wye, fishing between Bakewell and Rowsley. The Wye gets sadly too much over-fished. Sport on the Derwent, from Baslow down to Matlock Bath has been very good, both with fly trolling and bottom fishing with the worm; and many trout over 1 lb. each have been killed, chiefly with the worm, one gentleman taking six trout that weighed over 6 lb., the largest fish nearly $1\frac{3}{4}$ lb.; these fish were killed between Rowsley and Darley Bridge. There has also been some good sport had by fishing off of Darley Bridge, with the worm; also down at Matlock Bath, in the deeps, one of the natives taking a fine trout of 20 oz., besides several other locals taking trout from $\frac{1}{2}$ lb. each to over 1 lb. Sport, both in the brooks and ponds, has been very good, one gentleman from Norfolk killing twelve brace of trout off of the ponds last Saturday afternoon. Then, again, on Friday evening, the same gentleman took six brace of trout, all with March brown and red spinner flies. —George James Eaton.

P.S.—Would you kindly inform me where I could get from 50 to 100 brace of small pike, from 4 to 8 inches long, for stocking a river with.

Yore (Yorkshire).

As usual in this district, anglers have held a great carnival during the Easter holidays, but I regret to say that owing to the rivers being exceedingly low and clear, bright sunshine, and cold easterly winds, the success of neither visitors or local fishermen has been remarkable. The best dishes have been made with the worm or the stone fly creeper, which has made its appearance sooner than usual this season; in fact, I have seen two hatched stone flies on the Yore this week, a thing I never remember seeing before so early in April; the trout, however, do not take the creeper yet as they should do, coming "short" at it; but a shower or two of rain would greatly improve angling generally, and to-night (Wednesday) there seems every prospect of rain, when rising at fly (which has only been for an hour or so in the middle of the day) the fish have showed a decided preference to March brown and "woodcock and orange," with which flies I made a fair dish yesterday. Mr. Wm. Pickard, of Ripon, and R. Coldbeck, of Tanfield, have also done pretty well considering the adverse state of both water and weather.—Francis M. Walbran.

CLUB REPORTS.

BOSTONIAN ANGLING SOCIETY.

On the 12th, Mr. Jennings was elected secretary to this society, to whom all further correspondence must be addressed.—J. Jennings.

DUKE OF CORNWALL.

The annual return visit took place to the above club on Tuesday, the 11th inst., and was well attended, seven clubs were represented, and under the chairmanship of Mr. Jennings, of the Bostonians, faced by Mr. White, of the Brentford, a very pleasant evening was passed; the chairman, vice, and Messrs. Holmes, Harold, Hyde, Carling, Brown, Amies, Heckford and others with the worthy host, Mr. McClure contributing to the harmony.—J. Heckford, sec.

GREAT NORTHERN BROTHERS.

We had a good attendance at our concert on Wednesday last, Mr. G. Bentley in the chair, Mr. J. Dingley, vice. Mr. J. B. Leno gave some excellent recitations, and was greatly applauded. The following gentlemen also contributed to the harmony:—Messrs. J. Bentley, J. Dingley, Marley, C. Watling, Neale, J. Fitch, Littlewood, &c. Mr. John Bedford Leno will take the chair on Wednesday next, faced by Mr. Morley.—J. Fitch, jun., sec.

GRESHAM ANGLING SOCIETY.

The usual meeting of this society was held on Thursday evening, S. C. Harding, Esq., in the chair. The secretary announced that Dr. Brunton had weighed-in five trout, weighing 12 lb. 13 oz., the largest 3 lb. $2\frac{1}{2}$ oz., all of them landed without net, gaff, or any artificial assistance. Mr. Young also weighed-in. Mr. Crumplen stated that he had attended a meeting of the Anglers' Benevolent Society's Committee on Wednesday evening, when two extremely distressing cases coming under notice, were promptly relieved, and all the members might be assured that the subscriptions really went in aid of the objects of this very laudable institution. Some additional contributions went into the society's box, and the hope was expressed that all angling societies would aid so good a work. Mr. Geen, who was present, having been introduced by Mr. Crumplen, was very warmly welcomed, and responded very kindly to the welcome he received. A letter signed "J. M. D." in last week's Fishing Gazette was referred to, a full and satisfactory explanation being given by the member concerned, and the subject dismissed amid much laughter. The proceedings closed (after a little music) with a hearty vote of thanks to Mr. Harding, who was sincerely congratulated on recovery from his late severe illness.

KELSO ANGLING ASSOCIATION.

The annual spring competition in connection with Kelso Angling Association took place on Monday. The competition was confined to the open water on Tweed, Teviot and tributaries. The rains during the latter part of last week brought the rivers down in flood, but the dry weather of Sunday caused a rapid subsidence to take place, and on Monday morning the streams were in first rate condition for angling, although the air was very cold. In addition to the usual list of prizes, a reel and line and fishing-tackle book, valued at £1, were kindly given by J. J. E. Brown, Esq., of Rosebank, a gentleman who takes a hearty interest in the angling association. The weighing of the baskets took place in the White Swan Inn, between seven and eight o'clock on Monday night when the prizes were awarded as follow:—1. The association rod for heaviest basket of trout—John Steel, Kelso, 10 lb. 12 oz. (Teviot). 2. Pair of fishing stockings for second weight—David Brown, 9 lb. 12 oz. (Teviot). 3. Reel and line for third weight—Robert Robertson, 7 lb. (Teviot). 4. Fishing-tackle book for fourth weight—Anthony M'Cutcheon, 6 lb. 14 oz. (Tweed). 5. Basket and belt for fifth weight (given by Mrs. Beverley, White Swan Inn)—William Lamb, 6 lb. 7 oz. (Tweed). 6. Tackle book and flies for sixth weight (given by Mr. G. Allan, fishing-tackle maker, Kelso)—Thomas Walker, Sprouston, 6 lb. 5 oz. (Tweed). 7. Tackle to the value of 5s. for the best half-dozen—Robert Robertson, 3 lb. 12 oz. 8. Tackle to the value of 4s. for heaviest trout—J. Beattie, 1 lb. 8 oz. (Tweed). Thirteen baskets were weighed. Minnow and fly were the principal lures used. After the weighing the usual social meeting of the members took place in the White Swan.—Mr. John Croall, the vice-president of the association, in the chair, the croupier's chair by Mr. N. J. Mills. The usual loyal and patriotic toasts having been duly honoured, "His Grace the Duke of Roxburghe, patron of the association," was given with musical honours, as was also that of Sir George S. Douglas, Bart., of Springwood Park, as "President of the Association." The other toasts proposed were—"Successful competitors," "Secretary,' responded to by Mr. A. Steel; "Unsuccessful competitors," responded to by Mr. George Lees; "Chairman," by the Croupier, &c., &c. During the evening the harmony of the meeting was enlivened by songs sung in capital style by the chairman, and Messrs. Mills, Steel (secretary), Abbleck, Gibson, sen., and other members, and altogether the meeting was one of the pleasantest and most harmonious the club has held for several years, the discordant element being thoroughly awanting. During the evening the chairman suggested that the club ought to be represented at the Fisheries Exhibition to be held in London next year, and the members were invited to send into Mr. Steel, the secretary of the club, any specimens of fish (of whatever description), that might be thought worthy of stuffing and setting up. The idea was warmly taken up by the members, and Mr. Archibald Steel, the secretary intimated that as he would have a case at the Exhibition on his own behalf, he would be happy to set up and stuff any specimen forwarded to him from members.

LIVERPOOL ANGLING ASSOCIATION.

Our members have done but poorly so far this season. The opening day for trouting was fixed for the 28th February, in the river Vyrnwy, at Llanymynech. The weather was most unpropitious, heavy rain having fallen previously, and when we arrived at the scene the river was simply a rushing torrent of pea-soup, over which it was utterly futile to cast a fly, and but three small fish were taken with the worm. We had another excursion on March 14, the last day of the open season for coarse fish, the scene of operations being the canal at Rufford; but disappointment and failure again attended our efforts, and an almost blank day resulted. The weather at our Easter outings was anything but favourable—the bright sun, clear water, and cold east wind being all against fly-fishing, and in consequence the returns were generally very light. The heaviest creel was 8 lb. 6 oz. and best fish 1 lb. 6 oz., by Mr. F. Roberts, from the Kent: the next heaviest creel 2 lb. $13\frac{1}{2}$ oz., and best fish $14\frac{1}{2}$ oz., by Mr. R. Eelinger, from the Vyrnwy and Tanat; one trout, 10 oz. and one 5 oz., by Mr. R. Woolfall, from the Derbyshire Wye; two trout, $8\frac{3}{4}$ oz., by Mr. J. Evans, from the Tanat; and one trout, 6 oz., by Mr. Lofthouse, also from the Wye. These are poor results, considering the good waters that were covered; but we had fine holiday weather, and must not grumble, but look forward hopefully to better luck next time, which is the true angler's infallible comfort under these circumstances.—Rd. Woolfall, hon. sec.

April 18.

ORIGINAL CLERKENWELL PISCATORIALS.

A special general meating of the above society was held on Tuesday last. Mr. Murray, chairman of the central association, in the chair, for the purpose of knowing who were members, revising rules, and on other important business, and not one of the members present gave any intimation that they would withdraw from the society, therefore the statement that five had joined another club must be false. A complimentary visit will take place, of which due notice will be given.—Thos. Wm. Lucy, sec.

THE CAMBRIDGE FRIENDLY ANGLING SOCIETY.

The fourth annual dinner of the above society took place at the club house, the Rent Day, Cambridge Street, Hyde Park, on Thursday, the 13th inst., and was in every way a great success, forty-seven members and friends sitting down to an excellent dinner, provided by our worthy host and hostess (Mr. and Mrs. Chandler), the chair being taken by our much esteemed member, Mr. Townsend, faced by Mr. Baxter in the vice-chair, among the visitors present being Messrs. Geen, Bonvoisin, and Hoole of the West Central Association. After the toast "The Queen and Royal Family" had been drunk with applause, the chairman then proceeded to distribute the prizes; the fortunate winners, of which were Messrs. Welch, Warsop, Gower, Dobell, Colson, Ramsey, Jeffries, Self, Wicking, and Lovegrove. The remaining portion of the night was then devoted to harmony, several capital songs being sung, more especially those by Mr. Hart, jun. During the evening Mr. Sutch gave several selections on the violin, accompanied by a friend on the piano, which were much appreciated. Shortly before two o'clock the company broke up, every one thoroughly enjoying the night's entertainment. During the evening your humble servant was presented with a very handsome roach rod subscribed by the members. Total weight of fish taken during the season 889 lb.—W. Sutton, sec.

April 19th.

WALWORTH WALTONIANS.

The annual dinner of the above society will take place on May 17, on which occasion Mr. J. S. Weatherhead will preside, assisted by Mr. H. Bayley, the following gentlemen will act as stewards:—Messrs. Schwartz, Renault, Brown, Grigg, Sutcliffe, and Russell. The gross weight of fish taken during the past season amounted to nearly 650 lb. Considering that very few of the members weighed more than twice or three times during the season, the gross weight is not so bad, and those gentlemen who have succeeded in getting two figures to their gross have been handsomely rewarded, three figures falling to the lot of two members only, viz., Mr. Boalch, with about 137 lb., and Mr. Weatherhead 133 lb. Among the various prizes that are on view, at the St. Paul's, are a handsome work of art in silver, value £10 10s., given by Mr. Schwartz, and won by Mr. F. Grigg last September. There is likewise a large portrait taken and given by Mr. F. W. Evans of Mr. Tom Pearson, who succeeded in winning it last July; a diamond ring given by Mr. Renault and won by Mr. C. Beale; and among numerous other articles is a handsome illuminated floral musical album with the portrait of the donor. Mr. Bayley was appointed the thirteenth to attend the West Central Committee on its next meeting as the representative of this society.—Pixie.

April 18.

WESTBOURNE PARK PISCATORIAL SOCIETY.

On the 9th inst., Messrs. Garham and Reed succeeded in getting a trout each from the Colne; on the 11th, Mr. T. Stevens also weighed-in the largest at present, 2 lb. $14\frac{1}{4}$ oz., also from the Colne.—H. Adeane.

April 12.

PROTEAN ICHTHYOLOGY.

Of all sports, the gentle art of angling is followed with the least apparent infliction of pain. Fishing is called the gentle art, because, in pursuing it, it is the sport that least shocks the sensibilities of a gentle nature.

Rabbits, hares, birds, vermin and large game, when they are dying a violent death, struggle to get away, cry out, have a terrified or mournful look in their eyes, their eyelids are half-closed, and they breathe with difficulty, and when they are dead they look rumpled and dirty; but a fish's struggles and breathings are so different from our movements that his object is not so clear to us—he gives no expression of pain by voice, his eyes during the periods of his dissolution are without expression, and when he is dead he looks neat and handsome.

I have known fishermen take a dislike to eel-fishing and pike-fishing, from having to divide the spine of the former and cut out gorge hooks from the latter; and the gentleness of Walton's nature, taking Walton as the type of a fisherman, is shown by many passages in his book, which I have more than once read with pleasure, and hope to read again.

The most amiable of men is liable to show some failing, and, in reading Walton, a suspicion crosses one's mind that he is writing with much complacency when he is telling his listener the marvels of fish, and that the contentment of his mind would have been much disturbed had he learnt that most of his stated facts were fictions. Most of his facts, although they were accepted as facts then, are discredited now; but if he were writing at the present time, and had to abandon his list of wonders, he would have no difficulty in compiling another catalogue of far greater interest.

He might tell us that the first undeniable evidence of a vertebrate animal is that of a fish, occurring in the Upper Silurian Rocks, in a bone bed of the Downton sandstone, near Ludlow.

He might observe that some fish live about the sea-level, with an atmospheric pressure of about 15 lb. per square inch, and that others live at a depth of 2500 fathoms, with an atmospheric pressure of 2½ tons per square inch. He could then turn to the naval and military intelligence of the *Times*, and find that Colonel Maitland, dealing with a shot of 462 lb., by putting a ring of metal upon it retards its delivery, and retains the powder in the chamber of the gun until it is sufficiently fired to set up a pressure of 2 tons per square inch, when the shot starts with a bound.

Günther, in his admirable work on fishes, to which I am indebted for nearly all the statements I make, speaks of other fish living at an elevation of 14,000 feet above the level of the sea, so that the world, in its heights and its depths, is stocked with fish better than it is stocked with any other class of animal.

The developments of fish in various directions are most interesting; for instance, the flying gurnards and flying herrings, the latter taking a flight of 500 feet, at a speed exceeding considerably ten miles an hour, and taking longer flights against the wind than with it. According to Günther, flying appears to be a wrong expression, the long ventral fins merely acting as a parachute. Günther is so exact, that it must be accepted that flying fish do not fly; but I have observed, when barbel prime, that you can hear a fluttering of fins; and I think I have seen the pectorals vibrating. You hear the same fluttering noise when a trout is pulled violently out of the water without playing it.

Besides flying fish, there may be said to be a sailing fish, for the sword-fish's anterior dorsal rays are very long, so that they project beyond the water, and the fish, when quietly floating, can sail before the wind like a boat. There are the gurnards, who walk about with their three finger-like processes under the water,; and there are other modes of progression which fish adopt on land. One in Queensland is in the habit of going on land, or, at least, on mud flats; and, besides gills, is provided with a lung for breathing air, should it voluntarily leave the water, or the water become too impure, or be dried up; in the tropics, there are fish with eyelids, that leave the water and hop freely over the ground, hunting for small crustaceans left by the tide; there is the Malay tree-climbing perch, which has the faculty of moving for some distance over land, and has been taken on a palm tree, five feet from the ground; certain South American fish make a night's journey from one piece of water to another, and in such numbers that, when the emigrants have been met, many baskets have been filled with them. Günther mentions another fish that makes the same journeys, and the American mud-fish which can breathe air.

Several kinds of fish are able to live through the dry season in cavities they form in mud. One in Africa lines the cavity with mucus, and has been imported to Europe in the clay balls containing it; the Indian snake-headed fish survive a drought at the bottom of a tank from which every vestige of water has disappeared; and, in New Zealand, there is a fish which is mentioned to have been only found in mud or clay burrows at a distance from water.

I think it worth putting on record, as an instance of the vitality of the roach, the case of a large one being taken at West Drayton, and, having been kept in a bag all day, and shown at a club, was brought home, when the daughter of the gentleman who took the fish noticed that it was alive, and it was placed in water. The next morning it was alive, and was taken back to West Drayton and returned to the Colne.

Some Indian fish, in addition to gills, have a lung-like sac on each side of the head.

One more mode of progression should be mentioned, that is by means of suckers placed either under the throat or on the top of the head, and the fish, attaching themselves to sharks, turtles, and ships, so get carried about.

As to the means of attack and defence of fish, there are the electric organs. The electric rays stun or kill their prey, and are able by a single discharge to disable a full-grown man; there are the electric cat-fishes, not uncommon in Africa, and the electric eel, the most powerful of electric fishes. What is much more interesting, there is in the Nile a fish, which was once sacred, which has on each side of its tail an undeveloped electric organ, representing a transitional condition from muscular substance to an electric organ.

Sword-fish have a weapon three feet long, and three inches in diameter at the base. In the British Museum there is a two-inch plank of a whale boat with the broken sword in it. Saw-fishes have a saw six feet long, and one foot broad at the base, with the teeth or the saw implanted in hardened integuments, with which they tear pieces of flesh off an animal's body, or rip open its abdomen. A shark can bite a man in two. A shark's tooth has been found four inches wide, by five inches long; and as a shark has about twenty-six teeth in a row in each jaw, your imagination may build up the fish, that, happily for everyone but himself and his pilot fish, is dead.

The sting rays with their barbed spine, give extremely painful wounds, which have frequently occasioned loss of limb. The weevers make poisonous wounds with their dorsal and gill spines, and on the coast of Central America there is a fish, similar in appearance, with a perfectly developed poison apparatus of the same form as the hollow venom fang of a snake, with a poison bag at its base. There are the surgeons, with a lancet on each side of the tail; the globe fishes, or sea-hedgehogs, covered with strong spines, who, when frightened, inflate their bodies with air. One of these fish has been found alive and distended in the stomach of a shark, and has been known to eat its way out of it.

In tropical America, there is the Caribe, which has played its part in more than one novel, a fish never exceeding two feet in length. They have lobed incisors by means of which they cut off a mouthful of flesh as with a pair of scissors, and any animal falling into the water is attacked, and cut to pieces in an incredibly short time. There is also a tropical eel with formidable dentition, the longitudinal slit of whose mouth is six times the length of the distance between the eye and its nose; and there are the file fishes, who can bite off a piece of coral, or chisel a hole through an oyster shell.

The "Challenger" dredged up from great depths, to which sunlight could never penetrate, fish with a series of luminous phosphorescent spots along the lower side of the head, body and tail, or in front of the snout; in one, the eye is obliterated and replaced by a large light-producing organ, and another has phosphorscent organs in front of the eye. These organs, although lens-like, are not accessory eyes, but emit light as light is sent through the convex glass of bull's-eye lantern. Another peculiarity of these deep-sea fishes is that they have a stomach so distensible, that they can swallow a fish twice or thrice their own bulk; one specimen, four inches long, contained a fish seven and a half inches long and one inch in depth.

It is worthy of remark how many fish are mentioned as having noticeable appliances for hearing, such as the air-bladder communicating with the organ of hearing, or having skin or very thin bone where the auditory organ approaches the surface. The blind fish of the Mammoth Caves of Kentucky, has its loss of vision compensated for by the acuteness of its sense of hearing. There are some blind fish in the subterranean waters of the caves in Cuba, and some of the deep-sea fish are blind. In some cases, where their eyes are not much used, the organs of touch are greatly developed, taking the form of filaments twice as long as the fish.

As opposed to the blind fish, in the West Indies there is a fish habitually swimming half out of water, with each eye perforated with two pupils, and thereby seeing both above and below the water. It is wonderful that flat fishes, when young, should be perfectly symmetrical, with an eye on each side of the head, and swimming vertically, like other fish; and that, when they commence to rest on their side, the eye that would be underneath pushes its way through to the other side.

Some fish carry their eggs about with them like shrimps; with many sea fish, the males have pouches, within which they take care of the eggs, and some carry them about in their mouths. There is one fish with pouches like a monkey; another feeds on small flies, and takes its prey by throwing a drop of water at it. The fishing frog has an extraordinary ring-bolt joint to his fishing rod, as may be seen in the Westminster Aquarium; a small goby, who lives only a year, is the first instance of an animal vertebrate; the grey mullet, feeding in mud and sand, has a filtering apparatus; many fish build nests like birds, and their colours, in their beauty, can only be compared to those of birds; and a small Siamese fish is kept for fighting, as game cocks used to be.

The viviparous fish are remarkable: Agassiz describing the development of the embryo as a normal ovarian gestation; and in many of that kind of fish, the anal fin of the male is modified into another organ, more strictly appropriate to its sex.

There are some fish scaleless, others are literally cuirassed; some fish have microscopic scales, and the scale of a mahaseer is sometimes as large as the palm of a hand. There is a fish so fat that it can equally well be used as a candle as for food; another walking leaf of a fish imitates, in colour and appendages, the seaweed it frequents; there is a fish that makes for itself a home in the cavities of other marine animals; and in Brazil there is a fish that takes an unwarrantable liberty with gentlemen when they are bathing, causing intense inflammation, sometimes with fatal results.

As to the salmonoids, for Londoners, the most noteworthy record in Dr. Günther's book is that salmon and sea-trout come every year to the mouth of the Thames for permission to go up.

The lowest form of fish, the launcelet, has no brain, no heart, no colour in its blood, and no jaws; and the early progenitors of man, according to the evolutionists, must have been aquatic in their habits, from the lungs consisting of a modified swim bladder, the embryo showing where branchiæ once existed, and the lunar or weekly periods of some of our functions retaining traces of our primordial birthplace, a shore washed by the tides.

I ought not to conclude without expressing the pleasure and admiration I have felt in reading Dr. Günther's work, an extremely small book for the matter it contains, a book which might be termed, referring to one of its illustrations, a *Chiasmodus niger* of a book, containing the *scopeloid* of erudition. H. M. P.

NEW FISHING STATION ON THE YARE.

"A house, where the accommodation is good, cleanly and punctual, is a delight to the angler not too frequently met with by him. Often he finds the condition of things far from commendable. In some instances the boats are in the same uncleanly state as they were when last vacated by a negligent party of anglers, stale bait and other refuse, cast by during the day, strewing the seats and floor, while the nose gives the unpleasant information that some discarded fish had fallen beneath the floor boards, and were there decomposing. Happily, however, for the comfort of the angler, a considerable improvement has lately taken place in the provision made for them at the various fishing stations in the county, though there are still some noteworthy instances in which the tempers of piscators are ruffled, by being obliged, before starting down the river, to perform the unpleasant task of removing the dirt mentioned above. The universal interest now taken in piscatorial pursuits—an interest surprising from its universality and almost abnormal enthusiasm—has no doubt been the cause of this improvement, as now many more visitors are to be met with at the fishing stations than was formerly the case. So great has been the growth in the numbers of those who practise the art that any effort to provide the accommodation required must be acceptable, and many will be gratified to hear of the establishment of a new and commodious fishing station in a most suitable and convenient place. The new venture to which we refer is the scheme now in course of being developed at Brundall by Messrs. Flowers and Co. This station, with which considerable progress has been made, occupies twelve acres of land immediately adjacent to the railway, and extends to the river's bank. The river there is much frequented by anglers, and is well stocked with fish, being close to a couple of prolific breeding grounds, Surlingham and Rockland Broads. The site of the new station, which was until recently a swamp, intersected by several dykes, is being raised and made firm by a covering of good soil upon a foundation obtained by means of faggots, &c. It is contemplated, ultimately, to beautify the grounds by laying them out in gardens and walks, but at present time has not permitted anything to be done in this direction. The principal dyke, which has been widened and deepened to the necessary extent, leads up to a spacious yacht and boat-house, measuring 50 feet by 60 feet. There are two other dykes intersecting the ground, and these are being widened and deepened for utilisation as harbours, wherein yachts and other craft can lie with safety. It is also part of the scheme to erect an hotel on the grounds, wherein visitors may find accommodation when staying in the locality. What, however, is one of the most pressing wants of anglers is a better class of boats, wherein the attitude of a person sitting may not be worse than that of a person in the stocks, and less productive of cramp and other unpleasant sensations. The Yare Preservation Society has done much to effect an improvement in this way, and Messrs. Flowers are following in the same direction. Already they have afloat several new boats of an approved pattern, and workmen are being engaged in the construction of others. As we have said, the site is singularly suitable for the purpose of a fishing station. A quarter of a minnte's walk from the railway station lands the excursionist at the boat-houses. Anglers alighting at Brundall Station have hitherto found the walk to Coldham a tiresome journey, encumbered as they are with their tackle and bait, which latter, with roach and bream fishermen, is always a serious item of their luggage. Of course an enthusiastic disciple of Walton ought to be prepared to endure any amount of trouble and toil in order that he may practise his art. But this curtailing of the journey will be to him a pleasant and appreciated fact. There is a supplementary part of the scheme by which its financial success will doubtless be considerably enhanced. The land secured has a frontage on the railway at the station about 400 yards long. This frontage is to be used as an advertisement station, and already the advertisements of several firms meet the eyes of the immense numbers of railway travellers to Yarmouth, Lowestoft, &c."—*Norwich Mercury.*

CLUB AND OTHER JOTTINGS.

By L. B.

Much important business was transacted at the special and well-attended committee meeting of the West Central Assocition of London and Provincial Angling Societies, held at the Portman Arms, Great Quebec Street, Baker Street, on Friday evening last, not the least pleasing item being the enrolment, subject to the approval of the next monthly meeting of the association, of a new society, viz., the Nelson.

The annual dinner of the Cambridge Friendly Angling Society proved a perfect success, between forty and fifty members and friends sitting down to do justice to the capital spread provided by host Chandler and his better-half. I refrain from giving particulars because I understood Mr. Sutton, the worthy secretary, to say he would duly forward same to the angler's representative organ, the Fishing Gazette; but there's just one little item I should like to give prominence to in these "Jottings," viz., the presentation to the hard working secretary, Mr. Sutton, of a splendid roach rod, with a suitable inscription in recognition of his long and valuable services. A better deserved mark of respect and appreciation was never given, and the more club secretaries of Mr. Sutton's stamp we have, the better it will be, not only for clubs and club men, but for angling interests generally.

The application made by Mr. T. Hoole to the authorities of the Great Western Railway Company has been favourably entertained, and the new station, Tilehurst, between Pangbourne and Reading, will be added to the list of stations to which cheap travelling tickets are issued to holders of privilege cards of any of the three associations. Bravo, Mr. Hoole! the first fish I catch at Maple Durham I'll drink your very good health; and so, I feel sure, will Mr. C. P. Wheatstone and a number of other anglers whose favourite reaches of the grand old Thames will now become easy of access.

I took a walk down to the Welsh Harp Reservoir, Hendon, the other day, and had a long talk with Sawyer, the keeper of this splendid sheet of water. From him I gleaned that the fish—jack, bream, carp, &c.—are very forward, and that the shallows and weedy corners are alive with them. I was very pleased to hear that a second batch of over one hundred stock jack, ranging from 3 to 4 lb., have been turned in, while yet a third and much more numerous batch are shortly to be fetched by Mr. Sawyer from—but no, I suppose I musn't say exactly where from—at all events not a hundred miles from Oxford. Subscribers to this water will be glad to hear of this infusion of new blood; for in truth the jack-fishing in this famous fishery has, during the last season or two, fallen very far short of its usual standard.

The next No. 2 district West Central Association return visit will be paid the City of London Anglers, Codger's Hall, Bride Lane, Fleet Street, on Wednesday evening, May 3.

A meeting of the full committee appointed by the three metropolitan angling associations, to rent, preserve, and stock waters, met at the Star and Garter, St. Martin's Lane, W.C., on Monday evening. A capital code of rules, drawn up by the sub-committee, being submitted and, with two or three slight alterations, passed, the meeting being adjourned till next Monday evening, when the election of officers and executive committee will take place. There are already two or three good stretches of water spoken of, and directly the officers have been elected, and the executive duly constituted, I think we shall hear of some good practical work being done by this, on all hands, admittedly much needed society.

Re gross weights. In my remarks last week on this subject, "all-sized fish" should have been "fair sized fish," as apparent from the whole tenour of the paragraph in which the words occur.

ANNUAL DINNER OF THE STANLEY ANGLERS' SOCIETY.

In the very comfortable hostelry of the Lord Stanley, in Camden Park Road, this club, which receives its designation from the name of the house, has been eminently prosperous, and possesses a strong body of practical anglers and as fine a museum of stuffed specimens of fish as any society of similar growth. It has only been eleven years in existence, and its popular leader and well-known angler, Mr. C. P. Wheatstone, has been recently elected president for the sixth time. Since the last anniversary, the post of honorary secretary has passed into the hands of Mr. George E. Walker, who during the past year has given every proof that the duties of his office have been and will be successfully carried out. The treasurer, Mr. W. Jarvis, the respected proprietor of the hostelry, is one of the right standard, and follows well in the train of his predecessors, Mr. Forbes and Mr. Barker. The commodious billiard-room was, as usual, utilised for the banquet; and, with the dining tables tastefully laid out, and other adornments, the saloon presented a most cheerful appearance. The dinner arrangements were well carried out, and the catering of Mr. Jarvis gave every satisfaction. Mr. C. P. Wheatstone occupied the chair, with Mr. W. R. Humby in the vice-chair. There was a capital attendance on the occasion, and amongst others present were Messrs. C. Scull, G. E. Walker, W. H. Brougham, J. P. Wheeldon, Bellfreman, Nelson Hunter, H. Rose, G. James, D. M. Humby, Fyner, J. Duncan, Paramour, Rix, and J. Lupton. The president's hammer, which was used for the first time, consisted of the head of a 4 lb. perch caught in one of the Norfolk Broads. After the opening toast of "The Queen and the rest of the Royal Family," Mr. Wheatstone briefly introduced the toast of the evening, "Success and prosperity to the Stanley Anglers' Society," remarking that it was prominent in its desire to keep up a good standard weight of fish, and preferred a less result of weighing-in than bringing into the club-room comparatively small fish. After the toast had been enthusiastically responded to, Mr. G. E. Walker read a very interesting and attractive report, in which he referred first of all to the intention of reviving the reading-papers. In reference to the gross weight of fish weighed-in during the past season, it was much smaller than usual, partly owing to the accident to their worthy president and partly on account of the club preferring quality to quantity. The gross-weight table represented a total of 747 lb. 7¾ oz., out of which Mr. Wheatstone had alone weighed in 345 lb. 15½ oz., including 27 lb. 13 oz of Thames trout. The prizes taken were as follows: Mr. C. P. Wheatstone to the value of £1 11s., and a capital oil painting given and executed by one of the members; Mr. Pistrucci, £1 6s. and the silver cup; Mr. C.

Scull, £6 16s. 6d.; Mr. Rose, £3 8s.; Mr. J. W. Harris, two guineas; Mr. Parsons, two guineas; Mr. Laidlaw, two guineas; Mr. Tucker, one guinea; Mr. D. M. Humby, £1 0s. 6d.; Mr. Duncan and Mr. Jarvis, half-a-guinea each, and Mr. Pollentine and Mr. W. R. Humby five shillings each. Mr. Walker concluded his popularly written report by a reference to the financial position of the club, which was throughout heartily applauded.—Mr. Rose, on being called upon by the chairman, spoke in highly complimentary terms on the labours of their honorary secretary. Mr. Walker accepted the office at a period of difficulty, but, by his unwearied attention to the duties and unremitting perseverance in removing every impediment, he had brought the society into so satisfactory a position that the members felt he was entitled to a substantial recognition. He had already commenced a subscription which was being favourably responded to, and he sincerely hoped, when completed, it would be worth Mr. Walker's acceptance.—Mr. G. E. Walker, who was evidently taken by surprise, briefly expressed his acknowledgments.—Mr. Nelson Hunter, in prosposing "The Thames Angling Preservation Society," referred to the great benefits it had secured for the anglers; and in speaking of the admirable manner in which its work was performed, mentioned the circumstance that a friend of his, when angling, had his boat examined, and some small fish having been found in the well he was advised to put them back again, which he did; and, being so much satisfied the manner in which it was carried out, supplemented the action by giving a donation to the society. Mr. Hunter, after highly complimenting Mr. W. H. Brougham on his valuable labours for the benefit of the anglers, coupled that gentleman's name with the toast.—Mr. Brougham, in his reply, said the society had never attempted to make the law oppressive to the anglers, but where there were just grounds for a summons, that law had been fully vindicated; and in at least two instances last year they had performed their duties so pleasantly that after the payment of fines, the defendants had come forward and expressed themselves satisfied they had done wrong and had been rightly punished.—Mr. Rose then gave "the Press," which he said was always ready to take up the angling interests and give publicity to the doings of the clubs. They were much indebted to Mr. Wheeldon and Mr. Brougham for their labours in that direction.—Mr. Wheeldon, after noticing his work in connection with the Press, concluded an interesting speech by forcibly urging upon the society the necessity of supporting the Thames Rights Defence Association and the Anglers' Benevolent Society. The other toasts were, "the Secretary and Officers," "the Chairman," and "the Vice-Chairman." The evening was much enlivened with some capital singing by Messrs. Price, Rose, Wheeldon, Humby, and Barton, and the company did not break up without expressing their satisfaction to Mr. and Mrs. Jarvis for the really exquisite dinner they had placed on the table.

A FISH SEDUCER—HOW IT IS USED.

You have met him, Brother Angler!

A well-built frame, sometimes broad shouldered and thickly set or it may be long, wiry and angular; a fringe, or perhaps a full crop of heavy, bushy whiskers surrounding a weather-beaten face, tanned to an olive brown; hands callous, apparently an inch in depth, from constant labour. Eyes bright and piercing, a pleasant yet a patient face, born of his calling.

His boat rudely constructed, flat bottomed and scow-like, pounding the water at each ripple with a decided plash and the labouring oarlocks joining in with a thump that advises you he is rounding yonder bend—*kerchunk! kerchunk! he is coming.*

Spreading from all sides and projecting from the bow are his rods, cut from the neighbouring forests and with here and there a dangling float of well-worn cork or its counterpart of a piece of soft pine, all swaying in the wind.

He is homeward bound, and being desirous of hearing of his success you hail him, and drawing near you gaze with rather envious eyes on a fine catch distributed around his feet.

In addition to the old can that stands alongside of him, and an inch or two of dirty water, in which some of the finny tribe are still floundering, there appears nothing except a glass jar, such as is used to hold candles, tape and other such goods at a country store, but just now it appears to be occupied with lively tenants in the shape of minnows.

"Beent you up yer last summer?" inquires our fishing neighbour.

"Yes," we replied.

"Well, now, I tho't I kinder remember'd as how you be the feller from the city when I punched a hole in this yere bote, on one of them pesky snags down there be the flats, as pulled up and helped me fix'er up, and seeing as how some of my hooks were nigh used up didn't yer give me some bully good ones? Say."

We laugh and say something about "hope they were good ones, &c.," when our eyes once more lit on the glass jar.

"What have you there; an aquarium?" we ask.

You have seen a clam shut, Brother Angler, and shut suddenly, but not more rapidly that the lips of our fisherman, and—

Silence reigns.

* * * * * *

His generous, grateful heart will not, however, permit it to continue, and with a quick anxious look up at the trees, then down on the rocks and water to see that no tales can be told by listeners, he pulls close alongside, and in the utmost confidence, and with a "don't give me away" look, says:

"No, it ain't no equariagum; and yet it is an equariagum, as you down city folks call 'em; I name it at hum my *sejucer*. There ain't nobody in my destrict as knows I've got it, and I don't mean they shall. The great secret how to catch fish, and gobs of them, when no man, woman or child, or anybody else can, was told me by my old father, and he learned the racket from an old smarty, years and years ago."

"Now in this time of year (summer) the pickerel be mighty roamersome; he must feel the sun, and it makes him restless and narvious like. He goes cruising round the lake all the time and gets kinder lost and skattered, lonesome like, and so unsartin to get a mess. This jar biz gits 'em though, and I'll tell you how; for you might read and read all the books rit on fishen and you won't find nothin 'bout it."

"In the evenin' I goes down the lake with the jar and fills it full of clear water. I ketch about 200 live minny bait and dump 'em in this jar and ties a strip of skeeter nettin over the top—this hives 'em. I rows out to a good quiet spot where there ain't no weeds nor nothin', and hitch a cord to the jar and anchors it. I tie a bit of a chunk to the line to mark the spot and takes out for home."

"Now, all fish are durned old night owls, and in making the rounds first one and then another hauls up in front of the jar. When they see the minnies they get thunderen hungry and bouse about, fust one side then t'other. Other old bums see them sliden off on their ears off the jar, and take a hand in, too, and by mornin' every eternal durned galute of a pickerel in the lake is hangin' around the jar with a sore nose, and red-hot mad. I don't let 'em be tantalized long, for I sneaks up and drops down me anchor-stone easy and starts fishen. Of course, there is a rattling old free fight at first sight of my bait, but I rigs out five or six lines and poles, and it makes me sweat a pullin' 'em in. I then ups with my sejucer, which I kiver with my coat, and rows up to the landin'. When they see me a comin' all the hotel folks turn out, and when they sees the fish, the men sez:

"'Well, I'm gone durned if old Flum ain't got 'em agin'': and the gurls they sez:

"'Oh! ain't he the boss fisherman?' Then one is sure to turn round and say to her bow:

"'Chawles, why don't you kitch some of 'em—you goes often enough and brings home nothin'.'

"And then old Flum skips in and jines the boys and dispooges of the fish. I've got a soft snap on 'em, ain't I? Now don't you give me away, will you? 'Night!"

[The above was sent to us by a valued correspondent ("Black Bass") who thinks it too good to be lost and forgotten in the miscellaneous columns of a daily papor. The latter half of the story is given verbatim, as it appeared last year in the columns of the New York *Herald*, the first half has been rewritten by our friend.—Editor.]—*American Angler.*

Visit of the Queen to Epping Forest.—Apropos of the forthcoming Royal visit to Epping Forest, a very capital map has just been published by Mr. Henry Sell, of Bolt Court, Fleet Street, showing the new roads, paths, and improvements, as arranged by the Commissioners up to the present date. To any one desiring to follow the proposed route of her Majesty from the Chingford railway station to the "Connaught Waters," a fine chain of lakes, the adjacent Royal or Green ride, which, when completed, will completely traverse the forest, the charming glades of Fairmead, the retired thickets of the Monks and Hawkswood, the extensive prospect from Lippet's Hill, and the ascent towards High Beech, this map will be exceedingly useful. It shows almost a glance the situation of the new roads, as well as of the the forest rides leading from the fine new building of the Royal Forest Hotel at Chingford, which is on the ascent leading immediately from the station to the most romantic scenery, by the route to be taken by her Majesty on her visit next month.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

1st AWARD MELBOURNE EXHIBITION, 1881.
DAY, SON AND HEWITT'S
STOCKBREEDERS'
MEDICINE CHEST.
FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP, AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—
"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.
"RED DRENCH," for Cleansing Cows and Ewes, &c.
"RED PASTE BALLS," for Conditioning Horses.
"BRONCHOLINE," for Husk, Hoose, or Cough.
"GASEODYNE," for Heaving or Paining.
"ALCOHOLIC ETHER," for Colds and Chills.
"CARMINATIVE CHALK," for Diarrhœa in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT,
22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

JAMES OGDEN, 28, Winchcomb Street, Cheltenham,

PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE,

Solicits a trial of his

WORLD-RENOWNED TROUT AND GRAYLING FLIES.

Also his

CELEBRATED FLOATING MAY FLIES, GREEN AND GREY DRAKES,

Which are still being dressed by the same experienced hands as for many years past, and can only be obtained at the old shop

28, WINCHCOMB STREET.

JAMES OGDEN'S

MULTUM IN PARVO FLY RODS.

PRICE 21s.

The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading Anglers of the day.

JAMES OGDEN'S NEWLY INVENTED

NE PLUS ULTRA RODS.

For particulars of which see Article in FISHING GAZETTE of March 18.
All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.
N.B.—No connection with any other persons assuming the same name.

TO ANGLERS.

MRS. JAMES OGDEN,

(Relict of the late James Ogden, who died Dec. 19, 1880) with her brother, L. W. Scotford, continue to carry on the Fishing Tackle business in all its branches as they did for years at No. 28, Winchcomb Street. Mrs. Ogden is the maker of

OGDEN'S CELEBRATED FLOATING MAY FLIES,

and every other description tied from her late husband's original patterns, as described in his book on Angling, which she helped to compile. Only makers of

THE NEW COMBINATION MULTUM IN PARVO AND EUREKA RODS.

Price Lists free.

N.B.—All letters and orders to be addressed,

OGDEN and SCOTFORD, 7, Portland Terrace, Pitville, Cheltenham.

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

TROUT FISHING

IN THE PRIVATE WATER

OF THE

EARL OF CARNARVON.

Rivers EXE and BARLE.

FREE to Visitors staying at the Carnarvon Arms (and his Hotel being also nearest to Tiverton Association Water) DULVERTON STATION.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. DAVIDSON, Manager.

The Fishing Gazette.

SATURDAY, APRIL 29, 1882.

THE EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

AS promised last week, we now give our readers some account of that portion of the exhibition which is most likely to interest them, viz., the exhibits in connection with angling and pisciculture.

Without following any definite plan, we shall first notice the things in the order they came in when walking round. The exhibition is most conveniently situated in the centre of the city—and what a wonderfully beautiful city this Edinburgh is! It is close to the principal railway stations and hotels, and hanging, as it were, out of the side of Princes Street. The first thing the visitor sees is the aquarium, which at first was a great attraction; but the speedy death of most of the fish—caused by bad water—has robbed it of its value, and when we saw it it looked like a hospital for incurables affected with the *Saprolegnia ferax*. But the aquarium was never intended to be a great feature of this exhibition. It existed previously, and was rented by the committee of the exhibition simply because they feared that otherwise it would be difficult to exclude visitors to it from the exhibition proper. The water in the tanks was also taken as it was, and soon proved very deadly to the salmon and other fish which were introduced. As regards the show generally, it is certainly more extensive and better than we anticipated; and the committees, and especially the secretary, Mr. Henry Cook, are to be congratulated on getting so fine a show together in so short a time; the fact that they have had, to a certain extent, to compete with the London exhibition, to open next year, has been much against them. But the success of the affair is very great. All expenses were paid very soon after the opening, so great was the rush of visitors; and it is admitted by our Scotch friends that a considerable portion of this success is due to the beautiful display of specimen fish from the London angling clubs—only a tithe, by the way, of what might have been sent—and the Buckland collection, but we have referred specially to these elsewhere. Of absolute novelty the exhibition does not offer much as regards angling interests. The patent granolithic salmon ladders, exhibited in working models by Messrs. Stuart and Co., of 8, Thomas Street, Edinburgh, are thoroughly good practical things, and are in use both on the North Esk and the Teith. We should very much like to see one of them put up on the Eden at Armathwaite; it is piteous to see the salmon attempting the weir there, and bruising themselves in their fruitless endeavours—except in a flood—to get over. We hope Messrs. Stuart will show their most excellent invention in London next year. The great novelties in the way of artificial flies, were the frames of Swiss flies, tied on barbless hooks, exhibited by Majoria Guiseppe, of Locarno, Canton Tessin, Switzerland. These flies are made as follows :—A fine needle is made soft by heat; it is then bent into the shape of a hook, with the point turned very much inwards towards the shank. The wire is then again hardened and tempered, and the feathers tied on in a very primitive manner. All the flies are dressed spider fashion; in fact, some of them might be taken for the partridge and other spider flies in use on the Eden. These flies are said to be more killing than the ordinary English flies, and are used by the Swiss professional fishermen in preference to English flies on barbed hooks. Mr. Seth Green, the great American fish-breeder, never uses any other than a barbless hook for trout, and he has caught some tons of trout with it, so there must be something in it. The fact that the professional fishermen use these flies ought to be considered as speaking in their favour. We intend to get some to try.

Messrs. W. Dickson and Co., of 15, Frederick Street, Edinburgh, have a first-rate exhibit of rods and tackle, and we can strongly recommend their acme joint for holding the joints of a rod together; it is simple and strong. Then their elongating rod is another capital speciality. By a very simple arrangement the bottom joint is made telescopic, two feet of it sliding into the thick end of the butt, so that in a moment one can change the length of the rod from 14 to 12 feet, or *vice versa*. The winch is not moved. This is the simplest and best telescopic arrangement we have seen. Their flies and worm tackles are very good indeed; in fact, if they had made a larger show, they would have come off with higher honours. Some of their 10s. fly rods were of beautiful balance, and would have a ready sale amongst English anglers if known.

Messrs. McLeod and Blake, of 13, St. Giles Street, Edinburgh, show an ingenious tin case for holding salmon flies and casts. The flies are held on wires and an indiarubber band; it is a good thing.

Messrs. Hardy Brothers, of Fenkle Street, Alnwick, have a very nice exhibit of their rods, flies, tackle, &c. We have so often referred in years past to the excellence of the goods turned out by this firm, that we need say nothing on that score. They were taking orders as fast as they could book them for their split-cane rods, made on the American principle, and sold at about half the price. Their cork handles for rods have been much admired, but we think nothing beats the plain smooth wood of the butt itself—all metal rings near the grasp are a source of blisters. They have just brought out a very capital natural minnow-spinning arrangement—a piece of sword-shaped lead is tied to the gut near the hooks. The lead is pushed down through the minnow, which is then bent to the proper curve for spinning; of course, any bend can easily be given to the lead, which is also a nice weight, and quite hidden in the fish. Our trout-fishing friends should get this extremely simple and cheap arrangement, it cannot fail to answer. Messrs. Hardy informed us it spins admirably. Messrs. Hardy's Y-shaped landing-net, which folds up, is an old friend, which, from practical experience, we strongly recommend. Their bayonet ferrule fastening is not yet on the market; we shall notice it when it is. It is the best fastening yet invented, in our opinion.

Messrs. Hearder, of Plymouth, show a case of their standard Archimedean spinners for fresh and salt water fishing, some of them of unrivalled excellence.

The "salmon-fisher's boots," made by J. Fleming, tanner, of Berwick, struck us as being thoroughly useful goods.—Messrs. Goudie, Christie, and Co., 25, Princes Street, Edinburgh, have a large and varied exhibit of all kinds of life-saving garments. Had they been in use on the recent disaster on a Scotch loch, two anglers would now be alive who then perished.—Messrs, Thornton and Co., 78, Princes Street, Edinburgh, appear to be the principal waterproof makers in the North, and their fishing goods have a great name amongst Scotch anglers.—Mr. R. C. Stevens, of Berwick-on-Tweed, is another fishing tackle exhibitor, who was doing a large business among the visitors. He shows a cheap telescopic rod, which pleased us very much; all the joints go into the butt. and the play of the rod is very good. It would be just the rod for burn-fishing. He will have a large sale for it, as it is so cheap. He also exhibits the FISHING GAZETTE winch, which is liked, he tells us, by practical anglers who understand its advantages. He has the most varied exhibit in the exhibition, and we can recommend his selection and judgment. He has adopted our suggestion about giving anglers information about fishing in Tweed, Whitadder, Till, Glen, &c , and already has sent several of our readers to good spots.

Mr. Wigley, of Cheltenham, exhibits his Gloucester spinner, and is having a large sale, for one angler soon proved its killing powers on Loch Leven. We hope to try it on Loch Leven or Loch Vennachar this week, and will report result.—Perhaps the most interesting and novel exhibit is that of Mr. James Macnee, 7, Windmill Street, Edinburgh. He is a professional fisherman, and has resided for years near one of the best Scotch lochs. He exhibits flies, the wings of which are made from the scales of pike, and he tells us he can kill big wary trout in quiet bright water with these flies when they absolutely refuse everything else. They are wonderfully life-like, and durable. They certainly ought to have received a medal, and the sole cause that they did not was that the jurors mistook them for whalebone winged flies, of which he also exhibits several. But they are quite different, and infinitely superior. We shall give them a good trial, and then report more fully on them. In the meantime we can advise our readers to send for a shillingsworth as samples.

Mr. W. Cochrane, 4, Grove Place, Edinburgh, is himself a practical angler, and his modest exhibit will compare well with any other in the exhibition. Messrs. Redpath of Aberdeen, have an exceedingly fine collection of rods and tackles, and have received the gold medal for their display. Some of the rods they exhibit were simply perfect, and make one long to possess them; they are also showing Messrs. Conroy, Bissett, and Malison's American split-cane-rods—magnificent in workmanship—and have sold many of them, in spite of the high price. We must conclude our notice next week, and shall refer especially to Mr. B. Littlewood's excellent fish-hatching apparatus, which deserves more space than we can devote to it this week. The crowds of people visiting the exhibition seem to increase. The awards for the essays will be made known on Saturday probably, and the exhibition closes on that day.

P.S.—We have by an accident omitted to notice the exhibit of Mr. D. Wells, 11, Leith Street, Edinburgh. We must do justice to it next week. His flies are the best and cheapest we ever used, and we have used them for some years now.

THE RIVER ANT, NORFOLK.

THIS most prolific river for coarse fish, rises from some ponds, doubtless fed by springs, north-west of North Walsham, and coursing through Swafield, Worstead, Dillham, Stalham, Barton, Irstead, into Ludham, empties itself into the Bure, a distance in all about twenty miles. Fortunately the value of this river for fair angling purposes has aroused the zeal of a few earnest anglers, who, from first of all clubbing together, have extended their useful operations by the establishment of the Ant Preservation and Angler's Society. Their head-quarters are at Stalham, which is an excellent central place, having a railway station, reached by about four hours' journey from London. There are some very comfortable hotels in the town—the Swan, the Maid's Head, and the Railway Hotel.

A most energetic enemy of all piscatory abuses writes us:—

"The district to which this society purposes—if encouraged—to extend its protection to the fresh-water fish against the depredation of poachers, still unfortunately prevalent, despite beneficent legislation, comprises an extent of pleasant, and in many respects, picturesque tracts of country. As the waters are admirably suited for boating purposes, we think the following description of the various angling resorts on their banks will prove of interest to those of your readers who may be wholly or partially acquainted with the locality:—

The operations of the society commence from the basin of the North Walsham and Dilham Canal at Antingham, and cease at the confluence of the rivers Ant and Bure, near St. Benet's Abbey.

We may premise that pike, perch, roach, rudd, eels, tench, &c., are more or less abundant throughout, and will now take our starting point—the canal basin at Antingham, where we have caught some thick-backed pike; but in honesty must confess our fear that "liggering," the curse and bane of the Norfolk waters, has of late years seriously impaired the angler's chance of success. A little further on, and past the Bone Mills, is an excellent swim for roach, and many fine specimens exceeding 1lb. and 2lb. may be taken. But then it is indispensable that the angler should be a roach-fisher in the strictest sense of the term; and, it is almost needless to say, that to merit a title to the appellation, demands a keen watchful eye, a steady hand, and an immense amount of practical study. An angler possessing a very moderate modicum of skill, and using tackle of very humble pretensions, may certainly secure smaller fish, but will very rarely, if ever, beguile the heavy ones, which alone occupy the attention of the real roach-fisher.

After leaving the Bone Mills, we pass through some meadows to Bradfield Bridge, and from here to the first lock at Swafield is a splendid expansive piece of water with numerous nests of sedges, affording harbour for pike, of which there are some large ones. Here the water is, as in many other parts of the canal, full of weed, but after they have been rotted by a hard winter the spinner may find his skill and patience rewarded.

Between the two locks at Swafield we have sometimes observed very fine bream rolling about, but these waters have not as yet been fished by the metropolitan bream-fisher, to whom the leviathans would feel honoured by being drawn from their natural into another element. [Our correspondent is evidently not acquainted with what was done at this spot in 1868, by Messrs. Plummer and Elliott, two members of a London club. They baited a swim three nights previously, seeing to this indispensable preliminary themselves, and took, from half-past three until nine o'clock in the morning, 173 lb. of bream, some of which, according to *Bell's Life*, weighed 4 lb. and 5¼ lb. Our conviction is that, extraordinary as the feat may appear, it might be done again, if not exceeded. A more appropriate water for bream of the right sort we don't know. They fight at times on fine tackle like barbel.]

Below the lower lock is another favourite swim for roach, probably on account of a little stream which enters the canal just here. From Swafield Bridge to Austin Bridge, Barton Broad Lock and Messrs. Cubitt and Walker's mills at North Walsham, is some capital water. At the last-named spot the heaviest bream are occasionally captured, and there are the most delightful and suggestive bays and openings in the reeds which would delight the eye and attract the attention of a pike-fisher, by whom they were once held in the highest regard. But here again, we fear, the ligger has done its deadly work.

For two or three hundred yards below the lock is another justly esteemed swim for roach, and about another mile further, in a copse, there is a swim enjoying a somewhat enviable reputation amongst bream-fishers.

We now leave the mills at Briggate, a locality in which there exist some back waters, again presenting a most attractive appearance to the pike-fisher. Dilham comes next. Here is a lake which is private property, and is famous for its heavy pike and perch; but as the growth of aquatic vegetation, engendered by its very exclusiveness, it has become almost unfishable, even to its proprietors, during the greater portion of the year.

Soon after this the canal joins the river Ant, and by turning to the right we shall presently arrive at Dilham Old Broad, which many of the inhabitants can remember as an extensive sheet of water in their younger days, but in which different kinds of vegetation have grown up, died, and left their débris, and thus filled up its area until it now consists merely of a channel between the reeds, sufficiently wide to permit of the wherries, as the splendid sailing barges are here called, to sail through.

Perch and rudd, particularly the latter, afford us constant and most profitable sport. Rudd-fishing is here in its perfection, and, either with fly or bottom fishing, to our idea far excels roach angling; although we admit there may not be the extreme subtlety required to ensnare rudd as there is to get the larger roach to take the bait.

We must now return to the place where the canal unites with the river proper, and continue our course to the left, which brings us to Wayford Bridge. From this to the confluence of the rivers Ant and Bure is an excellent stretch of water with numerous dykes, which a Londoner would call affluents or tributaries, but dyke is our term, and in which the largest fish are sometimes taken, these dykes being a goodly depth. Besides dykes, we have several backwaters well worth looking after, as we purpose doing if we are encouraged.

About a mile and a half from Wayford Bridge is a cut leading to Stalham and Sutton Broads. They are both overgrown with weeds—the beginning of the end of the Norfolk Broads, which the more suggests that the present generation should do all it can to preserve this extraordinary feature of the eastern counties and its unique claims for the production and shelter of nature's fauna, now unhappily gradually becoming extinct. These broads however, overgrown as they are, become from that very reason the harbour and breeding-grounds of pike, perch, rudd and tench. The latter are remarkably plentiful, but, as in the Essex and Suffolk Stour, have the reputation of never being caught by rod and line, a prejudice now long since exploded in that aqueous division of those counties.

We must now, but not without regret, take leave of Stalham, and Sutton Broads—for their very desolation and threat of extermination has its charm—and once more seek the main stream of the river.

Now we arrive at Barton and Irstead Broads, which also yield some good sport at times. They are the property of Sir J. H. Preston, Bart., and as such are already partially preserved.

Quitting Irstead Broad, and entering the river, we come to the "shoals" for heavy perch, for which the water, flowing quickly over a gravelly soil, is well adapted. From this, past Ludham Bridge, and as far as the spot where the Ant joins the Bure, near St. Benet's Abbey, are many swims where good sport may be had; the last-named being an excellent one, where we have invariably succeeded in taking pike or perch.

Here our description ends. We consider the fish in the North Walsham and Dilham Canal far superior in quality to those in the rivers and broads, the former, though smaller, being as a rule better fed and of more brilliant hue than the latter. We may remind our readers that some months since a number of trout were turned into the canal, but regret to say, are informed that the beautiful fish have either died on account of the water not being congenial to their taste, or let free before they were of a sufficient size to hold their own, which means they have been thrown as food for the pike and perch. It should be known that no water in the county of Norfolk could be more easily preserved than the river Ant and its tributaries. We therefore hope that not only the angling fraternity, but the public, will co-operate with the society in their laudable endeavour to preserve the waters from illegal netting, &c. If they will do so, then good sport for the angler may be confidently relied on. It would do much to promote the increase of fish if anglers were to return to the water all undersized fish measuring less than six inches from the eye to the fork of the tail. Mr. Meale is the honorary secretary, Stalham, Norfolk, who will gladly reply to all enquiries.

The river Ant varies from four feet to ten feet in depth. There are also many low-lying fens, containing several acres of shallow water adjoining the river, and no end of water dykes, in which, with proper tackle, a good fisher would revel. Most of the gentry around are now roused to the value of protecting the water, and as a proof of this the society can boast of twenty-four gentlemen as water-bailiffs belonging to the society, devoted to making the Ant second to no river in the eastern counties. Although the annual subscription is a guinea, the society accept a donation as low as half-a-crown, entitling the angler to fish and a hearty welcome.

FLY-FISHING IN STILL WATER.

"I HOPE that fellow Palmer won't see me. I shall have to stop and listen to his chaff if he does." But Palmer's garden wall is close to the path by the river by which I must pass, and there is the fellow himself, lazily cutting away the dead leaves from his geraniums. Poor man! He is at his wits' end to know how to kill the time this hot, lazy August day.

He would as soon think of trying the fly (he is above "dapping") as trying to catch a sunbeam in a butterfly net.

Well, really, the weather is enough to provoke St. Nicholas, the fisherman's saint. The river is so low that just at the head of Dead Man's Pool, where the big ash tree is, the rabbits on the left bank of the river can cross by the rocks dry-footed, and see if those rabbits on the right bank, which they have so often looked at across the river, are really different to themselves in language, creed or feelings.

The big freshwater mussels are gaping open on the powdery bed of the river. I can stand in only a few inches of water in places where to attempt such a feat at ordinary times would result in a coroner's inquest and a short paragraph in the daily papers. The anxious fisherman taps the barometer and swears at the weather in a way that scandalises his adoring family, who ought to look up to him as the very incarnation of all the Christian virtues. Yet here I am actually in my waders, bent on an afternoon's fly-fishing, and trying to sneak along under Palmer's wall unseen. I am congratulating myself that it is all right, when a loud laugh makes me look up; and there is the face of that man, distorted with a huge grin, looking down upon me as if I were an interesting but harmless lunatic.

Palmer passes for a wag, and I admit that he sometimes says things that make me laugh a little and at which he himself laughs very much; but never, no, never, did I think his wit so contemptible, his sallies so feeble, as I do now, whilst he stands there looking over the wall, twirling his garden scissors, and poking what he calls "fun" at me about "fishing in the turnpike road," "a glut at Billingsgate," and "the miraculous draught of fishes."

"Come now, Palmer, "I'll bet you the Crystal Palace to a cucumber frame I get a dozen good trout this afternoon."

"Fine weather for tickling," the wag replies, with another of his stock grins.

Fine weather for tickling, indeed! Why here has this fellow been trying to say something to tickle *me*, and he has only succeeded in making me sore. However, I am always charitable to my inferiors, so I say now, "Come along for a stroll, there's a good fellow, and see if I can't get a trout or two."

My persuasive powers are wonderful when I exert them. Palmer is a thorough fisherman at heart, and a quarter of an hour later he and I are making our way to the long pool under the cliff. Palmer has brought his pipe and the "Saturday Review," as he is evidently sceptical as to the promised sport.

Here we are, then! It is a long deep pool, over which the cliff throws a partial shadow; but every stone, every particle of gravel almost stands out hard and distinct in the bright water, where the pool gradually tails off towards the stickle above the bridge. But there is no stickle now, merely a small rill of water in which an audacious hop-o-my-thumb of a gravelling would be ashamed to take up his quarters. There is just a breath of wind blowing up-stream, not enough to touch the water, but still sufficient to aid me in throwing a long light line.

Whilst I put my rod together, Palmer overhauls my fly-book; then he hands me a huge cow-dung fly. "Their appetites will be as jaded as an Anglo-Indian's, such a broiling day as this. That's the boy for them; they'll think it is curry."

My only reply is to take the fly-book from him, and select a small dingy-fly with mole's hair body and hare's flax legs, and without any wing. I never fish with more than one fly on these occasions—and my collar, of the finest gut, is about five yards long—if there is but a breath of air to help me.

When all is ready, I have my line and collar to soak in the stickle for full five minutes, otherwise in the still water it would lie dry and crisp on the surface; and, meanwhile, to escape Palmer's chaff, I stroll up to the tail of the pool, as I know in the thin water some fish will be lying, which I must necessarily frighten, and in their hurried rush they will startle the trout above them, so better get this over at once and give them time to settle down.

I go back to my rod, and, would you believe it, I was wrong after all, there is a gravelling in the stickle, and, by Jove, here he is. "Marry, and it is purely a huge one!" from the irreverent Palmer. I hate parodies at any times, but to parody the immortal Izaak! Palmer, my friend, you can sink no lower in my esteem.

Master Gravelling is returned to the place from whence he came, and now I am wading in the deep, still pool. It is too deep to wade on my side, but over there under the steep cliff-like bank it is deep and black. The surface of the water is powdered over here and there with the dust which has been wafted thither from the dry river bed; and in the shallows above, small particles of dry stuff which have apparently dropped from the overhanging trees, are floating on the surface, and here and there a small moth lies with outstretched wings, calmly reposing on the treacherous element where it has met its death. At these times and in such places trout always hunt in shoals. Here they are. I watch them as they come slowly down towards me making a small bubble here and there as they lazily suck in a dead fly, or mouth a particle of the dead stuff that is floating on the surface, to eject it again the moment they find it is not "good to eat." All is still again. Presently a small ring or two higher up tell me that the fish have turned and are working up-stream, so I follow them.

I am within throwing distance now, and my fly has quietly dropped in among them. I keep the fly quite still until it has sunk about six inches, then draw it slowly away for another throw, being careful by no rapid motion to disturb the fish. The great secret in this kind of fishing is to keep your fly still; and ten chances to one some enterprising fish, if he happens to come across it, will mouth it for a moment, perhaps out of sheer curiosity, merely to drop it again the next moment—that is, if you let him, which, of course, you won't do if you can help it.

"Ah, there he is!" A slight curl in the water: I strike instantaneously, there is a tight line, and "Into him, my boy" (this for Palmer's edification). But Palmer, in spite of his jeers, has been closely watching me, so my warning is thrown away. I like fighting a west country trout in still water. That first dive into the hidden depths of the pool is a treat. It does not last long. The elasticity of my rod is too galling to be borne with impunity, and the fish is soon brought down stream, where we have it fairly out. I soon find that I am the better man, and my conquered antagonist is led in triumph towards the bank, where Palmer is ready with the landing-net buried in the water; the fish is gently enticed over it, and my friend scoops him out like the true artist he is.

I never kick a man when he is down, so I don't give vent to those scathing sarcasms friend P. so richly deserves. But Palmer, being down, is privileged to kick. And what do you think this low-minded fellow says, as he unhooks the beautiful half-pounder we have just secured? "I suppose you think you have made a discovery?" This, he says, if you please, with that nasty slow drawl which betokens concentrated venom.

He is rather nonplussed by my careless "Not at all," so I continue: "The fact is, I learn't it from a fellow who knew nothing whatever of fishing, less, in fact, than you do." (A loud 'guffaw' from Palmer.) "A mere novice. I was fishing in a reservoir in the North of Devon where there were hosts of trout, and thumpers. But catch them? Not a bit of it. At least I could not. Well, there was this fellow standing out on a projecting piece of rock, slashing his rod out against the wind as if he were beating carpets, and whenever he managed to get his line out a little further than the end of his rod he would leave his flies to soak for fully half a minute. I laughed him to scorn. But, bless you, the laugh soon changed to the other side of my mouth, as every now and then a wild whoop told me he had got hold of a fish. Since then I always keep my fly still when fishing still water.

As I wade out once more, I catch some disjointed remarks from Palmer about my grandmother; but as that good lady departed this life before I entered it, I don't continue the conversation. Twice again I repeat the performance, but the game is played out now. I have satisfied their curiosity, and the fish, though still continuing to look about for flotsam, will have nothing to say to me.

A quarter of a mile further up the river there is another deep pool. You know it well—the pool where old Greenheart killed his large salmon in the autumn of 1880. You remember the current runs in merrily at the head of the pit, then curls along deep and stately one side of the river as far as the old limestone rock; then it crosses to the other side, under the steep earth bank, where the roots of the old thorn bush are peeping out, and loses itself in the broad, still basin which stretches right away from the gravelly beach on our side to the steep bank opposite, and ends at the fording-place.

"'Gad! that's lucky," I exclaim, as I see that the tail of the pool is just touched by the "haporth" of breeze. There is no cockle, the surface is only just crinkled a little, but still we must be thankful for small mercies on such a day, as here we are in the full light of the sun. Palmer stands on the bank as I climb down on to the rocks below the ford, and change my dingy fly for a small red quill gnat. Just a throw or two at the tail of the pool above me, I raise one small fish but nothing more; so, throwing ahead of me, pass up through the ford into Greenheart's pool, keeping as much the other side as possible; for even now it is pretty deep out here under the steep bank, and I want to keep as far as possible from the shallow water close in upon the shingly beach; for I know, this weather, the fish will be lying close to this beach, in only two or three inches of water, hunting, I suppose for those tiny insects that come to life under the genial warmth of the sun, and hop out their little lives among the stones. I have gauged the distance now, and am throwing a long line diagonally up stream, my fly dropping within an inch or two of the beach. Presently, there he is. A nice trout, too. I draw him quickly down stream, when we have it fairly out together. There is a point at which even a pugnacious Devonshire trout can fight no more. That point is reached and passed, and my score rises from three to four. I fish all the way up to the limestone rock, raise a fish or two and frighten a good many, which scuttle off to their hovers making quite a broad arrow in the shallow water.

"Don't think much of that," says Palmer, as I come out of the water.

I have a singular command over my tongue when I am not prepared with a reply, so Palmer's remark is received in cold silence. It is a long walk up to Folly Pool, past the stickles which in spring afford what Jim Burrowes calls "prapper sport sure enough," but now are dry, except just in under the alders, where, even now, a nicely-scoured worm might kill a fish.

However, the longest walk is walked at last, and now here we are.

"What sport we had here, Palmer, at the head of the pool when the March brown was on."

Palmer's elbow is driven into my ribs as he replies, "Ah, we did 'em brown then, eh?"

"Did them? I beg your pardon, I did not quite catch the expression."

But there was one expression that I do catch, and that is the expression in Palmer's eye which betokens a burning desire to kick somebody; but Palmer is a Christian, and the wicked thought evaporates into a loud laugh, which somehow is infectious, and we both laugh, but at what? Nothing. But that only makes us laugh the more. Ah, well, Palmer is not a bad sort, and, with this moral reflection, I survey the pool.

Such a hover for fish, deep as the bottomless pit, except where great ledges of rock stand up here and there under water. Looking up the pool from below, it looks like a beautiful avenue, fringed as it is with those glorious oak and ash trees. I climb down on to one those ledges of rock which lies about a foot under water, and, looking up stream, see a sight that quickly rivets my attention, and takes away my thoughts from the shady pool and the patches of sunlight which are playing on the surface of the dark water. About thirty yards above me, close in under the big oak tree, there is a perfect shoal of trout, playing like a school of mackerel, swimming hither and thither, splashing in a way that sober trout ought to be ashamed of. They are evidently after the small grubs, ants, and other insects that are falling from the tree. Now, with some mad impulse, they move out into deep water, and all is still. Presently there they are again. How can I get at them?

"Keep back, Palmer, there's a good fellow." For now I am sneaking along under the trees, clinging on to the narrow ridge of rock that runs up under water, close along the bank, but which broadens again a few yards below where the trout are. At last I have reached the big rock, the dingy fly is on once more, my line has been carefully soaked, and now my fly has dropped in amongst them.

Quick as lightning, there is a splash, as a fish evidently takes it for something dropping from the tree, and only wakes up to the horror of the situation when, after having been separated from his brethren, he sees me. Then, by Jove! it's glorious, while its lasts; for he is a good one, close on a pound, and I am in a cramped position kneeling on the rock unable to raise my rod, as it would be entangled in the overhanging branches.

"I wish you'd let me have the net Palmer, old chap; keep out of sight if you can."

I have not long to wait. The cheery face of my old friend peers over the bank a few yards below me, the net is pushed down towards me.

"Now my friend it's no use. Quietly, quietly," as the fish springs out of water. But obey me? Not a bit of it. There he is out of water again. I have him within a "measurable distance" of the landing-net now, and make my effort. "Gad, that's clumsy," I exclaim, as I raise the net, and, not being fairly under the fish, raise him partly out of water, and he drops back into the pool, but still on. A gentle thrill of gratitude pervades my breast as I feel that we have not parted company yet. Away, away, from the hated net with a rush that fortunately does not last long. I turn him after a short argument and bring the runaway back. No bungling this time, for he is writhing and knocking head and tail together in the net.

"Hurrah," from Palmer, who has been anxiously watching the contest.

I turn upon him that seraphic smile of which I have the acknowledged monopoly, and in my gratitude vow mentally to reward this man's largeness of soul by laughing at his very next joke. The fish is passed up to Palmer. "I believe he is a pound, old chap," "More than that; looks like a guinea, he's so yellow," was the reply. Here is my opportunity. I laugh—yes, actually laugh. Palmer looks surprised. So I make a mental note to repeat the laugh next time. Who knows? Perhaps———. No, I wouldn't stop poor old Palmer's little jokes for anything, so I won't laugh. Now I am at it again, and secure another fish which comes to the still fly under water; and have followed the fish up as far as the ledge of rock will allow me, for they are working up stream. A little higher up I find another place where I can repeat the performance; and here, and once again above, I fish carefully, raise several fish, and bag two out of the lot. And now the afternoon has gone. Hawkesford Hill is throwing a great shadow over the meadow; the moths are coming out; the cockchafers will soon be here, the breath of wind has dropped, and all is calm. Lower down the valley the hills look blue, and here and there in the far distance there is a tinge of purple on them.

Closing time now, for, though I should probably bag a few fish as the evening closes in, I don't intend to stay for it. So we light our pipes, and stroll homewards.

The cows are standing in the water at the bottom of old Greenheart's pool, lashing the water with their tails and lowing, for they think it is time that Mary Anne brought her bright milk-pail and three-legged stool into the meadow. The miller's waggon is going home across the bridge, and some labourers, who have been toiling in the barley fields, are shouting out some song or other in the lane up by the pound, for the day's work is done, and supper is waiting for them.

We are to separate at the bridge, for my way lies through the village past the church; so, on the parapet of the bridge, we lay out the fish—eight of them—and there divide the spoil.

"I think I shall try my hand to-morrow," says Palmer.

"So do," says I. "I have to go to Torborough to-morrow; but I shall see you on Sunday after service, and hear what sport."

The last word is spoken, and we part. The last word? No. For as Palmer jumps over the stile so as to go home through the meadows, he shouts back at me, "Wish I had taken your bet though; how about that dozen?" Low-mindedness of this kind deserves no reply, and it does not get it. But discomfited? Not he! Long after, as I make my way up the lane, I hear his cheery whistle in the meadows below. Dear old Palmer, I think I have a soft spot somewhere in my heart for him

SCOTCH LOCH FISHING.

Messrs. W. Blackwood and Sons, publishers, Edinburgh, send us a new little work under the above title. It is by one of the members of the Western Angling Club, of Glasgow, who writes under the *nom de plume* of "Black Palmer." Although we infinitely prefer river fishing to lake fishing, and fishing from the bank to fishing from a boat, still we should be sorry to deny that lake-fishing has its advantages. "Black Palmer," in his preface, "does not pretend to have written anything new," and we think he would have found it a difficult matter to do so, considering how much has already been written on this particular branch of angling. But his book will supply a want, for the simple reason that what has previously been written on the subject is to be found only in bulky volumes. A most useful feature in "Black Palmer's" modest little book is that it is interleaved for notes. Its eighty pages are divided into chapters as follows:—I. Introduction; II. Equipment; III. Tackle and Accessories; IV. Flies and Casting Lines; V. Trolling Tackle and Lures; VI. Duties of Boatmen; VII. Etiquette of Loch-fishing; VIII. Casting and Striking; IX. Trolling; X. Capture of Fish; XI. After a Day's Fishing; XII. Reminiscences; XIII. Conclusion.

It will thus be seen the work is comprehensive, and after reading it with pleasure we can recommend it to all who go in for loch or lake fishing, in which our author is evidently an adept. One thing we particularly like about him is the manner in which he gives his advice and instruction. There is no hesitation about it, no bewildering generalities which only fog the beginner. He tells you what he has, from long experience, found the best rod, the best flies, &c., and best method of fishing a loch, and any one who follows his instructions will soon prove their practical value. We do not agree with him in the matter of lines. The silk and hair hybrid is a vexatious nuisance in our opinion, and cannot for a moment compare with a really good waterproofed silk line. The Scotch system of trailing is one which ought to be much more restricted than it is. What chance do the fish get when two, or perhaps three, rods are used by an angler, each rod armed with a spinning bait and miles of water raked over in a serpentine fashion? No wonder the *ferox* gets rarer every year in the Scotch lochs. This kind of fishing reduces the work of the angler to the mere mechanical exertion of hauling in a fish, which has fastened itself on to half-a-dozen hooks. It was just this kind of fishing that did so much to ruin the Thames as a jack river, and some day our Scotch friends will find that they too must put it down as an unsportsmanlike practice. Any bungler who has a clever boatman can catch fish in this way, which is very far removed from legitimate spinning with one rod, and that properly worked by the angler himself, and not left to fish for itself. We will do our author the justice to say that he infinitely prefers fly-fishing, and looks on trailing or trolling, as he calls it, as a last resource.

We learn that a silver medal has been awarded to Mr. J. Starkey for his exhibit of a collection of preserved freshwater fish at Edinburgh.

A TELEGRAM, AND WHAT CAME OF IT.

The well-known postman's rat-tat put all at the breakfast table on the *qui vive*. The anxious expectancy was relieved by tearing open the yellow envelope and deciphering the telegram, which ran thus: "Would you like a day's jack-fishing? If so, come to-morrow; water in first-rate condition. Wire reply." As I hastily scribbled my answer, "Will come by first train," I could not help feeling commiseration for an old chum, whose face visibly lengthened as he sat munching his breakfast, preparatory to his return to the great Babylon from whence he had journeyed only a few days previous, in the hope of joining me in an expedition to this particular piece of water, but which now the calls of his profession compelled him to forego.

It was a raw cold morning in the month of February, 1882, and a thick fog completely enveloped the old provincial town, when I alighted at the railway station. The deep-toned bell of the Abbey tower struck ten as I exchanged salutations with my friend (whom I shall designate M.), who proposed an adjournment to the hotel, where we fortified ourselves against the cold with a glass each of mulled claret. We then shouldered our rods, &c., and, after a brisk walk of ten minutes' duration, arrived at the lake, where we were met by the keeper, who had everything in readiness; and by the time we had put our rods together, he had carefully adjusted a small bright roach on each of our spinning flights. Taking our places, one at each end of the boat, we were quickly at work.

By this time a breeze had sprung up, and cleared away the fog, and everything looked promising for a good day's sport. Our first casts were in a deepish bit of water, overhung with bushes and trees, which I knew, from former experience, to be a favourite rendezvous of *Esox Lucius*. The bending of M.'s rod, shortly after, assured us that Master Jack was not only at home, but was disposed to accept the bill of fare we had provided. M. was now jubilant, but for a short time only; for, with a vicious shake of the head, Jack bid him good-bye.

"Strike 'em a little harder, sir; they has very bony mouths. I like to give it 'em a second time, to drive the hooks well home," was our boatman's admonition.

In less than five minutes M.'s tightened line betokened another acceptance. Profiting by his instructions, he was enabled to claim first blood, as a four-pounder was lifted into the boat. Whilst M. was giving the *coup de grace* to this one, I hooked another, which, after taking out about twenty yards of line, turned, and made straight for the boat, and I had to reel up pretty sharp to keep any strain on him.

"You've got him proper, sir," said the boatman.

"Yes," said I, "he's right enough."

Ah! luckless speech, and bootless boast! I had hardly uttered it when he made a tremendous rush, and my line, minus trace and flight, was floating in the wind. I could have torn my hair with disappointment and vexation; but as that would not have mended matters, I didn't, but set about mending my broken tackle. We now had a long spell without a touch, and it was getting towards one o'clock when I hooked and killed a nice fish of six and a half pounds; by the time it was put *hors de combat*, a boy with the luncheon hamper hove in sight, to the contents of which our attention was directed for the next half-hour. Having lit our weeds we again commenced business, which opened briskly, M. almost immediately hauling in a good six-pounder, and shortly after another of equal weight was scored to my rod. We next fished some jacky-looking water, at the head of the lake, where three others (one of which was upwards of seven pounds) were duly accounted for, besides two which were hooked and lost. We then made a move to the locality where we commenced in the morning. I had only made a few casts under the overhanging boughs, when I felt the tug of a heavy fish, which, directly he felt the steel, was away like lightning; but, after a pretty fight, lasting about ten minutes, he was laid beside his captured brethren in the boat. This was our best fish, and plumped down the scales at ten and a half pounds. We fished on till four o'clock, adding a brace more to our captives, our total being twelve fish, weighing sixty-six pounds. Altogether it was a most enjoyable day, weather and water being alike favourable, and we had the advantages of the services of a boatman who was indefatigable in his endeavours to show sport, and had the happy knack of rowing just the right pace, and placing his boat in the best position for fishing each likely spot.

Red Ant.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal books. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

RIVER REPORTS.

MID-THAMES.

" —— on that bank, feel the west wind
Breathe health and plenty; please my mind,
To see sweet dewdrops kiss these flowers,
And then washed off by April showers."

I. WALTON.

April showers have been in the descendant, as well as ascendant, during the past week; so much so in fact that quite a freshet is the result, the river being high and coloured as I write and out of trim for trout. This freshet will do the river good, and act like gin and bitters on the appetites of the spotted beauties. At Hambleden, on the 20th Mr. Towsey, of Henley, got a pretty little takeable fish, and Mr. Alford a ditto at Magpie Island, above Medmenham. At Hurley, H. Rockwell, of Marlow, has succeeded in trapping a big poacher, viz., in the shape of a 23 lb. otter. I had an opportunity of seeing the gentleman on Tuesday evening, and a finer specimen of oily silkiness I never handled. At Marlow Mr. Faulkner, with "Tipney," whilst spinning Marlow Point the other day, got a splendid trout, which scaled 7 lb., and Mr. Englefield on the 20th, got a fish of over 2 lb., on the 24th another under 2 lb., which was duly returned uninjured, and on the 27th (yesterday) a splendid conditioned fish of 3 lb. 2 oz. Thursday evening.—River rising from recent heavy rains. When this colour gets down good sport may be safely anticipated.—MARLOW BUZZ.

Ballynahinch.

For this last week angling on the above has been very good. On Saturday and Sunday we had a heavy fall of rain, so that the waters are now getting into prime order. The most successful was Lord James Douglas on the 20th—one salmon 13 lb.; same date, Mr. Hynes, one 8½ lb., and Mr. Oldham, one 8 lb. On the 21st, Mr. Hynes, two, 10 and 13 lb.; same date, Mr. Oldham, one 10 lb. On the 22nd, Lord James Douglas, one 7½ lb.; same date, Mr. Brooks, three—8½, 10, and 11 lb. On the 24th, Mr. Hynes, one 10¾ lb.; same date, Mr. J. E. Chadwick, one 10 lb. On the 25th, Lord Douglas, one 10 lb.; same date, Mr. Hynes, two, 7½ and 9 lb., and Mr. J. E. Chadwick, one 10 lb. Total for the week, sixteen salmon, weighing 156¼ lb. Salmon have been taking the fly pretty freely—in fact, so free, that some of the above gentlemen have hooked and lost from three to six salmon a day.—WATTIE BLACKADDER.

Coquet (Weldon Bridge).

On te 20th the river came down white and thick. Mr. Oliver killed seven and a half brace with worm, and on the 21st, good condition for fly, Mr. Elcome, Liverpool, killed two dozen splendid trout. Colonel Saltmarch and Captain Saltmarch, Newcastle Barracks, had good sport, killed five and a half dozen for the two. On the 22nd fine morning for the sport, and eight started, but about ten o'clock the clouds made their appearance in the east and the rain came on and rained up to six o'clock, and the sport was poor. Msssrs. Saltmarch ten brace for the two, Messrs. Lawson, Bowment, Robson, Wilson, Newcastle, had from three to six brace; Mr. Elcome and Woolsey eight brace for the two. On the 24th the river in good condition for minnow; W. Esau, Moleshaugh, killed 8 lb. splendid fish.—A. GLASS.

Dove.

At the latter part of last week our river was very much discoloured, owing to the heavy and continuous rains; but it is now running in first-rate order for all kinds of trout fishing. In the brooks, both the natural and artificial minnows have been used with considerable success, and I hear that a gentleman fishing in the Henmore, near Clifton, caught a magnificent sample scaling 4 lb., quite an abnormal size for the Dove. The fish showed rare sport, but was landed in fine style. On Tuesday last some heavy baskets were obtained in the main river with the fly, and as the weather has now become considerably more favourable than last week, I fancy good sport is in store for trout fishers generally. I am informed that the May fly reported to have appeared on the Dove in sheltered places is not really that fly, but a green shade of March brown or the small green upwing designated by Ronalds "the little yellow May dun." I think this must be the case, for the May fly never comes out here before the middle of May.—THE SPLODGER.

Exe (Tiverton).

The river is at present too high for fishing, and has been all the week. By Saturday, if no more rain, it will be in good condition for the fly, when some good sport is looked forward for. We shall, no doubt, hear of some salmon taking advantage of the present flood to move up.—WM. MUDFORD.

Lyn (Lynmouth, N. Devon).

Recent cold showers interfered with last week's fishing. Water now in capital order.—J. H.

Medway (Tonbridge).

Last Saturday the members of the Tonbridge Angling Club were kindly invited by Mr. Liston Young, of the Tonbridge Wells Spa and Hydropathic Establishment, to pay a visit to his beautiful grounds for the purpose of clearing three lakes of all fish, as he is about to stock them with Loch Leven trout. The grounds are some of the most beautiful in Kent, and the lakes splendidly situate. They are supplied by springs surrounded by magnificent timber, and as they are never thick and grow plenty of silk weed, are the very place where trout should thrive and do remarkably well. The morning was wet, but sufficient numbers turned out to accomplish the work, and when the weather cleared up their number was greatly increased. Growns and Son, as usual, supplied the nets, but the haul was not nearly what had been expected, as the precaution had not been taken of placing gratings at the outlets of the lakes, and hence the bulk of fish had doubtless gone away down stream. This will be obviated in future. The majority of the fish taken were carp, nice, well-conditioned fish, as clean as a piece of silver, and full of spawn. As the day was young, Mr. White kindly placed a large pond at Lew at the disposal of the committee, and thither they accordingly proceeded. In three hauls between two and three hundred splendid carp were captured. They were a very even lot, weighing some half a pound each, and exceedingly healthy and full of spawn. They were at once placed in tanks and safely removed to Tonbridge, where they were deposited in the society's waters. Another grand addition, and one which will in time bear good fruit.—YE MEDWAY WATER RAT.

Norfolk.

There has been some rare good sport amongst the roach during the past week from the river Yare. They have been famously on the feed, and some excellent bags have been made. Two gentlemen at Buckenham, on Friday last, took 65 lb. of these fish, and all in excellent condition; and I also saw some nice samples taken at Brundall on the same day. Undoubtedly, between Buckenham and Brundall are the best roach-fishing grounds anywhere on the stream, as in addition to the Rockland and Surlingham Broads (which are most prolific nurseries), there is another broad called Shumpshaw Broad, which is now strictly preserved, and will, without doubt, be the means of adding many a million to our already great supply. I also heard an authority say that he observed last week an immense quantity of bream moving about, an instance that has not been known at this part of the river for years. Any of our angling friends from a distance coming down for a few day's good roach-fishing will do well to enquire for the Walpole's Reed Bush Reach, where on either side of the river they will obtain good sport; and whilst mentioning our friends who visit our old river during the season, I trust they will not forget the Yare Preservation Society's contribution boxes, which are placed at every inn on the river, so that at the end of this season it may be gratifying to the gentlemen connected therewith, to see that their labours in procuring plenty of sport have not been in vain. I forgot to mention that the Reed Bush Reach is only a short pull either from Brundall or Buckenham. I observe that the works of the Norfolk and Norwich Angling and Boating Society are being rapidly pushed forward, and that a most substantial quay has been placed next the river, in order to facilitate yachts and vessels of a heavy tonnage to moor in safety.—ANGLER.

North Lincolnshire.

Several baskets of nice trout have recently been caught in the becks of this neighbourhood, but as the waters run almost wholly through private grounds I will not further particularise. The chief fly is still the March brown, which I believe, if taken the whole season, will kill more fish than any other. Worm-fishing is wholly stopped on the Laceby Beck, and fly-fishing alone permitted. This is a step in the right direction. The stream is open so there is not the apology for the dirty worm that there may be on some waters. I am very sorry to say that most of the trout in the beck which I had so nicely stocked at Nettleton have been killed by the swillings from the new breweries. I can assure you this cuts me very hard. Since 1876 I have yearly placed a nice supply of fry in the stream, and to show how successful my efforts had been I may state that I have killed, in addition to smaller fish, no less than twelve of upwards of 1½ lb. each, about half of these 2 lb., and one 3 lb. At the end of last season I anticipated a splendid result this year, but I am drawing nearly a blank, it being impossible to catch more than a brace or so in a day, but they are fine and no mistake when captured. I had one last week 1¾ lb. which had a fair sized young water-rat in its maw. The *fontinalis*, which I turned out recently from the Manor fishery, are in some cases growing famously. Some are as large as fair-sized minnows. I attribute the excellent growth of these and the pinky flesh of the trout to the abundance of shrimps found in the waters.—THOMAS FORD.

Suir and its Tributaries, Clonmel.

Although we have many heavy showers the river continues this week in good order, and some salmon have been taken on the upper waters. Below Clonmel the river is still a bit too high. The cotmen are doing better this week than they did last week. The salmon still continue to run small in size. There is a splendid rise of trout every evening in the Suir, but they are not taking very freely with the artificial fly as yet. However, on all the streams, especially Nire and Tar, good baskets were got almost every day. Mr. Haines, at present staying at Rathronan, while spinning the Devon minnow for trout on the Anner caught on it a fine pike, weighing 11 lb. The favourite flies at present are wrens, grouse, and black hackles.—DORA.

Swale.

Some good catches have been made on this river by many local anglers since my last report, but still mostly with the worm and minnow. Owing to the mildness of the winter the spawning season was a good one, and the becks are full of young fry. The flies suitable for the present are the March brown, woodcocks, snipe and blue, snipe and crimson. I have heard of an early stone fly (May fly locally) being seen on the lower waters of the Yore.—THOMAS FORD.

Taw and Tributaries (N. Devon).

The water is what is called perfection in the small streams, but the Taw and Mole very high and still dirty, and will not be fishable until Saturday if the rain should hold up. Although the weather is cold, it is warm between eleven and four, and no doubt some good catches will be had On Friday last, a gentleman caught, in the lower part of the Taw, which has just been opened, a fresh-run salmon over 8 lb,, and on the part which belongs to Mr. Rolle, two more and a dish or two of trout. A gentleman got three dozen fine trout in the Bray. The trout have not been large this season. One gentleman caught thirty three in the Yeo, another eighteen, and no doubt some good catches will be had to-day (Thursday—first class day). I have heard that a Mr. Beazley caught some decent baskets last week upon the Bray. I hear the Lynmouth water has not given the usual good catches, they must wait for warmer weather.—RUSTY GAME.

Wye and Derwent.

A very great quantity of heavy thunder-rain fell the latter end of last week, which quite disturbed both rivers a little. The Derwent had a most beautiful woodland water come down it both on Monday and Tuesday; which was quite a treat to anglers, for both bottom and trolling fishing was followed with good success all up and down the Derwent, and some good baskets were the order of the day. Last Monday Mr. W. Smith killed two trout with the worm close to Matlock Bridge; the largest fish was 1 lb. 10 oz., and the other was 1 lb. 6 oz., two magnificent fish for the Derwent. The average size of the fish—trout, as a rule—is from half a pound to a pound each. Fly-fishing has also been followed with good success both on the Wye and Derwent, and baskets from four to nine brace per angler have been made. The killing flies have been the claret, bumble, duns, red and spider flies; the bumble killing the most fish. Sport in the ponds has also been good with both fly and bottom. March, brown, and red spinners are killers.—G. J. Eaton, Starkholmes, Matlock Bath.

Yore (Yorkshire).

There have been very few chances of making a dish of trout during the past week, as the river has been in high flood most of the time, and in addition the weather has been such as to render a visit to the river side neither pleasant or profitable to the angler. I am afraid that the creeper fishing this season will be a blank, and, owing to the floods, there will be only a poor chance of many of them turning into stone flies. This will be a great disappointment to many anglers, who rightly look upon these two baits as the most certain to produce a really good dish of trout. To-day (Wednesday) the wind has been very cold, and more rain seems to be impending.—Francis M. Walbran.

CLUB REPORTS.

ACT-ON-THE-SQUARE ANGLING SOCIETY.

The annual supper and prize distribution of the above society took place on Thursday last, the 20th inst., at the club house, Ferry Boat, Tottenham; Mr. John Thompson in the chair, ably supported by Mr. W. Mead as vice. After supper (which was capitally served by the Messrs. Day) the distribution was proceeded with, Mr. W. Mead taking the club prize for gross weight of roach, Mr. Thompson for gross weight of dace, and Mr. W. Stone for gross weight of perch. Mr. A. George headed the list of special prize winners by taking four; Mr. T. H. Clark, "the original Act on the Square," and Mr. H. Chapman came next with three each, and Messrs. J. Stone, W. Stone, J. Duke, and W. Money one each. After which some very capital singing was given by most of those present, and most having to go to London, an early break-up was the only mar to the evening.—A. George, hon. sec.

April 26.

ANGLERS' BENEVOLENT SOCIETY.

Since the last report, I beg to acknowledge (with thanks) the receipt of a donation of 5s. from the Cavendish Angling Society, and the contents of donation boxes from Gresham Angling Society, £2 2s.; Albert Angling Society, 8s.; from Hoxton Brothers Angling Society, 5s. The winning number of the picture presented by G. Fennell, Esq., will be published next week. The members' contributions are due on May 1st, 1882. Secretaries and members are requested to forward to the general secretary forthwith the list of names and addresses, with 1s. 1d. each, on receipt of which cards of membership will be forwarded. No application for assistance can be entertained unless subscription has been previously paid.

N.B.—The secretaries and members are earnestly requested to use their best endeavours in soliciting donations for the society, to enable the committee to carry out the good work so successfully commenced. The donation boxes for the club rooms are now ready, and may be had on application.—R. Ghurney, general secretary.

THE BRUNSWICK PISCATORIAL SOCIETY.

This society met at headquarters, the Brunswick Arms, Brunswick Street, Stamford Street, on Wednesday last, when it was arranged that the first annual dinner will be on the 10th day of May next. Gentlemen wishing to partake thereof are requested to write to the secretary. During the evening Mr. W. Allsop, presiding at the piano, some capital songs were given by the visitors and members present.—Esox Lucius.

CITY OF LONDON ANGLING SOCIETY.

A combined West Central and Eastern District visit will be paid to the above on Wednesday, May 3rd, at Cogers' Hall, Bride Lane, Fleet Street, which can be easily reached by 'bus, rail, or tram from all parts of London. We shall be most happy to welcome any brother angler who will favour us with a visit.—Cas.

CROWN PISCATORIAL SOCIETY.

The members of this society met in large numbers on Thursday evening, Mr. F. Long in the chair. Three members were made, and several gentlemen promising to become members after the business was done. The following gentlemen contributed to harmony:—Mr. Pipe presided at the piano, and Mr. W. Gorsuch, of the Original Clerkenwell Piscatorials, violin. Some first-class music was enjoyed, while Messrs. W. Long, L. Gorsuch, F. Long, F. Brooks, J. Roberts, W, Burwash, and Messrs. J. Trott and C. Turner, of the Clerkenwell Piscatorials, sung some first-rate songs, that brought to a close a most enjoyable night.—W. H. Burwash, sec.

April 21.

GRESHAM ANGLING SOCIETY.

This society held its usual meeting on Thursday evening, C. S. Bentley, Esq., in the chair. The secretary stated that himself and Mr. Bates had been elected members of the Committee of the West Central Association, also of the Anglers' Benevolent and of the new United Society, formed to rent, preserve and stock waters for the use of all members of angling societies. They had felt reluctant to take these honours, but regarded them not so much as personal compliments as showing the general respect accorded to the Gresham by the metropolitan anglers, and which they trusted would long continue. Mr. Crumplen had also the pleasure of replying on behalf of the Gresham to the toast of "Angling Societies," at the annual dinner of the De Beauvoir Association, so successfully held on Monday last, at the Holborn Restaurant, under the presidency of Dr. Defreiz. Mr. Brett weighed in $6\frac{1}{4}$ lb. trout, and Mr. Young one of $10\frac{1}{2}$ lb., both gentlemen returning smaller fish to the water. Mr. Beutley and Mr. Robertson have recently made presentations to the library, which now numbers about one hundred volumes. After a pleasant discussion on sundry angling topics, a very cordial vote of thanks was passed to Mr. Bentley who had very ably occupied the chair. The members afterwards, as loyal subjects, resolved themselves into a special meeting, and indulged in a bowl of punch, the Royal Bride and Bridegroom being enthusiastically toasted. Messrs. Jardine, Crumplen, Miller, Clark, and others sang the National Anthem, sung most heartily, concluding a very exceptional evening.

LARKHALL ANGLING SOCIETY.

The last smoking concert of the season was held on Wednesday last, the 26th inst., when a large number of members and their friends mustered at the clubhouse and spent a most enjoyable evening. The singing was of the usual first-class character, the songs given by Messrs. J. Lovett, J. Edmondson, R. Edmondson, Gordon Lauri, R. Bruce, C. Broadlake, J. English, E. Mallett, F. Croutel Alreak and J. Richards being much appreciated. A hearty vote of thanks was given to the president, Mr. G. F. Spencer, and the honorary secretary, Mr. E. M. Mallett, for the manner in which they had carried out the arrangements of the smoking concerts during the evening. In reply to the query in the letter of "Mark Antony" in last week's Fishing Gazette, *re* the gross weight of fish caught by this society during the past season, if he will forward me his address I shall have much pleasure in giving him every information respecting those "12 cwt.," and the weight of the different "sorts," which were all above the club standard.—E. M Mallett.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our annual supper and distribution of prizes took place on Wednesday the 26th inst., when a thorough enjoyable evening was spent by all members and friends present. The supper was placed on the table by our worthy host, Mr. Loomes, in an excellent manner, great credit being given to him for the same—ample justice was done to it by every one. The chair was well filled by Mr. J. H. Stead, and the vice-chair by Mr. J. Pipe. The harmony of the evening was first-class, some capital songs and toasts being given by members and friends. Also a selection on the miniature concertina and banjo by Messrs. Jackson and Barr. The distribution of prizes was got through in a short space of time; also a short report of the weights of fish, which was read by the secretary, who received great praise for the admirable way in which the prize list and report was made out. Some capital prizes was given for next season's fishing, and the evening was therefore crowned with a great success.—H. Moore, sec.

April 27th, 1882.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The members are particularly requested to attend on next Monday evening, May 1st, for the following purposes: to elect auditors, fixing the date of annual supper, and distribution of prizes, and other important business.—Thos. Wm. Lucy, sec.

ROYAL PISCATORIALS.

The anniversary dinner of the above took place on the 21st at the society's headquarters, Mr. T. Hughes's, "The Albion," Rodney Road, S.E., Mr. G. Hockley presided, assisted by Mr. W. Canton. Twenty-five members and their friends sat down and did justice to the good things provided for the occasion. The cloth having been removed, and the usual formality responded to, Mr. F. Dale, the secretary, gave the results of the competitions that had taken place during the past season, which were as follows:—Mr. T. Hughes, 1st, won seventeen prizes, including a handsome dressing case given by Mr. R. Grant, and also four society's prizes, given for the following specimen fish:—Jack, 25 lb.; barbel, 5 lb. 12 oz.; grayling, 1 lb 6 oz.; and a dace of 12 oz.; money prizes amounted to £17 6s. 6d. Mr. W. Canton, 2nd, to his credit was placed £9 19s. 6d., a box of cigars, and a box of handkerchiefs. Mr. G. Hockley, 3rd, succeeded in weighing, in the society, the largest Thames trout, for which a well-known member of the press gave a prize of £2 2s.; to the same member's account also stands:—A timepiece, a box of cigars, and £9 9s. Mr. H. Smithers, 4th, takes five prizes, amounting to £6 16s. 6d., a ton of coals, and a half share in a matrimonial fruit carriage. Mr. J. Frith, 5th, who also had five prizes to take, for which he received £9 19s. 6d. and a case of champagne. Mr. W. Randall, 6th, £7 7s and fly rod; this gentleman weighed the largest bream, 5 lb. 5 oz., for which he received the society's prize. Mr. G. Lee, 7th. Mr. F. Dale, 8th, though last, succeeded in getting £3 3s., a box of cigars, a meerschaum pipe, and a copy of Rolfe's picture. There were 58 prizes given during the season, two being given by ladies, one by Mrs. Hughes, which was won by Mr. W. Canton, and one given by Mrs. W. Canton, which was taken by Mr. G. Lee. The society gave six specimen prizes, Mr. J. Frith took one with a roach that turned the scale at 2 lb. The total weight of fish taken by members during the season amounted to 1321 lb. This part of the entertainment having been brought to a close, the rest of the evening was devoted to harmony, after which all retired, perfectly satisfied with the evening's amusement.

STALYBRIDGE ANGLING ASSOCIATION.

On Saturday April 22, one of the clubs in connection with the above society—viz., The Q Inn Angling Society held their first contest of the season in the Fox Tavern Reserve, where some useful and ornamental articles were competed. The fish did not seem to take to the dainty bits that were offered to them, and angling for upwards of an hour with very poor success, the members returned to their meeting house, the Q Inn, Back Grosvenor Street, where they sat down to an excellent dinner provided by the worthy host and hostess (Mr. and Mrs. David Shaw). After the removal of the cloth, the worthy president, Mr. Henry Abrams was called to the chair and was supported by Mr. William Jackson as vice. The president opened the meeting with a short but substantial speech, and distributed the prizes to the successful competitors as follows: 1st, John Ward; 2nd, David Shaw; 3rd, Joseph Leigh; 4th, John Tasker; 5th, J. B. Udale; the remainder of the evening was passed in singing and reciting by the members and their friends.—J. B. Udale.

WALWORTH WALTONIANS.

In the report that appeared in the last copy of the Gazette of the above society it states that "Mr. H. Bayley was appointed the thirteenth to attend the W. C. Committee on its next meeting as the representative of this society." It should have been, "on the 13th Mr. H. Bayley was appointed to attend the West Central Committee on its next meeting as the representative of this society." By correcting this you will oblige,—Pixie.

April 26.

As poor insane George III. was one day breakfasting at Kew, the great scarcity of beef, which was then prevailing in England, became the subject of conversation. "Why do not people plant more beef?" asked the king. Upon being told that beef could not be raised from seed, he seemed still incredulous, and took some bits of beefsteak, and went into the garden and planted them. The next morning he went to see if they had sprouted, and found some snails. Thinking they were oxen, he exclaimed, "Here they are, Charlotte, horns and all!"

VIEWS OF SCOTCH LOCH SCENERY.

ELSEWHERE in the present issue of the GAZETTE will be found notices of two little works on angling in the Scotch lakes, and very appropriately we have also the pleasure to notice this week four extremely fine oleographic views of Lochs Katrine, Earn, Awe and Achray. These fac-simile reproductions in colours of paintings by J. Blair, are published by Messrs. Raphael Tuck and Sons, 73, Coleman Street, E.C. Of the hundreds of German, French, Italian and other oleographs which we have seen, we know none to equal these four landscapes of scenes of the greatest beauty in themselves and of especial interest to anglers. As adornments to the angler's home or club-room it would be difficult to find anything more pleasing than these four views, and the price is within the reach of all.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents*]

GROSS-WEIGHT *v.* SPECIMEN FISH.

SIR,—I am induced, by reading "Kingfisher's" remarks, to write you the following:—

Where is the man to be found who is not proud of a good take of fish, proud to fish, and proud to show? Of this I feel certain, from reading your club reports. The objection I now take is only about the vagueness of some of the reports as to the time taken in catching any given exceptional take. When we see the name of a well-known man, say down for a catch of barbel, those who are in the secret know the take had not been effected without a day or two spent in baiting up a swim. Then, in some cases, we are not told that two friends occupied the punt, or one of the rods were used by the puntsman. How different is this sort of thing to the legitimate bank anglers (despised and detracted club men, vide "Kingfisher's" letter, April 15th), who are compelled to start with their brother members all by one train in the morning, and to return by a far too early train at night just when the fish are coming on. How small by comparison does his total gross weight for the year look. I could mention one or two takes of fish that would, if the time the man angled was given, look equal to anything previously done, considering only one rod was used and the quality of the fish exceptionally good, although there was not a single fish up to specimen weight.

In conclusion, I do not for one moment believe, in spite of all that can be written or said (a great deal of which is false), that our clubs will give up the most valued prizes of the year, Gross Weights. E. C.

P.S.—I have been an angler over thirty years. I take my share, or perhaps more than my brother members, of good fish; but for some years past I have not succeeded in taking a fish up to a specimen weight. I have not had the chance to get broken away. This fact I think conclusively shows that specimen fish are chance or lucky fish to the angler, and no sure sign of skill.

April 19th, 1882.

SINGULAR CAPTURE OF A TROUT.

SIR,—Mr. Charles Clark, whilst fishing in the Plym yesterday (Friday) hooked and landed a trout, about 11 inches long, that had an indiarubber band over its head. It had slipped over the gill covers, and was compressing the gills themselves. The horny part of the fish, which extends from the centre of the lower jaws to the belly, and divides the gills, is deeply dented where the band has evidently been pressing, and it has made quite a cavity under the lower jaw.

I should like to know if anybody has marked the fish with the band, or whether it got its head through in an attempt to take it for a bait.

How the fish lived is a mystery. It is in splendid condition, and I have preserved it for my museum.

It will be in my window for a few days this week where it can be seen.

Mr. Clark tells me that it was very lively when hooked, and did not seem anything the worse for its embracing.—I am, &c., WILLIAM HEARDER.

195, Union Street, Plymouth.

[April 22.

THE EYED HOOK.

SIR,—I enclose an eyed hook, with gut attached. You simply put the gut through the eye, then tie a slip knot, after which put the loop over the hook and draw it up tight to the eye. I find it never slips. It is much quicker than Mr. Hall's plan, and you have only to put the gut through the eye once. It is difficult to explain. The beauty is that once the gut is through the eye you may let the fly slide down the line, without fear of losing it, until you have made the loop knot. I see some one sent you a dottrel. If you could spare me about a dozen hackles I should be much obliged.—I am, &c,

HAMPSHIRE.

THE YARE ANGLING STATION.

SIR,—In justice to Messrs. Flowers and Co., I trust you will permit me to endorse every word in their letter to you in last week's issue. I happened to be spending my Easter holiday in that neighbourhood, and was much pleased with the improvements being carried out by them at Brundall. The projected company at that time had made no sign, they had only a patch of land (about one acre), whereas Messrs. Flowers and Co. are in possession of fully twelve acres in a most commanding situation, abutting upon both railway station and river. Nothing is gained by misrepresentation, and I can only conclude, sir, that your correspondent "Angler" has been the victim of a hoax. A very fine yacht-house is already erected, and if Messrs. Flowers and Co will only add a snug, comfortable house, which, I was informed, they are now contemplating, it bids fair to be the most convenient and popular angling resort on this river.—I am, &c., C. N. DOBLE.

Oakley, Lordship Lane, Dulwich, S.E., April 19.

CLUB AND OTHER JOTTINGS.

By L. B.

THE best piece of news I have heard this week is the formation of a Thames Preservation Society at Henley, in the success of which the Right Hon. W. H. Smith is said to take the greatest interest, which in itself augurs well for the future prospects of the society.

The following is clipped from the pages of a contemporary; and just now, when coarse fish culture occupies, and deservedly, so large a share of attention it is doubly worth reproducing:—"The Pope a Farmer.—How many people are there who know that the Pope is a farmer? Such is the fact, however, and there is reason to believe that His Holiness makes a very good thing of it. Leo XIII. 'goes in,' however, neither for the growing of cereals nor the raising of stock, but for the breeding of fish. The lagoons of Comacchio are thus turned to profitable use. Eels are the staple, and several tons of cooked eels are sent from the lagoons every Lent. The fish come up in immense shoals from the Adriatic, and are fed in the lagoons on other fish provided for them, until they are nicely fattened, when they are killed, and cooked in a vast kitchen. The labourers on these water-farms dwell in barracks built on an island. This is yet another instance of the strange use to which land may be put."—*Land.*

Next Monday evening the monthly meeting of the United London Anglers' Central Committee will be held at the Bald-Faced Stag, Worship Square, Finsbury.

The annual supper of the Sir Hugh Myddleton Angling Society, which took place on Wednesday 19, at the club house, the Empress of Russia, St. John Street Road, was a jolly affair. Mr. Smith made a first-rate chairman and was well supported by our old friend Mr. W. Fowler in the vice; the catering was excellent and the singing ditto, and among the guests were Messrs. J. H. Stead (the "Cure") and L. Bonvoisin; and when I left at 12 o'clock the worthy secretary, Mr. Caborn, was smiling sweetly the while he contemplated a long list of valuable prizes, subscribed by the members and visitors, to be fished for during the coming season. On Wednesday evening next, May 3, a General and West Central Association District visit will be paid the City of London Angling Club at the Codger's Hall, Bride Lane, Fleet Street, and as this is one of the best visiting societies in London, a rare muster is anticipated.

Mr. T. Hoole has received per post a letter addressed "T. Toole, 7, King's Road, Mortlake, S.W.," signed James Budd, pro H C.H.; and as it refers to matters he has not the remotest knowledge of, bears no address to which he can either return it or write for an explanation, he has asked me to put a line in my Notes this week in the hopes it may meet the writer's eye.

Many anglers are eagerly asking whether the talked-of bait and fly-casting tournament is likely to come off during the present close season. Such an event would certainly make a pleasant break in, and help to bridge over, the tedium of waiting for the glorious month of June, and the opening day. From all points of view the matter is well worthy of being considered, and I commend it to the notice of those gentlemen who took a prominent part in organising and carry-out the previous contest under conditions which would have sorely taxed the temper of jolly Mark Tapley himself.

The trout-fishing season opens on the Lea on May 1. Some good fish have been seen feeding, and have been carefully marked down in consequence. The first week generally brings the report of the capture of two or three big ones. Let us hope this year will not prove an exception—it ought not, if gloriously mild and bright weather has anything to do with it.

The Watford Angling Society is progressing satisfactorily—in fact, A1. as Secretary Vincent writes me.

No. 3 District visit was paid the Brunswick Angling Society on Wednesday, April 19, when the following clubs were represented—viz.: Battersea Friendly, Brunswick, Clapham Junction, Excelsior, Peckham Brothers, South London, United Brothers, Cambridge Friendly, City of London, and Crown Piscatorials.

This society, which is quite a young one, is progressing rapidly, having the three essentials—viz., a good secretary, chairman, and treasurer. They have every prospect of becoming an influential society. Several good songs were rendered by the members and friends, and a most enjoyable evening was spent. Mr. Copeland (the hon. sec.) is evidently the right man in the right place—he is here, there, and everywhere, doing all he can for the cause of angling; and that is the way to make his society known, and increase the number of his members. The next visit goes to the Clapham Junction Angling Society, of which due notice will be given.

The following capital set of rules has been drawn up and passed by the committee empowered by the association to rent, preserve, and stock fisheries. The names of the officers and executive, from the president downwards, are in every case those of gentlemen who have already rendered valuable services to the cause of angling.

THE UNITED LONDON ANGLING ASSOCIATIONS' FISHERIES SOCIETY, ESTABLISHED 1882.

President: P. Geen, Esq. Chairman: Mr. J. C. Murray. Vice-Chairman: Mr. R. Ghurney. Trustees: Mr. C. Hatfield, Mr. J. T. Cundall, Mr. J. Jennings. Secretary: Mr. T. Hoole. Bank—London and County Bank, Limited.

EXECUTIVE COMMITTEE.

From West Central Association: Mr. Crumplen, Mr. Bates, Mr. Murphy, Mr. Field, Mr. Bonvoisin. From U.L.A.C.C.: Mr. Manning, Mr. Chambers, Mr. Medcalf, Mr. Aldridge, Mr. Theobald. From Central Association: Mr. Fitch, Mr. Pettit, Mr. Watling, Mr. Obard, Mr. Smith.

RULES.

I.—That the name of this society be "The United London Angling Associations' Fisheries Society," and that whenever in these rules the "Society" is used, the said "United London Angling Associations' Fisheries Society shall be meant.

II.—That all meetings of the society be held at the "Star and Garter," St. Martin's Lane, Charing Cross, unless otherwise determined.

III.—That the society be in union with the West Central Association of London and Provincial Angling Societies; the United London Anglers' Central Committee; and the Central Association of London Angling Clubs; hereinafter called the three associations. That the committee be composed of thirty-six members, twelve from each association, to be elected annually.

IV.—That the sole objects of the society be to acquire, rent, stock, and preserve any water or waters for the exclusive use of its members, except where the committee deem it necessary to make exceptions, all of whom must hold a privilege card from one of the three associations; the tickets of membership of the society to be issued by each of the associations with the privilege card, and that one shilling per annum, or such sum as the society may decide upon at its annual meeting, be charged to each member for the said ticket, and handed by the said three associations to this society, which shall defray cost of printing only.

V.—That the society shall be managed by an executive committee of fifteen members, five from each association, five to form a quorum, who shall elect their own chairman, vice-chairman and secretary, one from each association. No member of the executive to hold more than one office.

VI.—That three trustees, one from each association, shall be elected annually, eligible for re-election, who shall have a right to be present at all meetings of the executive committee, and vote at all meetings; such trustees not to be elected from members of the executive committee.

VII.—That the executive committee have full power to acquire and rent any water or waters without reference to the society.

VIII.—That the committee shall frame such regulations regarding close seasons, or the sizes of fish, or weights of fish to be taken from its waters, as may be deemed desirable, such regulations after being submitted to the joint committee of the three associations and ratified by them, to be binding on all members of the society.

IX.—That the executive committee shall have full power to do anything needful to carry out the objects of the society, also to prosecute or order the prosecution of any person or persons reported guilty of illegal fishing, poaching, netting, or doing anything injurious to the society's fisheries; and may also reward any person or persons concerned in the detection thereof.

X.—That there shall be an annual meeting of the society in May, to approve of a report drawn up by the executive, a copy of which report shall be forwarded to each association. That three auditors, one from each association, be elected annually, to audit the accounts and vouch for their accuracy.

XI.—Under no circumstances shall the funds of the society be used for the cultivation of salmon, trout, or grayling.

XII.—That all funds shall be deposited with the London and County Bank (Limited) until required, and withdrawn only by the trustees after a vote of the executive committee.

XIII.—That the meetings of the executive take place on the second Monday in each month, and the meetings of the full committee once in three month, viz., second Monday in June, August, November and February; the secretary to have power to convene a meeting of the committee at any time should occasion arise for so doing.

XIV.—That these rules shall be final and binding, and cannot be altered or added to unless the executive committee call a special meeting of the society for the purpose.

XV.—That this society shall not be broken up so long as one-third of the delegates are willing to continue it.

SOCIAL BROTHERS ANGLING CLUB.

On Wednesday evening, the 19th inst., the third annual dinner in connection with the above club was held at the Prince Regent, Dulwich Road, Herne Hill, under the most satisfactory circumstances.

The chair was taken by Mr. Lockeyear, the president, whose *vis-à-vis* was Mr. Underdown, the vice-president. The *menu* was varied, ample, and exceedingly well done. The caterers, Messrs. T. Hyde and J. Lockeyear, distinguished themselves greatly by the excellent manner in which the dinner was put on the table. The decorations were very beautiful: the centrepiece being a silver *épergne*, lighted with four wax candles, while at either end were glasses filled with flowers of the choicest and rarest character. Ferns, in open vases, were conspicuous as forming a handsome addition to the decorations of the festive board.

After the removal of the cloth, the Chairman, in graceful terms, gave the first toast of the evening, viz., "The Queen and Royal Family." The first verse of the National Anthem followed.

Then came the toast, "The Social Brothers Angling Club," proposed by Mr. Lockeyear, which was responded to by Mr. Goubot, who, in the course of his remarks, touched on the friendly feeling now existing among the members of the club, which was, in name and in nature, a club formed of social brothers.

The next toast was, "The President and Vice-President," given by Mr. Spare, who spoke in laudatory terms of the efficient manner in which both gentlemen had performed their duties. Mr. Lockeyear, in responding, was deeply sensible of the kind manner in which the toast had been given, and assured the members that both he and his colleague would be only too happy to do all that would be requisite for the benefit of the club in future.

The next toast was, "The Committee and Officers," given by Mr. Lee, who knew how great were the services rendered by these gentlemen; and Mr. Pavey, the hon. secretary, in reply, remarked on the stability of the club, which had now reached its third year. The members were increasing; and, as far as the club's finance was concerned, he was pleased to say it was in a healthy condition. Although a small club, he believed it was second to none as far as its numerical strength went, and he was glad to state that nearly a quarter of a ton of fish was taken, with only sixteen members, in the season, which all knew was a bad season for fishing; and he believed that if the club improved as it had done the last year, the show for the ensuing season would equal, if not surpass, any small club of the same kind.

The next toast was, "The Honorary Members and Visitors," proposed by Mr. Irons, who said that the honorary members were the backbone of all clubs—without them, nothing could be done. Mr. Luff, in responding, acknowledged the honour done him in coupling his name with the toast, and expressed his sense of the kindness and consideration shown to them on this special occasion.

After this came the most important feature of the evening, viz., the presentation of prizes, by Mr. Thomas Harris. This gentleman said that he would do his best to fill the post he occupied, although he deprecated the honour, but, as a perfectly unbiased man, he would endeavour to do the needful.

The prizes consisted of those given by the club, and various articles, of considerable value and great in number, given by private donors, which had been keenly competed for, and which were taken by Messrs. Monk, Irons, Bromhead, Lee, Goubot, Bird, Freeman, Lockeyear, Cocks, Valler, Briscombe, Underdown and John and James Flynn; to each of whom Mr. Harris addressed a few graceful, encouraging and laudatory observations, and to which the recipients suitably replied.

The Chairman then said he had the great pleasure of handing a toilet set to the secretary, Mr. Pavey, subscribed to by the members of the club, as a mark of their respect for the attention he had given to the affairs of the club for the past year.

Mr. Pavey expressed his sincere thanks for the very handsome present, stating at the same time it was a labour of love to do anything for a club that contained such a number of congenial and jovial members.

The next toast was "Mr. Thomas Harris," given in very flattering terms by Mr. Monk, to which Mr. Harris responded. He was most happy to occupy the position he did, and the recollection of that evening would always be most agreeable. Next came "The Press," given by Mr. Smith, coupled with the names of Messrs. Brocklehurst and Bates; the former of whom spoke of the great influence possessed by the Press, and the means which it had of disseminating the views and wishes of every club of this and other kinds; and the latter gentleman dwelt particularly on the culture and preservation of fish, and the great interest always taken in everything connected with piscatorial matters generally by the newspapers of the day.

Votes of thanks were unanimously passed to Mr. Monk, the host, and Messrs. Hyde and Lockeyear, the purveyors of the dinner, and this most successful and entertaining evening was brought to a close by the members all joining in "Auld Lang Syne."

During the evening songs diversified the other proceedings. It must not be forgotten to mention that Mr. Field, that brilliant artist, presided at the piano.

THE DE BEAUVOIR ANGLING ASSOCIATION.

The annual dinner of this association was held on Monday evening, the 24th inst., at the Holborn Restaurant, when over 100 members and friends were present. The chair was ably filled by J. G. Defriez, Esq., and the vice chair by Edward Hayter, Esq., and among the visitors were Messrs. Wheeldon, Crumplen, Blake, J. H. Stead, Simpson, Smith, Kitson, Morris, Sawyer, Hannon, Pedder, and other well-known masters of the gentle craft. Loyal toasts of "The Queen, The Prince of Wales, and the rest of the Royal Family," were drank with musical honours, Mr. W. F. Packer presiding at the pianoforte with his practised rendering of "God Save the Queen," and "God Bless the Prince of Wales. The following is a list of the other toasts, songs, &c.—Song by Mr. Edward Foster. "The De Beauvoir Angling Association"—(song by Mr. E. Hayter)—responded to by Mr. J. Allen. "Kindred Societies," coupled with the name of Mr. Crumplen, secretary of the Gresham Angling Club—(song by Mr. J. H. Stead)—responded to by Mr. Crumplen. "The Visitors," with the name of Mr. J. Pedder—(song by Mr. Heath)—responded to by Mr. Pedder. "The Chairman," proposed by Mr. Hayter—(recitation by Mr. Snelling)—responded to by Mr. J. G. Defriez. "The Vice-Chairman," proposed by Mr. J. P. Hodge—(song by Mr. Edward Foster)—responded to by Mr. E. Hayter. "The Press," coupled with the name of Mr. Wheeldon—(song by Mr. Cartwright)—responded to by Mr. Wheeldon, who, in an eloquent and lucid speech, referred to the too common practice among anglers of taking undersized fish for gross weight purposes, by which our rivers were being steadily depleted at the expense of the future stock. The necessity of re-arranging the close time for different fish was also descanted upon with much cogency by this gentleman. "The Treasurer and the Secretary," proposed by Mr. J. G. Defriez—(song by Mr, Wheeldon)—responded to by the secretary, (Mr. J. Starkey), who reported that the takes of the members for the season totalled 889 lb. 12 oz., and that the following prizes would be distributed at the club room of the asssociation, the Lord Raglan, Southgate Road, N., on Thursday, the 4th of May next. Ten Association prizes from public waters, three taken. One by Mr. R. Morgan, with a pike of 13 lb. 12 oz.; one by Mr. H. Short, with a chub, 5 lb. 13¼ oz.; one by Mr. J. Starkey, with a tench, 2 lb. 2½ oz. Thirty members' prizes from any water, twenty taken; by Messrs. J. Allen, carp; E Hayten, eels; J. Starkey, bream; J. C. Collingridge, bream; H. Short, roach; J. Starkey, roach; H. Short, chub; R. Morgan, pike; J. Starkey, tench; G. Gent, perch; J. Allen, trout; G. Gent, chub; G. C. Ellis, pike; J. Allen, dace; J. G. Defriez, pike; Ed. Foster, dace; H. Short, third heaviest weight of the season; J. Starkey, heaviest weight of the season for roach from the river Lea for two consecutive seasons, won last season by Mr. R. Morgan; this prize is an oil painting, by Mr. Edward Foster, value £10 10s. A special prize for a day-out on the 17th November last for the greatest weight of pike was given by Messrs. Morgan, Allen, Histed and Kay, the successful competitors being Messrs. Levett, Spooner, Starkey and Ellis. The company dispersed before 12 o'clock, well pleased with the evening's entertainment, and the indefatigable exertions of the hon. sec. (Mr. J. Starkey) for the general comfort of all present met with much comment.

THE PISCATORIAL SOCIETY.

ONE of a series of smoking concerts took place on Monday, the 24th inst., at Ashley Hotel, Henrietta Street, Covent Garden, which proved a great success. The society's large room was well filled with musical and non-musical members and their friends. Chairman, N. F. Harrison; vice-chairman, J. R. Faulkner. The concert was opened with a pianoforte solo by Mr. Pond, when the following gentlemen exercised their talents for the gratification of those assembled:—Dr. Brunton, song, "Annie Laurie;" F. Sachs, song, "The Lost Child;" Messrs. Crew and Smithers two charming duetts; J. R. Faulkner, song, "Timbertoe;" E. Evans, song, "Midshipmite;" G. King, songs, "Little Hero" and "My Pretty Jane;" J. G. Andrew, song, "Tom the Tinker;" the Chairman, songs, "Merry Family" and "Rogeroo"; recitations: J. Cowell, from Mark Twain and Hans Breitmann; James Rope, "Pinafore Midshipmite—in memoriam;" E. E. Green, imitations of popular actors; violin solos by F. Fennings, jun., accompanied on the pianoforte by his brother; pianoforte accompanyists, Messrs. Pond and Pernet. The whole series of performances gaining deserved applause. During the evening the chairman congratulated the members that the society had been awarded a gold medal by the jurors of the Edinburgh International Fisheries Exhibition, Mr. T. R. Sachs being also complimented on receiving a silver medal for the loan of his private collection. Mr. T. Huggett brought up a nice tray of roach. Another member who had been to Ringwood complained of the salmon fishing being spoiled there by the too free use of the boiled prawn, which scares the fish and prevents them from taking the fly. A most desirable evening was enjoyed, and it was unanimously resolved to continue the smoking concerts once a month, several additional vocal and instrumental talented gentlemen promising their support.

NORWICH CENTRAL FISHING CLUB.

THE usual monthly meeting of the Norwich Central Fishing Club was held on Monday evening at the club house, the Oak Shades, Lower Goat Lane, under the presidency of the chairman of the association, Mr. Councillor Thirkettle. After the transaction of some routine business, the hon. sec. (Mr. G. Whorton) said he wished to bring before the members a matter which had lately been exciting much discussion among the anglers of the city. One of the gentlemen who had taken part in the notorious liggering on Hoveton Broad, which was described in the local journals and the FISHING GAZETTE as a "pike contest," and which resulted in a long newspaper controversy, had told him that the charges made against the club, whose members were guilty of liggering on the occasion, were the outcome of petty jealousy, and it was to be regretted that such a display of ill-feeling ensued. Perhaps, therefore, it would be undesirable for the members of the Norwich Central Fishing Club to discuss the question. The Chairman having invited discussion, Mr. J. Barnes remarked that he considered it unwarrantable for a club to indulge in liggering and to give it forth to the public that the fish were taken by the ordinary means employed in a match.—The Chairman said that undoubtedly liggering was unsportsmanlike work and not worthy an angler.—Mr. C. Mackie could not see that any petty jealousy had been displayed. A paragraph first appeared in the Norwich press giving an account of a pike-fishing match on Hoveton Broad by the members of a certain club in this city. Another paragraph subsequently described a supper, which was partaken of at the club house to celebrate the event. An anonymous correspondent then put the simple question "Were not these pike taken by liggering?" To that query no satisfactory answer had as yet been given, and now other anglers were charged with jealousy.—Mr. J. Thompson thought that as other clubs were not in the habit of holding "liggering matches," the subject under discussion was wholly useless, and the affair should be allowed to drop.—Mr. J. Young, vice-chairman, was of opinion that the gentlemen who had liggered for the pike had a perfect right to do so, for they had paid for the use of the water for that purpose.—Mr. Mackie admitted they were acting in a perfectly legal manner, but he contended that it was nevertheless unsportmanlike, and, as a member of the press said, that the paragraph sent to the newspapers in the first instance was a fraud which should not have been perpetrated by members of a society.—Mr. Whorton entirely agreed with the remarks of the last speaker, and said that although he had never been liggering himself he knew that it was a very killing method. For his own part he would sooner take a single fish by fair rod and line fishing than the magnificent weights which represented the catch at the "pike contest." (Hear, hear). As far as he could learn, liggering had nothing relating to skill attached to it.—Mr. Young contended that just as much care was necessary for the baiting of a ligger as for the baiting of a line from a rod, and he quoted an instance in which he had caught more pike with the rod and line than with ligger.—Mr. Mackie said that this exception did not prove the rule, and Mr. Burton stated that the owners of private waters knew that liggering was so deadly that in many instances they had prohibited it.—Mr. Barnes said it must be remembered that only one fish could be taken at a time with the rod and line while numbers were captured at the same time when liggers were set afloat. (Hear, hear).—A desultory conversation followed and Mr. Mackie then proposed the following resolution:—"Notwithstanding the fact that it is perfectly legal for persons to fish with liggers in waters hired for the purpose, at the same time being unsportmanlike it is undesirable that members of fishing societies should indulge in the practice."—The Chairman very heartily seconded the resolution and said he believed all true sportsmen were desirous of giving fair play to their game and would not employ such means for the taking of the same that would give very little chance of escape.—Mr. J. Thompson thought that the resolution would interfere with the private rights of anglers, and moved as an amendment that when not contesting in matches members should be allowed to fish as they pleased.—Mr. Mackie explained that he had no wish to interfere with the manner in which any member fished. He simply asked the club to mark its disapprobation of members employing unsportsmanlike methods in taking fish.—Mr. Young remarked that he had been out liggering repeatedly, and would do so again, for he considered it a legitimate method on private waters.—The amendment, on being put, were carried.—The Chairman having said that the discussion had been of a very interesting nature to anglers, and might possibly result beneficially, the meeting terminated.

THE OXFORD MILITARY COLLEGE AND GENERAL SIR GARNET WOLSELEY.—We learn that General Sir Garnet Wolseley has joined the Council of the Oxford Military College, and thus swelling the list of eminent officers already serving on that body.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S
STOCKBREEDERS'
MEDICINE CHEST.
FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP, AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—
"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

THE RIVER EXE,
NORTH DEVON.

SATURDAY, MAY 6, 1882.

TROUT FISHING ON LOCHS VENNACHAR AND LEVEN.

By R. B. MARSTON.

AFTER seeing what was to be seen at the Fisheries Exhibition, and borrowing a rod and line of Mr. Redpath, of Kelso, who very kindly offered to set me up when he heard I was thinking of having a little loch-fishing, I called on Mr. Wells at his shop at 11, Leith Street, to see about some flies I had ordered a week or two previously. I found Mr. Wells at home and very busy indeed serving customers who were bent on angling next day, which was a "fast" day in Edinburgh. Mr. Wells is one of the most obliging and practical tackle makers I know, and he very soon made me up a cast of splendid loch flies, and presently introduced me to Mr. Lindsay, of Dunfermline, a crack angler, who most kindly gave me all the information I needed about the flies and fishing. He told me I should have no chance of getting a boat on Loch Leven, as they were all engaged, and he advised me to have a day on Loch Vennachar. He told me I might use his name with host Menzies, of the Crown Hotel, Callander, who he was sure would lend me waders, rods, tackle or anything I wanted. I had previously sent a telegram to Captain Hall, who has the management of the fishing on Loch Leven, asking if I could have a boat, and I decided to go to Callander if his answer was unfavourable. While chatting with Mr. Wells, a Scotch labouring lad came in, and said something which sounded like "ach, naach garaach, peelarch," as far as I could make out. One of Mr. Wells' assistants pulled out a bundle of sea hooks on plaited horse-hair. "Ach, naach, garaach, peelarch," said the lad. "What d'ye say?" said Mr. Wells. "Oh, give him a couple of casts with March brown on for Peebles." "Your master is going to Peebles the morrow?" But our friend was quite in the dark as to what his master wanted, so Mr. Wells despatched him with the casts for Peebles. After a pleasant little dinner at the University Club with a friend, I returned to my hotel to get Captain Hall's answer. As I expected, it was, "that he regretted every boat was engaged." I had just time to catch the last train for Callandar, where I found myself about 11 o'clock the same night. Mr. Menzies very soon made me at home, and advised me to try Loch Vennachar next day, and he promised to get a boatman for me. Next morning, hearing Mr. Francis Francis was at the Dreadnought Hotel, I called on him, and found him at breakfast. He very kindly gave me some hints about the flies, the loch, and how I could fish the river Teith, in which he had killed two good salmon the previous day. The weather was very cold, and I was not surprised to hear he had done very little on Loch Vennachar; but he said there were plenty of fish, and advised me to try, I was amused to find that he, like myself, had been taken in at a "temperance hotel,"—hotels which are a great snare and delusion in Edinburgh. When I arrived, tired out, in Edinburgh, at 6 a.m. (from London), I tumbled into the first hotel I saw; my things were taken up, and I was following, when I called for a glass of rum and milk. "You cannot have it sir," said Boots. "Why not?" "This is a temperance hotel." I felt dumbfounded for a minute and then desired to be shown to a more reasonable abode. Mr. Francis told me he had been taken in in much the same way on a previous visit to Edinburgh. These Temperance hotels ought to show their colours more plainly. On getting back to the Crown, I found my boatman waiting, and he turned out to be the very man Mr. Francis had recommended. I found him a very capital fellow indeed, and any angler who fishes beautiful Loch Vennachar or any other loch in the neighbourhood of Callander, will be fortunate if he secures Walter Kear as his boatman.

Loch Vennachar—or Vennachoir, as it used to be written two hundred years ago—is only about 2½ miles' walk from Callander. It is formed by the waters of the river Teith, which has previously passed through Lochs Achray and Katrine. It is surrounded by hills of much beauty of outline, but no great height, and in some parts is of considerable depth, and in others quite shallow. Its length is about four miles and greatest breath half a mile, I should guess. Within the last seven or eight years, the Corporation of Glasgow have raised its depth by some four of five feet, by placing a dam across its outlet, to compensate some cotton mills for loss of water, sustained by its withdrawal for the use of Glasgow from Loch Katrine above. The consequence of this raising of the water level, is that some square miles of fields have been submerged, and those sub-lacustrine meadows form first-class feeding grounds for the Vennachar trout.

The procedure in loch fishing is extremely simple. You have any ordinary trout rod, a cast of three or four "fancy" loch flies, green, red, black, and yellow, and your boatman rows you over the best fishing grounds. The sides of Loch Vennachar where deep are the best places and the shallow meadow waters above referred to, which stretch out far into the loch. There was a gale of wind blowing and it rained in torrents on my first day on Vennachar. No fish were rising and no fly was to be seen, in fact it was snowing on the hills. I started fishing at 12 and up to 4 o'clock had only got a few small fish, which I returned.

At noon we were at the head of the loch, and I got out of the boat and went a quarter or half a mile up the Teith—for I infinitely prefer river fishing to loch fishing. I saw some fish rising, and put on one of Mr. MacNee's new flies—a little hare-lug, with his patent pike-scale wings. I killed three small trout with it in no time; or, rather, I might have done so, for I put them back; but I was convinced of the killing qualities of this new fly. The pike-scale wing, cut neatly into shape, becomes beautifully soft, pliable, and transparent in the water; in fact, it is the nearest imitation of the natural flywing which is possible, in my opinion. It is also very durable; after using these flies, they shrivel up a little when put away, but are all right again as soon as wet. My boatman told me all the big fish were in the loch, so we went back, and the old process of cast after cast over the wind-ruffled water was resumed for a long time without success. At last the sun came out for a short time there was a nice swell on the water under a rocky side. I said to my man "If we get a fish anywhere, it will be here." No sooner were the words spoken than I had a rise, and hooked a good fish. My boatman was all excitement at once, and his joy, when I brought the fish to the net after a splendid fight (for these Vennachar trout are plucky fish) was pleasant to see. It was a lovely fish of just two pounds. We tried the same spot over again, and in less than ten minutes I had another rise and missed it; but he came again and again, and then I hooked him—it is difficult work striking with a long line when you can hardly see the rise for the waves. I had a splendid bit of sport out of this fish, which banged out of the water one second, and the next darted to the bottom; and altogether gave me all I could do to keep a tight line on him. My boatman got him into the net after two or three tries, and I never saw a man more delighted than he was. I confess my own "great expectations" of this loch fishing were hardly realised by the capture of a brace of fish after four hours' work—bad as the day was—but they were real beauties and the best brace which had been killed on Vennachar this season, up to that day. When weighed by Mr. Menzies, six hours later, they weighed within an ounce or two of four pounds. They were Swiss lake trout, which had been put in as fry by Col. Stewart some years before. I never saw more beautiful or stronger trout.

After this pleasant interval of sport we did nothing, not a fish would move, and so I decided to try the Teith, for the half mile which is open below the loch. I got several small fish, but it was cold and wet and the big fellows were not to be moved. On getting back to my hotel I found two other anglers staying there had been to Loch Lubnaig and had done even not as well as I had the weather being the cause, for Lublaig contains more trout than Vannachar; though, as a rule, they average much smaller. A weed, a whisky, and a chat with Mr. Menzies, were very pleasant after the cold wetting I had got. Mr. Menzies is one of the jolliest hosts I ever came across; his hotel is most comfortable, his table good, and his charges moderate. He keeps three boats on both lochs and charges 2s. 6d. per day for the use of them, and you pay your boatman 5s. for his services.

Mr. Menzies had met with an accident the day I arrived. He had been glass-ball shooting from a trap, and one of the balls had struck him in the eye, most greviously blackening it. He was most anxious that it should not be supposed he had been fighting, so I mention this. Anyway, he is a very capital fellow and a thorough angler. He informed me that the salmon in the Teith were numerous, but have most of them got the "night cap" on. In other words, were diseased. So I had no desire to fish for them, as I otherwise intended to have done. The fish Mr. Francis got were quite clean, fortunately.

I tried Loch Vennachar again next day, but with no success; though I am perfectly certain that it would afford splendid sport in favourable weather, and so would the Teith; and an angler might do far worse than try a week at Callander in May or June.

I took leave of host Menzies with a hope that I should stay at his hospitable place again some day and get some more of those magnificent Vennachar trout.

I shall have something to say about Loch Leven fishing next week.

THE EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

BY a slip of the pen last week we wrote Messrs. Redpath and Co., of Aberdeen, instead of Kelso; their place of business is at Kelso-on-Tweed. As we said last week, they had a first-class show of rods, flies, &c., and their exhibit obtained the gold medal.

Mr. Byram Littlewood of Huddersfield, had an extensive exhibit of his apparatus for incubating, hatching, and rearing salmonidæ; his carboy for carrying live fish and ova long distances; his aquarium (registered) which takes the overflow from the bottom by a most ingenious device. This exhibit always attracted a large number of spectators, indeed it was a difficult matter to get near it at times. We like Mr. Littlewood's porous artificial stone hatching and breeding troughs very much indeed, they are more durable, more cleanly, and in every way better than wood or metal. The young fry in them were in splendid condition. Mr. Littlewood's aquarium is also a great success, and we can strongly recommend it to all who may be in want of anything of the kind. It was a very pretty sight to see some dozen or two of char from three to six inches in length, playing about in this aquarium, these fish were part of a lot bred by Mr. Littlewood and their healthy appearance was the best testimony his method of breeding, his plan of transport, and his aquarium could possibly have.

Mr. Littlewood's exertions in pisciculture are carried out so energetically and practically, that we confidently look to his establishment as a great source of benefit to the fishing interests We understand he intends going on extensively and treating the matter from a commercial as well as a scientific point of view, in future. We wish him every success.

An object of much interest was a shark 15 feet in length, caught April 22 off Frith by the steam trawler "Livingstone." The Buckland collection from South Kensington, came in for prominent notice from the exhibitors, the 70lb. Tay salmon being rightly considered the lion of the show; in fact, without this collection and that of the London club and other fish, the exhibition would have lost its chief attractions. Mr. Morgan deserves hearty thanks for the unwearing attention he has paid to the exhibits placed under his care and the pleasant manner in which he expounded the mysteries of our English fish to the Scotch visitors, whose questionings about them were endless. From a scientific point of view the Swedish collection, and the marine objects collected by the "Vega" expedition were of the greatest importance and value. Dr. Malm, of Gothenburg, described these collections to the visitors. Mr. Malloch, fishing tackle maker of Perth, had a novelty in the shape of a beautifully made winch, with an handle fixed on an entirely new principle. The handle is stationary when not turned by the hand, so that when the line is run out by a fish. the handle does not revolve, consequently it cannot catch or hold the line at all. The advantages offered by this winch have only to be seen to be at once appreciated. You can coil the line two or three times round the handle, and even then it runs out smoothly and easily. It would pay some London house to take up the agency for this.

If any of our readers want to see how beautifully flies can be made at the low price of 1s. 3d. per dozen, we can recommend them to write to Mr David Wells, 11, Leigh Street, Edinburgh, for a dozen assorted blue and yellow duns. We have never seen neater flies, or used better killing or more lasting ones. Mr. Wells informed us he was dressing large quantities of flies on Mr. Hall's eyed hooks, for Hampshire customers. Mr. Wells thoroughly understands his business, and has a great reputation amongst some of the best Scotch and English anglers of the day. We shall have occasion to mention his loch flies in our description of fishing in Lochs Vennachar and Leven.

RINGWOOD.

THERE is, I believe, but one bit of salmon-fishing on the Hampshire Avon accessible to the public, namely, about three miles of water below Ringwood, on the estate of J. H. Morant, Esq., the lord of the manor. Tickets for fishing are obtained of E. Low, of the White Hart Hotel, price 5s. a day. Every sort of angling is permitted for every kind of fish. Grayling are abundant, also jack; trout and perch are less numerous. Mrs. Low thoroughly understands how to make her guests comfortable

The river is of great depth in proportion to its width and the stream is pretty swift. The volume of water is far larger than one would have expected from the shortness of its course. A heavy rain colours it slightly, but it soon regains its clearness. It winds marvellously, and at each of its numerous bends is a grand salmon pool. The vast meadows on each side are but little raised above the river, and are, of course, often flooded. There are scarcely any hedges or trees about, to catch one's flies or give shelter from the rain. These meadows are just now most gorgeous, one vast golden sheet of marsh marigolds in full bloom, interspered with cuckoo plants, and a pretty small fritillary. Achilles' asphodel meadow in Elysium, must have looked something like this.

Mr. Low tells me he has issued about 350 tickets for this water since the season commenced on Feb. 2, and that 35 salmon have been taken, few of which were under 20 lb. in weight. The habits of these fish appear to differ from those of all other rivers that I know of, in that they afford no autumn fishing—the salmon not coming up for spawning until November. The kelts appear to leave sooner than is elsewhere the case; at any rate there are few or none here now, while the spring fish run up past the nets and weirs in great abundance till the end of May, after which they are rarely seen. It is generally thought that they return to the sea again.

I believe no one has yet satisfactorily explained why spring fish come up the rivers; a very probable theory is that they desire to cleanse themselves from marine parasites. However this may be, certain it is that some mysterious instinct impels them thus to present themselves at the time when they are in the most perfect condition for human food.

There is a salmon and trout breeding establishment here, which seems excellently arranged, and likely to be very successful. The Avon was not much known as a salmon-angling river till within the last ten years or so. Everything is done to encourage the fish, and poaching is said to be unknown. The Avon and Stour are under one Conservancy Board, which issues licences for angling for 10s. for the season.

Duly armed with the necessary document and weapons, I was fishing close to a spot known as Lake's Ditch, on Thursday, April 27—my fourth day on this river—at about 2 p.m., when I saw for the first time a grand swirl of the water, just a foot or so below my fly. I stepped back half a dozen yards, and again fished down slowly past the spot, without any response. I then changed the fly, and giving my friend half an hour's law, again proceeded to tempt her. Another grand swirl, and the coquettish beauty just showed half her tail and retired to the privacy of her bower. A third fly, half an hour later, was not honoured with any notice. Now fortune aid my selection of a fourth! Slowly and carefully did my gaudy tempter approach her home. I feared it had already passed the spot, when the sweetest of all sensations, a good vigorous tug, followed by a delightful whizz of the reel, and a splash on the other side of the river, proclaimed that a perfect communication had been established between myself and my fair one. Half an hour of delirious dalliance—during which the coy nymph never once showed her lovely form above water; but modestly kept out of sight as much as possible, constantly boring down to the bottom, and attempting to hide herself among the weeds; perpetually struggling up stream—until she could no longer resist the strong persuasion that was inviting her down stream and to the surface—and a splendid mass of living silver lay upon the bank—plump, and of perfect form—equalling in weight the day, as in length the number, of the month.

C. C. J.

THE TROUT LICENSE QUESTION.

IN our correspondence columns this week will be found some important and interesting particulars respecting the attempt recently made by the Trent Fishery Board of Conservators to impose a tax on trout anglers fishing in the river Wye in Derbyshire. As a great many of our readers are Wye anglers, we trust they will come forward and support the efforts which are being made to prevent this imposition. We have frequently had complaints from various parts of the country of the hardship of having to pay for a trout license to fish some stream which is not only never visited by salmon, but never watched by the conservators; and the money for the license goes to pay salaries of the officials and bailiffs engaged in preserving a fish the trout-fisher has no interest in, and a river he never fishes. Now we do not go so far as this, as we think the protection and improvement of our salmon fisheries is a not only national question but one which indirectly affects the interests of every angler. If our salmon fisheries decay, the others must follow suit, because there will be no responsible bodies to keep the rivers pure and check poaching. Therefore we have no objection to the charge for a trout license, provided it never exceeds 2s. at the utmost, and also provided it is only charged for angling in such rivers as are actually protected by the board imposing the license.

It is fortunate indeed that the far-famed Derbyshire Wye is to be the scene of the first real contest between trout anglers and a conservancy board respecting the trout license question. No other river would find so many anglers come forward in defence of their rights, and we do hope the utmost support will be given to those gentlemen who are moving in the matter.

The beautiful Derbyshire Dove suffers under the infliction of a trout license charged to all anglers, who get absolutely nothing in return; and the Derby poachers clear the Dove Dale reaches when they like, finding a ready market at 2s. a pound for the trout they get. If the Trent Board would only protect these reaches the trout angler would pay for the license and pour blessings on the imposers.

Grerory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

ANOTHER "FISHING GAZETTE" TOURNAMENT, IN AID OF THE FUNDS OF THE ANGLERS' BENEVOLENT SOCIETY.

WE have been requested by the committee of the Anglers' Benevolent Society to endeavour, if possible, to get up another tournament on a large scale in aid of the funds of the society, and we have much pleasure in doing so. The present intention is to hold the tournament at Mr. Warner's, Welsh Harp Fishery, Hendon, on Monday, July 10, to commence at two o'clock; the general impression being that Monday will secure a larger attendance of club anglers than would be possible on a Saturday. We hold a few prizes which were not competed for at our last tournament; and we appeal confidently to our readers to support this charitable purpose by giving other prizes to be competed for in July. Any such donations can be sent to our office, 12, Fetter Lane, addressed to the editor, and marked for the purpose they are intended for; and they will be duly acknowledged in the Gazette. Any useful articles will be acceptable, as we hope to arrange for a large number of prizes in each competition, so as to ensure a large number of entries.

The great interest taken in the last tournament, in spite of the terrible weather, almost assures the success of the forthcoming one. Further details will be published as they are arranged, and any suggestions our readers may make will be carefully considered. We may mention that the proprietors of this paper will be happy to give prizes.

COARSE-FISH PROPAGATION.

AN application having been made to the committee of the Thames Angling Preservation Soctety, by a committee formed for the purpose of carrying out the scheme of Coarse Fish Propagation (introduced by Mr. R. B. Marston) from the three central associations of London angling clubs, and inviting the society to initiate the the movement for the metropolitan rivers, the application was favourably entertained, and a sub-committee at once appointed to make the necessary arrangements, and to make a report at the next monthly meeting. The great difficulty of fish hatching was removed, prior to the meeting of the sub-committee, by the the liberal offer, through Mr. W. H. Brougham, of Mr. J. T. Carrington, the curator at the Westminster Aquarium, in completely undertaking this portion of the work, and giving the free use of the troughs and tanks in a part of the building unfrequented by the public, together with the employment of a man, and his own personal superintendence. This splendid offer having been officially reported to the sub-committee, it was eagerly accepted, and also Mr. Carrington's kind invitation to meet them at the Aquarium. This was accordingly done, and with so much satisfaction that arrangements were at once made to commence operations; and the head keeper of the T.A.P.S., on the following morning, despatched to Walton in search of some perch-spawn, which he was successful in getting, in spite of the quantity of land water in the river; and in the afternoon a splendid lot of ova, in capital condition, was safe in the troughs which Mr. Carrington had prepared for its reception, In addition to all this, that gentleman has given the whole of the sub-committee facilities for visiting the Aquarium at any time. Too much praise could not possibly be accorded to Mr. J. T. Carrington for what he has done in thus assisting so prominently in the initiation of coarse-fish propagation; and, with his well-known talent as a naturalist, he has placed beyond doubt any failure in the movement; and all interested in coarse-fish propagation will ever feel grateful to him for thus voluntarily coming forward at a time when some difficulty might have arisen as to carrying out the first and most difficult stages of fish-culture—and that without any cost to the sub-committee. One thing is certain, the value of his services, and the support given to it by Captain Hobson, the manager, will meet with due appreciation.

B.

[Having been away at Edinburgh, the receipt of the above from our friend B. is the first intimation I had of Mr. Carrington's kindness in offering to help the coarse-fish scheme. I am sure Mr. Carrington's experiments will be a great assistance; but I regret very much to say I greatly fear they will not succeed. I have, from the first day when I proposed the scheme, always said we must *not* try to increase our coarse fish in the way the salmonidæ are increased—artificially. It is too expensive, too uncertain, and the results are so poor that it cannot pay. The peculiar nature of the ova of summer-spawning fish makes it practically impossible to handle it as salmon and trout ova is handled. I do not say that perch and other fish can *not* be hatched and reared by hand as it were, but that it will never *pay* so to rear them, as the loss is so enormous.—R. B. Marston.]

NOTICES OF BOOKS, &C.

MESSRS. CASSELL, PETTER, GALPIN AND CO. have just issued the first monthly instalment of a serial edition of their "Illustrated Bible," with coloured plates, from a series of original paintings by acknowledged artists, including the names of M. L. Gow, G. L. Seymour, H. M. Paget, H. C. Selous, M. E. Edwards, Towneley, Green and others. The subject chosen for the frontispiece to this edition of the Scriptures is from the picture by M. L. Gow, entitled "The Captive Maid." It is excellently drawn, and is pleasingly bright and warm in tone. The work is also embellished with numerous woodcuts.

Messrs. Cassell have also in progress a new serial issue of their Illustrated Book of "Canaries and Cage Birds, British and Foreign." The first part is now ready. The work is conducted by Messrs. W. A. Blakston, W. Swayland, and A. F. Wiener, and is adorned with coloured plates and wood engravings.

MR. JAMES OGDEN'S MAY-FLIES.

MR. JAMES OGDEN, of 28, Winchcombe Street, Cheltenham, has sent some of his May flies dressed on Mr. Hall's eyed hooks. We have never seen a better sample of May-fly, and can guarantee that they will kill, if properly used, on any water on which this beautiful fly appears. Their being dressed on the eyed hooks gives them a great additional advantage in our opinion. By the way, we would caution dressers of flies on these eyed hooks, especially on the smaller sizes, to leave the eye perfectly free, so that the gut can be easily passed through it.

THE FISHERIES PRESERVATION ASSOCIATION AND THE RIVERS CONSERVANCY AND FLOODS PREVENTION BILL.

ON Monday last a deputation from the above association waited on the Right Hon. J. G. Dodson, M.P., President of the Local Government Board, to ask the Government's consent to certain amendments in the Rivers Conservancy and Floods Prevention Bill, and which have chiefly for object:—(1) The empowering the new boards named in the Bill as the authorities to execute the proposed Act (there called Conservancy Boards), to enforce within their several districts the Rivers Pollution Prevention Act. (2) To secure that the power given by the Bill to the new boards to regulate the opening and closing of flood-gates, sluices, &c., in time of flood or apprehended flood shall be so exercised as not to conflict with the 26th section of the Salmon Fishery Act, 1873, and the 53rd section of the Salmon Fishery Act, 1873, which provide, under a penalty, that "the sluices if any, for drawing off the water which would otherwise flow over any dam, should be kept shut on Sundays, and at all times when the water is not required for milling purposes, in such manner as to cause such water to flow through the fish-pass, if any, or over the dam." (3) To secure that, if in any works undertaken by the new boards for the prevention of floods, the fish-passes or other works erected by the Boards of Conservators under the Salmon Fishery Acts for facilitating the passage of fish over obstructions, shall be interfered with, the said fish-passes or works shall be restored by such new boards to the same condition in which they were before such interference.

The deputation was introduced by Earl Percy, M.P., and was accompanied, among others, by Earl Fortescue, Chairman of the Taw and Torridge Board; Mr. J. W. Willis-Bund, Chairman of the Severn Board: Mr. Joseph Dodds, M.P., representing the Tees Board; Mr. Alan Bagot, representing the Trent Board; Mr. Sclater, representing the Ouse (Sussex) Board; Sir Baldwyn Leighton, Bart., M.P.; Sir William Miller, Bart.; Hon. Edwin Portman; Dr. Hood; Mr. Greville Fennell; Mr. Higford Burr; Mr. E. Waugh, M.P.; Mr. E. Primrose; Mr. E. White-Wallis, Secretary of the Sanitary Institute of Great Britain; Mr. G. J. Symons, F.R.S., Registrar of the Sanitary Institute; and Mr. William Needham. Many letters also were received from, among others, the Chairmen of the Tyne and other Fishery Boards, and other gentlemen interested in the object of the deputation, expressing concurrence with the proposed amendments, but regretting, from the writers' distance from London, and other causes, their inability to join the deputation.

After the proposed amendments had been read and *seriatim* fully explained by Mr. Willis-Bund, and supported by speeches from Sir Baldwyn Leighton, Earl Fortescue, and Mr. Alan Bagot, &c., Mr. Dodson, in reply, said that of course the deputation would not expect any definite answer from him at that moment; but that as regarded the pollution of rivers he would state that, as far the Government were concerned, they had no objection that a Board of Conservators shall have power to enforce the provisions of the "Rivers Pollution Prevention Act;" that in fact such empowering clause was in the Government's original Bill as it passed the House of Lords, and it was only struck out afterwards in deference to the opinion of the Select Committee of the House of Commons, who thought it was not germane to the matter of the Bill, and that such enforcement should be left in the hands of the authorities, with whom it at present lay; that as regarded the other amendments, and the bearing of a scheme framed under the present Bill upon the Salmon Fishery Acts, the points brought forward shall be very carefully considered, and if we find we can meet the wishes of the deputation without defeating the main objects of the Bill we shall be very happy to do so. I can only say now that we shall give every consideration to the deputation's suggestions, and if we are not able to give you all you ask we hope to meet you by giving you something.

The deputation, after thanking the right hon. gentleman, then withdrew.

RIVERS CONSERVANCY AND FLOODS PREVENTION BILL.

Amendments suggested by the Council of the "Fisheries Preservation Association," and placed on the Paper of the House of Commons by Earl Percy.

Clause 14, page 7, at end, add "a Conservancy Board shall have power to take proceedings to enforce within their district the provisions of 'The Rivers Pollution Prevention Act, 1876,' and for that purpose shall be deemed to be a sanitary authority within the meaning of that Act, except that any expenses incurred by a Conservancy Board under this section, shall be deemed to be expenses incurred for the purposes of this Act."

Clause 15, page 7, line 38, after "apprehended flood," insert "Provided that no such bye-law shall in any way affect the provisions of the twenty-sixth section* of 'The Salmon Fishery Act, 1861.'"

Clause 42, page 21, at end, add "Provided that nothing herein contained shall apply to the erection of any fish-pass or other work by a Board of Conservators to facilitate the passage of fish over a weir or other obstruction."

Clause 49, page 24, at end, add "and if any fish-pass or other work constructed by a Board of Conservators under the Salmon Fishery Acts be interfered with, the Conservancy Board shall restore the same to the same state and condition as that in which it was before such interference."

Clause 54, page 27, line 6, after "Parliament," insert "or

(8.) To interfere with any works erected by any Board of Conservators or other persons under the provisions of the Salmon Fishery Acts 1861 to 1876."

Clause 58, page 27, line 35, after "constructed," insert "or altered so as to cause increased obstruction to the passage of fish."

Clause 58, page 27, line 36, leave out "for salmon."

Clause 61, page 29, line 9, after "Parliament," insert "and any Board of Conservators constituted under the provisions of the Salmon Fishery Acts 1861 to 1876."

* This Section as amended by the 53rd Section of "The Salmon Fishery Act, 1873," provides that sluices shall be kept shut on Sundays and at all times when the water is not required for milling purposes in such manner as to cause the water to flow through a fish-pass where such exists, or if none over the dam.—Clause 15 as it stands will give power to do away with this very useful provision.

MAIDENHEAD, COOKHAM AND BRAY THAMES ANGLING ASSOCIATION.

THE annual general meeting of this association was held at Skindle's Hotel, Maidenhead Bridge, on Saturday afternoon, April 29. Mr. T. B. Sharpe occupied the chair, and there were present—Messrs. J. H. Clark, J.P., C. E. Jollands, W. C. Haynes, H. Hoare, A. Styan, B. Perelli-Rocco, W. G. Day, A. A. Wood, R. Nicholson, J. Greville Fennell, and W. H. Brougham. The Chairman opened the meeting by reading the following interesting report:—

"In presenting their eight annual report, it is satisfactory to the committee to find that the interest taken in the association has not materially suffered from the almost universal depression which has prevailed so long.

"Of course it must be expected that the older the association, the losses by deaths or removals of its earlier supporters must increase, and the past year has proved no exception to this simple truism; but it is to be hoped that many new subscribers will be found to take their place during the ensuing year.

"The number of anglers who fish that portion of the river over which this association takes supervision, has increased at least twenty-fold of late, compared with what existed before this care was taken; and the committee feel they are fairly entitled to look for help from those who are fully aware of the advantages thus accruing to them.

"The committee have had very important matters before them during the year just ended.

"In the autumn of last year they were given to understand that the Thames Conservancy contemplated making very important alterations as regarded the laws relating to the fisheries in the lower waters of the Thames, and feeling it was very desirable to have similar arrangements for the upper portion, the committee called a conference of those associations connected with the latter, for the purpose of fully discussing the desirability or otherwise of so doing. This was held on November 29, when, in addition to Messrs. Spreckley and Brougham, of the Thames Angling Preservation Society (who kindly attended to afford information as to the steps taken in the lower waters), the following associations were represented, viz., the Maidenhead, Cookham and Bray, Marlow, Reading, Windsor, and Eton. The subject was fully discussed, and the views taken by the various associations (which were almost unanimously adopted) forwarded to the Board of Conservators, and have since been graciously acknowledged. A sub-committee, consisting of members of the above-mentioned angling societies, was also appointed to ascertain whether it were possible to obtain a piece of water for the purpose of rearing rather than the present system of purchasing trout; but after weighing carefully all the circumstances, not least, the cost, the committee of this association think it would not be desirable to incur so great a responsibility.

"Another circumstance which caused the committee much anxiety and regret was in reference to the prosecution, by Sir Roger Palmer (a vice-president), of one of the bailiffs of the association, for throwing a net for the purpose of catching bait for a member in a part of the river which Sir Roger Palmer claims as private. The committee felt it would be unfair towards their bailiff not to undertake his defence, as he was only doing what Rule X. required of him, and holding a deputation from the Thames Conservancy, of which Sir Roger is a member, he was authorised to do, not being aware that any claim to the water being private would be made. The defence was, however, undertaken by the Thames Rights Defence Association. The case was decided in favour of the bailiff.

"The committee regret that the number of swans is still so large, there being nearly 250 in about thirty miles of water—the mischief done by so many cannot be calculated.

"There have been placed in the river 137 trout during the past year; and a very large number of jack, perch, chub, &c., from the ditches in the neighbourhood, have been rescued from the poaching fraternity.

"A very heavy expense has also been incurred in printing. Fresh placards for posting at the various hotels have been prepared and framed in accordance with the resolution passed at the last general meeting.

"In concluding their report the committee most cordially acknowledge how much they are indebted to the members of the press for the assistance so readily and cheerfully at all times accorded.

"Subscriptions for the ensuing year are now due, and the committee request they may be paid to the treasurer and secretary, W. G. Day, London and County Bank, Maidenhead."

On the resolution of the Chairman, seconded by Mr. Greville-Fennell, the report was ordered to be printed and circulated amongst the members, and to such other sources the committee might deem desirable.

The financial receipts, including a balance of £44 19s. 1d. and £18 18s. of unpaid subscriptions, amounted to £160 9s. 1d., and the payments, including a balance of £28 19s. 6d. in the hands of the treasurer, making a corresponding total of £160 9d. 1d.

Mr. Greville Fennell proposed, and Mr. H. Hoare seconded, the appointment of the following gentlemen as members of the general committee, which was cordially adopted:—Messrs. J. B. Sharpe, J. H. Clarke, C. E. Jollands, J. H. Lemann, R. Nicholson, B. Perelli-Rocco, A. H. Styan, Rev. C. H. Fardell, W. C. Haynes, C. P. Wheatstone and A. A. Wood.

A vote of thanks was warmly accorded to the chairman.

In the evening the annual dinner of the members and friends of the association took place in the new rustic saloon which has recently been erected by Mr. Hoare on the lawn sloping down to the Thames, and which will be admirably adapted for summer parties and entertainments, as it is capable of accommodating fifty guests. This was the first occasion of its being used, and from its light and airy construction, at the time of a very boisterous gale of wind and rain, the inauguration was attended with somewhat unpleasant reminiscences.

Mr. W. H. Grenfell, M.P., was the chairman, supported by the Mayor of Maidenhead, the Rev. C. H. Fardell and about forty others.

The toasts were "The Queen and the rest of the Royal Family," "The Maidenhead, Cookham and Bray Thames Angling Association," responded to by Mr. T. B. Sharpe; "Kindred Associations," which was replied to by Mr. W. H. Brougham and Mr. A. C. Butler; "The Press," with which were associated the names of Mr. Greville Fennell and Mr. J. P. Wheeldon; "The Chairman," proposed by Mr. J. H. Clark, J. P.; and "The Visitors," given by Captain Styan and acknowledged by Mr. W. B. Farr, Mayor of Maidenhead.

There was an excellent and *récherché* dinner placed upon the table by Mr. Hoare, eminently suited to the opening of the new room, and the proceedings of the evening were greatly enlivened by some capital singing from Messrs. J. P. Wheeldon, A. A. Wood, W. G. Day, W. C. Haynes and others.

SILVER TROUT ANGLING SOCIETY.

The annual dinner of this old established angling club was held at the Star and Garter, St. Martin's Lane, Charing Cross, on Tuesday evening last, under the presidency of Mr. E. Hawkins. There was an excellent attendance, including Messrs. C. P. Wheatstone, F. Roberts, G. E. Walker, J. T. Carrington, W. H. Brougham, F. T. Williams, R. Clarke, W. Griffiths, J. H. Stead, J. P. Wheeldon, W. Bailey, C. Hewitt, C. Davis, Pike, Lees, Dumenil, Grace, Pettit, Gilson, J. Clarke, &c. Mr. F. C. Hatfield, with his accustomed liberality, placed on the table a most exquisite dinner, performing the duties of carver, and superintending the service of the various items in the most energetic manner. After full justice had been done to the good things, and there was no stint in the quantity, the Chairman very briefly gave the usual loyal toast, which was drank with enthusiasm. He then proposed "The Thames Angling Preservation Society" and, after some complimentary allusion to its work, included the name of Mr. W. H. Brougham in connection with it. Mr. W. H. Brougham, in replying, said he always felt pleasure in meeting the Silver Trouters for two or three reasons: first, as it was one of the oldest subscribers to the society; secondly, as it was the only club that assisted him when he took up the suppression of the slaughter of small fish; and thirdly, because in his friend Mr. Hatfield they had one of the best hosts in England. As their Chairman's rule was to be very brief, he would only refer to the coarse-fish propagation scheme and the emptying of the reservoirs. Out of the latter he hoped to get some tons' weight of good sized fish, and he trusted the members of the Silver Trout would get their share. The Chairman next introduced the toast of the evening, "Success to the Silver Trout Angling Society," and in simply noticing its prosperous character, associated with it their late secretary, Mr. W. Griffiths. Mr. Griffiths very briefly responded to it, and assured the members that although he was no longer their secretary he should take the same interest in the club and attend the meetings as frequently as possible. The Chairman then stated the prize donors were Messrs. Wheatstone, Davis, Dumenil, Grace, Hawkins, Hatfield, Lake, Kusel and Poole; and the prize winners were Messrs. Davis, Holman, Grace, Griffiths, Fruchtnicht, Loder and Pettit. The only prizes presented were first of all a splendid cup of exquisite work and design by the donor, Mr. Dumenil, to Mr. Davis, for the first gross weight of 114 lb. 1 oz., and Mr. Grace receiving a beautifully executed figure of a shoeblack, given by Mr. Hatfield's brother, for the heaviest perch, a fish of 1½ lb., caught on the first of March. The next toast, as evidenced by the enthusiastic demonstration which was attached to it, was the great item of the evening; it was that of Mr. F. C. Hatfield, the simple allusion to his name by the Chairman causing all present to rise, the ringing cheers and the hearty reception requiring no further words. Mr. Hatfield, whose feelings were very much overpowered at receiving such an ovation, heartily expressed his warmest thanks, and assuring all present he would do his best in the future as he had done in the past to retain their good opinion of him. The only other toast on the list was the "Press," to which Mr. J. P. Wheeldon happily replied. There was some capital harmony from Messrs. W. Packer, F. Roberts, Pettit, Long, J. P. Wheeldon and others, and a long and enjoyable evening was spent. The arrangements were in every respect complete. Miss Emily Hatfield was in charge of the cloak room, and, although young, performed her duties admirably; and in the arrival and departure of the guests every attention was paid to them by Mrs. Williams and Mrs. Baker.

CUTTING WEEDS, GRASS, &c., IN WATER COURSES.

The fly-fisher, even after he has obtained permission of the riparians of a trout stream and expects to fish it unmolested, has reckoned without his host, if he has neglected to secure the good will of the miller and his men above the district of his operations. Who has not, while fish were rising everywhere or had to be courted with the greatest skill, found all his efforts rendered abortive by a mass of floating vegetable filth viciously sent down from the mill head to render him disgusted with the water and all around him. Happily, the Thames and its branches have been freed from a likelihood of this curse-breeding nuisance; that kindly watcher of the anglers' comforts, Capt. Etheridge, having looked up an efficient remedy for the ill amongst the conservancy laws. This he has caused to be extensively distributed and published throughout the localities in which the offence was likely to occur, and he has further obtained a conviction against a miller on the Colne, but it being the first case of the kind a nominal fine was only inflicted. Cannot this form a precedent for other rivers, doubtless so upon those that possess conservators who have power their own bye-laws and the zeal to get them confirmed. The notice paper runs as follows:—"Thames Conservancy. Notice. All persons cutting weeds, grass, &c. Section IX. of the Thames Conservancy Act, 1878, enacts that all persons cutting weeds, grass, or other vegetation in the river Thames, or in any stream, canal, or watercourse commnnicating with the river, shall remove therefrom such weeds, grass, or other vegetation, immediately after cutting, so as to prevent their remaining in and decaying and contaminating the water of the said river, and no person shall throw, sweep, or cause to be thrown or swept, any weeds, grass, or matter of a like nature into the river Thames, or into any stream, canal, or watercourse communicating with the river; and if any person wilfully, and with notice of this enactment, does any act or thing in contravention of this enactment, he shall be liable to the same penalties as any person acting in contravention of section sixty-three of 'The Thames Navigation Act, 1866,' is liable, namely, fine £100, and to a further penalty not exceeding £50 for every day during which the offence is continued after the day on which the first penalty is incurred."

"41, Trinity Square, Tower Hill, London."

The Great International Fisheries Exhibition, London, 1883.—We understand that the promotion of this exhibition is already being energetically taken up. Among others, the Trent Board of Conservators subscribe to the guarantee fund; they intend to exhibit and to defray the expenses of showing any object of interest (except fishing tackle) that any person residing within the New Fishery District may have, and they will exhibit their system of boats and working arrangements; they have also communicated with the mayors of the towns within that district in order to obtain subscriptions to the fund. The Mayor of Ryde has held a public meeting, at which the following resolutions were passed:—1st. That this meeting, recognising the importance of the objects of the proposed Great International Fisheries Exhibition to be held in London in 1883, under the patronage of her Most Gracious Majesty and the presidency of His Royal Highness the Prince of Wales, K.G., pledges itself to use its best endeavours in the Isle of Wight to promote the success of the same, and to assist the London Executive Committee. 2nd. That a committee be formed consisting of the following gentlemen (subject to their approval), with power to add to their numbers for the purpose of carrying into effect the foregoing resolution. No doubt such good examples will be followed by others, and there is every prospect of a most successful result.

RIVER REPORTS.

MID-THAMES.

The Thames has been in high flood and colour during the past week, and so trout-fishing has been a dead letter. The water is now dropping, and as the weather is seemingly settled, the coming week may be productive of some sport here and there amid the "pretty crathurs"—the beauteous daughters of Father Thames. The annual meeting of the Maidenhead, Cookham, and Bray Thames Angling Association was held at Skindle's Hotel, Maidenhead, on Saturday last. From the report the association seems to have done a heap of good work in its waters, and altogether is in a very satisfactory position with regard to members and pecuniosity. The dinner, after "fishy" business was disposed of, was a culinary and gustatory success; and the chairman (Mr. W. H. Grenfell, M.P.) was most amusing and "all there" in proposing the toast of the evening, that of success to the M.C. and B.T.A.S., and, in the course of many pithy and apposite remarks, "brought down the rods" with the following: "A fisherman never, on any occasion, used bad language. Suppose he was fishing in a weir pool, and hooked a large trout and lost it, he never used the 'big, big B.' He exercised the precepts of his art. He simply smiled benignly, and said: 'This comes of my not having soaked my gut.'" All anglers will join me, I am sure, that the honourable member for Salisbury will not break away when he gets hold of a beauty.—MARLOW BUZZ.

Ballynahinch.

Since my last report we have had very unfavourable weather for angling. There has only been two rods for the most part of last week. Mr. Chadwick, on the 26th ult., caught one salmon, 10 lb.; on the 29th, Mr. Hynes, two, $13\frac{1}{4}$ and $16\frac{1}{2}$ lb.; same date, Mr. Chadwick, one, $8\frac{1}{2}$ lb. Yesterday and to-day we have had a great change—quite summer weather. Wind west and north-west, accompanied by strong sunshine.—WALLIS BLACKADDER

Coquet (Weldon Bridge).

On the 27th, Mr. Wood, of Lindon, killed a good basket of 7 lb.; on the 29th, Mr. J. Young a good basket; on May 1, Mr. Elcom, Liverpool, killed 6 lb.; R. M. Warrick, Esq., six brace; T. R. Trevelyan, Esq., Netherwitten Hall, killed the best basket for this season that has come to the inn, $12\frac{1}{2}$ lb., and a splendid lot of trout.—A. GLASS, Anglers, Inn.

Dove.

Sport has been fairly good this week, though, in consequence of Saturday's rains, our river has been running very high and thick. A good many anglers were out on the open lengths on Monday and Tuesday. The largest baskets of trout were killed with the cockspur and brandling worms. The heavy thunderstorm which passed over the district on Wednesday night added a great deal more "liquid" to the river, and to-day (Thursday) there is another rise on. The Excelsior and Universal still keep killing the heaviest fish in the tributary brooks. I notice that David Foster's angling book is to come out this month, and I believe the work will be found one of a most valuable nature. The fungoid disease amongst grayling in the Wye has not, so far as I can learn, extended to the grayling in the Dove, as the fish are very healthy and forward —THE SPLODGER.

Exe (Exeter).

If any portion of this river, from its source to the mouth, has been at all fishable during the past week, one portion for a certainty, that is from Cowley Bridge downwards, has not been, not a scale having been grassed, the weather being most wild, the rain having come down in torrents, swelling the river to an enormous extent, the effects of which have carried happily all the smotts to sea. Thus far we shall be no further troubled, and numbers of salmon have escaped the nets in the lower waters, owing to the nets not having been shot, the tide being too strong to attempt the same, leaving the wind out of the question, which on Friday and Saturday blew a complete hurricane; trees of huge dimensions were uprooted in all directions, and numerous are the temporary bridges formed by their falling over the various streams and roads thereto. News of damage to life, stock, houses, &c., &c., continue to be reported, and the number of narrow escapes is something extraordinary. Riding with two friends on our road to Wonford, for a little sport, we observed several trees that had fallen on our right, which I undertook to count, whilst my friends did the same on the left. Presently the flyman said "Look out—here's another one coming!" Suiting the action to the word, he gave the horse a cut with the whip, it being useless to pull up or turn back, so passed; this falling trunk came down crash, with about two seconds to spare, being a very narrow squeak. The various colonies of rooks' nests, which surround the city, were nearly all dismantled; and immense numbers of young birds, with the debris of their habitations, were discovered on the ground during and after the gale. And many are the tales told, how troubled, and with what exertion the old birds worked to save their offspring from falling to the earth. The lodge-keepers of Northernhay tell me they never saw rooks so fat for their size before, it having been a splendid feeding time; and although the shooting on May 18 be but poor, they have already had their rook pie, which probably they would not have had when the shooting was on.—FRANK GOSDEN.

Exe (Tiverton).

The river the past week has been very high and little has been done; it is thought that a fair number of salmon have come up. Yesterday one of 6 lb. was killed in the upper water by Mr. Collingwood at Emmerford; some good sport trout-fishing is looked forward to the next week or ten days.—WM. MUDFORD.

Norfolk.

Since writing my last report, I have heard of nothing of any particular importance to chronicle respecting angling. The coarse weather has been rather too much for one to venture out, even for the most enthusiastic. I saw a few very good bream taken at Wroxham recently, the spot being directly opposite the Hoveton Horse Shoes Inn, kept by Whittaker, and which place he informed me was at this time of the year generally frequented by plenty of fish. This is very convenient for them; one has not those tedious long pulls in order to obtain a favourite swim, and also it is handy, should a smart shower threaten, for in about two minutes you may be snugly stowed away in Host Whittaker's comfortable parlour. Wroxham, with the several magnificent "broads" adjacent to it, is well worthy a visit just now; the lovely trees which line each side of the river, and which entirely surround the great broad—now resplendent with their new foliage—is indeed a sight to behold, no matter which way one looks, nothing but magnificent scenery meets the eye. It has been said, and rightly, too, that Englishmen often take the trouble to travel over to the Continent in search of a thorough change of scene. They spend money and lose time looking for what can be found almost at their own doors. Our own Holland—the Norfolk Broads—for instance, is every whit as convenient, and much easier of access, than the conventional and continental Holland. A little over four hours' railway journey from London will land the traveller in the midst of a great flat, stretch of country, intersected by silent waterways, and dotted all over with quiet little lakes. For days and days a man may sail through the broads and find little company, save that of some marsh fowl or slowly-moving wherry. People who have studied the Norfolk Broads speak of the people as contented and civil, and of their services as obliging and civil. For £1 per head parties of three can hire a trim-built little yacht of about 5 tons burden, and sail placidly on through an entirely new England—a Great Britain which is unlike anything the traveller has ever seen in the island before. "Forests of reeds 10 feet high, with enormous feathery tops," rock and sway in the wind as the boat glides on, and everywhere "between lake and lake there are great beds of flowers of meadow-sweet, and white water-lilies." So fair a scene should tempt many this summer to exchange the rather hackneyed delights of the ordinary seaside for a novel bit of island home scenery.—ANGLER.

Severn and Teme (Worcester).

The two rivers are this day settling down from the late floods; last Sunday the brooks and rivers were all overflowing their banks. In this district angling was out of the question; but the last few days have again set the lovers of the gentle on the look-out for the first turn, as it is a fact that a flush at this season is the cause of many strong fish taking up new homes, and fish are often keener for the bait after a flush. As a proof of this, we find Mr. Bins weighing $8\frac{1}{2}$ lb. of trout, the fish averaging $\frac{1}{2}$ lb., two perch 2 lb. 2 oz., a pike 13 lb. Mr. Joseph Thorne ten brace of trout, E. D. Davis twelve brace one day, fourteen and a half brace in a day or two following, some fish scaling a pound. There has also been some bull trout taken upon the Severn, from 2 lb. to 8 lb. each. Mr. Hundley landed one at Holt Weir 6 lb. with the minnow. There are more trout in this part than I remember for years. I am anxiously waiting for the stream to fine down for the fly. I recommend the blue dun, the cowdung fly, the grannam, and black gnat.—JOHN A. GRIFFIN.

Taw and Tributaries (N. Devon).

Water in good condition. The large rivers fining down, but very high. Fishing likely to be very good for some time. The rivers on Sunday were like autumn—full of trees, leaves, and every possible thing the flood could wash away. I have heard of many good dishes; one of ninety fish, but I fear it was the worm that was used. The Yeo, Bratton stream, Bray, Mole, and Muddiford rivers have given some good sport. The nets opened their ball on Monday, and I have heard of some good salmon being caught in the tidal river. An otter was caught in the smallest stream running into the Yeo on Monday, but released again.—RUSTY GAME.

Thames (Windsor).

Notwithstanding a very high and thick water, with anything but pleasant breezes as an accompaniment, some good trout have been had in this district, and I have just inspected one of the handsomest fish taken this season—in fact, have never seen one with more brilliant spots or in better condition for its weight, which is 5 lb., taken by Mr. Eaton, of Chalvey, bank-fishing near Boveney. On Prince Leopold's wedding day another handsome fish was had of 6 lb., which I placed under the care of Cooper for preservation; this was taken by C. Paice, of Etonwick, and was also a capital conditioned fish, though not spotted so beautifully as the one before mentioned. I may add, the gentleman to whom this fish was sent as a present—Mr. Lynes, timber merchant, of Notting Hill, London—on receiving a note from me, very kindly handed it over for preservation, instead of being subjected to the tender mercies of the cook. The same angler, next day, took one of 3 lb. 3 oz., a good fish for the size. Since my last, two very good fish have been had down river, in the neighbourhood of Old Windsor; one of 5 lb., and one of 6 lb., the latter taken by a gentleman angler well known in the district. The great rush of water has forced these fish to leave their usual haunt, and seek quieter water close in to the bank. One angler tells me he counted, in the evening of the 27th ult., no less than nine feeding close under the bank, one of which, he stakes his shirt, will not go less than 10 lb. A stroll along the bank, on the *qui vive*, with some lively fat minnows, and any angler stands a good chance of a veritable Thames trout, providing he knows how to treat them when hooked.—B. R. BAMBRIDGE.

Tweed and Teviot.

For the last eight or nine days the Tweed and Teviot have been in fair order for angling, and salmon and trout anglers have been plying their favourite pastime with tolerable success. On Thursday, last week, Mr. Barclay, Thorp, Norwich, fishing on the Hendersyde water, caught a nice salmon. On the Hendersyde lower water on Friday Mr. T. Macpherson Grant, of Ballendallo Castle, had one salmon to his rod. Mr. C. Kerss, on Friday, caught three fish in the Sprouston water. Mr. F. Macpherson was again out on the Hendersyde casts on Monday, when he had a run with a salmon, which he ultimately lost. Fishing the Sprouston casts, on Tuesday, Mr. Gavotte caught one fish; and on the same day and on the same water, Mr. James Kerss landed a couple of salmon. Here also another gentleman secured a fish. Trout-fishers are now daily out on the rivers in large numbers, and in the course of a week or so night fly-fishing will be pretty general. On the Teviot, on Saturday, Mr. Alfred Mills, in two and a half hours, caught 8 lb. of trout with the fly; and on Tuesday, the same gentleman caught 9 lb. 10 oz. in three and a quarter hours with the same lure. Very good baskets have also been obtained on the Hendersyde water by Messrs. James Kerss, T. Pringle, and Pringle Elliot. On the Sprouston water, Mr. J. J. E. Brown, of Rosebank, and Mr. Charles Kerss have likewise prosecuted trout angling with considerable success. On the Ednam House Water, Mr. Drummond and several friends have had fair takes of trout. On the Eden (a tributary of the Tweed), on Wednesday, Mr. James Anderson, Kelso, had 4 lb. of very nice trout. The weather is now somewhat settled and mild, the streams are in fine angling condition, and anglers are on the tip-toe of expectancy.—Maxwheel, Kelso, May 4.

Wye and Derwent.

We have had continual flushes, more or less, on both rivers several times since my last report, from the heavy thunder rain which has fallen on most days. This morning (Thursday) both rivers are very high and muddy, not fit for angling. To-morrow (Friday) aud, in fact, all next week, ought to be first-class for all kinds of angling. The ant egg is just coming in: it is a very killing bait, on the Derwent, for trout, especially in a muddy water. This last week has been the worst one I ever knew for all kinds of fishing, and small baskets have been the order of the day; no doubt owing to so much electricity being in the air daily. There has been a fishing case tried at Bakewell Petty Sessions, at the instance of the Trent Fishery Board; five gentlemen were charged with fishing for trout in the river Wye without having procured the 1s. trout licence. The defence argued that the Wye was not a tributary of the Trent, but of the Derwent. The Bench dismissed the case, which I myself think was a very proper verdict to come to, as the Wye is the private water of the Duke of Rutland, and we have no salmon in it, and I myself think it is quite an imposition for gentlemen anglers to have to be compelled to purchase a 1s. licence before they can fish the Wye for trout. Where does all the licence money go to that is got from the Wye and Derwent every season?—as I have never seen a Trent Board water bailiff on either river up to the present time, although I fish daily the year through, weather and water permitting. I hear that Mr. Moss's brook, near the Lea, Derbyshire, has been poisoned, and every trout in it destroyed, and there is a reward of £20 offered for the parties who have done it.—George James Eaton.

Starkholmes, Matlock Bath.

THE SOUTH OF IRELAND.

During the past three weeks the weather has been very unsettled, and recurring floods have favoured the hopes and the chances of the Waltonian. Last week we had hail and snow, and storm and rain introduced into the first month of summer. At irregular intervals during this period of change, anglers snatched some good days. Sir Oriel Forster, on his place at Fargus, landed a large number of fish. Mr. Geo. Haynes took fifteen in five days. Mr. James Lambkin two. Dan Rendan, a bailiff of Mr. Augustus Warren, landed seven on one day and several since. Mr. Bailes and friends took four on Monday. John Manning has several to his credit, having taken as many as eleven fish on one day. The weather has now set in with warmth, and with the river in fine order. I expect great results during the coming week. The river is well stocked; the floods which we have had so repeatedly during the month of April always stocking the river with a fresh run of fish. The peal season, which is now near at hand, promises well, and the net fishing in the tidal waters recently has yielded a good return to the net men.—Angler.

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

The third annual supper of the above club will take place on Tuesday, the 23rd May, at the club house. The next Central return visit will take place at the above club on Tueday, the 16th May, when we shall be glad to see as many brother anglers as can make it convenient to attend.—W. Davis, sec.

May 4.

ANGLERS' BENEVOLENT SOCIETY.

At the usual fortnightly meeting on Friday evening last, April 28th, Mr. P. Geen, treasurer, in the chair, and full committee. The draw for the handsome picture in gilt frame, presented by Greville Fennell, Esq., in aid of the funds of the Anglers' Benevolent Society took place in the committee room. There were 275 tickets sold; the winning number is 33. The person holding that ticket can have the picture on application on Friday evening, May 12th, between 9 and 10 o'clock, at the Forester's Hall, Clerkenwell Road.—R. Ghurney, secretary.

The members' subscriptions become due on May 1, 1882. Secretaries and members are requested to forward to the general secretary forthwith, the list of names and addresses of members, with 1s. 1d., each member's subscription, on receipt of which cards of membership will be forwarded. No application for assistance can be entertained unless the annual subscription has been previously paid. N.B.—Secretaries and members are earnestly requested to use their best endeavours in soliciting donations for the society, to enable the committee to carry out the good work so successfully commenced. The committee take this opportunity to acknowledge with thanks, the generous assistance afforded by several angling societies, and notably by the Gresham Angling Society and the Richmond Piscatorial Society, in making special collections at their respective club houses.—R. Ghurney, general secretary, 10, Baches Street, Charles-square, Hoxton, N. P.S.—Donation boxes for club rooms may be had on application to the general secretary.

BATTERSEA ANGLING CLUB.

This club received the second return visit of the newly formed south-eastern district (promoted by Mr. Allen, hon. secretary of the Bermondsey Brothers), and was most successful, and five clubs were represented, viz., Bermondsey Brothers, Battersea Friendly, Peckham Brothers, Anchor and Hope, and Angler's Pride, the Bermondsey Brothers attending in force in a brake and pair, over fifty angling visitors being present. Mr. H. W. Payne, Battersea Friendly, in the chair, Mr. Mills of the Bermondsey Bros. in the vice. The harmony was well carried out by Messrs. Payne, Mills, Norten, Webb, Page, Howell, Conn, Mitchell, Herbert, Newton, &c., Mr. Welsh giving some excellent solos on the violin, all present spending a most enjoyable evening. At the close of the meeting, the chairman, in the name of the Battersea Friendly, thanked the visitors for supporting them in such numbers, and assured them the Battersea Friendly would always return it in the same spirit. Mr. Allen, in replying, said the next visit would be to the Anchor and Hope the first week in June.

BRENTFORD PISCATORIAL SOCIETY.

Our first annual dinner will be held at the Waggon and Horses, Kew Bridge, on Thursday, May 11, at seven p.m., when Kenneth Montgomery, Esq., has kindly consented to take the chair, and T. Layton, Esq., the vice-chair.—J. H. White, hon. sec.

May 4.

BRUNSWICK PISCATORIAL SOCIETY.

The first annual dinner of the above society will take place at the Brunswick Arms, Brunswick Street, Stamford Street, S.E., on Wednesday next, at eight o'clock. Gentlemen wishing to partake of same are requested to write to the secretary. Tickets, 3s. each.—Esox Lucius.

GRESHAM ANGLING SOCIETY.

The usual meeting of this society on Thursday evening was very pleasantly diversified, Mr. Jardine giving a most humorous account of his angling exploits, from the time he was seven years of age. It is needless to say that with his elocutionary talent he detailed a series of adventures, such as fall to the lot of no ordinary angler. His remarks were all impromptu, and he related his experiences on the Darent and elsewhere, teeming with anecdotes which greatly amused and were fully appreciated. Mr. Harker (City toastmaster), who was present, also added some remarks, which were equally welcome. The result of Mr. Jardine's speech was that Captain Alfred promised a paper quickly "On Barbel Fishing," and several other papers are to be shortly given. The members are fully occupied with the trout, and Mr. Young brought up a very nice show, taken on Thursday in the Darent, giving additional interest to the meeting. The proceedings closed with a hearty vote of thanks to Dr. Lloyd for the very able manner in which he had occupied the chair.

HOXTON BROTHERS ANGLING SOCIETY.

The next complimentary visit of angling societies will take place at the Cherry Tree, Kingsland Road, Shoreditch, on Monday, May 15th, 1882, when we hope to have the favour of your company and as many of your members as can make it convenient to attend.—R. Ghurney, sec.

KINGFISHER ANGLING SOCIETY.

I am very pleased to inform you that we have had several very fine trout weighed, eleven fish in all, the smallest scaled 2 lb. 3½ oz.—G. A.

UNITED BROTHERS ANGLING SOCIETY.

Our first annual dinner took place on Wednesday, the 26th, when a most enjoyable evening was spent by all members and friends present. The dinner was placed on the table by our host, Mr. W. Wood, in an excellent manner, and ample justice wes done to it by every one. The chair was occupied by the chairman of the society, Mr. W. Belton, and the vice-chair by Mr. F. Watts. The harmony of the evening was very good, some capital songs were given by the following members and friends:—Messrs. W. Belton, F. Watts, H. Tyler, W. Bathe, Bros. Currans, F. Pierce, Cook, Booth, Avery, A. Fox, and a host of others too numerous to mention. During the evening the chairman presented a very handsome pair of vases to our respected host, Mr. W. Wood, for his kindness to the members generally during the time the club has been held at his house; the members and friends then stood up and drank Mr. Wood's health with musical honours. Mr. Wood then replied in a few but well-chosen words. Harmony was resumed and kept up till Act of Parliament compelled us to finish one of the most pleasant evenings it has been my lot to enjoy. Mr. B. Gaston presided at the piano with his usual ability.—W. Belton.

May 4.

SCOTCH ANGLING CLUBS.

Jedburg (Roxburghshire) Angling Association.—The annual competition was held on Monday, when the following prizes were awarded:—1, Adam Oliver, dyer; 2, David Douglas, surfaceman; 3, T. Ellis, shoemaker; 4, Andrew Watson, cabinetmaker; 5, A. S. Young, bootmaker; 6, James Young, Handlies Smithy.

Greenlaw (Berwickshire) Angling Club.—On Saturday the spring competition of this club took place. The streams were in good condition, and there were some fair takes. The following were the prize-takers:—1, W. Cook, 7 lb. 11 oz.; 2, J. Foster, 7 lb. ½ oz.; 3, W. Douglas, 6 lb. 12½ oz; 4, D. Leitch, 5 lb. 8 oz.; 5, J. Emand, 4 lb. 3½ oz.; 6, W. Stark, 3 lb. 15½ oz.; 7, M. Leitch, 3 lb. 11 oz. There were eleven entries, and the total weight of fish caught was 46 lb. 5 oz.

YORKSHIRE NOTES.

A Fine Trout.—A fine trout of 2 lb. 2 oz. has recently been caught in the canal at Gargrave by a Skipton angler.

The Cod Beck.—This stream is a tributary of the Swale, and the fish therein appear to be both numerous and fine. One has lately been secured which weighed nearly 3 lb., and even larger fish are supposed to be waiting the skill of the angler to capture them.

The Aire.—The water has of late been running rather high, but some nice fish have been taken with the minnow.

The Wharfe.—The Wharfe has been in capital trim, and the fish are beginning to rise very freely at the fly; the best dish that I have yet heard of was secured by Mr. Jas. Holmes, of Addingham, who caught on Tuesday in last week, sixty-one fine-conditioned fish. He returned, in addition to these, about twenty under eight inches long.

The Greta and Doe.—These streams are in the neighbourhood of Ingleton, and some splendid sport is being had thereon. Mr. J. Barrow, of Ingleton Hall, caught ten trout, which weighed 8 lb., some time ago; and Messrs. Cragg and Darwin had over 14 lb., some of which were over 1 lb. in weight.

The Swale and Yore.—Good catches continue to be made on the upper reaches of these rivers, both with minnow and worm, and the fish are beginning to rise more freely at the fly. The March brown continues to be the first favourite; but other good flies, particularly for May, are Ford's favourite, light woodcock and Royal Charlie. Some good sport has been had by the members of the Hawes Association. But the finest fish yet reported has been caught by Mr. John Metcalfe; this trout was 19 inches long, 11 inches in circumferenee, and weighed over 2¼ lb. It was quite a model of beauty, and in fine condition. This neighbourhood is well worth a visit by tourist anglers, and the charges for tickets are very moderate.

Thomas Ford.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

IMPORTANT TO ALL TROUT ANGLERS.

The Trent Fishery Board and the Derbyshire Wye.

Sir,—It will be seen from the subjoined reports taken from the *Derbyshire Times* and the *Manchester City News* that a case of great importance to anglers, not only those who fish the Wye, but many other streams similarly situated with respect to salmon rivers, will shortly come before the Court of Appeal for decision.

His Grace the Duke of Rutland's Fisheries on the Wye, extending from Bakewell to Rowsley, and on the Lathkill, have been made and preserved; breeding ponds and weirs have been constructed, and the whole kept in their present efficient state at His Grace's sole charge and expense, and, as stated in *The Field*, the assumption by the Trent Fishing Board of a jurisdiction over these waters has caused much irritation to owners as well as to the public who have, through the Duke's courtesy, enjoyed the privilege of angling for so long a time. It is even said to be probable, that should the right to interfere be made good by the Board, the fishery will be entirely closed to the public. The interference of the Board, too, is not confined to the Bakewell Fishery, but extends to the source of the Wye at Buxton.

It may be urged that the payment of a shilling annual license is but a small matter, which no angler can reasonably object to, and which is not worth fighting about, but it must be borne in mind that the Board in its statement to the bench of magistrates said that the license was not claimed for the purpose of improving or watching the water (that being already efficiently done), but for the purpose of raising funds to carry out their own work on the Trent. On this point the *Derbyshire Times* says:—

"Although an appeal has been lodged to take the case to a superior court I venture to think the decision a just one. As I understand it, the main reason of the existence of the Trent Conservators is to preserve the salmon in that river, but as we have no salmon in the Wye I do not see why the Conservators want to interfere with our river. Unless indeed it be that they wish to derive a certain revenue from it."

It must also be remembered that if the right to levy a license is conceded, the price will in all probability rise from a shilling to the full amount allowed by the law, namely, ten shillings, and that it is really the principle of the matter that is in contention and not the amount.

It was thus written about in *The Field* by Mr. Francis Francis, October 15th, 1881:—

"By the way, you have now to take a shilling license to fish here (Bakewell), for, though it is many miles above the point where any salmon ever penetrates, the unfortunate trout angler is mulcted in order to pay the wages of the Trent Board's bailiffs miles and miles away below. This is regarded as a pure robbery by Act of Parliament, and has caused the greatest dissatisfaction. It is a straining of the law which never ought to have been permitted."

The case against Mr. Reid, which was decided in his favour by the magistrates, and which is about to come before the Court of Appeal, will be an appeal against the decision of the bench, and not against Mr. Reid, the defendant in the original case. It becomes, therefore, a public matter which Mr. Reid, who has done his part at his own personal risk, cannot be expected to follow up. It is at the same time most advisable in the public behalf, that counsel should be present in Mr. Reid's right, particularly so as the magistrates, having no special interest in upholding their decision, will probably not be represented, and the Trent Board certainly must and will.

Believing that the case ought to be taken up as a public one, the following gentlemen have formed themselves into a committee, with power to add to their number, for the purpose of obtaining subscriptions to meet the costs that will be incurred in taking the above-mentioned course, and will be glad to be allowed to add your name, with such subscription as you may think fit to give.

Subscriptions will be received by the treasurer or any member of the Provisional Committee, to be in part returned (*pro rata*) if the amount received, as may reasonably be expected, exceeds the sum required to conduct the case.

Abel Heywood, jun., hon. sec., pro tem.

Provisional Committee:—Chas. Estcourt, F.C.S., Chairman, Colonel John Mawson, C.E., Francis Francis, R. B. Marston, Alfred Jardine, J. O. Mackenzie, Thomas Harker, David Reid, James Reaper, Thomas Fildes, G. S. Woolley, 69, Market Street, treasurer. Abel Heywood, jun., 3, Wellington Street, Higher Broughton, Manchester, hon. sec.

P.S.—The following report appeared in the *Derbyshire Times*:—"A gentleman, Mr. David Reid, of Manchester, was summoned at the instance of the Trent Fishery Conservators for attempting to catch trout from the river Wye at Bakewell, on the 1st of April last. Mr. Eddowes, of Derby, appeared on behalf of the Trent Conservators, and Mr. Simpson (Simpson and Hockin), solicitors, Manchester, was for the defendant. The case excited considerable interest. Mr. Eddowes, in opening the case, said that the proceedings had been taken by the Conservators of the Trent Fishery district in order to establish their right in that part of the district in reference to the trout licenses. The Conservators had under their care some 400 miles of water, and for the purpose of protecting the fish they employed almost fifty water bailiffs, all of whom were solely engaged in watching the waters up and down the district. Besides them there were about forty distributors of licenses, one of whom could be found in nearly every place of importance. Notwithstanding that it still appeared that in some districts it was contended that a license was unnecessary, and these proceedings were now taken not so much to punish the defendant as to vindicate the authority of the board. The board had been at great expense in giving full notice in warning people that licenses were necessary before people went angling in the rivers comprised in the board's district. The licenses were issued for the first time last year, and during the year the board felt it would be unfair to proceed against any party for not having a license, insomuch as they might have acted in ignorance of the law. The board felt it would be unjust in the first instance, especially toward gentlemen who came from a distance, to proceed against them unless they had been fairly and reasonably warned of the existence of the law. After a few further remarks, Mr. Eddowes concluded by putting in a certificate defending the limits of the Trent fishery district, which included the 'Trent and its tributaries.' He then shewed that the act passed for the protection of salmon had, by the Fresh Water Fisheries Act, 41 and 42 Vic., 1878, section 7, been extended so as to include trout and char, and therefore the only further duty for him to undertake was to prove the defendant was fishing without a license. Isaac Hall: I am a water bailiff in the service of the Trent Fishery Board. It is my duty to traverse the streams in the neighbourhood of the Trent. My attention was particularly drawn to this neighbourhood at about Easter. On the 1st of April I saw defendant fishing with rod and line. He was fly-fishing. There are trout in the stream. I asked him if he had a license, and he said, 'No, I do not believe in them.' I then asked him to give me his name and address, and he did so. He asked me for the name and address of my master, and I gave it to him. Cross-examined: I did not produce my authority to him. I have a special authority as water bailiff. Mr. Simpson: Did he not ask you for some information as to these licenses? Witness: I do not know that he did. Mr. Simpson; Did he ask you to inform Mr. Eddowes that he wanted further information as to these licenses? Witness: I cannot remember that he did. I took his name and address. This concluded the evidence. Mr. Simpson, in defence, pointed out at some length that the Act of Parliament authorising the existence of the Trent Conservators merely gave them authority over the Trent and its tributaries. He contended that the Wye was not a tributary of the Trent in the sense indicated by the Act of Parliament, which must be construed strictly. The Wye was a tributary of the Derwent, which was a tributary of the Trent, but if the Wye was to be called a tributary of the Trent, why, then, the Conservators would have power over every little brook that ran into the Wye, and so on *ad infinitum*. In support of this agreement, the learned gentleman quoted the case of Merrick *v.* Cudwalladar and another (December 7th, 1881), which was a very similar one to the present one, but which was dismissed by the judges. This concluded the case, and the magistrates retired for consultation. After about half-an-hour's absence, they returned, and the Chairman said that they had decided that the Wye was not a tributary of the Trent within the meaning of the Act, and was therefore outside the jurisdiction of the Conservators. The case was therefore dismissed. Mr. Simpson applied for costs, which were allowed. Mr. Eddowes gave notice of appeal to the Court of Queen's Bench. Three other similar cases were adjourned for three months, awaiting the decision of the appeal case. This case concluded the business of the Court."—*Derbyshire Times*. A. H.

[We have elsewhere referred to this important matter.—Ed.]

HAIR AND SILK PLAITED AND TAPERED FLY LINES *v.* WATERPROOF SILK LINES.

Sir,—I have subscribed to your Fishing Gazette ever since its publication, and have read the various articles and notes with great pleasure In perusing in your number of April 29th a note, "Scotch Loch Fishing," by one of the Western Angling Club of Glasgow, signed "Black Palmer," published by Messrs. W. Blackwood and Sons, Edinburgh, I read in your notes—your criticism of the above little work—you do not agree with him in his choice of fly lines, viz., hair and silk, which, in your opinion, is a hybrid and vexatious nuisance, compared with waterproof silk lines. Kindly accept the enclosed line made by myself, and which was originally invented by one of the best fishing-tackle makers in the world, and I should say the most celebrated fly-maker, named John Morley, 23, Carrington Street, Nottingham, my predecessor. In justice to myself, allow me to say I have been a practical angler with the fly for upwards of forty years, and have used, and at present make, all kinds of lines, and must say that I never used a line possessing the qualities required in a fly line—stiffness, lightness, and buoyancy, like hair and silk plaited and tapered.—I am, &c.,

Charles Jackson.

Piscatorial Depot, 23, Carrington Street, Nottingham.

[We should be sorry to pretend our judgment of the best make of fly-line was infallible. We know many anglers swear by the silk and hair line, but we generally find they have never tried a really good whole-silk braided line properly dressed. We shall give Mr. Jackson's line a good trial; and if we find his make possesses any peculiar advantages, we will acknowledge them.—Ed.]

FISHING AT BRUNDALL-ON-THE-YARE.

Sir,—Perhaps it would be interesting to our brothers of the angle residing in London to hear that Host Brown, of the Coldham Hall Inn, near Brundall, is having extensive alterations to meet the requirements of anglers residing at a distance that may favour him with their patronage this season for a few days' fishing.

A new wing is being added to this already commodious hostelry for the convenience of anglers, and more boats are being added to his now large fleet.

I was down at Brundall the other day. Host Brown informed me that splendid catches of roach had been taken in the Strumpshaw reach and down towards Buckenham. It happened to be a very wet day when there; but, as usual, Brown in his obliging manner made me very comfortable. What a contrast, I thought, between Host Brown's interior, with a beautiful glowing fire, to the new fishing station; which, from a distance, looked to me like a couple of wooden huts on a bog? I do not think our London friends can beat the old fishing station after all—good accommodation, good beer, and, above all, good whisky. —I am, &c.,

A Visitor.

FLY-FISHING IN STILL WATER.

Sir,—Your anonymous correspondent I think errs to some extent when he informs your readers that the fly should be kept motionless in still, or log-water. Now, there are two departments of fly-fishing in which I take infinite pleasure, namely, that which deals with beguiling fish in burns that are alternations of rapids and excessively still water, and that which has to do with the fly-fishing of larger rivers, in deep pools during clear, dead-low water; yet, not only do I experience a delight in this kind of fishing, but, also, I have at one time or another had a great deal of practice in these departments. It thus happens that, while I endorse your correspondent's method of allowing the fly to be still or sink gradually in the water after the moment of alighting, which period is the most deadly of the whole cast, yet I cannot assent to more, for after the flies have sunk to a depth sufficient to prevent the production of ripples on the surface of the pool, when movement is imparted to the lure, the artificial representation may with advantage be manœuvred, either by a slow quivering motion, or by a more quick darting action—the first is, as a rule, to be preferred, when the lure may be mistaken for a small beetle or heavy fly moving a trifle below the surface, which has fallen from the branches above. In relation to the trout swimming about in schools, and emitting bubbles, I do not deny that this may have been a fact; but such appearances are much more applicable to dace, bleak, or even chub. Trout, on the other hand, are usually almost stationary, each being sentinel to its own area, and feeding in a very limited region; whilst the bubble-emitting trout that are observed when the days are hot and the water low are in the most part tenacious occupiers of some fixed lair.—I am, &c.,

The Raven.

[Trout certainly do not swim in schools like dace or roach, but we think our correspondent merely meant to indicate that a number of fish were roving about at the surface; and in still water trout will roam all over the place, as we have often noticed.—Ed.]

VARNISHING RODS.—BREEDING AND KEEPING WORMS.

Sir,—Will some of your numerous readers kindly give me instructions and information for varnishing a bamboo-rod ?

I last year did it with two coats of coachbuilders' varnish, but it brittled off in places, and was too glaring in the sun. I have just taken it off with sandpaper, and fancy the rod should now be sized before being again varnished. One joint is much lighter than the other—how can I darken it ?

Shall also be greatly obliged for any information as to breeding and keeping worms, particularly brandlings.—I am, &c., A. J. Ecclestone.

2, York Road, Great Yarmouth.

EELS AND THE MUNDELLA ACT.

Sir,—I am desired by the secretary of the St. Ives and District Angling Society to request you will be good enough to state for the benefit of that and similar associations :—

(1) Whether eels are considered freshwater fish in rivers ?

(2) Whether the gleaving for eels is prohibited during the close season in rivers ?

(3) Whether the catching of eels is allowed in any way during the closed season ?

(4) Whether an angling society can prosecute for gleaving in water hired by them during the closed season ?—I am, &c., Tom Adams.

St. Ives, April 28.

[We have frequently answered this query about the eel. There is no doubt whatever, it is *not* protected by the Mundella Act, and any one who can *prove* that he is eel-fishing is all right. The difficulty is that some magisterial decisions have refused to accept the angler's assertion that, when using ledger and lobworm, he was only eel-fishing. If otherwise legitimate, gleaving, eel-sets, eel-baskets, &c., are not interfered with by the Act. It is absurd to interfere with eel-fishers, and thus protect that voracious, rapacious, never-satiated ova and fry destroyer, the eel! It is like putting a cover over your tarts to keep the flies off, while you let the mice and rats in underneath. The eel feeds at night, and is rarely seen in the daytime, otherwise anglers would not want to protect him as well as their beloved roach, &c. !—Ed.]

THE NAVAL AND SUBMARINE EXHIBITION.

Sir,—Herewith you will find the names of the successful competitors in the competition for the prizes given at the late Naval Exhibition.

Re next Exhibition.—On account of the great interest taken in the late Exhibition, another will be held in a shorter time than was anticipated, viz., two years hence, about May, 1884. All particulars can be had on application.—I am, &c., Samson Barnett, jun., per R.H.

(Copy of letter from Committee of Award of Prizes.)

"Blackheath, April 21, 1882.

"Sir,—Having at your request undertaken to act as judges for awarding prizes at the late Naval Exhibition held at the Agricultural Hall, viz., a prize of 100 guineas for the best means of saving life in cases of shipwreck, and a second prize of 50 guineas for the best invention of a humane character connected with seafaring, we beg to state that after a careful examination of all the exhibits brought to our notice with the objects on view—

"We award the 100-guinea prize to Mr. R. Roper, stand No. 82, for his 'bridge raft,' as affording the readiest means seen by us, in case of shipwreck, of saving collectively a large number of persons and supporting them above water for a lengthened period.

"The 50-guinea prize to Messrs. J. and A. W. Birt, stand No. 309, for their contrivances of cork mattresses, hammocks, cushions, seats, &c.. for supporting individually, persons in the water till further assistance can be rendered.

"We beg to remain, yours faithfully,
(Signed) Henry Boys (Vvice-Admiral).
Digby Murray.
A. W. A. Hood (Vice-Admiral).

"Samson Barnett, jun , Esq., 4, Westminster
Chambers, S.W."

TWAITE SHAD.

Sir,—I see in a copy of the Fishing Gazette, April 1, mention made of a Twaite shad being obtained and believed to be the largest specimen, the weight of it being 2½ lb. I beg to inform you that the one in Mr. Buckland's museum is 6 lb. 2 oz.—I am, Sir, yours obediently, Richard Edon.

Museum of Fish Culture, South Kensington.

May, 4. 1882.

GROSS WEIGHT *v.* SPECIMEN FISH.

Sir,—I have watched with interest the correspondence that has appeared in the Fishing Gazette, and I think that correspondents ought to be fair towards one another, which does not seem to be the case of Mr. T. Crumplen towards J. M. D., who says (so far as I can understand), that a member of his club weighed-in a gross weight and got a prize, and also weighed-in some of the same fish as specimens at the Gresham, which T. C. says were two distinct takes, and weighed-in in each case to one club only, when in reality the same fish were weighed-in to both clubs, according to J. M. D.'s statement of April 15. Again, if we refer to the Fishing Gazette of January 7, page 3, we shall find a splendid take of pike by two members of the Gresham—ten fish weighing over 140 lb., besides thirty other fish under 8 lb. each. And, again, if he will turn to the Fishing Gazette of February 18, he will find another great take of pike by members of the Gresham; thirty pike were taken in five hours, eighteen of which were brought to the Gresham as specimens, two of the heaviest weighing 21½ lb. and 17 lb., the remaining nine going only 48 lb. Now, does Mr. T. Crumplen call nine fish weighing 48 lb. specimens ?—averaging not 5½ lb. Also, if the members advocate specimen fishing, why did not they return to the water all those fish, except the two largest ? Can Mr. Crumplen call the two cases I mention anything else but gross weight takes ?—if so, I fail to see what gross weight is. A pike of 5½ lb. is no more a specimen than a roach of 6 oz. or a dace of 4 oz. in comparison. Now if it were a usual thing for anglers to take 10 lb. of roach or 40 lb. of pike every time they go out, then they could well afford to return all the small ones; but such is not the case, as anglers know very well. So that, when they do get a good catch they like to keep them. Of course, I do not advocate keeping roach and dace that take sixteen to weigh a pound. Anglers, as a rule, in this neighbourhood (and they are not a few) return all the small fish they take, or put them in the bait tin for jack fishing. I think J. M. D. will be backed up by anglers, who not only believe in weighing in gross weight, but by those who are outspoken and practise what they preach. In conclusion, may I kindly ask Mr. T. Crumplen to show us in practice what they advocate in theory ? Thanks for space, &c.—I am, &c., T. Fudge.

New Cheltenham Place, Kingswood, near Bristol, April 22.

GROSS WEIGHT *v.* SPECIMEN FISH.

Sir,—To the ordinary reader, this question, no doubt, appears to lie in a nutshell, but each week one or more side-issues involved in it crop up, and prove how very much the subject required ventilation; nevertheless, I fail to see what good purpose can be served by "Mark Antony's" repetitions of Trent-side trickery. As it is, I can only wonder why our friend has hidden his light under a bushel so many years, instead of joining some club, and endeavouring by his influence to raise the standard of angling morality in his district. Surely there are some honest members of the craft in the Midlands who would even now join heartily in such a laudable cause; however, as I am unacquainted with that portion of the country, I will leave the matter to those whose knowledge gives them a better right to speak.

You, Mr. Editor, very properly tell our "ancient Roman" that the Larkhall anglers are "above suspicion," and to that statement I do not hesitate to add, so are the majority of London angling clubs; indeed, this is so patent a fact that I only repeat it for the special benefit of "Mark Antony," who is quite welcome to all the other information I have given him respecting the anglers of this big village. If space permitted, I should be happy to still further enlighten him on a subject of which he does not appear to have mastered even the alphabet.

Mr. Crumplen accuses me of "cleverly diverting attention from the point at issue"—an undeserved compliment as applied to myself, but one which I return to him as its rightful owner. There is not the slightest need to divert attention from my cause—the gross-weight system: it is too well established to need any such bolstering up; on the other hand, I can well understand how anxious he is to hide the ugly fact that any members of the Gresham, who also belong to gross-weight societies—and I believe there are many such—can catch and weigh-in at those gross-weight clubs anything above the Thames and Lea standards, so long as they make their appearance once now and then at the City of London Tavern with a few "specimens," and, as it were, receive absolution for all past, present, and future gross-weight misdeeds. They can then sit down to their annual dinner with a light heart, receive the congratulations of an unsuspecting chairman, and, like the Pharisees of old, thank goodness they are not as other men.

It is all very well for Mr. Crumplen to assume blissful ignorance as to the doings of his members; but, if only one Gresham angler weighs-in gross-weights at another society, what becomes of one of the avowed objects of the Gresham, viz., "the abolition of gross-weight competitions"? Of course, Mr. Crumplen will tell me he cannot help what is done by other societies; but, in my humble opinion, if the gross-weight system is so very reprehensible, the Gresham should never have accepted as members men belonging to clubs where it is in vogue.

I do not deny the fact that the members of the Highbury Angling Society are quite as capable as those of the Gresham of taking large fish when they get the chance; but, as I have said before, the Highbury Anglers as a body, and many others of the same class, do not often get the chance, and even the member in question has not repeated his brilliant performance, I suppose for the simple reason that, like many more of us, he cannot often get away from town for two or three days' fishing. The exception taken to my logic savours very much of the "abuse of the other side's attorney" recommended to an advocate with a bad case; but in plain truth, I am too sensible of my literary shortcomings to aim at much more than a plain statement of facts, my sole object being to defend the ordinary gross-weight angler, who is at least equal in sportmanlike feeling and behaviour to many of those who make him the object of their censure.

Let me in conclusion metaphorically shake hands with "A Working-man Angler," whose ideas, with which I entirely concur, are expressed with a force and conciseness I can but despairingly admire. His letter is worthy the careful consideration of those would-be angling reformers, who would condemn and inconvenience the many for the sins of the few.—I am, &c. J. M. D.

Highbury Angling Society.

SPECIMEN FISH *v.* GROSS WEIGHT PRIZES.

Sir,—In reply to "A Working-man Angler," who asks if I should not feel proud to see my name to such a take, viz., "fifty trout weighing about 30 lb.," I hope he will not think me wanting in courtesy if I tell him that I fear his remarks are quite outside the question under discussion. It would afford me very great pleasure indeed to have such a good take of trout. But—please pay attention—it would very much depend upon *where* they were caught, whether I should have feelings of "pride" or shame. Just fancy the amount of insensibility necessary in the individual who had the audacity to show "fifty trout, weighing about 30 lb.," from the Thames or the Colne! I should also like to remind him that the question is not the number of fish an angler may take, but the wisdom of clubs in offering money prizes for the depletion of public angling waters. I would also ask him to re-peruse correspondence in Fishing Gazette of Feb. 18th, 1882, signed, "Creel," and "G. A."

J. M. D. is remarkably clever in discovering my "Hibernianism," and I think very much more so in evading the chief questions put. I fail in seeing in any of his replies anything in favour of the continuation of the giving of money prizes for the greatest weight of fish shown in clubs, but I am certain that what has been said against the practice can be multiplied again and again. One question, and I shall have done with these queer matters this time. Is it not true that the person who first introduced money prizes in angling clubs was the first to be expelled therefrom ? One more—I really cannot help it—Is it not true that, some time ago, when the club standards were much lower than they are at the present time, and the necessity for Parliamentary and other interference had not been seen, that a member of a club (in which the limit of weight of roach was 3 oz.) weighed about 80 lb. of them, from a wellknown swim, not a hundred miles from Datchet, and that 30 lb. out of the 80 lb. would not weigh ? These fish could not have been used for food, seeing where they came from, and were only taken to gratify the sight of his "Fellows" and convince them that he "had them on." Now if this was a fact, was it not, also, part of the process of depletion ?

J. M. D. may rest assured that his expressions of friendship for my humble self are duly returned with interest; in proof of which I venture to hope, not "prophesy" mind, that although not a little bit of paint is yet off the "nose" of his "idol," I may live to see the "dear old creature" without a head, If J. M. D. is really serious in his desire to know how a "bank angler" can keep the fish he catches alive until he "packs up," perhaps the following simple contrivance may please him; if not, it may be useful to others. Take an old mackintosh, if you have one that is useless for the original purpose intended, or buy a piece of new about 30 inches long, by 28 inches wide; the size is immaterial so long as you have it large enough to hold the anticipated "take." Now, having procured the material the size required and sufficiently strong, get about three dozen brass eyelets, such as are found in your watertight boots, and put them into the mackintosh in regular order, commencing about 1½ inches from the sides, or narrowest part, and about 2 inches from the bottom of the deepest part, leaving about 6 inches without holes at the top of the piece; double the piece and stitch it down the long side and the end where the eyelets are nearest the edge. You will then have a perforated bag 30 inches long and 14 inches wide. Put a runner of good water cord or strong jack line round the top of the bag. Now buy two small canes, such as are sold at toy-shops for a hal'penny or a penny each, cut them so that each one is twice the width of the bag when the sides are close together; now fit a short ferrule to each piece; lay each piece of cane in hot water for a few minutes, then pull them round so that both ends meet within the ferrule. You then have two rings of cane the same size. Strain a piece of mackintosh over one, just like the paper cover of a jampot, and also put a loop of cord at the edge, and exactly opposite fasten a piece of wide tape. Three pieces of tape must also be sewn by their centres to the top of the bag under the runner at equal distances apart. The application.—Tie the uncovered ring inside the bag securely by the three tapes to the mouth of the bag, secure the bag to a piece of cord long enough to reach the water from the bank, tie on the cover with piece of tape, which forms a joint; a piece of string attached to the loop, on the other edge of cover, completes the whole arrangement, with the exception of dropping plummet, or stone, into the bag to keep the bottom of it below the surface of the water, and the most important one, viz., making it secure to the bank. I advise mackintosh as the most suitable material on account of its strength, opacity, and the speed with which the angler can pack it, dry outside and fish inside, into his box or bag. It can be made in less time than this description has kept me occupied in writing it, and will cost the angler a few pence only. I have forgotten to say that the cord should be doubled and the ends thereof secured to opposite sides of the bag, so as to hold the mouth in a horizontal position when in the water, and that the top of the bag should be about 6 inches from the surface of the water. When in use the holes in the bag are to allow the water to flow through the cover to keep out the light and keep the fish quiet. I have been profuse in the description to enable the least skilful angler to make or obtain one. It must be obvious that at the end of the sport the bag may be emptied on to the bank, the undersized fish returned, and that the fish retained will weigh more than they would if killed early in the day. In conclusion, allow me to say that I hope those who may use this bag will call it the J. M. D. "Honour to whom honour is due."—I am, &c.,

KINGFISHER.

CLUB AND OTHER JOTTINGS.

By L. B.

THE monthly and annual meeting of the United London Anglers' Central Committee, took place at the Bald Faced Stag, Worship Square, Finsbury, on Monday evening last; in the absence of Mr. S. Morgan, who was representing the London angling interest at the Edinburgh Exhibition, Mr. Metcalfe was voted to the chair.

After the Secretary, Mr. R. Ghurney, had read the minutes of the previous meeting, the same had been confirmed, and several letters from the secretaries of the West Central and Central Association, concerning privilege tickets and the renting of waters, read and duly discussed, Mr. R. Murphy brought forward the question of the public right of fishing in about 1⅓ miles of the River Lea Navigation, viz., from Carthagena Weir Lock to Dobson's Weir Lock, in which Mr. Benningfield claims the right of private fishery. Much interesting discussion took place concerning this water; but ultimately it was wisely decided to ask the representatives of the Lea Conservancy to receive a deputation to ask their advice and opinion previous to taking any decisive steps to test Mr. Benningfield's alleged right. The deputation appointed consisting of Messrs. Morgan, Ghurney, chairman and secretary respectively, and Messrs. Manning, Murphy, and Dymond.

In the place of Mr. George Oran, deceased, Mr. A. Clark was elected to be London honorary bailiff on the River Lea. Messrs. Pearce and Chambers were elected as auditors. Messrs. Ghurney, Morgan, Metcalfe, Aldridge and Chambers, delegates to the West Central Association of London and Provincial Angling Societies. Mr. Burden was elected to be residential Lea bailiff, and bids fair to make an excellent one. The election of chairman stands adjourned until next monthly night. Some routine business was then transacted, the meeting terminating with a vote of thanks to the chairman for the capital manner in which he had conducted the business of the evening.

Mr. P. Geen (ticket No. 33) wins the handsome framed oil painting kindly presented to the Anglers' Benevolent by Mr. Greville Fennell, and raffled by them on the Art Union principle, for the benefit of the funds.

There will be a committee meeting of the East and West Central Association, at the Portman Arms, Great Quebec Street, on Friday next, when matters of the gravest importance will be brought on for discussion. It is earnestly hoped every committeeman who can possibly do so will attend.

The West Central Association Railway Privilege Card for the coming season will be, what it has never been before, really pretty and artistic. Mr. Harding, of 157, Piccadilly, a member of the Gresham Angling Society, who turns out nothing but first-rate original work, has the matter in hand; and I think we may rest perfectly satisfied, will execute for us something really neat and tasty—something the piscator can while away the time with by taking out of his pocket and gazing upon when the fish go dead off the feed.

The annual dinner of the Hammersmith United Angling Society, on Thursday evening, April 27th, was a perfect success. Host and Hostess Green put a capital repast on the table. With Messrs. Geen and Hoole in the chair and vice-chair, respectively, things were bound to go, and did go, "merry as a marriage bell."

Among the visitors were Messrs. Wheeldon, Brougham, Nuttall, Dickinson, Gaunt, Cooper, Griffiths, L. Bonvoisin, &c. A long list of toasts, and some capital songs, recitations, &c., made the evening pass only too swiftly.

On Wednesday evening, 3rd inst., the annual dinner of the Surrey Piscatorial Society took place at their home, the St. Paul's Tavern, Westmoreland Road, Walworth Road. The dinner itself was most admirably served, the *menu* being well chosen, and the whole doing great credit to Host Bansback. Mr. Duck made a capital chairman, Mr. Beckett proving an excellent *vis-a-vis*. Messrs. Wheeldon and Bonvoisin were among the guests. As the hard-working secretary, Mr. Hamlyn, will no doubt send our editor fuller details, I will only add that a most enjoyable evening was spent, and that capital speeches, toasts, songs, &c., coming in due order after a really nice dinner, contributed thereunto not a little.

USES OF THE GAFF IN ANGLING.

IT does not appear to be generally understood that snatching and the use of the gaff, or any similar instrument, such as the spear and strokeball, for the capture of trout in England and Wales is prohibited in the same manner and under the same penalties as in the case of salmon. The use of the gaff as an auxiliary to the rod and line is, however, permitted during the whole of the angling season, except in those cases where the Local Boards of Conservators have made a special bye-law on the subject. The following table has been prepared as a useful addition to the table of close seasons published in the FISHING GAZETTE on the 4th ult. It shows the periods during which the use of the gaff is allowed in salmon angling in those districts in which its use is not permitted during the whole angling season. It does not apply to trout. In all other districts the gaff may be used during the whole angling season.

Avon and Ermes.—1 April to 30 September.
Camel.—1 May to 30 September.
Conway.—1 May to 31 October.
Dart.—2 April to 31 October.
Derwent (Cumberland).—1 July to 1 November.
Dovey, Mawddach, and Glaslyn, 31 May to 20 October.
Eben, Esk, Mite, Irt, and Calder.—1 July to 31 October.
Eden.—1 July to 1 Nov.
Exe.—2 March to 30 September.
Kent.—2 June to 31 October.
Rhymney.—1 May to 1 November.
Ribble.—1 May to 1 November.
Seiont, Llyfni, and Ogmore.—2 March to 1 November.
Taff and Ely.—1 June to 1 November.
Taw and Torridge.—1 June to 15 November.
Teign.—3 March to 1 September.
Usk and Ebbw.—Below a line drawn from the north boundary of the west district along the eastern watershed of the Honddu to Llanvaes Bridge at Brecon, and thence along the eastern watershed of the Tarell to the southern boundary of the district, 1 May to 1 November. Above said line 1 May to 1 September.
Irze.—10 March to 1 September.
Yorkshire.—1 May to 1 November.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

ALFRED YOUNG
TRADE MARK. GOLDEN PERCH
"The GOLDEN PERCH,"

THE ODOR OF THE FOREST
THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are :—

The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.

The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

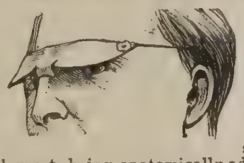
ublished by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park Row, New York, U.S.

Subscription agents for Great Britain :
Messrs. SAMPSON LOW, MARSTON, SEARLE, and RIVINGTON, Crown buildings, 188, Fleet Street, London, who can supply specimen copies.

80,000 Parrots Imported Annually.

A beautiful African Grey, with crimson tail, sent to any address, package included, for 15s. If not satisfactory on receipt, money returned. A host of other stock. Beautiful Singing Canaries, small foreign birds, Pet Monkeys, Tortoises, Peacocks' Feathers, 5000 Parrot Cages, and fresh arrivals daily. The Grey Parrot—the Thirty Guinea Bird—that took the two first prizes at the Surrey Show in 1878 and 1881, was purchased from me a young bird.

WILLIAM CROSS, Largest Importer in the World, LIVERPOOL.



THE glare of the Sun has spoilt many a day's sport of the disciples of Isaac Walton. The anglers' headache will now be a thing of the past, as the GELATINE EYE SHADE becomes known and used They are light and small, yet as effective as the largest, being anatomically adjusted.

Sold by all Opticians and dealers in Fishing Tackle. Samples sent. Elastic Holders, 2s.; fine steel bows, 4s. 6d; to

THE ANGLER'S POCKET DICTIONARY OF TROUT FLIES,

And their SYNONYMS.

BY WILLIAM SANG.

To be had of W. WARD, Publisher, Barnard Castle.

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted). 10 to 4. Sir Julius Benedict writes :—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes :—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.

INITIAL PIPES.

Important to Smokers and Smokers' Friends.

A first-class BRIAR ROOT PIPE, with any two Initials beautifully carved thereon, forming a beautiful and novel Present,

For ONE SHILLING, post free 14 Stamps.

A fine MEERSCHAUM PIPE, with large Amber Mouthpiece (guaranteed real Meerschaum and Amber), with any two Initials, exquisitely carved, complete in Morocco and Velvet Case, price 3s.; post free, 3s. 3d.

I have recently purchased the Stock of a Manufacturer of above Initial Pipes at about one-half the cost of production, and can offer them at about one-third the usual retail price.

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SATURDAY, MAY 13, 1882.

TROUT-FISHING ON LOCH LEVEN.

By R. B. Marston.

LEAVING Edinburgh soon after six in the morning, after many changes, I found myself at Leven Station about nine. I walked down to the landing-stage as fast as possible to secure a boat, but Captain Hall informed me that there was a Glasgow and West of Scotland trout-fishing competition to be held that day, and that every boat was engaged. I felt somewhat "too late for the fair," and could not resist the wish that one of the competitors would get a telegram requiring his presence to receive a fortune. I ascertained from Captain Hall that no one is allowed to fish from the bank, or even from the landing-stage; the reason given being, that if visitors were permitted so to fish the natives could not be stopped. I should mention that the fishing in Loch Leven is leased to a company, who pay a large sum annually as rent. Captain Hall has the management of the boats, and a most civil, pleasant and efficient manager he is. There was much bustle going on along the long landing-stage. Quite an army of piscators were gradually filling the twenty-four immense boats of the company, each boat being manned by two boatmen, and one angler took a place in the bow and the other in the stern. I thought I recognised a face under a big, soft felt hat, and was delighted to find it was Mr. Francis Francis.

"Holloa! Mr. Francis, I thought you were back in London?" "Holloa! Mr. M.; who'd have thought of seeing you here?" Mr. F. then introduced me to some of the Scotch anglers, and informed me he was going to have a go in the competition. "Have you got a boat?" On my replying in the negative, he told me I would certainly be unable to get one, on account of the competition. Then I came in for a slice of luck, for it turned out that Mr. F.'s companion had to leave by a midday train. "If you like to share my boat after twelve o'clock you are very welcome," said Mr. F. I need hardly say I blessed my stars and eagerly accepted the offer. "Then be down here at twelve sharp, and we shall then have the best of the day before us." Half a day with Mr. Francis was worth a whole day by myself, as he is one of the pleasantest and most genial of anglers, and I knew I should pick up a wrinkle or two from his long experience of Scotch loch fishing. Mr. F. informed me that he had got some fine trout the evening before, averaging over a pound, and some nearly two, and thought the prospects were favourable. I decided to go back to the Bridge End Hotel and have some breakfast. This done, I cast about for some fishing; and, seeing a nice little burn running into the loch, I went to ask permission of a miller to fish it, and his mill-pool. The miller is also a farmer, and I found only his wife at home. The good lady informed me that the fishing was reserved, and that only the miller could give permission. I put in a sorrowful tale of my position as a wandering Englishman, disappointed of a boat on the loch, and held out promises of a fry of fish, if I caught any. She said she would try and find the miller; but after a fruitless search she returned and told me she thought I might just fish a bit. I soon had a cast of small flies ready, and was whipping the waves of the mill-pool, for there was a splendid breeze up, when I heard the miller and his men coming up the road. Presently the miller appeared and informed me the fishing was private. I told him my tale, and he smiled and said I could fish. To my offer of any fish I might catch, he replied that I might keep them, but that if I had any success another day on the loch I could send him a brace. The mill-pool water was thick and full of weeds, and I got no fish; so perhaps the miller's hint was prophetic. I then tried the pretty little burn, and in an hour caught and returned some dozens of the weest of wee troutlings I ever saw—pretty, plucky little fellows. By the time I got down to the bridge it was just twelve, and I found Mr. Francis and his friend just coming in. They had done nothing, and had only seen two fish rise, the sun being so bright, and in Mr. F.'s opinion making a glare on the water which dazzled the fish and prevented their seeing the flies. We decided to pull off to a bay some half mile or more beyond the Castle, a venerable ruin on an island. Loch Leven is oblong in shape, about four miles long and two wide. There are some deeps, but for the most part it is very shallow. It is by no means one of the most picturesque of lochs, the surrounding country having but a few small hills to boast of. The loch has also lost a vast amount of water by drainage, and this gives the banks a very level, meadow-like appearance. But what it lacks in appearance it makes up in angling qualities and historical interest. Readers of Scott's "Abbot" will remember the romantic story of Queen Mary's imprisonment here and perilous escape. As an angling resort it is considered to be second to none, its trout being numerous, large, and of the most exquisite quality. "You may get more fish in some Sutherlandshire loch, but they won't compare in pluck and quality with these Loch Leven fellows," Mr. F. says, as we are rowed along. He gave me the right fly, and now we were soon on our fishing-ground, with an even depth of four to six feet of water under us and with the wind strong on our backs. Mr. Francis used a double-handed rod, and I a 10-foot single-handed one. We both fished hard, but could not get a rise for a long time. At last Mr. F. got a fish of about ¾ lb., then I hooked and lost one about the same weight. We had a long interval of fruitless casting after that, drifting broadside to the wind slowly across the loch. In this kind of casting every throw is over fresh water if the breeze is at all strong and steady;

and you simply have to throw your flies out well in front of you, and draw them back towards the boat in such a way that the bob flies dance attractively over the surface, skipping gently from wavelet to wavelet. You, of course, keep a sharp look out for a rising fish, and, if you can reach the spot, place your flies about a yard to windward of the rise as the fish work up against the wind. Mr. Francis, I was glad to see, evidently believes in a good variety of flies, and his hat was covered with them. For my own part, as I have often said, if fly-fishing were reduced to a rule-of-three system it would lose its great charm—that endless chat, discussion and speculation as to what is *the* killing fly.

The previous day Mr. F. had found the Zulu kill well and we had both tried it; he changed his cast for one with a larger set of flies on it and was soon rewarded by another fish, about the size of the first. Then we had another long spell of shifting about the loch and fruitless thrashing; the wind dropped and the sun shone out more strongly than ever. Rochefoucauld says we always feel a secret pleasure in the misfortunes of others. This is a libel on human nature in my opinion, but it is certainly true that ill-luck is not made less unpleasant by seeing your rivals in a boat, not fifty yards away, getting fish after fish when you are doing nothing. I smoked, and Mr. F. told me some of his adventures among loch trout in years gone by. We thrashed away, whistled for breezes, drew on the whisky, changed our quarters; but all to purpose, as far as rising fish went. One of the boatmen, an old hand at fly-fishing, tried my rod for half an hour, he got one rise but missed it, but the "beggars" would not "piscate worth a cuss," as Mr. F. said, quoting some Yankee angler. We saw several boats trolling, but neither of us cared for that kind of fishing. Curiously, the water was covered with cow-dung fly, and yet the fish would not look at them. I think Mr. F.'s theory about the great glare on the water, had a great deal to do with it. We had to get back by four, and at 3.30 our boatmen started and pulled hard all the two miles back. As we were going over a good deal of very deep water and the pace was so fast it was little use fly-fishing, so I put on a small Devon and let it spin behind in the hope of getting at least one fish to try the flavour at dinner. After going a mile perhaps, I felt a tug, but feeling no resistance did not trouble to pull up; then Mr. F. got a fish quite unexpectedly which, although small, fought round to my end of the boat and I had to pass my rod over Mr. F.'s for him to get the fish to the net on the other side. I then wound up and found a small but beautiful fish on which was new to me. "Ah, that's a real Leven trout—one of the aborigines," said Mr. F. It was a graceful fish, wonderfully silvery, and without the red spots; in fact, I took it to be a smolt at first. I ate it an hour afterwards, and never tasted a more delicious trout in my life. At the landing stage we found the boats coming in and Mr. McGregor, who had charge of the competition, soon began the process of weighing the takes. The best take out of the twenty-four boats was one by two anglers, who had twenty-one fish, weighing about 19 lb., the best fish I saw weighed was 3 lb. 5 oz., a real beauty; many of the boats had done nothing and the majority very little. Some of the best fish were taken by trolling. So ended my four hours' experience of Loch Leven. Although so unsuccessful, it will always be a very pleasant reminiscence for me, thanks to Mr. Francis; but for his kindness I should have had to content myself with looking at the water from the bank.

TROUT-CULTURE IN THE TRENT.

THE Birmingham Piscatorial Society, which may be described as the premier angling club of the Midlands, having its head-quarters in Birmingham, is making a vigorous and highly commendable effort to increase the supply of trout in that portion of the river at Alrewas which is rented by the society. This part of the Trent was for many years the private and specially-preserved fishing ground of Mr. Michael Bass, M.P., and it contains some of the finest grayling scours to be found in the whole course of the river, the bottom being hard gravel, stream sharp and swift, and the water free from pollution by sewage or other deleterious matter. It is no uncommon thing for grayling of a pound weight to be taken, and even occasionally some fortunate angler will succeed in landing fish of 1½ lb. to 2 lb., but these are only to be caught on red-letter days, when the conditions of weather and water are alike favourable. The same sharp waters that grayling delight in are equally adapted for trout, and there can be no reason why the Trent, or at least certain portions of it, should not afford as good trout-fishing as the Thames. Three years ago the Birmingham Piscatorial Society made an attempt to increase the supply of trout in their water by putting into a stream which was shut off from the main river by wire netting, 1000 *salmo fario*, but, unfortunately, successive floods came, and carried all into the river. It was naturally thought that all the young fry would perish, principally from the ravages of pike and perch; and, for a newly-formed society, the result was most disappointing, as it was considered by all that trouble and expense had been wasted. Last season, however, several good fish, averaging ¾ lb. each, were taken, and this season one weighing 1 lb. 8 oz. was captured; thus clearly showing that the trout which were put in three years ago were not all lost. In support of this theory, it may be mentioned that the river keeper, who has had care of the water for twenty years, has never before known trout to be taken in this particular part of the Trent. It was, perhaps, only slender encouragement; but sometimes we have to be thankful for small mercies, and so, nothing daunted, the society determined to make another attempt. Two thousand *salmo fario* were ordered from Mr. Andrews, of Guildford. Their opening career was not auspicious. They were despatched by rail from London at 8 a.m. on Saturday, April 22, and did not reach their destination until 9 a.m. on Sunday, having been carried to Trent, near Nottingham, instead of to Trent Valley Junction, Lichfield. Happily only about a dozen succumbed, although they had only received fresh water once during the twenty-four hours. But this fortunate circumstance may, in some degree, be accounted for by the extreme coldness of the weather. No time was lost in turning the young fish into their new quarters, the spots selected being the weir at the back of Alrewas Mill, and the canal weir, lying off the Burton Road. They were in a most lively condition, having all been hatched from large fish; and as soon as they touched the water they darted off and sought shelter beneath the large stones and boulders at the base of the weirs. The work was carried out under the supervision of Mr. Adams Parker, the vice-president of the society, and Mr. Edwin Hooper, solicitor, one of the most active members of the committee; and it is to be hoped that their efforts will be the foundation, at no distant future, of good trout-fishing for the members of the Birmingham Piscatorial Society in their water at Alrewas.

[The great mistake we generally make in attempting to stock our waters in this country is that we put in such ridiculously small quantities, and then wonder at getting no result. Our Birmingham friends ought to put twenty thousand fry in every year for some years.—ED.]

THOUGHTS ON THE THEORY OF FLIES.

BY ROBERT BALDERSTON.

(*Continued from page* 171.)

IN northern rapid mountain streams, fish do not use so much discrimination; as long as the bait is fly-like it is enough for the troutkins which swarm in these localities; but save when the season is declining, it is not to these diminutive fingerlings that the master turns his attention. It is towards large trout the main efforts of the old craftsman are directed. Such fish despise rude imitations; there is an intellect of high order; and experience extends through several years of an observant life. Often have the fish felt the angler's hook with worm, minnow, or fly, each at sundry times attached thereto; often have they beheld glistening gut and waving rod associated with stinging steel; and when the time of beholding comes again, the old attendant ills are not forgotten. Bygone warnings are not unheeded, for the angler and his lure are gazed on with contempt, the noble fish scorning to be deluded by such a poor and meagre imitation of the luscious fragile prey forming its daily food. It signifies little whether insectile provender be abundant or not; this is a thing which more sternly and seriously affects the smaller fry. If only the latter can exist—and live and feed they do in countless schools—all will go well with the patriarchal tribe; for, scorning ill-formed and badly manœuvred baits, the old trouts, in the absence of all other food, remorselessly essay the task of gulping down some of their younger brethren; forsooth, their own children may be thus engulphed, the cravings of a ravenous, but well restrained, hunger being satiated speedily. These facts are the eliminations of daily experience, and well known. The best angler using the best flies captures the greatest number of heavy trout, and the largest trout absolutely fall to his lot. Allusion is not here made to the isolated cases of some tyro having the unmerited good luck of encreeling a solitary unwontedly heavy fish; for trout, like men, at times do unaccountable things; and it is just as possible for there to be a demented fish mad enough to take a bungling angler's bait, as it is for human beings on sundry occasions to be subject to mental aberration. In places where there are no heavy trout, the adept with his good flies, &c., far outshines his compeers in the number of his take, whilst securing on the whole a larger growth of trout. It is not, however, to be supposed that all the difference arises from the kind of flies employed alone, for much is owing to the superiority of the angler's skill and tackle; yet a very material proportion of the whole bulk is due to excellence of mimic workmanship in the flies themselves, and the addition in average weight of fish is almost wholly owing to this particular.

From the foregoing remarks it may readily be gleaned that the occasions on which the angler's discrimination in selecting flies is most strongly called into play, are those wherein he is obliged to seek the trout either in rivers where they are scarce and gorged to satiety, or where hourly experience has taught them to be wary. Another influence likewise affects the inclination of fish; a sudden change in the temperature of the water, either to heat or cold, may cause the trout to become more or less inert and indifferent to food, at least for a time; and during such periods they become more negligent of the fly; yes, even more wary. Sometimes the bait is refused because the fish are lying at too great depths; at others because, although the fly is clearly seen, the trout themselves have become so listless and enervated by the changed temperature that hunger is for a brief hour or day forgotten, food having lost its charms; whilst on another occasion it is the fly that is at fault; for, listless though the trout may be, yet the degree of heat or cold is not so great as to render it wholly unsusceptible to the sweet influences of Pleiades—the stars, or rather flies that float with glittering hackles just above—provided only those flies and hackles are sufficiently delusive as to be mistaken for the rich-flavored insects that have but lately yielded such a hunger appeasing repast.

These are the times for carefully selecting the choicest specimen's in the angler's fly-book, not only those dressed and trimmed most neatly, but those which, being faultless in this respect, are imitations of the insects actually on the water at the time. In April, the March brown and blue dun are fitted on the cast. In June, the iron blue and orange fly have supplanted earlier flies. In July, the July and small yellow duns and orange dun are better suited for the sultry heat.. In August, the red and black ants and August duns are found upon the lines; whilst later still, in September, the whirling blue, the little pale blue dun and blue bottle have displaced their predecessors in the list.

There are many mountain burns and becks where two or three good general flies may secure a fine dish of fish during any month of the angling season; but even here the water must be of fair bulk; whilst it cannot be denied that perfect patterns of common aquatic insects are more deadly than rude hackles, and can, in much-fished burns, when the bulk of water is dwindling, secure twice or thrice the number of fish beguiled by the disordered apparition of the rustic.

The second class of anglers who adhere to form and reject color, commit an error nearly as great as those of their kindred, who espouse the cause of colour and say they have no faith in form. They are in theory nearer the truth than the latter, for they recommend something which is like a fly, but in practice they stray a little further from reality; as the latter, though swearing they do not believe in form, are really most pertinacious upholders of it, for they adopt an insect-like structure, but keep to one or two varieties, blinded by infatuation; for though they have the imitation before their eyes, and though fish take it as such, they still persist that it is uninsectlike, and resembles nothing in water, earth, or sky.

The group of anglers which heads the list does not perhaps comprehend so many adherents as the others; but is formed of individuals who more calmly and justly considering all the varying phases of the question, have gleaned the true premises of rival factions, working them out to correct conclusions, whilst rejecting those that are false, and fully perfecting and scrutinising those which are crude. Their views, severely tested by practice and theory, may be set forth in the following terms:—

a. Trout and many other fish have three sources of food—the surface, middle, and bottom of the water. As a rule, the kind of pabulum found on the first consists of flies in the larval or imago state; in the second, small fishes, crustaceans, annelids, &c.; on the third, mollusks, gasteropods, crustaceans, and other lower organisms, as well as small fishes, such as bullheads. However, certain insects and water spiders nearly related, are met with in all the three areas.

b. Much trouble and loss of time is experienced in obtaining these living baits, which even sometimes cannot be procured; and when once in the angler's possession are found to be very delicate, brittle, and unenduring.

It has been thought, and thought correctly, that if good imitations of these could be made of some durable substance, a great saving of time and trouble would be ensured at the outset, and much after-annoyance done away. To whom the credit for the invention of the artificial fly is due, is unrecorded; but its present state of excellence has been the work of successive improvements.

c. The properties which, united, constitute a good insectile resemblance are esteemed by all first-rate adepts, practical habitues of the river's side, to be—

1st, Likeness of form. 2nd, Likeness of colour. 3rd, Similarity of size, inclining to a diminution rather than increase in bulk, as the smaller the bait the less likely are any defects in workmanship or material to be detected. Moreover, many species of insects are constantly met producing numerous individuals, much smaller than, but never exceeding, the standard size; thus a small imitation is not unnatural. 4th, To a great extent similarity of texture. Most flies which frequent the water are more or less soft-bodied, with the wings and legs yielding readily to the touch. Now it is difficult to make a soft-bodied artificial fly, which is durable, not absorb much moisture; by doing which it becomes heavy, falling anything but lightly on the water, and is unfit for that part of the art called dry-fly fishing. The wings and legs can easily be made, and the fibres from the feathers of various birds are found to act better than any other substance; they vary, however, in this respect, and some birds are much more famous than others for the soft yielding nature of their feathers. The dotterel, starling, landrail, and woodcock are good examples of this, as well as of another circumstance, the great varieties of colours which feathers possess. The angler is able to obtain feathers of all colours and markings; but even if the exact shade be not at hand the substance is so susceptible of the influence of dye that the want can speedily be remedied. The yielding nature of the feathery fibres is required for two reasons: a substance is wanted readily made to quiver by the motion of the water, and yielding likewise at once under the touch of the fish's jaws, so as not to shield the point of the hook from impinging on the closing mandibles. For the bodies of flies silk, waxed or unwaxed, quill, fur, wool, mohair, ostrich and peacock's harl, &c., are commonly used. Silk and quill are by far the best substance for duns, whilst ostrich and peacock's harl are to be recommended for thick-bodied flies as not absorbing water, and as glistening with great brilliance like the chitinous covering of many beetles. For other thick-bodied flies an extra dubbing of fur is, perhaps, the best material, as it absorbs little moisture, although it does not make so smooth a surface as the natural integument of most insects.

5. Besides likeness of form and colour in a general sense, there must be individual resemblance to particular insects in both these respects; these insects, not beingtaken at random, but chosen from those on which fish feed most frequently, and being flies having their origin in the river's bed itself, on the land, or in the trees and bushes.

The first are seized by fish, when in the larval or imago state, at the bottom, or floating on the surface as duns, and subsequently as spinners, after having fallen from the air and become submerged; the second, blown or shaken by the wind from the adjacent banks or land beyond, as the cow-dung, house-fly, fern-fly, orange-fly, bracken clock, and others; or perhaps hovering and fluttering, of their own free will, and alighting at intervals to fall a prey to aquatic animals, as the wren-tail, gravel-bed, fœtid brown, sand-fly, &c.; the third, shaken or tumbling from leafy boughs into the stream beneath, such as the hawthorn, oak, alder, and many other flies, as well as caterpillars, or the palmers. The first of these three groups on the whole, perhaps, contains the most certain killers; but in the others there are some which are often quite as deadly.

6. Having obtained flies of exquisite workmanship—colour and form being faultless; tackles unimpeachable in texture; hooks of perfect contour and true tempering, not yielding under strains instead of penetrating, bound to the finest gut, tough, but not brittle—the angler must place the fly before the gaze of the trout, manœuvring it, with all the skill he owns, so as to pourtray actions such as those the natural fly, whose mimic hangs from the cast, is wont to execute.

Provided with this tackle, and with the knowledge of the art and skill gained by long wanderings with the rod in hand, the angler, when following his pastime through its intricate and varying phases, should hook and land a brace or two for every trout the aspirant to angling fame can show, who counts himself amongst the number of the brotherhood whose faith is plighted to nondescript flies, and are called Colorists, Harelugists, Hackleists, Monstrosityists, and so forth. If not, he may at once be cognizant of a secret hidden from him in all other ways—aye, if he have no other proof—that his adversary fishes with a charmed hook, the hook and bait known as the variety shaped out of lustrous silver, with neither shape of fly nor barbed steel thereon, and having not the semblance of aught that flieth in air or crawleth on grassy blade and bush, or glideth in translucid waters—a silver coin. Speak it not in Gath, whisper it not in Ephraim; but the truth is none the less the same. What mysteries could be revealed were some attendant keeper or old rustic angler to break silence! Many would lower their laurels at the word. Laurels so proudy worn!

And now having considered the more special facts relating to the existing diversity of opinion on the matter of flies, attention may be turned to other general questions of controversy. The colorists and advocates of nondescript patterns adduce, as one of their points of resistance, the circumstance which so often is a cause of annoyance to the angler—over and over again to the amateur; occasionally, though seldom, to the old master. This apparently weak point in the practical working of the theory of the anglers who advocate exact imitation of the natural insect, and who may, therefore, be called naturalists, is made the great stronghold of the Colorists, Harelugists, Monstrosityists, Hackleists, &c.; and is after all a very little matter and a point of slight vantage, when it is considered how strongly and densely these various parties have concentrated their forces around, in order to carry it by assault. The reason being there is no other assailable position which will repay them for their trouble, even with colourable pretexts.

Here there is an appearance of true argument, a something apparently unaccountable; a specious mode of settling the difficulty is found, and plausible reasons are adduced. But what is this vantage ground against which the employers of nondescript flies so boisterously advance? The answer to this question is worthy of a somewhat lengthy expansion, as having to deal with practical experience by the waterside, and as settling the vexed question. Entomologists in their fusty libraries, or in museums, may declare there is no resemblance between their dried specimens and the artificial copy. The degree of likeness, however, need not be such that were a specimen from the angler's flybook placed in the hands of an entomologist, this learned individual should at once be able to name the species; the answer, which it is absolutely necessary that he should give, being, "This combination of feathers, silk and steel, possesses the general conformation of the genus; whilst the size is that of one, two, or more of the species included therein, to one of which the colour and markings very closely correspond." It may at once be exclaimed that "It is exact imitation, which the naturalists advocate; how then can the copy be exact, if the specimen may be mistaken for several species of the same genus that do not differ widely in colour markings?" This is hardly a logical way of putting facts and deductions. Place a specimen of the real insect in the entomologist's hands, then give him the angler's mimic fly, and ask him if there is any general resemblance in the latter to the species first given. He will, unless demented, answer at once—"Yes, this is the result of the handicraft of a very ingenious workman; there is indeed, a very striking likeness, the resemblance being not only generic, but even specific." The same questions are made to the fish; the natural fly, a dun, floats with all its proportions fully displayed down the stream; a trout observes it, appreciates all its exquisite beauty and flavour, and swallows it forthwith. A few moments after, the angler, who has noticed the same insect on the water, places a feathery imitation before the very trout which, having only just beheld and swallowed the real insect, observes the mimic; and thinking that a thing having the same delicate colour and figure must be endowed with flavour as rich, tries to gulp down the second floating organism, and before finding its mistake, has become conscious of pricking steel, and an unyielding tether. But this is not always the case; the real is taken and the unreal rejected. To this the nondescript anglers add that, finding their imitation resembling the fly actually on the water was refused, they have repeatedly put on the cast another fly, of totally different make, such as red and black hackles, or, in other words, the cow-dung, sand-fly, black gnat, house-fly, rudely represented; and that this new fly has been immediately taken. This is the great fact on which the rival fishers base their propositions, and starting from, which they endeavour to overthrow, by crude and absurd theories the deductions of the true angler, the offspring of years of unwearying angling and working out of problems to an end, and not the growth of new ideas while the old are still unripe. The nondescript anglers urge that if fish refuse the copy of a fly actually on the water, and take eagerly that of one which is not there, they are actually caught by nondescript flies; and therefore exact imitation, or, in fact, any imitation at all, is quite unnecessary.

A Correction.—The following words (accidentally omitted) should be added at the end of the first paragraph of Section VI., in our issue of April 15, in order to render the sentence complete:—"It cannot be denied that the imposture is good."

(*To be continued.*)

THE COARSE FISH PROPAGATION SCHEME AND THE EXPERIMENTS OF MR. CARRINGTON.

THE announcements which appeared in the *Field*, the *City Press*, and the Fishing Gazette, to the effect that the above scheme had been taken in hand by Mr. Carrington, of the Westmimster Aquarium, have been somewhat misleading, as we know from conversation with many prominent anglers, and we think it our duty to put the matter right as far as it is in our power to do so. We paid a visit to the Aquarium the other afternoon and had a very pleasant interview with Mr. Carrington, and we have his authority to state that he never for a moment entertained the idea that any experiments he might undertake in the hatching and breeding of coarse fish, should be considered as the first steps in the direction of re-stocking our rivers. He agrees entirely with us that this re-stocking must be done on a large scale, in the open, and in the neighbourhood of the rivers to be replenished, and he also agrees with us that this can be done most easily, cheaply, and successfully. He took us over his domain, commencing with his beautiful collection of dried specimens of crabs, lobsters, live cray-fish, &c., then to the tanks containing freshwater fish—dace, roach, trout, tench, jack, &c.—which form a most interesting collection to any angler. The trout look wonderfully healthy, they are Thames fish, probably some of those introduced at Maidenhead or Cookham. Then we saw the Duke of Edinburgh's pike, which has spawned and looks in a very emaciated condition. This patriarch prefers one of his relations as a meal and a two or three pound jack soon disappears down his fish-way, when introduced to his notice. Mr. C. informed us that when this pike was presented to the Aquarium the hooks of the gorge tackle on which it was captured were embedded in its throat, and are there now unless they have been digested; a *post mortem* examination will be held on the fish when he dies ,to determine this point. We next examined the trough in which the perch spawn was placed (this spawn, we are informed, was not from Walton, but from a private water). The experiment has been quite successful so far, and thousands of fry have been hatched out and are now about a quarter of an inch in length—most beautiful and lively little fellows they are. We should advise Mr. Carrington to turn them into the Serpentine or some other water before they die, as they certainly will do if kept in the troughs. He might keep a small quantity, just to see how long he can keep them. Only a small portion of the ova has hatched out, the journey to London having doubtless killed much of it. Our readers will see that this is a most interesting experiment, and although it manifestly will never do to take fertilised ova from a river in which it has been safely deposited and in which it has every chance of coming to life naturally, carry it to London to get a small percentage of fry from it to carry back to the river! Mr. Carrington's experiment proves to be true what we stated many months ago, viz., that the simplest way to stock a pond with perch, would be to transfer some perch-spawn from some other water to it and protect it. But we must take care not to take the spawn from a public water. The A.B.C, of our coarse-fish scheme is this:—We obtain parent fish and place them in special ponds, &c., in the open, providing every facility for deposit of spawn. We protect the spawn and eventually the fry from their natural enemies, and then we distribute the fry wherever it may be wanted. Details of the method to be followed, will be given at a meeting at the Society of Arts, which is to be held next month. We are glad to say the three great angling associations have, through Mr. Geen, applied for the room and fixed a day, which will be made known shortly.

A QUICK DRYING VARNISH.

DR. BETTENDORF writing to the German *Fishing Gazette*, recommends the use of a varnish for use in fly-making and hook-tying, made by dissolving gutta-percha in chloroform at ordinary temperature. If a black colour is wanted, a little asphalte can be added. He says this varnish dries quickly, is not brittle, and resists the corrosive action of the worm fluids.

TESTIMONIAL TO MR. GREVILLE FENNELL.

[The following is a copy of a circular which has been sent to us for publication. We gladly give it prominence, and trust that our readers will exhibit their appreciation of the great services of Mr. Greville Fennell, by heartily supporting this testimonial.—Ed.]

There are few men living whose life has been more devoted to the interests of anglers and the ventilation and introduction of angling subjects than Mr. J. Greville Fennell, or, as he is most extensively known, "Greville F."

Mr. Fennell is now in his 75th year, and at the early age of 18 he commenced writing on subjects relating to angling. His special aim at the time was that of making youthful anglers, not only by directing their tastes to a healthy and quiet pursuit, and diverting their minds from many less innocent and expensive habits which might prejudicially colour their future life, but by practically carrying out the idea in presenting the young folks with fishing-rods and all the necessary tackle.

In the literary world Mr. Fennell has been long known as an accomplished writer on the practical character of fish and fishing, not only in his various publications or writings in magazines, but as a valued and able contributor to the *Field*. His works "The Rail and the Rod," which have developed nearly all the angling resources of England, and the various railways which afford facilities for getting to each, have had an extensive sale, and been welcomed and appreciated by thousands of anglers.

His public acts of benevolence have been manifested on several occasions, for, as a talented artist, he has liberally presented his paintings of scenic excellence to various objects connected with angling interests, and latterly the Anglers' Benevolent Society has realised large sums of money by his gifts.

As during the entire period of more than half a century of public work he has never received any recognition from the angling world, or from those with whom he has been either known or associated, it is proposed to get up some public recognition of his past services.

He has recently suffered severe domestic affliction, and himself not in the full enjoyment of his usual health and strength, the opportunity of doing something of the kind has occurred, and it is earnestly hoped that a prompt and liberal response will supplement the effort which is now made to offer him not only a substantial appreciation for what he has done, but as an evidence of respect for him in the maturity of life.

EAST ANGLIAN PISCATORIAL SOCIETY.

THE general monthly meeting of the above society was held at the club house (the Great Eastern Wine Vaults) on Wednesday evening, May 3rd. The business of the evening being to distribute the prizes which had been contested for at the late "scratch match" which took place at Coldham Hall the previous Wednesday. There was a full attendance of members, several of whom were accompanied by friends from several local and also notably from one or two of the leading clubs in London. The contest (which was held under most unfavourable circumstances with regard to weather) took place at Coldham Hall. Twenty-one competitors entered, out of which sixteen put in an appearance on the morning of the match. The catch was very slight, the prizes being awarded as follow. The first prize: An elegant silver biscuit caddy, presented by John Boyce, Esq., president fell to the lot of that veteran angler, Mr. Robert Palmer. This is the third occasion this gentleman has succeeded in taking the president's prize. 2nd prize, 15s., Mr. A. Woodcock; 3rd prize, 13s., Mr. James Cupper; 4th prize, 11s., Mr. Leonard Wright; 5th prize, 9s., Mr. J. J. Rice (hon. sec.); 6th prize, 4s. 6d., Mr. Hinsby (vice-chairman). The recipients of the various prizes were each congratulated by the chairman, and they having suitably responded, Mr. Alfred Palmer then moved a vote of thanks to Mr. H. Roberts for the able manner in which he had conducted the staking out of boats, &c. Mr. Roberts, in responding, said he did his best under the existing circumstances, and trusted that at the next outing we should be favoured with more genial weather, and that at all times he should be only too happy to serve the club in any possible way.

Upon the motion of the vice-chairman, Mr. Wm. Hinsby, and seconded by Mr. Jno. Cupper, it was agreed that the next match takes place on Wednesday, June 28th.

A vote of thanks was then ordered to be recorded to the Norwich Omnibus Company for the grand and comfortable manner in which they conveyed the members to and from their destination.

The next business of the evening was the discussion of the proposed Challenge Cup. The secretary announced that he had that day received through their late secretary (Mr. A. Palmer) a very encouraging letter from Edward Birkbeck, Esq., M.P., who had also enclosed a handsome donation towards their cup—(cheers)—a like donation from W. H. Grenfell, Esq., M.P. for Salisbury; a further donation from E. F. Holley, Esq.; also a donation from Mr. R. Olly; a cheque per Mr. Cullington from a friend, a member of the Thames Angling Society, and various others, and he trusted that at their July meeting he should be able to place the cup before them. (Cheers).

Toast, song, and sentiment brought to a close another of a series of evenings for which the society is famous.

RAILWAY PRIVILEGE CARDS.

IMPORTANT to members of societies enrolled with the West Central Association of London and Provincial Angling Societies. Application for the New Railway Privilege Cards should be made at once through the secretary of your society.

J. HOOLE.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

A SKELETON CHRONICLE OF DATED, RE-DATED, AND UNDATED EDITIONS AND REPRINTS, WITH DISSIMILAR IMPRINTS, OF IZAAK WALTON'S "COMPLETE ANGLER."

With one exception the existence of these eighty-seven issues is incontestable. I have personally examined copies of all of them but one. Fifteen of them, dated before the year 1864, have escaped previous notice, and are not to be found in Ellis, Pickering, Bethune, Russell Smith or Westwood ("Chronicle"). The most important omission was the Hawkins of 1791.

Hampstead, April 15th, 1882. THOS. SATCHELL.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

"Where peaceful rivers, soft and slow,
Amid the verdant landscape flow."

The present surroundings of Father Thames should be only seen at the present moment to be more than appreciated. Such a wealth of delicious tint of greenery could not be seen in a foreign land in a month of years, and all this loveliness and health-giving to be had within an hour's ride of the village of London for a 2s. 6d. return ticket. To add also to the river's attractiveness, the water has dropped down from flood to a summer height, and is in the best of trim for trout. At Marlow, Mr. Faulkner, in spinning from the bank, has taken a pretty fish of 3 lb.; and Mr. Englefield, in fishing the Bassetlemy waters, has had five beautiful trout. To-day (Thursday) Dr. Brooks, of Henley, is paying his respects to the Hurley waters with an Alexandra fly, and I certainly hope the Doctor will administer a dose of steel to a good fish. From Henley I have the following:—"Although the water was thick yesterday (Monday) three fish were had, viz., one by Mr. Pitchey, of 4 lb., from the Hambledon waters, fishing with W. Parrott. Mr. Alcomb, a trout of 2 lb, fishing from the bank and spinning a worm; and the third fish was had by Potter, below Marsh Lock, weight 4 lb.

Thursday Evening.—Water improving hourly for trout work, and weather simply "scrumptious." Wind, S.W.—MARLOW BUZZ.

Ballynahinch.

For this last week the weather has improved greatly, fine sunny days with occasional showers. Yesterday morning we had a continual fall of rain, which lasted about seven or eight hours, and has caused a nice spate. No peal have been taken as yet, although they have been seen on the tidal waters. The following is the number of fish killed since the 2nd inst.: On the 5th Mr. T. A. O. Taylor caught two, weighing 14 and 12 lb.; on the 6th Lord James Douglas caught two, weighing 13½ and 5¾ lb.; on the 8th Mr. Middleton two, 9½ and 13 lb.; on the 9th Lord James Douglas one, 11½ lb.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

On the 4th Mr. Oliver killed a basket 6 lb; on the 6th Messrs. Webb, Gemnisen, Gillespie, Foster, Morpeth, had good sport; they creeled from two dozen to three; and on the 8th the river was flooded. On the 10th Mr. Oliver creeled three and a half dozen. The July dun is the favourite fly at present. The red spinner has been a good fly, but it is past for the present.—A. GLASS.

Dove.

The Dove is now getting into nice order for the fly, but there still continues a fair volume of water. One or two good dishes are reported to have been caught at Harlington. The Derby killer has also been settling a fair dish or two, one gentleman, at Dove Dale, taking 5½ brace of trout. What is now wanted is warm, sunny weather, which would improve the prospects of agriculture as well as those of fishing. Since I last wrote, the worm has been taking fairly well on the lower lengths of the river.—THE SPLODGER.

Exe (Tiverton).

The river is in good order for fishing, but it is fast settling down. Trout have not sported very well, the weather being too bright. Flies killing best are the blue upright, olive dun, iron blue, and black gnat, all tied small. The following gentlemen have been successsul in killing:—W. Leir and — Collingwood, Esqs., one salmon each; T. C. Daniel, Esq., two.—WM. MUDFORD.

Ilfracombe.

I have no fresh-water fish to report this week. Sea-fishing is a little better than it has been for the past few weeks. Bream have again made their appearance. On Thursday week, several ling and two large cod were caught, with lob-worm for bait. Friday week, a few boats out with fishing parties, their catches averaging from 15 lb. to 20 lb. per boat per tide of whiting, pout, and breem. Some fine lobsters were taken from the pots, weighing from 4 lb. to 5 lb. each. Sunday, four ling brought in from a spiller, weighing about 60 lb.; one cod, 25 lb.; one bream, 4 lb. Monday, very good sport for cod, ling, whiting, and bream. Tuesday and Wednesday, whiting, pout, and bream, about 10 lb. each boat. Thursday, two large cod and three ling, just landed. There is some good fishing now, of an evening, from the pier and jetty, with rod and hand lines, for pout, dabs, pollack, and red gurnet. Weather at present very fine.—E. COMER.

Severn (Shrewsbury).

There has been very little doing in this district for the last three weeks, the river being quite out of condition for trout fishing. It is, however, getting into pretty fair order now, and by Friday anglers will be able to have a fair go among the trout. I heard the early part of last week of a trout of 5 lb. being taken off the top of the English Bridge ford with the nets. What sport he would have given to an angler. In all probability he would not have been landed by the first who hooked him. On Friday last I saw seven very nice trout that had been taken in the Tanet with the March brown. I heard yesterday of one of our members taking two dozen in a brook on Monday. I hear the night lines are beginning their slaughter again.—T. H. MORGAN.

Severn and Teme (Worcester).

These streams are in fine order for angling, the brooks are now fine and low, and many good takes of trout have fallen to the wormfisher, and the angler with the minnow and fly. The Severn in places is all alive with white fish at each of the weirs and the fords below those places, or falls, it is not over-estimating if I say tons at each weir of perch, roach, dace, and chub included. There are also trout, grayling, pike, gudgon, bley, eels, &c. The trout are getting in form for the table, and strong when hooked, affording good sport. I know of over forty brace being caught, some with the worm. Others have used the minnow and fly. The following list of names are members of the Boughton Angling Club, St. John's, and as I am keeping the club house, the Portobello Inn, you will, Mr. Editor, excuse me if I take the present opportunity to inform your subscribers that any information I can give to them I will do so with pleasure.—Mr. Wm. Hopkins, 3½ brace of trout and many dace with the worm; Mr. C. Langford, 5 brace, also with the worm; Mr. A. Shaw a few trout; myself, 11 brace with the fly and minnow. I returned two brace as small fish.—JOHN A. GRIFFIN.

Suir and its Tributaries, Clonmel.

The upper part of the river is now in splendid order for the rods, and has been so for the past week. There was great sport on Lord Donoughmore's preserves at New Castle, the Hon. W. Hely Hutchinson and party killed six salmon on Thursday week the largest weighing 23 lb., and on the day following six more, the largest being 18 lb.; the water then got too flooded until the following Thursday, when they landed two fish, 10 lb. and 8 lb., next day another fish weighing 18 lb., and on Tuesday another salmon (weight not yet known). Higher up the water there was also good fishing. On Tuesday Dr. Campbell killed three salmon, Colonel Brown one of 12 lb., and several others were equally fortunate; but the former gentleman (Dr. Campbell) seldom or never has a blank day. There must have been a great run of salmon, as the Clonmel cotmen got for the last two weeks 35 and 29 salmon respectively. During the corresponding fortnight last year they got but five fish, and the year before only four, owing no doubt to the low water at that time. The trout fishing continues to improve, there is a good rise every evening at dusk. Mr. Harrison, R.A., and Mr. Shannon got a few dozen good trout on the river Tar on Monday.—DORA.

Swale.

Owing to the recent heavy snowstorm, there has been too much of what is locally called snow broth to permit of anything like good fly-fishing. The locals have therefore had to take to the worm and minnow, with which some fair baskets have been made at intervals between the storms. When the water runs in again a selection from any of the following flies should bring some good fishes to the net: Royal Charlie, blo brown, blue drake, checkwing, dark drake, grannam, sanded dun, plover, dun hawthorne, and oak fly. It is rather too early for the two latter, but they should be held in readiness. The last is an excellent fly. Mr. Barker, of Rush, had some fine catches with it last season.—THOMAS FORD.

Taw and Tributaries (N. Devon).

Water in first-rate order, and everything one would desire, and the rivers have been well fished and likely to be in good order for some days. Some good sport has been had in all the rivers, and some large fish; I heard of one gent. getting some 1 lb. and ¾ lb. amongst his basket. The large rivers have given some good salmon sport, many fresh fish having been taken with the fly, minnow and nets, I saw a salmon 35 lb. taken in the tidal river this morning.—RUSTY GAME.

Thames (Windsor).

Water by Saturday will be in excellent trim, though at present time it is in good order for spinning, being but slightly discoloured. Another brace of beauties have been taken out of these waters, one on 7th inst., by Howard, Esq., of the Friendly Anglers, fishing with James Gray, at Boveney, weighing 6 lb. had with spinning bait; and one by G Lumsden, of Eton, going 6lb., taken live baiting near Sir Beaumont Dixie's. G. Hockley, Esq., of the Swan Inn, Old Kent Road, took a brace yesterday in the Windsor Weir stream, spinning with the split tail spinner, both were small, going, I believe, about 4 lb. Some good fish have been playing about in the Windsor Weir, and in a walk from Bray to Windsor a gentleman tells me he never saw so many playing about before. This speaks well for the future. Should weather keep as it is to-day I expect some more heavy fish will be had, as they will now work up into the weirs; though I am of opinion a great many never leave one spot.—B. R. BAMBRIDGE.

Tweed and Teviot.

The very heavy thunderstorm which passed down the Tweed basin on Sunday brought both Tweed and Teviot down in flood on the following day, putting a stop to angling. The subsidence of the streams was, however, as rapid as their rise, and on Tuesday fishing was again engaged in, and from that day up to the present time some very good baskets of trout have been obtained, Mr. Gavotte, fishing on the Sprouston water, having caught from 9 to 10 lb. each day. On the casts, at the confluence of Tweed and Teviot, Mr. Pringle Elliott has had takes ranging from 4 to 6 lb., while baskets of a similar weight have been caught by several other gentlemen in the neighbourhood. On the Ednam House lower water Mr. J. Brown, Kelso, obtained a very good basket with minnow, one trout weighing 2½ lb., while several others in the "dish" turned the beam at 1 lb. and upwards. Fishing in the Teviot, Mr. Robert Robertson, Kelso, has had one or two good baskets during the week, as has also Mr. Alfred Mills. Thursday last week being the fast day in Galashiels, Melrose, and Selkirk, a great many anglers went out to the Tweed, the Ettrick, the Bala, and other streams, but the greatest success fell to those who went to the Leader. On the Tweed, James Welsh, mason, took 10 lb. with fly, and several others had from 5 lb. to 6 lb. Gala was heavily flooded, and coloured the Tweed below its mouth too much for good fishing. Very many, however, had gone towards Melrose, and still further downwards with worm, but none of them were very successful. Wm. Welsh, who went down the river as far as Rutherford, near Kelso, killed 10 lb. on the upper portion of the Leader. Three gentlemen from Galashiels came home with 20 lb. George Marshall had the best individual take of which we have heard, weighing about 16 lb. A number of the workers at Gala Mill, Galashiels, having the Fast Day as a holiday, had a competition, for which about 15 entered. They were allowed to use any legal lure. Thomas M'Dougall took the first prize with 10½ lb., killed in the Leader; Alex. Rutherford had

8½ lb. from the same river, and took second prize; John McLauchlan, who went to the Tweed, took the third prize with 5 lb. 10 oz.; the fourth prize was won by Robt. Grant, with 5 lb. 9 oz., killed in the Tweed; and the fifth was taken by Robert Blake, who killed 2½ lb. On Friday Thomas Tyson fished the Leader for a few hours after 9 a m., and took 6 lb. with fly. Bertram Tyson, in company with him, had 10 lb., also with fly. An angler from Hawick had been on the same river early in the morning, and beforeb reakfast had got 14 lb. with worm.—Maxwheel.

Wye and Derwent.

Since my last report, there has been some baskets of fish killed, especially on last Saturday and Monday, both with the artificial fly and by bottom fishing with the ant eggs, baskets from 6 to 11½ brace per angler were made, the fish running smallish, not a fish over three-quarters of a pound. The gravel bed or spider fly is out now very abundantly, also the May yellow is just making its appearance both on the Wye. and also on the Derwent. Trout are particularly fond of the yellows, and I find that they give the preference to them over any other flies that can be shown to them while it lasts, and that is longer than any fly I know. I recommend the use of this fly till the end of August; it beats all drakes ever invented, let the feathers be ever so costly. It is made chiefly from the dotteril bird, the principal feathers being on the butt or shoulder of the wing, with a dirty yellow or Esterhazy body; this is also a very good killing fly for evening fishing on any of the Derbyshire rivers made thus: wiry young starling's quill feather, hackle light honey dew, with primrose body; these two flies may be depended on when the drake is at its height. Artificial drakes are of very little use on either the Wye or Derwent, without there is a strong wind on the water or there is a discoloured water on. The best artificial drakes that is thrown on these rivers, are the Derbyshire green drakes. Dibbing with natural flies under the bushes and trees have been followed with fair results on the Derwent in the middle of the day. Three brace of nice-sized trout were taken with the small bluebottle fly yesterday, Wednesday, below Cromford. Sport on the ponds has been first-class since my last report, both with the artificial flies, and by bottom fishing with worms and ant eggs. The killing flies have been bumble, red spinner, and sand flies.—George James Eaton.

CLUB REPORTS.

BERMONDSEY BROTHERS.

The Bermondsey Brothers had a very successful return visit from the angling clubs on Monday last, and wish to return thanks to those clubs who honoured them on that occasion.—Wm. Allen, Secretary. May 10, 1882

CITY OF LONDON ANGLING SOCIETY.

Our combined West Central and Eastern district visit, on Wednesday, May 3, was a success and something more, being the best visit ever paid to this society. Mr. F. G. Watts, of the United Brothers, in the chair, faced by Mr. Burwash. We had plenty of harmony by the following gentlemen:—Messrs. Watts, Burwash, Duke, Head, Shaw, Morley, Benning, Parkins, Finch, Thorling, Owles, Neal, Peckley, White and Dacey, and a recitation by Mr. Rooke. The roll was called at eleven o'clock by Mr. Hoole, secretary of the West Central Association, the following clubs being represented:—Amicable Brothers, Amicable Waltonians, Bloomsbury Brothers, City of London, Convivial, Good Intent, Metropolitan, Odds and Evens, Reform, St. John's, Trafalgar, West Central, Alliance, Hoxton Brothers, Great Northern, Alexandra, Hearts of Oak, Eustonian, King's Cross United, Bermondsey Brothers, and Burdett, also the Anchor and Hope, Anglers' Pride, Barbican, Battersea Friendly, Bostonian Buckland, Clerkenwell Piscatorial, Crown Piscatorial, Hammersmith United, Marylebone, North-Western, Peckham Perseverance, Phœnix, and last, but by no means least in numbers, the Peckham Brothers and the United Brothers, from Deptford, thirty-six clubs being represented. Messrs. Beningfield and Parkins jun., presided at the piano. I am requested to thank the visitors for so nobly supporting our little club on this occasion, and to say they will always find some of our members to answer when the name of the City of London is called at their visits.—Cas.

CROWN PISCATORIAL SOCIETY.

This flourishing society met this evening (May 4), and are adding greatly to their number. After the business was done, the following gentlemen contributed to the harmony:—Mr. Pip, piano; Mr. Gorsuch, violin; while Messrs. Caddell, the host, Messrs. Knight, L. Gorsuch, R. Stebbing, W. Long, W. Burwast, Sutters, Cuthbert, S. Pip, and W. Powers sang some first-rate songs.—W. H. Burwash, sec.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

At the annual meeting of the above society the members, on the motion of Mr. Burgh, heartily united in expressing their abhorrence at the assassination of Lord F. Cavendish and Mr. Burke, and trusted that the perpterators of the diabolical outrage may speedily be brought to justice.—W. G. Gardner.

May 11.

GOOD INTENT ANGLING SOCIETY.

Mr. R. Murphy opened the trout season last Sunday, bringing in 10 lb. 2½ oz. of nice fish, one scaling close on 3 lb.—not a bad start. I am afraid it is too good to last. I am glad to say our club room looks itself once more, having our cases in their places again after their successful journey to the Edinburgh Exhibition; and I am happy to say there is not one damaged, and they appear to look all the better for the change of air. They stood the change better than our friends Brookwell and Morgan, who I am glad to say are all right now. It has been decided the awards will be given up to the successful candidates at our club house, Mr. Marston kindly undertaking that duty, assisted by Mr. F. Clench and the London committee. Due notice will be given when it takes place.—R. Murphy.

May 11.

GRESHAM ANGLING SOCIETY.

The Gresham Anglers met as usual on Thursday evening, Robert Bryant, Esq, librarian, in the chair. The letters of T Fudge and J. M. D in the Fishing Gazette having been referred to, the secretary said he thought the society might safely ignore them, and he almost regretted having replied. In all good movements little jealousies of this kind were sure to arise, but as the controversy which first purported to be on the relative merits of "specimen fish *v.* gross weights" had been twisted simply into an attack on the Gresham, there was no need for any further notice beyond the reply now finally given. The Anglers' Benevolent Society was also mentioned, and the secretary stated that the committee had unanimously voted two guineas to be offered as a prize at the Tournament proposed to be held at the Welsh Harp at the end of June, which Mr. Marston was now organising. The Tournament serves two useful purposes, advancing the art of angling, and uniting all anglers as a brotherhood for mutual aid. In was announced that the meeting in furtherance of Mr. Marston's scheme for freshwater fish culture would probably take place shortly, and Mr. Crumplen said it had his entire sympathy; from what he had heard it was eminently common-sense and practical, and he was sure it would be well supported by the members of the Gresham and other angling societies. The renting of water by the three associations was also adverted to, and its many advantages pointed out. The ballot for new members was then taken, and Mr. A. W. Smith elected. The usual discussion on angling topics, renting waters, &c., followed, and the proceedings closed with a hearty vote of thanks to Mr. Bryant for presiding. Mr. Brett presented a valuable work to the library, now numbering 100 volumes.

KINGFISHER ANGLING SOCIETY.

A general meeting will be held at the club house, The Royal Saxon, Alfred Road, Harrow Road, on Tuesday, 16th instant, when members are requested to attend early.—G. A., honorary secretary.

LIVERPOOL ANGLING ASSOCIATION.

Sir,—Enclosed I beg to hand you our programme for prize fishing on Whit-Monday, 29th inst., which I hope you will kindly insert and oblige.—I am, &c.,

R. Woolfall, hon. sec.

Prizes for Whit Monday fishing, May 29th.—By the association: 15s. for the heaviest basket of trout, 10s. for the second basket of trout, 7s. 6d. for the third basket of trout. By Messrs. Leaman, Higson and Gass: 10s. 6d. for the heaviest basket of trout taken on Whit-Monday, but weighed in at the club house on Tuesday evening. By the chairman, Mr. Pratchett: A reel and line for the heaviest trout taken on Whit-Monday.

Conditions.—Members to fish where they please. If their takes are not weighed-in at the club the number of fish and their gross weight must be properly certified on the association cards, and sent in to the hon. sec. in time for the meeting on the following Thursday evening, or they will not be recognised.

N.B.—Members cannot take more than one of the prizes given by the association; but they may, in addition, win one of the two presented by members. Members six weeks in arrear with their subscriptions cannot weigh-in fish for any prizes. New members are not eligible to win any prizes or weigh-in fish until they have paid one quarter's subscriptions. No trout can be weighed-in under 4 oz (¼ lb.)—R. Woolfall, hon. sec.

Liverpool, May 6th.

STOKE NEWINGTON ANGLING SOCIETY.

Sir,—The second annual supper of the above took place on Thursday, the 4th inst., at the club house, a good number of members and friends sitting down to an excellent repast provided by host Tomkyns. On the removal of the cloth the remainder of the evening was devoted to harmony, some excellent songs being given by Messrs. Webb, Brookman, Parrot, Hutchins, the brothers Wilkinson, Harris, Berry, Lewis, Robinson, Brooks, Jones, Dennis, and Tomkyns. Mr. Jones ably occupied the chair, Mr. Hutchins officiating as the vice chair. Altogether a most enjoyable evening was spent. Several prizes were given for the ensuing season.—Thomas Gretton, secretary.

May 8.

SYCAMORE AND COCKBROOK ANGLING SOCIETY.

The members of this newly established club, held at the house of Mr. Henry Taylor, the "Sycamore Inn," Cockbrook, met together on Saturday afternoon last, for the purpose of fishing their first contest of the season. The prizes were awarded in the following order: -1, James Oldfield; 2, Rowland Hurst; 3, William Wardle. The members afterwards adjourned to the meeting house, where a comfortable and social evening was enjoyed, the following members contributing mostly to the success of the gathering, viz.:—Messrs. William, John, and James Thorpe, and Mr. Hampden Greenwood.

8th May, 1882.

TRAFALGAR ANGLING SOCIETY.

Will you kindly give space to the following in your club notices? A special meeting will be held at the club room, on Wednesday, May 17th, 1882. to arrange for the eighth annual supper. All members are requested to attend.—J. Gaze, sec.

THE BERESFORD ANGLING SOCIETY.

The annual dinner of this society took place at its headquarters, the Grove House Tavern, Camberwell Grove, on Wednesday 3rd May, when a very good company sat down to the usual excellent spread provided by the worthy host Mr. Searl on these occasions. The chair was taken by W. H. Beckett, Esq, the Vice-Chairman of the West Central Association, and in the unexpected absence of the worthy chairman of the society, Mr. D. J. Whitaker, through indisposition, Mr. E. G. Ellis the secretary of the society occupied the vice-chair. The Society was favoured with the attendance of Mr. Robert Whitmore Cox, who presided at the pianoforte as also with that of his brothers, Messrs. Frederick and Arthur Cox, who accompanied him occasionally with the violin and flute, and some capital music and singing was enjoyed by the company, Messrs. Tozer, Wm Cox, Hibbard, Morris, Priestnal, Frei, and others, contributing to the harmony. After the toast of the Queen Mr. Ellis the vice-chairman proposed "Success and continued prosperity to the West Central association of United London Angling Societies and kindred association," and referred generally to the advantages anglers had derived and would enjoy, as the result of the work of the associations, not forgetting that they were indebted to such gentlemen as Messrs. Geen Bonvoisin, and Hoole, and their then present chairman Mr Beckett, for much of the excellent work which had been done. Mr. Ellis mentioned these gentlemen particularly as being connected with the association to which his own society belonged, but he knew from report that the officials of the other associations were equally zealous Mr. Beckett in responding said it was a fact worth mentioning that one of their club members, Mr. Baylis, had been appointed on the committee of the West Central Association, and that that association represented about 120 societies in London, and the delegates on the committee were the picked men out of these 120 societies, and he considered it a signal of honour to the "Beresford" that one of its members shonld be one of the 14 committeemen. Mr. Beckett then referred to the scheme for the union of the three associations for the purpose of forming a distinct association, so to say, having for its object the renting of waters and the propagation of coarse fish, which scheme had no doubt already been discussed by them; and continuing his remarks Mr. Bcekett said there was one society with which they ought to be well acquainted.

and with which no doubt they were, for, whenever he had the opportunity of speaking on its behalf he did so. He therefore took the opportunity that evening. He was referring to the Anglers' Benevolent Society, and said every member of an angling society ought to support it. He mentioned the good they had been able to do and could do, It was a rule with the Benevolent Society never to publish the names of anyone whom they assisted, and thereby they did far more good and relieved really the most deserving cases. Mr. Baylis made a few remarks in acknowledgment of the kind way in which Mr. Beckett had spoken of him as their delegate and as committee-man, and expressed his intention of furthering the work of the association to the best of his ability. The Chairman then proposed the toast of the evening, "The Beresford Angling Society," and referred to the prizes which had been won during the last season. It appeared that Messrs. Sames, Whitaker, Wilkes, and Frei were the principal winners, and that the prize list amounted in value to exactly 13 guineas. Mr. Sames having the heaviest gross-weight, with a take of 92 lb. 11 oz., took the first prize, which was a beautiful silver goblet, which he had purchased with the money prize kindly presented by the host, Mr. Searl, for the heaviest weight, as a remembrance of Mr. Searl's generosity. The club prize had been taken by Messrs. Whitaker, Wilkes, and Frei, in the order named; the other prizes being presented by Messrs. Sames, Baylis, Whitaker, Plummer, Hopkins, Wilkes, Poulton, Ellis, Bush, Frei, Morris, Cole, Christmas, and Simmons, and were specimen and season prizes. The Chairman said that some of the prize-winners regretted that the winning takes had not been so large as they would have wished, but he did not think they had much cause to be dissatisfied, as most anglers he met said the same thing—fishing had been so indifferent. His own experiences of angling was something like Sam Weller's knowledge of London: extensive and peculiar. He felt, however, that the Beresford Angling Society need not cover its head with sackcloth and ashes. Referring to Mr. Sames' cup, he said he thought it had been won by a sterling good man; and as to the prize list, he thought very satisfactory for so small a society. In proposing the toast, he said it was needless for him to comment much on the society, but he was glad to have enjoyed the friendship of several of its members since its very inception. He then paid a warm tribute to the late secretary (Mr. Poulton), but was glad to find that in Mr. Ellis they had secured the services of so able a man. The society had flourished steadily, though not rapidly; the reason of this being that it aimed at being strong socially rather than numerically. There was one advantege in limited numbers. They could work better together, and with more satisfaction to each member. Increase of members led to difficulty of management sometimes, and it required care and tact to keep members together; and he concluded a very able speech by saying, "Pick your men and keep them together." The toast was very heartily responded to. Mr. Ellis, as vice-chairman, after referring to the death of Mr. Whitaker who was more able to respond to the toast than he himself, and could more properly have replied to the kind expressions of the chairman, said, in replying to the toast, he was sure the members of no society in London met or worked together harmoniously than they did, and it was always a pleasure to meet at the club house two or three times a week gentlemen such as those who now belonged to the society, and he assured the society that he should always have much pleasure in acting as their secretary and doing what he could for them. He thanked Mr. Beckett very much on behalf of the society for his remarks, and with reference to himself said he had been much indebted to the late secretary, Mr. Poulton, for the orderly manner in which he had found everything on succeeding him in that position. Speaking of the objects of the society, he said although they wished to keep it a somewhat select one, yet they nevertheless would be glad if a few gentlemen would join them and work in the same spirit as they did.—The other toasts were the chairman, which was proposed by Mr. Ellis, and very cordially responded to, being drunk with musical honours. The vice-chairman, proposed by Mr. Beckett and responded to by Mr. Ellis. The visitors, coupled with the name of Mr. Morris, of the South London Angling Society, was well proposed by Mr. Baylis in a few kindly words, and equally well responded to by Mr. Morris. The toasts of the host, Mr. Searl, and the health of Mr. Whitaker, unfortunately absent, were not forgotten. During the evening several gentlemen from the South London Angling Society paid the Beresford the compliment of looking in, amongst whom were Messrs. Field, Palmer, Goody and Buck.

THE BRUNSWICK PISCATORIAL SOCIETY.

The first annual dinner was unavoidably postponed until Wednesday, the 17th inst., when it is to be hoped all those who have taken tickets, and any gentlemen who would like to be present, will attend. Please send notice not later than Monday night to secretary, Brunswick Arms, Brunswick Street, Stamford Street, S.E.—Esox Lucius.

THE SECOND SURREY ANGLING SOCIETY.

This society held their first annual supper on Wednesday evening, at the head quarters, "The Queen's Head," Brandon Street, Walworth, when a capital repast was placed upon the table by the worthy host and treasurer, Mr. Spooner. Supper over, a little vocal and instrumental harmony was indulged in, and the manner in which Messrs. Joseph Wright and "Daddy" Adams acquitted themselves with the violin and guitar respectively was thoroughly appreciated. The vocal talent was well represented by Messrs. A. Nicholls, Cockett, Regall, Cherriell, junior, Powell, Grace, and last, but not least, Mr. George George, who occupied the chair during the harmony, faced by Mr. Grace, and who kept the company in roars of laughter with his dry humour, which is so well known in the vicinity of Walworth. The usual loyal toasts, and thanks to the officers of the club having been proposed and responded to, the company, having spent a very pleasant evening, separated with the usual vote of thanks to the chairman.

WOOLWICH INVICTA ANGLING SOCIETY.

The above society's annual dinner took place at the Golden Marine, Francis Street, on Tuesday, and was a great success. Amongst the guests were Messrs. Levett, Lomax, Kay, Sheppard, Howlett, Hallam, Weaver, &c. The chair was occupied during the evening by Mr. C. W. Jones, faced by Mr. J. W. Clark. Some excellent music and singing, with the usual toasts, &c., added to the enjoyment of a very pleasant evening. The prizes were taken in the order named: C. W. Jones, Foster, Maddick, Pycroft, Perry, Knight, Clark, Davis, Elles, Brett, Hallam, and Watkins. Upwards of £18 was promised for prizes for coming season. The secretary, Mr. C. Foster, was presented with a silver-mounted rod, subscribed for by the members as a token of their esteem. —C. Foster, Secretary.

May 10, 1882.

ANSWERS TO CORRESPONDENTS.

Gibbs, Landport.—There is no size fixed by law for roach from all public waters. Some public waters, like the Thames and Lea, have sizes fixed by the preservation associations; 6 or 7 inches would be about the average standard.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE DERBYSHIRE WYE AND THE TRENT FISHERY BOARD.

Sir,—As an old angler on the Derbyshire Wye, who has paid many a half-crown for a day's fishing, and hopes to pay many another, I beg to ask, What are the proprietors of the hotels doing to assist anglers to defend their rights? They have made fortunes out of anglers in past years, and no wonder, for the charges at some of them are as excessive as the civility is not. If the fishing is closed, these hotels will suffer; and perhaps, if this were explained to them, they would add their names for good sums—say, 5 per cent. of one year's takings from angling visitors.—I am, &c., Clericus.

Brussels, May 8.

SPECIMEN FISH *v.* GROSS WEIGHTS.

Sir,—As the gentleman concerned in the dispute between Mr. Crumplen and Mr. Macdermott, will you please allow me to state that Mr. Macdermott is quite mistaken in his facts. The fish I weighed-in at the Gresham, and at the Highbury, were not the same, they were not even taken on the same day, and they were all fish worth showing in any society, I see nothing inconsistent in my conduct, nor do the Gresham Angling Society, before whom the matter was fully explained. With reference to that I may say that on both occasions and to both societies I weighed in only my best fish, and returned many, which might have been brought home, to the water, thus fully carrying out the spirit of the specimen fish system.—I am, &c., D. Cartwright.

Finsbury Park, May 8.

GROSS WEIGHT *v.* SPECIMEN FISH.

Sir,—Referring to the letter of May 6 from New Cheltenham Place, Kingwood, in justice to Mr. Knechtli and myself, I must say that the signature is most *a propos*, as it is "all Fudge." The ten pike—weighing 140 lb.—"Fudge" alludes to were surely specimen fish, and the other thirty, under 8 lb. each were returned to the river, and therefore not weighed in, as "Fudge" so incorrectly states. Anglers like facts, not "Fudge." After weighing in the 17 lb. and 21½ lb. pike specified in the Fishing Gazette, February 18, the remaining nine, weighing 48 lb., showed an average, as "Fudge" observed, of some 5½ lb. each, which will probably exceed the average of "Fudge's" pike caught in the waters near Bristol.—I am, &c., A. Jardine.

38, Old Change.

SPECIMEN FISH *v.* GROSS WEIGHT.

Sir,—Mr. Fudge, of Bristol, regards J.M.D., of the Highbury Angling Society, as infallible, and charges me with unfairness, because I question the fact.

I repeat that J.M.D. was in error, if he really thought or represented that on a certain occasion the same fish had been weighed-in at the Highbury and the Gresham, and of this I believe J.M.D. is now fully aware. What was done was strictly in accordance with the rules of J.M.D.'s society; if not, J.M.D. will no doubt at once expel the offending member. The facts are these. A member of the Highbury, who belongs also to the Gresham, did last autumn weigh-in fish at both societies, but they were two distinct takes, caught on different days, all in public water, and good fish. J.M.D. only lately heard of the occurrence, and was so overcome by the news that he has only been able to give an imperfect version of the affair. J.M.D. must have had a poor opinion of the members of his own society to think it possible any of them would do as he implied, my experience of one or two of them leading me to think they would scorn any such proceeding. The remainder of Mr. Fudge's queries have been already answered. I have defined what I understand by specimen, or sample fish, as opposed to gross weights, long ago, and to those definitions I adhere. Neither myself or the Gresham Angling Society have hitherto said or done anything that I am aware of calculated to diminish the sport of any section of our brother anglers. Our only desire is to improve it, and we have consistently advocated an increase of the club standards, as one means by which that object may be materially aided. The present system, in many cases, merely offers a premium for river depletion, and this point J.M.D. shelves by a personal attack on individuals and societies who do not share his views. In this I shall not imitate him, and I very much question whether his sentiments are shared by the Highbury Anglers, whose name gives the only weight I attach to the statements he has made.—I am, &c., T. Crumplen.

London, N.W.

[This must close this Gross Weight and Specimen-fish controversy.—Ed.]

BLACK BASS (*Grystes salmonides*) FROM LAKE ST. CLAIR, U.S.

Sir,—Any gentleman wishing to see what these fish are like, and will call some Monday evening at the rooms of the Piscatorial Society, Ashley's Hotel, Henrietta Street, Covent Garden, they will see one of 4½ lb. in a case. I have another, a smaller one, which is now at the Edinburgh Fishery Exhibition. They were sent to my late friend, Frank Buckland, from America, and by him presented to me, in the flesh. I have also very handsome striped bass, which will be on view on its return from Edinburgh.—I am, &c., T. R. Sachs.

SCOTCH LOCH FISHING.

Sir,—In your notice of the little book just published under the above title, there are some remarks about "the Scotch system of trailing," to which I must take exception. The comparison between trailing for jack on the Thames and for ferox in a large Scotch loch is unfair in my opinion. If it were feasible I should certainly prefer to spin from the reel in the Nottingham fashion; I have practised this kind of fishing successfully for pike at the head of Loch Awe. But the haunts of pike are easily detected; a shallow weedy creek is a sure find generally, and then "legitimate spinning with one rod, and that properly worked by the angler himself," is the only sportsmanlike way of going to work. But with ferox the case is quite different. They are very hard to find; they frequent the deepest parts of a loch, and the best days for taking them are often very rough and stormy, when it would be no easy matter to stand up in a boat and throw a spinning bait. Moreover, the number of veritable ferox caught by trailing is comparatively small, and I question whether the ferox gets appreciably "rarer every year in the Scotch lochs." As to "the mere mechanical exertion of hauling in a fish which has fastened itself on to half-a-dozen hooks," I ask anyone who has ever landed a ferox whether this language is applicable to the case. Take a fish of from six to ten pounds for example, hooked on a trace of single gut, at the end of sixty yards of line. What sort of sport does such a fish give? From twenty to forty minutes, or more, of the liveliest and most exciting sport I know, and there is nothing of the mechanical "hauling in" style of business. I know of an instance of a ferox of 13 lb. playing for 2½ hours on spinning tackle, and I submit that this and other cases are not to be compared with jack fishing on the Thames, and that the condemnation of trailing for jack on a river (which I freely admit is a most objectionable practice) does not in the least degree apply to a similar case on a Scotch loch. Of course I admit that a clever boatman is half the battle, and hooking a ferox is a great fluke (how great a fluke few know until they have tried it); but I say the present system is the only one likely to meet with any reward at all on a big Scotch loch, and while this is so I think it never will be "put down as an unsportsmanlike practice." If any readers of the FISHING GAZETTE have had sport with ferox and other big loch trout by spinning from the bank, or casting from a boat, I shall be very glad to hear how and where they practised it. I used to be very fond of jack-fishing in the Nottingham style, and I have killed quantities, alone and unassisted, from a boat; but the only time I ever tried it in Scotland for big trout I was laughed at by the locals, and, though I persisted for several days, I never had a run!

If trailing is to be condemned as unsportsmanlike without any reservation, then all the fishing in Loch Tay, and "harling" on the river Tay must be considered unsportsmanlike. I have never tried either, but I know plenty of first-rate anglers who have—men who can throw a fly and kill salmon or trout with anyone in the kingdom; but am I to condemn their trolling as unworthy of a sportsman simply because I hold the opinion that trailing for jack on a river should not be practised by anyone who calls himself a sportsman?—TROUT.

[Our remarks did not apply only to the ferox. We cannot think "Trout" would wish to defend the system we referred to, and which is condemned by "Black Palmer," the author of book we noticed. He tells us that some Scotch anglers will have two or even three rods out with trolling baits on, and in this way they rake miles of water, the boat being rowed in a zigzag-fashion. Trolling or trailing should be adopted only when one cannot use the fly.—ED.]

FISHING AT CARNARVON AND BANGOR.

SIR,—You will greatly oblige myself and several friends if you will inform us, through the medium of your paper, what fishing is to be had in the neighbourhood of Carnarvon and Bangor—whether free, or what fees for the day, and also the best lures for the season and place. There is a cheap day-trip from here to North Wales in Whitsun week, and a party of anglers have thought of taking advantage of it, if they can obtain any good information as to what sport they may expect.

Hoping these questions will not trespass too much on your time,—I am, &c.,
W. W.

Bolton, May 8, 1882.

[The "Anglers' Diary" gives the following particulars:—"Bangor on Ogwen—salmon, sea-trout, and trout-fishing. Lord Penrhyn preserves the water from the sea for two miles, but the river is open above that. At Aber, four miles from Bangor, there is a mountain stream full of trout, which runs out of Lyn Anavon, full of good fish. The best fishing in the neighbourhood is in Lakes Ogwen, Idwal, and Bochlwyd, nine miles from Bangor, and within one mile of each other, May is the best month. Lakes Gwynant, Llanberris, and Lyn Cwellyn, are within thirteen miles of Carnarvon. There is a capital Inn, the Snowdon Ranger, near Cwellyn. There are daily conveyances to and from all these places. The rivers Sciont, Glynphaw, and Llynfni run near, all free, except for salmon." Doubtless W. W. would get further information of the postmaster at Bangor or Carnarvon.—ED.]

THE CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

SIR,—A report having been spread to the effect that the three associations have amalgamated, I am compelled to take this course on behalf of the Central Association, and I beg to inform you that no such amalgamation has ever taken place, and that the Central Association, held at the Star and Garter, St. Martin's Lane, still conduct their business entirely independent and separate from the other associations. A resolution passed at our association compels me to inform you of this.—I am, &c.,
R. STEBBINGS.

May 11.

THE BAIT QUESTION.

SIR,—Can I throw a net for bait in a public river in the close time? Where can I get a copy of the Mundella Act, and how much is it? By answering the above you will oblige.—I am, &c.,
GEORGE SEAGERS.

Cattershall Lane, Godalming, May 9.

[The Act allows bait to be taken. You can get the Act from the Acts Office, Messrs. Spottiswoode and Co., West Harding Street, London, E.C. Price about 6d., we think.—ED.]

ADDRESS WANTED.

SIR,—Can any of your numerous readers kindly forward me the address of Mr. Connolly, a fly fisherman of many years' standing (he lives somewhere Bethnal Green way), and confer a favor.—I am, &c.,
FLY FISHER.

3, St. Peter's Terrace, Fulham, S.W.

AN INVITATION.

SIR,—If you want to enjoy an hour or two amongst the jolliest of fellows, drop in at the Builders' Arms, Bridge Road, Hammersmith, on Thursday evening, 18th of May next. The Hammersmith United and Hammersmith Club Angling Societies have arranged to receive a visit conjointly, and harmony will be the order of the evening. A first-class programme will be arranged. All are welcome.—I am, &c.,
TONGS.

FLIES WITH PIKE-SCALE WINGS.

SIR,—I shall be much obliged if you will kindly give me Mr. MacNee's address, and the price per dozen for his new flies.—I am, &c.,
TROUT.

[The flies cost 3d. each. A letter addressed "Care of Mr. Wells, 11, Leith Street, Edinburgh," will find Mr. McNee.—ED.]

THE GRESHAM ANGLING SOCIETY AND THE PROPOSED TOURNAMENT.

SIR,—I have much pleasure in forwarding cheque for £2 2s., being amount voted by my committee as the Gresham contribution to the prize fund of your forthcoming anglers' tournament. We make no stipulations as to what it shall be offered for, being fully satisfied that in your hands it will be usefully applied.—I am, &c.,
T. CRUMPLEN, Hon. Sec.

11 Bishopsgate Street Within, May 9.

[Many thanks. This prompt and warm support from the Gresham is very encouraging.—ED.]

NORWICH PISCATORIAL SOCIETY.

THE monthly meeting of this society was held at the club house, Walnut Tree Shades, on the 2nd instant (the president of the society, Charles Daniels, Esq., in the chair), when a large number of members and their friends assembled to hear a paper read by Mr. T. E. Gunn, of Norwich, naturalist, on "Fresh-Water Fishes of Norfolk."

Mr. Gunn commenced by stating that the county of Norfolk had long retained the reputation of possessing as rich and varied a fauna as any in the British Isles, the three great departments of natural history being here presented under circumstances especially favourable for development and observation. The inhabitants of our rivers and broads, notably the birds and fish, had long been an interesting hobby with him, and having, during his long experience as a taxidermist, collected notes and observations, representing a mass of information on the "Aquatic Fauna of Norfolk," he hoped at no distant time to place them before the public as an addition to the natural history of the county. The sub-branch of ichthyology had, until recent years, remained in apparent obscurity; but now the art and recreation of angling, to use a vulgar phrase, seemed to be all the rage; but in these piscatorial pursuits, the angler should not only prove an adept in the art of angling, but also a student of the form, habits, and other details relating to the life-history of the fish themselves. He might then consider he had gained something even more valuable than a good catch in a day's angling, In enumerating some of the most noticeable fish, he placed what he called the king of fishes, viz., the pike (*Esox lucius*) first. This part of Mr. Gunn's paper contained a long account of the form, habits, and the life-history of the species, and would in itself form sufficient matter for an evening's amusement and instruction. He alluded to its name of "fresh-water shark," and showed, by relating several instances of its extreme voracity, that it well deserved the name. Camden, in his "Britannia," published 300 years ago, mentioned Norfolk pike as being famous when he said "Horsey pike, nothing like." It is satisfactory to learn that these fish still retain their good character. Mr. Gunn mentioned several methods of pike-fishing, enumerating a list of thirty large fish that had been captured during recent years and had passed through his hands. These ranged in weight from 20 lb. to 36 lb.; no less than seven fish being above the weight of 30 lb. each. He had opportunities afforded him of making various observations and obtaining several facts with regard to their variation in colour and disparity in size in the sexes. Out of the thirty fish he mentioned only one proved to be a male, and that was of 20 lb weight. He also alluded to the nature of their food, and the various birds, animals, and fish they had been known to prey upon. According to a certain method of calculation adopted by the late Mr. Buckland the roe of the 36 lb. fish, which weighed 5 lb., contained no less than 800,000 eggs. This was an immense number from one parent fish, but only a small proportion of these were hatched, aquatic birds and insects, as well as fish, preying upon them, so that consequently a small proportion only arrive at anything like maturity. Mr. Gunn also described the pike's parasitical tormentors; the construction of its mouth and teeth, its habits, and the curious incident of pike swallowing pike mentioned by the late Mr. Buckland, also the theories advanced to account for the singular incident; the age of big fish; description of a curious malformed pike, and the injuries to which this fish was subjected both from natural as well as accidental causes. This was illustrated by an instance of a 9 lb. fish that had a large piece jagged from its back and a broken jaw. These somewhat serious injuries were healed, and had not apparently affected the growth and nourishment of the fish. The other species of freshwater fish described by Mr. Gunn were the perch, of which he gave an account of some interesting varieties; the ruffe, miller's thumb, several species of sticklebacks, including the rare four-spined species; bream, including the veritable monster of 11½ lb., the largest in England; white bream, hybrid bream, roach, dace, azurine or blue roach, crucian and gold carp, the sturgeon, broad and sharp-nosed eels, and several others. The paper was illustrated with cases of preserved fish, also several sketches showing the form, variation of shape, internal organs, construction, as well as various diseases the fish were subject to. In concluding his paper, Mr. Gunn remarked that he had omitted several of our most familiar species, and of which he should have liked to have said something, but he had found in the facts and matter at his disposal so much that to him was interesting, that he found it impossible to condense the matter more than he had done. He suggested to those who had spare time at their disposal to take up the interesting study of ichthyology, for the student would here find a vast field for investigation open to the inquiring mind.

The paper, which occupied upwards of an hour in reading, was listened to with the greatest attention throughout, and at its close the Rev. Matthews, chairman of the society, proposed a cordial vote of thanks to Mr. Gunn for his kindness in favouring the society with a paper containing so much matter of interest and instruction to anglers.

This was seconded by Mr. E. H. Corbyn, and unanimously adopted.

Mr. Gunn, in reply, expressed his thanks to the members for the kindly manner in which he had been received, and hoped on some future occasion to be able to give a paper on a similar subject, and added that he would be pleased at any time to show his collection of specimens to the members.

Several songs were sung during the evening, the meeting breaking up at eleven o'clock, the proceedings being brought to a close in the usual manner by the members singing the National Anthem.

DINNER OF THE YARE PRESERVATION SOCEITY.

THE annual dinner of the Yare Preservation and Anglers' Society, which was held at the Royal on Wednesday evening, was a somewhat tame affair compared with its predecessors, although the company numbered over 100. There seemed to be a lack of "go" in the thing throughout, and this was apparently felt by those at the head of the table, since the proceedings were run through with such rapidity that the curtain fell at 10 o'clock—much earlier, we should say, than the society's festive performances have ever before closed. Although he placed a good dessert on the table, champagne was not given by the president this year, and this may have accounted for the exodus of some of the guests soon after speech-making commenced. Singularly enough, the glee sung to the President's health was "Come, boys, drink, and merry be." The only remarks made during the evening from which practical deductions might be made were contained in the speeches of the President and Mr. Oldham Chambers, the former of whom gave an interesting account of his successful trout-breeding operations; while the latter furnished an entertaining description of the recent International Fisheries Exhibition at Edinburgh, at which he had the deserved honour of being appointed a special juror. Mr. Chambers instituted an impartial comparison between this display and that which took place in Norwich last year, and though he evidently spoke without the slightest approach to bias, we gathered that Norwich had the best of the bargain, and especially in the matter of the arrangement of the classes, which would seem to have been somewhat clumsily effected in "Auld Reekie." Mr. Chambers' was undoubtedly the speech of the evening, and it is a pity it did not come earlier in the list, so that more of the members might have listened to his pleasant narrative. The Yare Preservation Society is in excellent trim both as regards the amount of funds in hand, and the number of members on the roll. The treasurer has a balance of very nearly £100, and the secretary suggests that this sum may be required to pay the expense of getting an amended Act of Parliament, which shall prohibit netting on our rivers altogether. Some of the members—Mr. Barwell included—considered that all that is required to effect the desired purpose is that the Conservators should alter their bye-law affecting the size of the mesh, and procure the consent of the Home Secretary to such emendation; while others—including Mr. Field, the hon. solicitor—contend that Parliament must be applied to, and hence considerable expense will be entailed. We suppose we shall ascertain shortly who entertains the correct view upon the subject, which at any rate is one of extreme importance to the angling fraternity, for if Mr. Greene's melancholy forebodings come true, we shall have a perfect fleet of the *genus* Barber cruising about our rivers, and using nets of a three-inch mesh, through which, when wet, none but the smallest fish can pass.—*Norwich Argus.*

CLUB AND OTHER JOTTINGS.

By L. B.

THE annual dinner of the Marylebone Angling Society will take place at the society's club house, Prince Albert, Sherborne Street, Blandford Square, on Tuesday evening, May 16th, and a very pretty invitation card has been sent out by Mr. secretary W. F. Pearce, to the members and visitors invited. The next West Central Association, No. 2 District, visit will be paid to the Convivial Angling Club, Bull and Bell, Ropemaker Street, Finsbury, on Tuesday evening, May 16th, when a good muster is anticipated, however short the notice.

A complimentary visit of angling societies and friends will be paid to the Hoxton Brothers Angling Society, on Monday, May 15th, to inaugurate the removal of the club to the Cherry Tree, Kingsland Road, near Shoreditch Church. Mr. G. H. Wood in the chair, faced by Mr. J. Haygett, in the vice. Brother anglers will be most heartily welcomed.

The inaugural dinner of the Brunswick Piscatorial Society, which was to have taken place on Wednesday evening, May 10th, is postponed until Wednesday, May 17th.

I am glad to say that, as far as I can ascertain, there are no club men among the persons styling themselves "anglers"—save the mark!—who are daily slaughtering numbers of spawning or spent fish, particularly perch, in a famous reservoir not a hundred miles from the Marble Arch. One of a committee of steam-launch proprietors, I am told on the best authority, recently boasted that they would sweep the anglers away from the surface of old Father Thames. They have been for many years, and not altogether without success, trying to destroy his sylvan beauty, wash away his banks, harry away the best of his finny inhabitants, and to terrify, irrespective of age or sex, the many thousands who annually seek healthful recreation on his broad bosom; but an outspoken declaration of this kind is, in practice, very much like the running up of the death and cross bones flag by a pirate craft, and will serve at least one good purpose, as it will thoroughly wake up, not merely the anglers, but the public generally, to the seriousness of the whole question, and the necessity for taking action against a common foe.

Mr. Brougham recently publicly lamented a falling-off in this year's subscriptions from London angling societies to the funds of the Thames Angling Preservation Society. I think, however, he omitted to take into consideration one very important fact which, though it should not, does weigh very considerably with anglers, viz.—that the Thames season, which closed on the 14th of last March, was one of the very worst (if we except dace fishing in the tidal water) that we have had for many years. Members, in despair, went to other waters, and possibly subscribed their half-guineas and guineas elsewhere. Let the elements but prove favourable, and the fish bite, the subscriptions will go up once more, and Mr. B. will smile yet again, and discover that there is balm in Gilead.

The annual dinner of the Waltonian Angling Society took place at the club house, the Jew's Harp, Redhill Street, Regent's Park, on Wednesday evening, May 10. Mr. Brady occupied the chair, ably faced in the vice by Mr. Waltham. A capital dinner put the members in good form to enjoy some really good singing—toasts, speeches, &c., following each other in pleasant succession. Some capital prizes, won during the past season, were distributed to the fortunate members; a long list of trophies being also subscribed for competition during the coming season. Among the visitors were Messrs. Hill, Beckett (vice-chairman West Central Association), and Mr. L. Bonvoisin.

THE FINE OLD JOLLY ANGLER.*

I'll sing to you a simple Song, made by a simple Pate,
Of a fine old Jolly Angler; a tale I will relate:—
He kept a Skiff and Jolly Boat, his Punt he pol'd first-rate;
Nor wanted Man to carry his Can, or pick him out his Bait:—
He was a Jolly Angler, one of the olden times.

His Punt so clean, was strewed around with tackle of each sort,
With reels, and creels, and running lines, and rods well made for sport;
And there old Hook'em sat at ease; no care for days gone by;
There he enjoyed his Bread and Cheese, or finished his cold Pie;
For he was a Jolly Angler, one of the olden times.

In Spring of year, your heart 'twould cheer to see him throw his Fly
With such precision, and so clear, some Trout were sure to die;
Nor was the thick-head Chub forgot, when he'd a mind to try,
He never had unlucky days, but always got a Fry.
He was a famous Angler, one of the olden times.

When Winter came, 'twas just the same, I've often heard it told:
With worsted stockings, and thick boots, he never caught a cold;
His heart he'd cheer with good old beer, and when the Thames he troll'd,
His silvery Dace the Pike would chase, and seldom leave his hold,
Till gaff'd by this old Angler, one of the olden times.

When night was come, he trudg'd him home, with heavy fish well stored,
Where many angling friends would meet around his festive board;
He quaffed his ale, he told his tale, no secrets he would hoard;
He'd teach you how to make a throw whene'er you went abroad
With this fine old Jolly Angler, one of the olden times.

But age now came, he first grew lame, and then he lost his sight;
His hooks he could not bait himself, he scarce could feel a bite;
His gentles all turned into flies, and they in turn took flight;
But though his head and gear went wrong, the heart was always right,
Of this fine old Jolly Angler, one of the olden times.

And now his line of life was run, his ground bait was all gone;
He knew the hour of death was come, and he must feed the worm:
One wish he had, 'twas granted him, by friends who round him press'd,
That by some merry rippling stream his bones might ever rest,
Thus died this Jolly Angler, one of the older times.

Written by G. S. CHAPMAN,
Late Hon. Secretary to the Piscatorial Society.

* By permission of the Piscatorial Society we reprint this song for the benefit of our club friends. Many of them have doubtless heard Mr. Jardine sing it; if not, they ought to ask him to give it when he is next at their club.—ED.

A BULL TROUT TAKEN IN THE SEVERN.—A fine bull trout was taken in a salmon net just below Worcester-bridge, by a fisherman named Darke. It measures 2 feet 4 inches in length, 17 inches in girth, and weighs 8 lb. It is now at Mr. James's, in Broad Street. A cow trout was caught recently not far from the same spot.

JAMES OGDEN, 28, Winchcomb Street, Cheltenham.

PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE,

Solicits a trial of his

WORLD-RENOWNED TROUT AND GRAYLING FLIES.

Also his

THE ODOR OF THE FOREST

THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

- The Sportsman Tourist.
- Sea and River Fishing.
- Game Bag and Gun.
- Yachting and Canoeing.
- Natural History.
- Fishculture.
- The Kennel.
- The Rifle

The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park Row, New York, U.S.

Subscription agents for Great Britain:

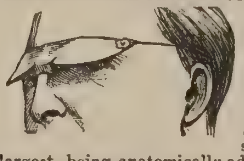
SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted), 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.



THE glare of the Sun has spoilt many a day's sport of the disciples of Isaac Walton. The anglers' headache will now be a thing of the past, as the GELATINE EYE SHADE becomes known and used They are light and small, yet as effective as the largest, being anatomically adjusted.

Sold by all Opticians and dealers in Fishing Tackle. Samples sent. Elastic Holders, 2s.; fine steel bows, 4s. 6d.; to

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations :—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht ; also some good Sea Shooting in the neighbourhood; Seal being numerous in the season —Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8 ; ticket for the week, £2 10s. ; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SATURDAY, MAY 20, 1882.

"AMONGST THE FELL-BECKS."

THOSE who travel by the London and North-Western Railway, north of Lancashire, will remember that—after passing Carnforth Junction and leaving the coast of Morecambe Bay—the face of the country through which the line runs begins to assume an aspect of sterility, in comparison with the undulating richness of the landscape rapidly disappearing southwards.

Small rugged hills or scars, with bare limestone scalps, or perhaps with a cincture of larches, make their appearance and take the place of that wealth of woodland to which South-country eyes are more accustomed.

The hedges are vanishing by degrees, and in their stead the land becomes veined, up hill and down dale, by that fence of the North-country, viz., dry stone walls, which of itself is sufficient to give to the district in the afore-mentioned eyes a somewhat dreary and desolate aspect. Further north again, beyond Kendal Junction, the train speeds through the first outskirts, or spurs of mountain-land, and presently roars through the stupendous cutting on Shap Fells, to wind along the hillside far above the bed of rushing Lune, who can be seen, hundreds of feet below, foaming his way southwards to Lancaster and the sea.

We are now fairly in the heart of Westmoreland, and a line drawn due west at right angles to the railway, would form the minor axis of the lake district. From Shap on the east to Whitehaven, and St. Bees on the west, from Wigton in the north to Morecambe Bay in the south, is compacted the most beautiful and romantic scenery in England, and in which is provided for piscator a perfect Paradise. Here, he may indulge himself, whatever be his predilection. Behold! to him all methods of warfare against the finny tribe are open. Be he the patient individual against whom that venerable gibe as to the alternatives at the ends of a line are even now so often heard from the lips of scorners of the gentle craft—or the ardent professor of the "fly," aristocrat amongst fisher-folk—here he can find scope for his powers and pursue his favourite sport to his heart's content.

But I find I am rambling on, instead of at once commencing to say in a few words about the fishing to be found amongst the Fellbecks, as the heading of this little paper indicates. Fellbecks are the upland moor streams, which after having received birth far up amongst the mountains, become the natural drains for the moors or fells through which they pass, falling afterwards to the lower levels, to swell the volume of the rivers or feed some of the numerous lakes or tarns of this lovely district. These little streams are often swarming with trout and those who know the sport, will bear me out when I say that there is a charm quite *sui generis* to be found in this class of fishing and not to be obtained elsewhere. I have for many years enjoyed not only this, but most of the other forms of angling in our dear old lakeland, but last year I treated myself to more than my usual share of fell-beck excursions, for several reasons. First, not being in the best of health, to enjoy that glorious freshness and exhiliration which alone is to be found amongst the higher mountain regions; secondly, because one is enabled to see more of the country than would be the case where the fuller valley streams are followed; and third, but not least, for the sport itself. It is always a delight to a fisher's heart to live over again his triumphs, and recount to attentive and sympathetic ears his doings in search of speckled or other finny prey, and from my own experience it is almost always the next best thing to being the actual performer, to read the exploits of others.

Come, then, with me for a few minutes to the land of lakes and let us together enjoy a few hours amongst the haunts of the fell-beck trout. I'll engage that it shan't be altogether lacking in interest or enjoyment.

After a day's or two's hard rain among the mountains, there will be found plenty of water in these generally diminutive streams to afford good sport. So, with such preparations, and after an early breakfast one morning, off we start for two or three hours' walk (you can't ride, having nowhere to stable your steed) for that point at which you purpose commencing operations—in this case say, one of the feeders of the lake, close to whose shores you are staying for the time. Long before you reach the appointed stream, whose waters are to yield you amusement for the day, you can see it hanging like a thread of broken silver against the face of the dark rocks, down whose face it flings itself so impetuously to mingle its waters with those of the tranquil mere below.

A slanting climb of nearly an hour over the short-cropped slippery turf, amongst brackens (hill fern) in some places shoulder high, brings you to the head of these miniature falls and you have arrived at the "happy hunting grounds" of your fancy. Now see what there is before you, before putting together and commencing the day's operations. A small flat rush-covered valley with big hills on either side, narrowing to a ford about a mile ahead. In this ford you can just make ont the fussy little beck creaming its way down to reach the level of the plain; along the floor of the valley it then meanders in and out, making the distance a good two miles instead of a direct one, before it reaches the point where you stand, then to precipitate itself into the lake below. Query, shall you fish this portion first, or push on to the ford and reserve it until coming back? A moment's reflection decides for the latter course and on you go straight for the valley head, crossing and recrossing with many a leap the windings of the little beck by the way. Twenty minutes' hard walking; and it *is* hard walking, over peat moss that gives and bends beneath the foot and which the tread shakes for yards around, as though you were walking on a vast water-bed—which indeed it is, a natural one—brings you to the first little fall and you clear at once for action. The stream is just sufficiently full to be right, the water not yet having had time to drain off entirely from the surrounding hills, and, as you can see from the volume pouring itself over the ledge of rock before you, well tinged with the brown colour of the peat, through which it has lately passed. Over it comes with a steady rush, making delicious music, into a deep black-looking hole, seeming deeper and blacker from the colour of the water itself; and after rising again in a regular boil of brown cream foam spreads away into a shallowish basin, some twenty feet wide before finally sliding down a little incline to the valley level below. A likely-looking spot enough and good for a brace at any rate, you think, as sitting down on the thymy bank, you leisurely make ready that short and somewhat stiffish rod and adjust the short cast with two tiny flies you purpose to open the campaign with.

And now after having taken the precaution to wet your line on the incline before mentioned, you make your first cast just above the outlet to the pool.

That first cast is nearly always an uncertain one and sure to be pretty much at random; but just as the leader drops on to the water amidst the floating bubbles, you see a sight that quickens your pulse and stirs all the blood in your veins. A quick golden flash, and the slight jar, as your dilatory wrist strikes ineffectually, tell you that you have felt and lost your first fish. One never seems prepared somehow for that rise to the first throw. However, you feel all on the alert now, and after another cast or two to the left, the same flash repeats itself to the eye, but not with the same result; wrist and hand are working now in perfect unison with the eye, and the next moment you have grassed your first, a quarter pounder in splendid condition, somewhat dusky, as might be expected from the "peat broth." This gives you heart, and after taking two more, rather less in size, one from either side, you prepare for a throw up there by the head of the pool. Surely there's a half-pounder lying beneath that jutting ledge of rock just out of the swirl of the fall's first rush, is your mental exclamation!

At the first cast your leader drops into the foam a foot short, this adjusts the range and the next instant it falls to a nicety by within a inch of where you wanted it. Before the stream has had time to whirl the line downwards, you see the familar flash of the golden side, and *habet!* He has it, and with a gallant spring has shot out above the foam and drops back, to rush madly down the pool and thence seeing you, back again to the black depths above. A regular game-fish he is, but soon yields to the inexorable persuasion applied to him and after one more ineffectual flurry in the pool, allows himself to be drawns safetly to the grassy bank, where his predecessors have already gasped before being transferred to the basket. After admiring him, and a beauty he is, and sure to turn the scale nearer three quarters than half a pound, and with such encouragement at the start, you are eager for the next pool above. This is altogether a very different sort of thing. A long, deep gulley in the rock, with a strong swift stream racing through like tidal water through a culvert. Sure to be a fish there though; but, if hooked, how to land him is the problem you are troubled with.

Anyhow, here goes. Once, twice, and no response. Three times. Was that a rise? Another throw over the same place and quick, sharp strike, and away he goes in the teeth of the stream. Now comes the tug of war: how to get him out. At last the disagreeable fact forces itself upon your mind that there is no alternative for it but lifting him, and this you accordingly do, fortunately without mishap, and he goes to join his friends in the creel. Pretty good this, five in the first fifteen minutes.

Now on, still farther up the groin of the mountains, trying each pool or stream with varying luck; sometimes not a fish can you rise in the most likely-looking places. Again, you throw in to what you consider not by any means a spot where a trout would lie, and are surprised on striking to a rise to find that you have hooked two. This not at all unfrequently happens. If you should be fortunate in your day, the trout seem perfectly ravenous. Perhaps the mountain air sharpens their appetites! Just above the last stream you can see a stillish sort of pool with an eddy that slowly bears round masses of foam that have come down from the falls ahead, and the boom of which you have heard for some time past. In this pool you presently become aware of a mighty one, feeding quietly and gently, as befits his dignity. How your heart beats as you notice the difficulty there is in reaching him without being seen. But at last you manage to drop your flies gently in the basin not a couple of inches over his lordship's nose. A gentle rise, a motion of the wrist, and, if your tackle holds good, you've got the best fish you are likely to see so far up the mountains.

He dashes about a bit at first, but has hardly room for his strength. Indeed, the place he has fancied as an abode, although deep, is so small that it is matter of wonder that a fish of his size and consequent experience should select it as a home. Be that as it is, there he is, and desperately striving to get up stream, where you can see the half-submerged trunk of a mountain ash jutting out from a crevice in the rocks. If he gets beyond and underneath that, good-bye to your chances of ever seeing him on *terra firma* on your cast of flies again. So it becomes a case of pull devil, pull baker; and, as the struggle continues, you begin to think it is all over, and he must break away, but at the last moment, as it were, the steady pressure tells upon him, and he comes sulkily down stream. Another scurry or two round the lower part of his domain exhaust him, and he comes gasping into the little creek, and so on to the grass, on a level with it, like a lamb.

An unusually large trout for the fell becks, where a half-pounder is esteemed, and rightly, a fine fish; but this fellow will certainly turn the scale at a pound. After basketing your prize on you go again with varying success until your watch warns you that you are some eight miles away from dinner and bed, and it is time to turn. Besides, your creel is full, and if you have had anything like decent sport, most of your pockets likewise. So, although reluctantly, you turn your face preparatory to returning again the way you have come; but, intent upon fishing, you have not noticed how higher and higher you have been climbing, until, from the position you are now standing in, you can command a view of half the country side. A magnificent panorama is unfolded before your astonished gaze. Mountains piled upon mountains, lakes and tarns spread out before you as in a topographical map, and all bounded on the west by the sea. Truly a sight worth seeing, and well worth the climb, if even without the encouragement you have had. After gazing awhile, you prepare to retrace your footsteps; and, after trying once more one or two of the pools, reach the little valley where you commenced. One last throw here into the first pool is rewarded by a youngster, perhaps the one you first touched. And now you feel perfectly satisfied with yourself and the day's fishing; and therefore put up the rod that has served you so well to-day, foregoing until another occasion trying the valley portion of the stream. So, having packed up, and taken a pull at the whiskey flask, you start off on the long trudge home, happy and hungry, and quite contented with this experience of fell beck fishing.

Theodore A. Howard.

THE RIVERS OF ENGLAND.

When we undertook to write "The Rivers of England," pledging ourselves as closely as possible to obtain the most reliable information more directly touching upon matters exclusively pertinent to anglers, some of our readers kindly inquired of us whether we knew the formidable nature of our undertaking. They sent us a list of the names of the rivers, which amounted, certainly, to a "perpendicular pile of figures;" but, as in many another well-intended suggestion, they had omitted to take into calculation, or to adopt the fact, that more than three-fourths of these so-called rivers were tributaries, affluents, rivulets and many dry in hot summers. If this factor is not overlooked, the number of our English rivers proper is not so very great; and as our intended system is now to absorb them as we proceed down the stream to which they contribute their volume, the undertaking becomes shorn of a considerable portion of the presumed difficulty and consequent occupance of the valuable space of the Gazette, as well as the time and attention of the reader. At the same time, it must be understood that those rivers which only contribute their volume to the main outfall close to its estuary will be treated as rivers proper; or, in other words, where their confluence is at or in the salt or brackish water, they will be recognised as belonging to independent fresh-water sheds.

There is another condition which will tend to confine the extent of these papers, namely: no diversions from the banks of the rivers under review, unless to visit lakes, ponds, meres, &c., within a short distance; no elaborate details of any picturesque scenery, old ruins, or archæological objects, beyond the mere necessity of indicating the places we are passing, and thus giving them a local habitation and a name, will be made. Thus, though our work will be, we confess, divested of much of the charm of a river ramble, it will be essentially fishy; and, if not florid, we trust will not be dry.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

THE GREAT INTERNATIONAL FISHERIES EXHIBITION, 1883.

Prize Essays.

I. £100. The Natural History of Commercial Sea Fishes of Great Britain and Ireland, with special reference to such parts of their natural history as bear upon their production and commercial use.

Note.—This would include Natural History, habits, and localities fish frequent at different seasons, and artificial propagation

(This will not include the Salmonidæ.)

Prize offered by Sir H. Peek, Bart., M.P.

II £100. The effect of the existing National and International laws for the regulation and protection of Deep Sea Fisheries, with suggestions for improvements in said laws.

III. £100. Relations of the State with Fishermen and Fisheries, including all matters dealing with their regulation and protection.

Note.—This would relate to home legislation affecting regulations for fishing vessels, protection of spawning beds, close time (if any) for salt-water fish.

IV £100. On improved facilities for the capture, economic transmission, and distribution of sea fishes.

Note.—On improved nets and modes of catching salt-water fish, the application of steam to Deep Sea Fisheries, the advantages of steam carriers, greater facilities to be given by railway Companies in regard to rates, refrigerating vans, new improved fish markets, cold storing rooms for ditto.

V. £100. On improved fishery harbour accommodation for Great Britain and Ireland, indicating the localities most in need of such harbours, the general principles on which they should be constructed, and the policy the State should adopt in aiding and encouraging harbour accommodation for fishing purposes.

Note.—The effect of the Passing Tolls Act, 1861, the causes which led to its failure, grants to supplement local efforts, loans at low rate of interest, period to which they should be extended.

Second-Class Prizes.—(Amount not determined.)

I. On the legislation at present applicable to the Salmon Fisheries in Scotland (including the River Tweed), and the best means of improving it.

II. On the legislation at present applicable to the Salmon Fisheries in England and Wales, and the best means of improving it.

III. On the legislation at present applicable to the Salmon Fisheries in Ireland, and the best means of improving it.

IV. On the introduction and acclimatisation of foreigh fish.

V. On the propagation of Fresh Water Fish, including Salmonidæ.

VI. On oyster culture.

VII. On the best means of increasing the supply of Mussels and other Molluscs (oysters excepted) used either for bait or food.

VIII. £25. On the best system of Life Insurance for Fishermen, and of insuring boats, gear, nets, &c.

THE NEW GELATINE EYE-SHADE.

Messrs. Harrison and Son, Opticians, 40, Hatton Garden, have sent us for notice one of their new eye-shades. This is a most useful invention, and a great advance over the old affairs of the kind. It is carefully shaped to fit the head, and will be fouud most grateful and comforting to the angler who fishes in a glaring sun; and for the next few months that is how most anglers will have to fish. We can strongly recommend this particular eye-shade.

Present of Fish to Mr. Howlett, Naturalist, Newmarket.—The Right Honourable Lord Walsingham, of Merton Hall, Norfolk, has presented William Howlett, naturalist, Newmarket, with a dozen brace of the golden tench (*Tinca vulgaris*). Some fine specimens of this magnificent fish were exhibited at the late Fisheries Exhibition, Norwich, and were wonderfully admired. According to the late Frank Buckland, these fish were first introduced to this country by Sir Stephen Lakeman about the year 1850. Their original *locus standi* appears to be in some part of Germany or Austria. They are cultivated as an ornamental fish in Silesia, but nowhere do they breed and thrive better than in the lakes at Merton Hall, the seat of Lord Walsingham, his lordship being very fond of piscicultural as well as natural history science.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

A HISTORY OF FISHING TACKLE, WITH NOTES ON ITS AMATEUR MANUFACTURE.

(*Continued from page* 34.)

By J. Harrington Keene.

No. III.—Hooks.

I NOW purpose taking each separate piece of apparatus used in the pursuance of angling and to trace its history as closely as the limits of space and my own research and knowledge will allow. To begin at the beginning, I have chosen the subject set at the head of this paper; and I need, I suppose, scarcely stop to assure my readers that it is one of the utmost interest and, indeed, importance to the fisherman, though this fact is constantly overlooked even by the most experienced.

The earliest representation of hooks in a printed book is that shown in the "Treatyse of Fysshynge with an Angle," published in 1496. "Thyse fygures are put here in ensample of your hokis," says the fair authoress, and she shows eighteen specimens, which for coarseness and general inefficiency of shape—judging, of course, by the angling of to-day—I should say, could never be surpassed. The method advised also for the manufacture by hand of these extraordinary weapons is curious and will contrast remarkably with the processes of to-day. She says:—"Ye shall understande that the moost subtyll and hardyste taske in makynge your harnays is for to make your hokis;" and depend upon it, not only in those days, but in the present, the remark is a true one, if the angler himself were foolish enough to try it now. In the fifteenth century, however, it was necessary that each fisherman should be able to fashion his own rude tackle, and the hook being most important, the following directions are given:—"Ye must have fyles, thyn and sharpe and small beten . . . . a dam . . . . a bender, a payer of long and small tongys, an hard knyfe some deal thicke and annelde (annealed) a lytyl hamour. And for smalle syze, ye shall make your hokes of the smallest quarell nedlys that ye can fynde of stele." Thereafter follow instructions for tempering, raising the beard, and final sharpening and tempering. The shank at the end is to be beaten broad like the eel-hooks of to-day. Largest hooks are not to be made of needles, but of shoemakers' "nailes" (nails). I wonder what the good dame would think if she saw the processes as they are successively completed at any of the great hook factories of the present time. Nearly 400 years makes a vast difference in the methods of mechanical work Curiously, however, the cuts given of the "hamour," "knyfe," "pynsons" (pincers), "clam," "annelde" (anvil), "wreste," "megge," and "fyle" are not very much different from the tools of these names in use now; indeed, these types seem likely never to change until hand-labour is superseded entirely by machinery. Query, will this ever come to pass?

The peculiarity of the hooks thus figured was, however, not so much their coarseness and want of finish as the extraordinary distance between the point and the shank opposite—or open-zen, to use an ugly but expressive word. I have these drawings before me now, showing the hooks attached to the "lyne," and I can assuredly affirm that the chances are a hundred to one against a fish being hooked unless the cumbrous piece of mechanism managed to become securely lodged in the maw. The line of direction is very widely divergent from the line of impact, and it is a certainty that the best hooks are those alone where the two are the most closely coincident. The same fault must be found with the gorge hooks figured by Nobbes in his "Art of Trolling" (1682), though it might have been expected that in nearly two hundred years such an obvious fault would in some degree have been reduced, or corrected entirely.

The progress of improvement in fishing-tackle of all kinds till within the last century has been very slow, and the remark applies with great and signal justice to hook manufacture. Even to the present day the round bend is preferred to the Pennell with its very close coincidence of direction and impact as compared with other makes. Perhaps a little explanation of this incipient complaint may be welcome to the reader at this juncture.

In considering the subject it is necessary to ask "What are the desiderata in hooks?" and Mr. Pennell, with great precision, argues as follows: Penetration; holding power; strength, lightness, and neatness. I don't think anybody can grumble at the reply; and, assuming this, let us see what the answer actually implies.

Penetration.—This, of course, means, in a good hook, the maximum of ease in its passage into the jaw of the fish, and is brought about by means (*a*) of an exquisitely-fine point, and a near coincidence (as I before intimated) between the angle of impact on that spot where the hook's point touches the mouth of the fish and the direction of the force applied—in other words, the pull of the line on striking. Let any reader, in order to understand this clearly, take a hook of gut, and, placing it against his finger, draw gently towards himself. He will find that in nearly every make of hook the hook's impact is distinctly away from the direction of the gut, so that in striking the point enters obliquely, thus increasing the difficulty of penetration very greatly, and invariably, no matter how the hook may have been seized. In the case, also, of the Kirbys and snecks, where the point turns sideways, the same principles obtain, though the extra "catching" power of these makes may probably overbalance the defect. The "Crystal" roach hook is perhaps —barring the Pennell—the nearest approach to perfection in penetration, being Limerick shaped, long, and somewhat barbward inclined in the shank, and strong and light, with good holding power, though this latter is the weakest quality in the "Crystal." Of the five makes of hooks in common use—viz., round, Kirby, Limerick, sneck, and sprout, there is not one which even approximately avoids the evil of divergence to which I have referred; and more than this I find great fault with them all for the extreme outstanding of the barb; so wide is this of the hook that it is often, especially in pike-fishing, impossible to strike it home. No hook should be used with a barb very widely outstanding.

HOLDING POWER—Consists in the efficiency of the barb and the closeness of the point to the opposite shank. I have said the barb ought not to be wide; at the same time, I am of opinion it should be long, and I am not sure but, if it were turned shankward slightly after having been opened from the shank, that its efficiency would be impaired. This is at present, however, a matter for experiment which I hope to decide before this series reaches its end. The shankward tendency of the point of a hook increases the holding power even yet more pronouncedly, and at the same time aids penetration on the theory I have before explained.

STRENGTH—is useful in all mechanical operations and constructions only where it is wanted, and it should be increased in proportion as it is required. Increased strength is required in modern and usually-employed hooks just in the bend above the barb, because it is at that point that the chief strain falls on striking. Generally, however, this part is of the same thickness as the rest of the bend, and this would not much matter were that thickness sufficient, and did not lightness and neatness become desiderata. The Limerick shape has a very nasty knack of breaking at this point, in fact I have seen good fish repeatedly lost when these hooks have been used. The moral, therefore, is let the hook be thickened there and reduced in maximum of barb and shank.

The Pennell hook, the principles of which I have been almost entirely expounding, fulfils the expectations in practice which its inventor claims for it; still it is not a perfect weapon by any means, and, though based as it is upon the existing form of Limerick make, it is not exactly my ideal. In my "Practical Fisherman" I have shadowed forth a hook with a shank so shaped that the angle of impact does not exist as such, it being swallowed up by the line of force, or, in other words, the lines of impact and force applied are identical; the holding power, by virtue of closure of the bend, shankward, is also greater, and the barb and point of a design entirely original, in that it is not rigid when passing into the jaw of the fish, only being so indeed when it is rendered so by the struggling creature. The point of my hook also is not like others, it is bayonet shaped, and thus its penetrative power is greatly increased without loss of strength. Of course these are chiefly used for large fish, especially so for salmon and pike. For smaller fish the Pennell is by far the best.

Some little reservation may be, perhaps, made in connection with the foregoing remarks regarding eel, and such hooks as are not used where it is necessary to actually strike the fish. An entire revolution in hook-making for such quarry, even it were possible is not needful. The eel will hook itself on almost any shape of hook, owing to its extreme voracity and fearlessness. By no means is the eel an artful fish in the sense of acquired cunning, and, as compared with the roach—which Walton terms the "water sheep"—it is a complete fool.

Of course, as the attentive reader will readily have perceived, I have been speaking of the single hook. The same arguments do not apply to the brazed triplet, supposing that all of the three points enter at once; but, *cæteris paribus*, they do apply when it is considered that in not one case out of ten does more than one hook enter the fish. Hence I advocate the making of triplets on the same principle as single hooks, or, in other words, I advise that triplets be made from the Pennell pattern singles.

I adverted to the making of hooks four hundred years ago. Perhaps it is but fair that I should generally indicate the processes of their present manufacture. Briefly, then, the wire is received from Sweden chiefly, in coils of different gauges, and it being of the purest iron is necessarily soft. It is cut into the desired lengths. Then, by means of a specially made knife, it is barbed. This operation consists in cutting half-way through the wire at one end, and raising the upper section by a turn of the knife blade. Next the wire is bent to the desired form; then it is heated till the proper colour is attained, and plunged into oil. By this procedure sufficient carbon is taken up by the metal to transform it from iron to steel. The hooks are then either blued or polished, the former by means of a chemical mixture and the latter by shaking in a bag into which a little fine emery has been thrown. They are then counted and packed.

Such is the general procedure, and it is astonishing what immense numbers are manufactured. "What becomes of the pins?" might fitly be said of the fish hooks, for it would seem incredible that so many as are made could be disposed of.

To be continued.

GUT AND HAIR.

TURNING over the recent back numbers of the FISHING GAZETTE, I find "March Brown" paying me the compliment of requesting me to reply to certain queries which naturally arose from my article upon the above subject. On the following week, instead of doing so, I answered him most curtly, and in a manner which, after this lapse of time I feel demands not only an unqualified apology to "March Brown," but to the whole of the readers of the FISHING GAZETTE, to whose service I respectfully devote myself. The only excuse I can offer, is, that at that particular time I believed I required a blue pill, my head not being in a sufficiently analytical condition to go into the experiments which were involved in properly answering "March Brown's" inquiries. Having been much exercised since by a touch of conscience, I have tried to remove the charge of grumpiness, by looking up amongst my notes, at least some few facts which bear upon the question—namely the relative strength of human (for accepted distinction) and animal hair; in the latter, that of the horse being the special consideration:—

Montague Marriot, an accomplished angler, says that the finest hair for twisting comes from Buenos Ayres and other South American ports, the best being mane hair, sometimes 5 feet long. J. C. Wilcox, the author, of the "Sea Fisherman," says, in the *Field*, in reference to this statement, that "this seems very extraordinary," and asks where any such hair is procurable in England, from 30 inches to any greater length. He further states that the fineness of the hair would be a great recommendation for a sea-fishing line, as it would, of course, give increased strength. The chief want is black hair, of which these sea-lines are made.

A correspondent who seems to claim especial experience from having arrived at the age of fifty-six, writes, "I fished with nothing but hair-lines in my boyhood, and have still in my possession some of those lines, good and sound yet; in my opinion, the secret is in the hair being taken from the tail of a horse, rather than from that of a mare, the finishing-off part of the latter being subject to be moistened otherwise than by water from the clouds." But we would ask whether this would not occur more with the opposite sex?

This not too ambiguous hint caused me to make inquiries how the horsehair weavers for chair coverings treated this material to render it so supple and lasting; and I found in Spitalfields, from ocular demonstration, that the hair, before being used in the loom, is soaked for some time in urine. I afterwards learned from the late Mr. Wix that he was acquainted with this fact, and that he subjected his choicest hair periodically to a salt-water bath of this nature. In the "Compleat Fisherman," an odd old book, if possessed by any of my readers, he will find statements confirmatory of the above, but they cannot be quoted here. The fishermen of the Channel Islands always prefer the tail of a young living horse, and the lower part being cut off, as useless, from dirt, &c., it is carefully washed, tied up in small bundles, and hung up to dry in the open air. Black hair is preferred for the lines, and of a medium thickness; for, acting on the principle that union is strength, they prefer a large number of hairs of medium size to a smaller number of coarser hairs. The favourite number of hairs is thirty-six. They have great objection to use hair from a dead animal; and, as many of the fishermen are likewise farmers, they prefer it from their own horses or those of their friends. White hair is generally, and not unnaturally, supposed to have lost its vitality, and consequently its strength. But it is often used for a length of two or three fathoms at the end of the line from the presumption that the colour is less observable by the fish. It is said that there is no material so durable as hair in salt water, which singularly agrees with the rationale of the process of its preservation by the weaver.

In Derbyshire the fishermen prefer hair as a rule, on account of the lightness, freedom from entangling itself, for its becoming straight in the act of throwing, durability, colour, &c., and its adaptation to the clear limestone waters of that county, where trout and grayling are the principal quarry, But when these fish are above a pound or so in weight, considerable risk of losing your fish, with hair, exists.

Hair can be stretched to more than one-third beyond its length, and it will contract again to its ordinary dimensions. This for bottom fishing, its non-swelling properties and elasticity, are in its favour. We have known gut repeatedly soaked in boiling water part with its cohesive gelatine, so as to assume almost the character of floss silk, which it, in fact, is, minus its natural gum, and becomes more like a blow-line than a concrete thread.

But to my text, from which I have greatly wandered: the actual length and strength of human hair. Sir Charles Bell makes allusion to a woman who had hair six feet in length, and Tennyson speaks of the Lady Godiva—

> Anon she shook her head,
> And showered the rippled ringlets to her knee.

But, to leave poetry for fact, Robinson's "Essay on Human Economy" tells us that a single hair from a boy only eight years of age supported the weight of 7812 grains, and that one taken from the head of a young man aged twenty-two years supported 14,285 grains. It "March Brown" turns to Hair Manufacturers, in the London Directory, and will inquire of any of the owners of the names therein, he may learn much of interest respecting human hair; or if he be fortunate enough to pick up a copy of Prince's Book upon Human Hair, published for the proprietors of Macassar's oil—but by no means a trade, though a thoroughly scientific work—he will there find a tabulated list of strengths of the hair of various nations.

CREEL.

CENTRAL ASSOCIATION OF LONDON ANGLING SOCIETIES.

THERE was a large attendance of delegates, representing about forty clubs affiliated to this association, at the monthly meeting at the Star and Garter Hotel, St. Martin's Lane, Charing Cross, on Friday evening in last week. Mr. J. C. Murray, the chairman of the association, presided on the occasion, supported by Mr. Thomas Spreckley, president, and Mr. W. H. Brougham, secretary of the Thames Angling Preservation Society, who had been specially invited to attend.

After the transaction of the ordinary business, Mr. Murray remarked that it afforded him much pleasure in having the attendance of Mr.

Spreckley and Mr. Brougham, and he was sure the same feeling existed amongst them all. There could be no doubt it was through the energetic labours of those gentlemen that the protection and preservation of the Thames fishery were mainly due, and with this feeling the Central Association, at its last meeting, voted the sum of ten guineas towards the funds of the Thames Angling Preservation Society. He had now the gratification of handing over that amount, and asking all present to accord a hearty vote of thanks to Mr. Spreckley and Mr. W. H. Brougham for their attendance that evening.

This having been enthusiastically responded to, both of those gentlemen, in practical speeches, acknowledged the gift, and assured the meeting they had only one object in view—that of securing good sport to all classes of anglers.

The meeting was afterwards addressed by Mr. A. Allison, Mr. F. C. Hatfield, and others, and the subject of coarse fish propagation discussed, the delegates expressing their approval of the response which had been made by the Thames Angling Preservation Society in reference to the application made to it by the combined committee of the three association. An additional club was enrolled, and the affairs of the Central Association were regarded as being in a very healthy condition, Mr. R. Stebbings discharging the duties of his office as secretary with fidelity and zeal.

ANNUAL DINNER OF THE BRENTFORD PISCATORIAL SOCIETY.

The establishment of an angling club in the county town of Middlesex is of significant importance, as forming another link in the chain of suburban angling societies on the banks of the Thames with Putney Battersea, Hammersmith and Richmond. The hostelry where the Brentford Piscatorials meet is peculiarly adapted for an angling club, as the grounds slope down to the river, and fish may be taken therefrom. The neighbourhood of Brentford is somewhat proverbial as the habitation of the poacher, and the establishment of a club advocating sportsmanlike principles and upholding the Thames by-laws in their midst may have some effect in convincing those men that the sober law of fishing rights will be vindicated, and the locality made rather too warm for such characters as lawbreakers. There was something very pleasant on the occasion of the first annual dinner of the Brentford Piscatorial Society in the prospect of future care for the value of this portion of the Thames fishery by such a gallant body of piscators as have been enrolled as members, with Mr. Kenneth R. Montgomery at the head as president, and Messrs. Thomas Layton and Henry Croxford as vice-presidents. The society has also been successful in enlisting the valuable services of Mr. J. H. White as secretary, and who has expressed himself desirous of emulating the character and position of the neighbouring club on the other side of the water at Richmond. The dinner, which took place on Thursday evening in last week, was held in a spacious and comfortably-fitted marquee on the grounds of the Waggon and Horses, at Kew Bridge, where covers were laid for forty guests, and all in the course of the proceedings were occupied. A very excellent dinner was served up by Mr. J. D. Thaxter, the treasurer, and proprietor of the charming hostelry, and which was substantially appreciated. The tables were exquisitely decorated, and when it became dusk a profusion of oil-lamps gave the interior a very pleasant and romantic appearance. Very shortly after the appointed hour of seven o'clock, Mr. Kenneth Montgomrey occupied the position of chairman, with Mr. T. Layton in the vice-chair. The Thames Angling Preservation Society being represented by Mr. W. H. Brougham, the West Central Association of London Angling Clubs by Mr. Thomas Hoole, and the local press by Mr. G. Thomason, the proprietor of the *Middlesex Chronicle*. After the loyal toast, the Chairman at once introduced the toast of the evening, "Success to the Brentford Piscatorial Society," which, he remarked, was founded to encourage legal angling and the suppression of all unfair fishing; the members were also determined to do all in their power to prevent the river from being illegally netted. There was, he considered, a wonderful amount of enthusiasm amongst the bank anglers; his own experience of this class of sportsmen was that they were thoroughly devoted to the pursuit of angling, and always appeared satisfied with their day's sport. It was well known to all practical anglers there were successful as well as unsuccessful days; all classes enjoyed fishing, and he had himself tried to catch most kinds of fish, from the sportive gudgeon to the lordly salmon—all of which required endurance, patience, and skill, as well as fine tackle. He believed angling outdid every other sport, such as hunting or deer-stalking—the work of which was done by huntsmen, stalkers, keepers, and beaters; and fishing was indulged in by the highest to the lowest in the land. The chairman concluded a thoroughly practical and interesting speech by asking those present to drink with great heartiness to the success of their society, which was done with the warmest enthusiasm. Mr. White, in his reply, said that when the club started, on the 28th of November last, they had only a dozen members, and they had at the present time thirty-five respectable anglers. He would endeavour to do all he could to keep up the success of the society and emulate the example of the Richmond Piscatorial Society. Mr. Cuxford then gave "The West Central Association," which had done so much to obtain railway concessions and other advantages for the members of angling clubs. He looked upon angling as associated with our mercantile life, as it was by perseverance the anglers acquired success, and he was quite sure a successful angler would be a successful man of business. He coupled with the toast the name of Mr. Thomas Hoole, as the secretary of the association. Mr. Hoole briefly replied, as he said he had two other meetings to attend that night. The associations, of which there were three in number, were now combined for the purposes of coarse fish propagation, which at their request had been taken up by the Thames Angling Preservation Society. He promised the members to get the Great Western concessions extended to Brentford Station. The Chairman, in proposing "The Thames Angling Preservation Society," said it needed very few remarks from him to commend it to their high approval, as it was well known how it laboured in the interests of fishing; and they were honoured on that occasion with the presence of Mr. Brougham, whose name he would associate with the toast. After a compliment of musical honours, Mr. W. H. Brougham first of all congratulated the club on its success, and then, referring to the work of his society, he regarded as amongst the helpers, first of all, the professional fishermen, who were the natural allies to Thames preservation; but he was sorry to say, when asked for their assistance, their great desire was to know how much they were going to receive for it; then there were the angling clubs, and he was sorry to say only about sixteen out of one hundred and sixty clubs directly supported their work; and then there were the anglers, and he was sorry to say they did not as a body support the protection of the fishery. The names of successful anglers were conspicuous by their absence on the list of subscribers to the society. Mr. T. Layton, in a very complimentary speech, proposed "The Health of the Chairman, to which Mr. Montgomery, receiving musical honours, briefly responded. "The Vice-Chairman" and "The Press" completed the list of toasts. The musical arrangements were good; and the following prizes were distributed during the evening:—Mr. W. Turner, of Hounslow, oil painting (executed and presented by Mr. H. J. Clarke, who is a member of the society), for best specimen of roach; also roach rod (secretary's prize), for best catch of roach in one day; Mr. T. Taylor, second prize, a pin; Mr. J. Mount Stephens, first prize gross-weight, winch and jack line; Mr. J. Allan, second prize gross-weight, winch and jack line; Mr. T. Waight, third prize gross-weight, fly rod; Mr. J. W. White, for best catch of jack in one day, reach rod and winch (presented by Mr. A. Emmerson); Mr. J. Allan, silver watch, for best catch of roach in one day, pegged down (presented by Mr. Mount Stephens).

THE FISH SUPPLY OF LONDON.

A meeting of the Society of Arts took place on Wednesday, the 10th inst., at its premises, John Street, Adelphi, Mr. Birkbeck occupying the chair. Mr. Spencer Walpole read a paper on "The Fish Supply of London." He said that the same source from which the whole of the four millions population of London drew their fish supplied also the whole of England, and even some foreign countries. In 1880 about 130,000 tons of fish were brought to London, which meant a daily distribution of about 400 tons. He repudiated the idea that fish would ever become scarce, maintaining, as he did, that the North Sea, at any rate, was practically inexhaustible. Although the supply of fish to London had vastly increased, it was still very dear, and this he considered was to a great extent due to the excessive rates charged by the railway companies. The consequence was that water-borne fish had of late years increased 100 per cent., while land-borne fish had only increased 25 per cent. in the same time. After expressing his opinion that the market, however improved, ought never to be removed from the waterside, he said it would be bad both for seller and consumer if it were attempted to multiply markets, as in no trade was the tendency to centralisation so strong as it was among fishmongers. He considered that were an adequate market provided the price of fish would be much reduced, although at the same time he did not believe all the stories of extortion and running up of prices by the Billingsgate ring. Billingsgate might be made into such a market by the widening of its approaches; but if the cost was too great, then the chief centre of the fish trade ought to be removed to some more convenient spot.—*City Press.*

A YEAR OF LIFEBOAT WORK.

Happily the work of Saving Life from Shipwreck on the shores of the British Isles has assumed such proportions and efficiency as it obtained at no former period. In this good cause the National Lifeboat Institution has, of course, taken a prominent and active part, having contributed last year alone to the saving of 1121 lives from various wrecks, while the Board of Trade and the Coastguard, by means of the rocket apparatus, rescued upwards of 500 lives. These facts are learned from the annual report of the Lifeboat Institution, which has just been issued.

Last year eleven new lifeboats were launched. The number of lifeboats now under the management of the Institution is 271.

During the year 1881 the receipts of the Institution amounted to £36,419, while the expenditure was £37,781. As usual the items of receipt and expenditure are fully detailed in the financial statement, which has been audited by Mr. Lovelock, public accountant.

The valuable and earnest co-operation afforded by the local branch committees and their honarary secretaries, is suitably acknowledged, and so are also several munificent contributions to the institution.

It is hardly necessary to add that the managing body of so great and philanthropic a society as the Lifeboat Institution fulfils a national public duty, and its committee are amply rewarded in its administration by the sympathy and liberal support which the community extend to it. Thus fortified they may unhesitatingly leave no effort untried which shall contribute to the efficiency of their life-saving machinery, and fit it to perform the great work the originators of the Institution had in view—"The Preservation of Life from Shipwreck."

We will only add that contributions are received for the Lifeboat Institution by all the London and country bankers, and by the Secretary, Richard Lewis, Esq., 14, John Street, Adelphi, London.

RIVER REPORTS.

MID-THAMES.

> "Glory is like a circle in the water,
> Which never ceaseth to enlarge itself."
> —SHAKESPEARE.

I have had reports of the capture of several fine fish during the past week—captures which have become daily enlarged, until this morning a well authenticated fish, of 7 lb. odd, had culminated into one of 15 lb., *a la* the circles of water above cited, ever growing from one little splash until sight and space render them invisible. At Surly Hall and Bray three or four takeable fish have been had, but not above 4 lb. the largest. At Maidenhead the Earl of Ravensworth, fishing with Harry Wilder on Friday last, had the fortune to take three trout, scaling respectively 5 lb., 3 lb., and 2¼ lb. Captain Haynes, R.N., also out with the invincible Harry, took three fish, the best of which scaled 2½ lb.; the others, being under 2 lb., were returned to the bosom of their Father Thames. From Marlow I glean that Mr. Richard F. Jackson, on Thursday, off Stonehouse Point, caught a fine trout in splendid trim, which scaled 8 lb. to a tick. Mr. J. was fishing alone. At the Marlow weir yesterday (Wednesday) a gentleman, out with young Hatch, took a pretty fish of 5 lb. I may here incidentally mention that old Hatch, of Marlow, an excellent and respected fisherman, has recently, and very suddenly, gone to other and possibly happier fishing grounds. Two more trout have succumbed at Hambleden and one at Sonning. Thursday evening.—Weather delightfully fine, in fact, scorching; river in grand fettle; so now, before the "madding crowd" arrives, is the time to angle for ye trout.—MARLOW BUZZ.

Ballynahinch.

The following are the number of fish killed for the week:—On the 10th and 11th, Mr. E. Middleton caught one each day, weighing 10 lb. and 11½ lb. On the 12th, Mr. T. A. O. Taylor, one, 10½ lb. On the 13th, Mr. T. A. O. Taylor caught the first "peal" of the season, weighing 6 lb.; same date, Mr. W. H. S. Openshaw caught three salmon, weighing 9 lb., 13 lb., and 15 lb. On the 15th, Mr. T. A. O. Taylor, two, 10 lb. and 10½ lb.; same date, Mr. Openshaw, one, 12 lb.; and on the 16th, Mr. W. H. S. Openshaw caught one, 10 lb.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

On the 11th, Mr. Headley killed a good basket and Mr. Oliver and Mr. Wear each a good basket. On the 12th, Mr. Armstrong, of Gosforth, killed a basket 9 lb., R. M. Warwick, 4 lb. On the 13th the river is very small; bright; the sport was bad, from two to six brace. On the 15th, Mr. Oliver killed 7 lb. The trout are taking the willow fly at present. If the weather continues fine as it is at present there will be some good sport with the drop minnow. Trout last week have been a good class, averaging from 10 oz. to 18 oz.—A. GLASS, Anglers' Inn.

Dove.

We have had nasty cold winds all the week, and at night the thermometer has been down at almost freezing point. Trout, therefore, while having risen fairly well, have been rather backward considering that we are now getting past the middle of May. We want warm rain badly; agriculture requires it as well as angling. The ground is literally parched, and the Dove is at the time of writing getting very low, and is as clear as gin. The takes during the week have averaged from six to eight brace. The best time has been in the middle of the day, when the sun's warmth has to a large extent mitigated the icy severity of the breezes. Dibbing with the house-fly has now commenced, and ant eggs are being used by bottom-fishers with good effect. The appearance of the May-fly has been considerably retarded by the bitterness of this week's weather. It will not be freely on the water until June.—THE SPLODGER.

North Lincolnshire.

The weather is becoming much too bright for fly-fishing during the day. Anglers who wish to do anything of note will defer their operations until the evening, when the fish are better on the feed. I caught a beautiful basket of fish one evening during the past week in a tributary of the Ancholme. I had ten fish, all over ¼ lb., some well on to 1 lb. each, and that in a stream where there were none six years ago. Amongst them was one pretty Fontinalis, two years old, and which weighed above ½ lb. I transferred this and seven of the trout safely to the Manor Fishery, and hope to utilise them for breeding next season. A fortnight ago I sent some "Yorkshire Notes," copied from the *Craven Herald*, but in the hurry of writing for five papers I quite overlooked the insertion of the authority from which they were taken, and added my signature in lieu thereof. It should have been "*Craven Herald*," countersigned only by me as attesting the correctness thereof. Your correspondent has a strong objection to copying from the other boys without making a proper acknowledgment.—THOMAS FORD.

Taw and Tributaries (N. Devon).

Water getting back very low and clear. The Taw is lower and fishable, and some fine salmon have been taken with the N. Devon minnow (not the angel, but the solid one). The bass have not come into the rivers, nor the mullett, but should the weather remain fine and clear they will shortly arrive and good sport will be had. I have heard of a few dishes of trout being killed, and amongst one basket was a trout 1½ lb. weight. Many salmon; one gentleman got three, another two, and others one each. An application was made at the Board of Conservators for another month to be added to the net fishermen's time for fishing, but only half of the time voted; but it will rest with the Home Office to decide, and if *they* knew that salmon were poached by *them* all the year, they would not get it.—RUSTY GAME.

Test.

Water very clear and low. Weed cutting been going on for the last week; will be pretty well over by to-morrow. Where they have been cut wholesale, fish are very shy, and no sport can be expected. It is owner's own fault and they will believe it in time. A spent May fly was brought to me last evening. The fly will, I fancy, be a week earlier than usual; low water and hot sun conducing to their development. A few fish have been killed during the past week, but it is only to be accomplished by brute force and by those who can drive a fly dead against the wind. The wind has been north-east for some considerable time, and I see no prospect of a change. Some evenings the fish rise well from 7 to 8.30. The most killing fly, I find, is the indiarubber one. The pattern was given me by one of the best fishermen in Hampshire, and I now swear by it; it floats beautifully when tied on an eyed hook.—HAMPSHIRE.

Thames (Goring).

Water now in good order for trout-fishing. I have seen four this week. Prospects look well for the coming season. There are a good many perch; I have seen a good lot of them. Chub and barbel have been up by Goring Bridge very thick. There are plenty of fish here.—JOHN RUSH.

Tweed and Teviot.

For the past seven days the weather in the south of Scotland has been most variable. During the latter part of last week the border streams were flooded with "snow broo" from the surrounding hills, and the air was bitterly cold. The weather this week, however, has been delightfully fine, and the rivers have subsided almost to their summer level. A heavy, warm rain is much desiderated in order to cause a flood, which would have the effect of cleansing the river-beds and of carrying to the sea the shoals of salmon smolts so numerous at present, and which simply tantalise the angler. The solar rays during the day have been too bright to admit of successful angling, but in the evening tolerably good takes of both salmon and trout have been obtained. On Thursday, on Birgham water, Mr. Novette captured a nice salmon of 14 lb. A number of captures are reported as having taken place on the Floors casts, but no particulars of these have come to hand. After sunset on Saturday, Mr. Pringle Elliot, fishing on the Ednam House water, caught a salmon of 8½ lb, and had a run with another which he failed to bring to bank. Mr. James Kerss killed two salmon on the Hendersyde water on Monday, and on the same day and on the same water Mr. Charles Kerss also landed two fish. After seven o'clock on Tuesday evening Mr. James Kerss obtained a couple of salmon on the Sprouston water. On Wednesday, on the Hendersyde lower water, Mr. James Kerss secured two salmon, and on the same water three baskets of trout, from 9 to 11 lb. each, were obtained. On the Sprouston water two baskets of trout were caught, which scaled about 10 lb. each. A very nice dish of 9 lb., one of the trout composing which weighed 1¾ lb., was caught on the Makerstoun water. Night-fishing for trout has been enthusiastically prosecuted since the advent of the prevailing fine weather, and day-fishing, which is exceedingly unproductive, is now little resorted to. Fishing with worm on Hempseedford, on Tuesday, Mr. Elliot caught a fine common trout, weighing 5 lb., while his tackle latterly gave way in running what ostensibly was a larger fish. Further down the stream, a good basket was taken, one trout in the lot weighing 2½ lb. Baskets weighing from 3 lb. to 4 lb. have been pretty numerous on both Tweed and Teviot, while the smaller waters also yield fair sport.—MAXWHEEL.

Wye and Derwent.

The weather during the past week has been sharp; frosty nights, with a bright, hot sun during the middle of the day; which has been very bad indeed for the artificial fly fishers, in the middle of the day. Only in the rough parts of the stream there have been several good baskets made by experienced fly fishers. Trout have risen freely in the evening, principally at the "May yellow," and a light dun which is now on all of our Derbyshire rivers; and baskets from two brace to nine brace per angler have been made. The following flies have all killed fish: The "May yellow," light dun, dotteril, black-gnat, gravel beds, and spinner flies. Dibbing all up and down the Derwent, has been followed with good success, with the natural flies, viz., down backed, or oak fly, house fly, and small blue-bottle flies. On last Saturday, a gentleman-angler killed eight brace of fine trout on the Darley Dale water by dibbling. Two of the trout over a pound apiece, and many more anglers have likewise been doing well. The Derby Trout Killer, has killed some very fine trout the last thing at night, in various parts of the Derwent. Last night, Wednesday, there was a handsome trout of 1¾ lb. killed, close to Matlock Bath Station Bridge. The bottom fishers in the Derwent only fish early and late during this hot weather. Sport with them has been but middling, the fish being killed chiefly with maggots and ant eggs. Sport on the ponds continues to be A 1, especially of an evening with the artificial fly. The best killing flies have been the small honey-dun bumble, golden-spinners, and sand flies.—GEORGE JAMES EATON.

CLUB REPORTS.

ANCHOR AND HOPE.

The Central Association's return visit was paid to the above club on Tuesday, the 16th instant, the following clubs being represented:—Odds and Evens, Clerkenwell Piscatorials, Barbican, Buckland, Little Independent, Original Clerkenwell Piscatorial, Second Surrey, Crown Angling Society, United Brothers, Peckham Perseverance, Bermondsey Brothers, Anglers' Pride, and City of London. The following contributed to the harmony during the evening—Messrs. W. Hale, Drum, Mills, Barber, Hobart, Smith, Watling, Frost, Bowman, Allen, Rymer, and Sherman. During the evening Mr. Stebbings (of the Central Association) presented the club with a very handsome teapot to be fished for.—DANIEL DAVIS.

May 17.

AMICABLE BROTHERS ANGLING SOCIETY.

The members are requested to attend the club on Wednesday, May 24, general meeting night, to arrange the annual dinner, privilege tickets, Anglers' Benevolent Society tickets; also respecting the United London Angling

Association's Fishery Society, respecting the breeding of fish and renting of fisheries, and other important matters appertaining to the club.—J. WORLEDGE.

May 17.

ANGLERS' BENEVOLENT SOCIETY.

I beg to enclose the names of the gentlemen forming the committee for the year commencing May 1, 1882:—President—T. Spreckley, Esq. Vice-Presidents—S. Morgan, Chairman United London Anglers' Central Committee; L. Bonvoisin, West Central Association of London and Provincial Angling Societies. Committee—G. Manning, Izaak Walton Angling Society; Bates, Piscatorial; R. Murphy, Good Intent; G. H. Field, South London; J. Aldrige, Hoxton Brothers; J. F. Welch, Cambridge Friendly; J. T. Cundall, Alliance; T. Crumplen, Gresham; W. High, Original Alexandra; W. H. Beckett, Good Intent; C. A. Medcalf, Amicable Brothers; R. Marshall, North-Western; A. Clark, Albert; and J. Jennings, Bostonian Angling Society. Treasurer—P. Geen. Trustees—Messrs. R. Murphy, G. Manning, and G. H. Field. Steward—G. H. Field. General Secretary—R. Ghurney. Since my last report I beg to acknowledge with thanks the receipt of a donation of 5s. from T. Crumplen, Esq., and from the donation boxes of the undermentioned societies:—Bostonian, 16s.; Stoke Newington, 5s. 3d.; Bridgewater Brothers, 5s. 10d.—R. GHURNEY, general secretary.

GRESHAM ANGLING SOCIETY.

This society held its weekly meeting on Thursday, J. Ferrand Clark, Esq., in the chair. The secretary, having read the minutes, reminded the members that this was the time for any notices or proposals to be given if intended to be brought before the annual meeting, to be held on Thursday, June 1; the committee would then retire in accordance with the rules, and as one or two members would vacate their seats in any case, there was now an excellent opportunity to bring forward new men, who would infuse fresh life, even to this ever vigorous society. For himself, he would only say that he intended to take no active part in the election beyond what his duties demanded, and that his position as secretary was quite open, and he would like to see a new one, who should have his hearty co-operation Mr. Brett weighed-in 3 lb. 14 oz. of nice trout; Messrs. Robertson and Edward Bennett also weighed-in; and Major the Hon. E. R. Bourke, one of the vice-presidents of the society, has taken some splendid salmon. Mr. Young read an interesting paper on "A day's Trout-fishing in the Darenth," which was followed by a very pleasant discussion. Mr. Jardine presented a beautiful copy of the second volume of the Manchester "Anglers' Evenings" to the library, and it was also resolved to purchase the FISHING GAZETTE for the past year, which would give an epitome of the society's operations for the past year. It is hoped there will be a large attendance at the annual meeting, as it is understood that the business to be transacted will be of an exceptionally important character, and some unique cases of specimen fish will be on view. Mr. Jardine, in responding to a vote of thanks for his valuable present to the library, gave a useful and scientific account of the Derwent and other rivers. The proceedings closed with very hearty thanks to Mr. Clarke for presiding.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The annual supper and distribution of prizes of the above society will take place on Monday next, May 22. The chair will be taken by Mr. J. C. Murray, chairman of the Central Association, vice, Mr. J. Obbard. Supper on table at 8.30 precisely.—THOS. WM. LUCY, secretary.

BURTON ANGLING ASSOCIATION.

The committee, in presenting the report on the second year of the association, do so with a feeling that the interests of the members have been advanceed, so far as the limited funds allowed. During the year a keeper has been put on the Newton Water, and places likely to be netted have been well staked, so that poaching and illegal taking of fish are reduced to the narrowest limits. The committee deplore the foul state of part of the water, but, from a communication from the Trent Fishery Board, it is hoped the sewerage will be diverted in less than two years' time. Arrangements have been made, with consent of the Trent Conservators, for the netting of baits for the use of members in pike fishing. Thanks are due to E. Salt, Esq., for the privilege of mooring the punt to his banks, also for the interest he takes in the association. There were 46 members on the books, with four resignations, making now 42 members. The balance shows against the treasurer, but, it is hoped, by being economical and obtaining new members, to be able to balance the accounts more satisfactory another year. Members having friends to propose are particularly asked to attend the annual meeting, as new members can only be proposed at general meetings.

GODALMING ANGLING SOCIETY.

The first annual meeting of this society was held on Monday evening at the Sun Inn. The Mayor (Mr. Edward Stedman) presided, and there was a fair attendance of members. The report of the committee, read by Mr. Dowse (hon. sec.) was of an interesting and satisfactory character, and unanimously adopted. The officers having been reappointed, the meeting closed with a vote of thanks to the chairman. We extract the following particulars of the doings of the society from the report:—The oommittee thanked the landowners, occupiers, and others with fishing rights for the valuable permissions conceded and general support given to the society. The first meeting, at which the society was established, was held on the 31st May, 1881, and Major-General Marshal kindly consented to become president. The society at present numbers 112 members, including subscribers. Alluding to the negotiations with the riparian owners, the report stated that the society had acquired permission to fish from Mr. Blackman's meadows above Eashing Bridge to the Guildford and Horsham Railway Bridge at Shalford. This stretch of water includes important privileges in the river above Eashing Bridge, the mill pool at Messrs. Pullman's, the backwater at Messrs. Spicer's mills, and the intermediate waters between Eashing Bridge and Messrs. Pullman's mills, most of which had not been previously accessible except by special permission. With regard to the stocking of a portion of the river with trout, the pecuniary position of the society would not justify the expense. Prizes offered by the society for the heaviest takes of fish had created considerable interest among the members, and prizes had also been offered by friends of the society. The prizes had been awarded as follows:—For jack, Denyer; roach, H. Lewer; dace, J. Cooper; gudgeon, Court, There were no entries for bream, chub and tench. Lewer was also the winner of Mr. Steere's prize of a roach rod for the heaviest roach, and Messrs. Herne and Norris's prize of a box of cigars for the same description of fish. The prizes were distributed by the Mayor (Mr. E. Stedman) who had the warmest thanks of the committee. The gift of a quantity of fish from Mrs. Hall, of Witley, which had been conveyed into the river, was acknowledged. One hundred jack had been purchased from Mr. Marden, of Frensham, and turned into different parts of the river. The finances of the society were flourishing, and had been strengthened by the transfer of £10 15s. 1d. from the old society to the present, and the society was indebted to the executors of the late Mr. H. Stedman, who was the secretory of the old angling society, for the augmentation. The committee consider the society had been instrumental in preventing netting and other practices injurious to the fishing, and they appealed to all lovers of the "gentle craft" to second their efforts in this direction, and help them with liberal contributions. The members were also asked to individually do their utmost to carry out the objects of the society. Prizes will be competed for on the opening day, the first Monday after June 15.

WALTHAMSTOW ANGLING SOCIETY.

The members of this society held their annual supper at the club house, the Common Gate, Markhouse Road, Walthamstow, on Wednesday the 26th ult. A capital supper was put on the table by the host, Mr. D. G. Casey, the treasurer of the society. After the cloth had been drawn, the president, Mr. C. F. Haines, proposed the usual loyal toasts, which were cordially responded to; also the prosperity of the society, and the honorary secretary, Mr. H. Howse. The president then presented the prizes:—Mr. Jas. Latham, 6 silver spoons and 4 guineas, for jack and roach (heaviest jack, 9 lb. 16 oz.); Mr. D. G. Casey, 3 guineas, for roach and chub; Mr. G. Lancaster, 2½ guineas, for dace, bream, and barbel; Mr. W. Berry, 2½ guineas, for roach; Mr. R. M. Smith, 1½ guineas, for perch; Mr. J. Latham, jun., 1 guinea, for jack; Mr. J. Howell, jun., 1½ guinea and jack rod, for gudgeon and roach; Mr. W. Howell, ½ guinea and roach rod, for roach; Mr. W. Tinyay, handsomely fitted tackle case and 10s. 6d., for tench; Mr. George Chillingworth, Nottingham winch, for roach.—H. HOWES, hon. sec.

WALTONIANS.

The annual dinner of this old-established society took place on Wednesday, May 10th, Mr. Brady in the chair, faced by Mr. Waltham. After doing justice to an ample repast, the usual loyal and patriotic toasts having been given, the prizes for the past season were distributed to the fortunate ones. Harmony was started by Mr. Waltham, who is gifted with an excellent voice, and as a consequence was called upon to oblige more than once during the evening. Other members contributed to the harmony of the evening, both in comic and sentimental singing, Mr. Starr's rendering of the "Good young man that died," causing great amusement. The toast of the visitors being proposed, was responded to by Messrs. Bonvoisin and Beckett. Mr. Bonvoisin then proposed the Waltonian Angling Society, coupled with the name of Mr. Packman our secretary, which was responded to in the usual hearty manner. Our worthy secretary, whose popularity is unbounded, responded in his usual business-like manner. The healths of Mr. Brand, founder of our society, and Mr. Marriott, our reporter, were drunk; and a most enjoyable evening was brought to a close by a vote of thanks to the chairman and vice-chairman, but not before a heavy and substantial list of prizes had been announced for the ensuing season.

WALWORTH WALTONIANS.

The anniversary dinner of the above took place on the 17th at the St. Paul's Tavern, Westmoreland Road, Walworth. Mr. J. Weatherhead presided, assisted by Mr. Bayley. Between fifty and sixty were invited to partake of the good things provided by Mr. C. Bansback, whose catering needs no praise from me, as it is well known to all at this end of London. The cloth having been removed, the rest of the evening was devoted to harmony and the giving of prizes for the coming season (a list of which I will give in my next). In consequence of the large number of prizes (sixty-seven) given and competed for during the past season, the evening of the 1st of June has been appointed for their distribution to the following gentlemen: Mr. Boalch leads with ten prizes. £5 15s. 6d. in cash, a gold pin, two brass winches, Rolfe's picture, a side of bacon and a half a ton of coals. "Bravo, Mr. Boalch, you have earned them." Mr. J. Weatherhead has six, £5 5s., a gold pin and a guinea hat; Mr. Bayley ("Le Péré,"), £3 3s., guinea hat, and a writing desk; Mr. Bedford, £3 13s. 6d., a guinea hat and set of hair brushes; W. Brown, leg of mutton and trimmings, two gallons of gin and two rods; Mr. Delehaye, £3 3s. and a silver watch; R. Cain, £1 11s. 6d., box of cigars and a box of sweets; Mr. F. Grigg, £1 11s. 6d. and a silver cup value £10 10s, "lucky dog." Mr. C. Bansback, £3 3s., pin, studs, and solitaires; Mr. J. Collins, 10s. 6d., a felt hat, and two pictures of birds by Mr. W. Hart; Mr. T. Pearson, 10s. 6d. and a £2 2s. portrait; Mr. C. Beale, six bottles of wine and a diamond ring; J. Howard sen., 10s. 6d. and a pair of boots; J. Howard, junr., £3 13s. 6d.; Mr. Piolaine, box of cigars, pipe and tobacco; M. La Feuillade, set of tankards; Mr. Irons, £1 1s; Mr. Mawby, pair of boots; Mr. Schwartz, musical album; M Renault, two illustrated vols. of piscatory lore and 10s. 6d.; Mr. Evans, cigar case; Mr. Fox, 10s. 6d., and Mr. Russell, 10s. 6d. On this evening all members are requested to attend to receive their prizes. The cricket match between the Walworth Waltonians and the Surrey Piscatoria's will take place on the 6th of June, at the Greyhound, Dulwich, as before.—PIXIE.

TESTIMONIAL TO MR. GREVILLE FENNELL.

Subscriptions will be gladly received by Mr. Thomas Spreckley, Treasurer, 13, Cannon Street, E.C.; or by the Hon. Secretaries, Mr. W. H. Brougham, Swayfield Villa, Hounslow, and Mr. P. Geen, Lowther Lodge, Lonsdale Road, Barnes.

May 18, 1882.

ANSWERS TO CORRESPONDENTS.

Adam Smith.—We really cannot identify the insect you sent, owing to its having been completely smashed and dried in transit. It, however, looks like the larvæ of one of the Ephemeridæ order of flies. In sending any further specimens, immerse in spirit of wine, or whisky, &c., and pack securely in a hard wooden box.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

VARNISHING RODS, HAIR AND SILK LINES, BUBBLE-EMITTING TROUT, &c.

Sir,—One of your correspondents asks for information regarding the varnishing of rods. As I have just renewed the coats of seven jack and fly wands, whilst some others have still to pass through my hands; and as the dressings which I impart never fail to do their duty and be serviceable, my remarks may be useful. Most angling authorities recommend coachman's varnish or spirits of wine and shellac. The latter preparation is, however, not particularly good. I have often used it, but have found that the solution of lac is not strong, and that the spirit does not evaporate sufficiently quickly to produce a firm, clean coat. Red sealing-wax must not be used as a substitute for pure shellac, as the coat given becomes to a certain extent streaky and opaque. The menstrum which I employ instead of spirit is the best rectified naphtha, which dissolves much more lac than the alcohol, evaporates well, and gives a thick, clear coat. For varnishing rods I find that 12 oz. (not more than 16) of naphtha to 2 oz. of shellac is a very convenient proportion, but for knots and silk wrappings in casts and other kinds of tackle a little time may be saved by making the solution, or rather, in this case, mixture, somewhat stronger. For applying the varnish a flat camel's-hair brush ¾ inch wide is required. Before using the solution, shake up the bottle, so as to thoroughly mix the sediment of lac which fills the lower half of the vessel, and pour one or one and a half table-spoonfuls into the varnishing glass; then take one of the joints of the rod, holding it by both ends, and pass it two or three times before a red fire, turning the piece slowly round at the same time, so as to heat both sides of the wood and old coat of varnish without blistering the surface. Having done this, immediately apply the brush nearly full of the lac solution to the whole of both sides of the wood, and then once more move the joint slowly with a rotatory action twice or thrice before the fire, again being careful not to blister the surface. Rear the joint vertically on the top of the mantelpiece, and allow it to remain two hours; after which another coat may be applied, when, after the lapse of a similar period, a third or final dressing may be given, the warming process being never omitted, either before or after the application of the varnish. Leave the rod standing on the mantelpiece all night. The implement may be used for fly-fishing the next day, but it is as well not to put it into the rod-bag before three days or a week have transpired, as the varnish dries slowly on the wrappings. Such a coat as the foregoing will last one or two years even, if the angler fishes on every third day.

The first coat is always the most difficult to lay on, as, owing to grease, foreign matter, and difference in the nature of the coats, the new layer does not seem to take "kindly" to its predecessor. As several of my rods consist of rent-cane, or have rent-cane tops—not such as are now made with knots in the wood every nine inches—I have to be very careful not to let that which is excellent deteriorate through want of proper habiliments. Some of these rods have caught thousands of fish in different parts of the world; and are, notwithstanding, practically just as good now as they were the day they came from Blacker. The varnish should never crack away from hickory joints; in cane rods, especially, the upper treble splints of rent-cane implements, there is a tendency for the coat to separate into small pieces; but this will hardly happen if the dressing has been applied with due care; and more than one application should never be needed in a single year of incessant fishing.

The scarecrow theory of a well-varnished rod is mainly a myth in practice, the sight of a dull moving stick being calculated to impart approximately as much fear to trout, as is a bright line; whilst the reflection of a round rod is nothing to be compared to that of a flat surface of the same width, for the light is disseminated instead of culminating; and the angler has always the remedy of a longer lines or different mode of casting.

Reverting to two of your recent editorial remarks, Mr. Editor, I must just add a few comments simply in defence of the opinions I expressed about eighteen months ago in your columns, in an article on fly-lines. You stated a short time since, that hair and silk fly-lines were antiquated pieces of tackle, and that the whole silk-braided lines are infinitely superior. I acknowledge that some of the latter are in many respects good; but I believe I am entitled to speak, as I do not belong to that class of anglers who "have never tried," and constantly fished with such lines, having three now in the house, two of which I believe I may consider of the really good variety; whilst the third, if not first class, was, at any rate, sold as such by Farlow. More I have possessed, but the finest of those that remain has had plenty of trying work, and become much curtailed. I will not abuse this line too much; it has in many respects been a faithful servant, but I still maintain the tightly-plaited, or cable-laid twisted hair and silk, is better than anything else yet brought out for fly-lines for trout, &c.; but, perhaps, for nothing else.

I see in an advertisement the properties of a fly-line are supposed to be "fineness, strength, and scientific construction," whatever the latter property may be; but to these requisite qualities I would add lightness, provided this lightness do not exceed the specific gravity of the water, when the line has been fairly immersed in the stream.

If the strand be much heavier than water, as in the braided and dressed silk lines, &c., the cast of flies is dragged to a considerable depth in pools, and even streams, whether you wish such a thing to occur or not; and the angler cannot bring it back to the surface, when employing a long line, without committing to the fly such rapid dragging movements as are wholly unnatural. This may be all very well if it be wished to sink the flies as in windy weather—the only time when the dressed silk line is really allowable—or, perhaps, occasionally in deep streams, or elsewhere, when sinking and drawing. I am aware some anglers find it difficult to cast the flies with a very fine hair and silk line, but in this case they should use the finest drawn gut collar for points, and, if this expedient do not assist them out of the dilemma, then hair casts equally as fine must be used. I only know that the finest hair and silk line may be made to deliver the fly correctly as far as five times the length of the rod, and afterwards be caused to manœuvre the fly naturally, either at or below the surface; but that for such a length of strand the dressed silk line either plucks the fly, in most cases, below the water to a considerable depth, or whips it back along the surface of the smooth pool towards the angler, until the "bellying" line accommodates itself to the demands of its own specific gravity; whilst in the case of the hair and silk line, the very nature of the surface tends to resist such an action. These, Mr. Editor, are the opinions which a thorough practical experience of both varieties of lines has at last caused me to entertain.

I must say a few words in relation to bubble-emitting trout and the roving fish of the same species. In the whole course of my fly-fishing experiences it has been one of the very rarest occurrences for me to observe shoals of roving trout, for these fish are not so fond of each other as to do this except when very young. In nearly every instance in which I have seen such movements there have been palpable signs of suspicion, not quite amounting to fear, on the part of the fish, plainly showing that if they had not already obtained a glimpse of myself, rod, or their attendant shadows, they had seen or felt something that rendered them, one and all, restless and not at ease. On the other hand, I have seen coarse fish constantly roving; whilst my experience in this case, though considerable, is small as compared with my adventures amongst trout. When suspicious, or terrified, the coarse fish behaved themselves at first much in the same way as the trout.

The only case I can at this moment find bearing strongly on the point of movement, as set off against stability, amongst my notes, occurs in my diary of camp life in the Tills Tjeld, in Norway. I extract the words verbatim from the account written on Thursday, June 27. "Went after dinner to try a nook in Over Smeddal with the fly, as I thought I had seen a school of trout rising there in the morning when the water was still; but the appearance was evidently owing to some other cause, such as rising gases, &c., for no trout were forthcoming." The nook was a rather broad backwater or arm of the upper lake; and, on thinking the matter over, I concluded I had been deceived by the rising of very large bubbles from the ooze and decaying organic matter at the bottom of the water under the influence of the sun, which had only recently been able to exert its power in that locality, after the melting of the winter's ice. On the 11th April and 7th June of the same year I had two remarkable examples of the stationary position of myriads of trout in still water. In 1875, in Wales, I repeatedly had magnificent opportunities of inspecting pools full of fish, in which trout were practically stationary until they had seen my approach, when they began to move in shoals. In England I cannot say that I have noticed any great movement of these fish in any way partaking of a gregarious nature, otherwise than in such instances as those to which I have already referred, whilst of Scotland I may make the same observation; and I have at no time had to alter my system of fishing for trout in any but very exceptional cases, to suit such alleged movements, if we debar the consideration of those resulting from suspicion or fright.

The nearest approach to intermittent wanderings of the recluse and wary trout, I have observed when daping with the natural fly and grasshoppers, in the deep pools of a rocky, wood-clad ravine, where a good fish certainly might now and then be seen to have a feeding ground of several yards in length, over which the trout went on regular patrol, always falling back to its favourite station at the foot of the area; but this, though in a pool, was close to a strong current.

The bubbles with which many fish are credited are for the most part gaseous emanations from the ooze of the watercourse, or from dead animal and living or dead vegetable matter in the water itself.

Turning to the subject of gross weights, I must record my vote as altogether against competitions for prizes in angling, so far as they have to do with takes of fish. I hold that the love of the pastime is a sufficient incentive to craftsmanship and luxury exquisite enough for all true sportsmen.

One thing more I must notice. I see in Mr. Ford's Yorkshire notes a report relating to two rivers over which I was once conservator; and I also observe in this instance a good take credited to a man who was a most inveterate poacher, was convicted of netting, and who constantly poaching his fish at night, left them in place of hiding, and then professed to catch them with the rod next day.—I am, sir, yours, &c., **The Raven.**

[Having recently tried the silk line and the hair and silk plaited line against each other, we can only say that we infinitely prefer the waterproofed braided silk. The hair and silk is all very well for casting with the wind, but directly you try to throw the least bit across the wind you are powerless; but with the solid silk you can do anything. We shall never use anything else. The great secret is to make your rod and line match well. Never overweight your rod.—Ed.]

MORE PRIZES FOR THE TOURNAMENT.

Sir,—I have just purchased of Messrs. Bumpus, Holborn, the following books:—Darwin's Work on Worms, Macaulay's Critical and Historical Essays, Letters and Speeches, ditto; and the History of a Crime, by Victor Hugo. I have ordered them to be delivered at your office, and place them at your disposal as prizes to be given at the forthcoming angling tournament.—I am, &c., **A. J. Marriott.**

[Many thanks. Other prizes will be "thankfully received" by the committee of the Anglers' Benevolent Society, and acknowledged by us. They can be sent to the Editor of the Fishing Gazette, 12, Fetter Lane.—Ed.]

ANOTHER FINIAN ATROCITY.

Sir,—All Mr. Forbes' real Thames trout fry—1500 in number—which were placed in the rearing ponds at Sunbury, have been stolen. There can be no doubt but that this was the act of Finians.—I am, &c., **Creel.**

THE GREAT WESTERN RAILWAY.

Sir,—Will "Marlow Buzz" kindly explain how to get to "Mid-Thames" in an hour's ride from London for a 2s. 6d. return ticket? Would that the Great Western Railway had such liberal views as some other lines on such matters.—I am, &c., **W. B.**

May 15.

HOOKS WITHOUT BARBS.

Sir,—A good many years ago I fell in, one March evening, at Domodo'gida, with a native fishing enthusiast, very poor indeed, but as happy in his enthusiasm as man can be. He carried me off to his room—such a poor place it was—and showed me how he made his hooks out of needles. Then and there I wrote down what he did. Here it is.

Take a needle, No. 10, with a pair of pliers at the large end, heat it gradually in the flame of a candle, beginning at about one-third of the distance from the point and going on to the point; repeat this process till the needle is red hot.

Then, with a pair of round pliers, bend it, beginning at the point, and so on, bit by bit, till you have the shape you want. Then heat it again red hot, and dip it into cold water. Then rub soap or grease on it to give it what colour you please. Lastly, with a cutting pliers, cut it off at what length you like.

This poor fellow had plenty of English hooks, but held them in supreme contempt. Unfortunately the snow was beginning to melt on the lower slopes of the Alps, and the river was foul, or I would have had a day with him.

I bought a dozen of his flies, and send you one of the few I happen to have left. I have tried them in England, and, though I did not stick to them, as far as my trial went it was in favour of the hooks. I caught some small trout with them, and purposely held them rather loosely to let the barbless hook fall out if it liked, but it did not. My trial, however, was far too short to be a real test of the hooks. Still, there is one thing in their favour—viz., their sharpness. It requires some self-confidence to begin a thing opposed to the practice of nearly all mankind from the beginning of time, as far as we know. The most ancient hook I ever saw are those found at Pompeii, now in the museum at Naples; and they were barbed, and heavy clumsy affairs altogether. Angling in the Sarno seems to have been a favourite pastime with the Pompeians. I wonder what they caught.—I am, &c.,

NEMO.

[The fly is exactly like those described by us the other day as being exhibited at Edinburgh.—ED.]

THE BERESFORD ANGLING SOCIETY.

SIR,—In the otherwise correct report of the annual dinner of the Beresford Angling Society appearing in your last week's issue, there occur two errors. The first makes me say that my "experience of angling was something like Sam Weller's knowledge of London, extensive and peculiar." Now, as I am a somewhat indifferent angler, this startling proposition doubtless proved highly diverting to my friends, who must have thought my vanity, which had been latent, had become blatant. What I really said was that "my knowledge of angling societies was like," &c.

Further on your report speaks of the "death" of Mr. Dr. J. Whitaker. I am happy to say that I met my esteemed friend, Mr. W., last Tuesday, who appeared, it is true, somewhat poorly, but worth any quantity of dead Mr. W.'s. Your insertion of these corrections will oblige.—I am, &c.,

May 16th. W. H. BECKETT.

[The word "death" should have been printed "absence;" otherwise, the report is as we received it.—ED.]

THE PROPOSED AMENDMENT OF THE MUNDELLA ACT.

SIR,—I noticed in your issue of the 15th, under the heading of Club and other Jottings, that it is proposed to alter the laws regarding the fishing for coarse fish. I have read the various proposed alterations carefully, and think, with one or two exceptions, they will be of great benefit to anglers at large. But I think the size of one or two kinds of fish could be altered to advantage both to the angler and fish. If carp are allowed to be taken as short as 8 inches, would it be fair to stop the taking of all roach under 9 inches? In the water I am in the habit of fishing in, I have often taken as many as eight or nine dozen roach in a day, and out of that number have not had twenty fish up to 7 inches and not one up to 8 inches. I well remember once having the pleasure of Mr. Geen's company while fishing this water, and amongst five of us anglers our takes, though numerous, were, I believe, a blank so far as sizeable fish went, taking 7 inches for the standard. Mr. Geen stated at the time that unless the roach were thinned out by turning in a number of jack, or by some other means, we should never have fish of a good size. I ask, would it be fair to us who are in the habit of fishing this water during the open season, to be restricted from taking fish under 9 inches? No doubt in the Lea and Thames, where roach often reach 2 lb. in weight, 9 inches is small enough. But I can truly say that it is a rare occurrence to take one here up to ½ lb., and I believe there was not one taken during the whole of last season up to 1 lb. in weight.—I am, &c.

J. GIBBS.

147, Malins Road, Landport.

USE OF THE SLIME OF FISHES.

SIR,—Will you or any of your readers kindly inform me if the slime we find in such profuse quantities on the bream acts (as I have been informed) as a preventitive against cold; presuming this is the case, how do you account for this and other species possessing far less in the winter than in the summer and autumn months? J. V. T. tells me he was informed by Mr. Frank Buckland that it acts as a kind of second or outer skin, and that the eel suffers pain at the loss of it. This is such an extraordinary statement I should like to know more about it. It is a singular fact that out of many hundreds of bream I have caught I have never yet seen a diseased one. May not this be owing to the medicinal properties of this singular formation.

MARK ANTONY.

P.S.—As some anglers might doubt any one saying he had caught fish in a diseased state, I beg to say I have often caught fish in a very bad state of disease, notably the roach; and I once caught a flounder with a sore on its back as large as a damson.

M. A,

CLUB AND OTHER JOTTINGS.

By L. B.

THIS (Friday) evening, the monthly meeting of the West Central Association will take place at the Portman Arms, Great Quebec Street, Baker Street, Mr. L. Bonvoisin presiding.

The annual supper of the North-Western Angling Club is to take place on Thursday evening, the 25th inst., when Messrs. Julius Harding and Harry Winn will occupy the chair and vice-chair respectively; truly, two goodlier men could not be found.

A visit was paid on Tuesday evening to the Convivial Angling Society, the Bull and Bell, Ropemaker Street, Finsbury: but, owing to the letter fixing the date having been delayed in delivery through an oversight in the addressing, only two or three days' notice had been given, and the attendance was very small. Mr. Crockett occupied the chair, Mr. Kelson the vice. Among the singers were:—Messrs. Crockett, Kelson, Simpkin, Brown, Winn, Sparrow, Hodges, Bonvoisin, Ghurney, Chambers, &c. Twelve clubs were represented, viz., Amicable, Waltonians, City of London, Convivial, Odds and Evens, Reform, Bermondsey Brothers, Little Independent, Hoxton Brothers, Act-on-the-Square, Stepney, and North-Western. The roll was called by Mr. L. Bonvoisin, the district officer, who, after making some remarks about the renting of waters by the United London Anglers and the coarse-fish propagation scheme, which were received in a manner which could leave no doubt of the warm interest taken by club anglers in these twin questions, said that, having in view the circumstances which had led to so small a meeting, he would have no hesitation in agreeing to the suggestion that had that evening been made, that the society should receive a complimentary visit—(hear, hear)—the date of which was afterwards fixed for Tuesday evening, June 13. Mr. Ghurney also addressed the meeting, his remarks *re* coarse-fish culture being not only well received, but frequently cheered.

Mr. Stebbings' letter in last week's GAZETTE is perfectly correct in substance, no amalgamation has taken place between the Central Association and the East Central or the West Central; but surely it would only have been gracious to have added—and I hope not having done so was an oversight on Mr. Stebbings' part—that all three associations are actively co-operating on several questions, notably on those relating to the renting of waters, obtaining and working railway concessions, coarse-fish culture, &c.; that the benefits of the Anglers' Benevolent Society are extended to the members of all three alike; and that it is generally felt by all the right-thinking men of all three bodies that such co-operation is not only beneficial but absolutely necessary; and that it is desirable it should be extended to all questions of general interest, if any lasting practical good to anglers and angling is to be the outcome of efforts now being made.

Some fair trout have, I hear, been taken at West Drayton.

Apropos of trout, I have a most amusing letter from Haslett, the well-known Chertsey fisherman. He says: "There are plenty of trout here. The other day, while out with Mr. Allan for a few hours, I saw six feeding, but not a sign of a jack; if there were as many jack as trout we should look for some winter fishing. The bream have been looking up their spawning grounds in the back waters, and there was quite a grand show; the roach have been busy, too, but not so numerous as one would wish. I hope to have the pleasure of sending you a fish before the trout season is over. I have waited for a month for customers that have not put in an appearance, and will now have a try on my own account, but would rather have a customer; am open to fish with any gentleman for a week and catch two trout, or no pay. If I take, or hear of any good fish being taken, I will let you know without fail."

I hope Haslett will get a customer, and be saved from committing so dreadful a deed as fishing by himself.

The visit to the Hoxton Brothers on Monday night was a perfect success, the room being crammed—it was a house-warming in a full sense of the word—and I am told Mr. R. Ghurney was jubilant. Mr. Ghurney, as secretary of the Hoxton Brothers, works very hard, and I don't know whether the secretary has most reason to be proud of his club or the club to be proud of its secretary.

Mr. Hoole is receiving applications from all quarters for the new tickets. All who have seen the tickets admitting they are the neatest ever issued; every angler who sees will want to possess one.

THE SEVERN BOARD OF CONSERVATORS.

THIS board met at the George Hotel, Shrewsbury, on Monday, the chair being occupied by Mr. Willis-Bund.

The Duke of Beaufort was elected a member of the board, and a resolution was passed expressing the sense of the meeting of the valuable services that had been rendered by Mr. Spencer Walpole to the fisheries of the country during the fifteen years he has acted as inspector; and, while congratulating him upon his appointment to the important post which he has been called upon to fill, they felt that his removal from the office of inspector was a great loss not only to that board, but to the whole fishery interest in England.

After one or two matters of minor importance had been dealt with, Mr. Humphrey Owens's new bye-laws for preservation of fish in the upper waters of the Severn were discussed, and, with a few modifications, adopted.

A memorial was presented to the board, signed by between 400 and 500 of the inhabitants of Shrewsbury, praying the board to allow the corporation to have the control over the fishing within the borough, with power to prohibit netting.

It was stated that netting was carried on in such a manner as to make what might be one of the best angling resorts in England a very poor place for sport. Complaints were made that the netters, who were not men who fished for a living, took a number of samlets when they could catch nothing else, and that it was their practice to take fish at a time when they were quite out of condition.

The chairman of the board pointed out that the board had not power to stop netting in any district while netting was legal, but he said the board would no doubt co-operate with the corporation in an endeavour to obtain an Act of Parliament for the prevention of netting in the borough. A resolution agreeing to such co-operation was ultimately passed.

A CORRECTION.—By a printer's error, Mr. Jardine is made to say in his letter to us last week, that all the pike taken on the 3rd of January last under 8 lb. were returned to the river; it should have been part were returned to the river and part given to friends living in the locality in which they were fishing.

MR. FRANCIS GEORGE HEATH has accepted the editorship of *The Journal of Forestry*, the new volume of which, just commencing, will give considerable space to all subjects interesting to lovers of the country.

THE BRUNSWICK PISCATORIAL SOCIETY.

On Wednesday, the 17th inst., the first annual dinner of the above society was held at their headquarters, the Brunswick Arms, Brunswick Street, Stamford Street, S.E. (which by the way is worthy of a visit if only to see the display of fresh-water fish, completely covering the entire sides of two compartments), under the most satisfactory circumstances.

The chair was very ably filled by Leo Bonvoisin, Esq., and the vice-chair by Thos. Hoole, Esq. There was a good muster of members. Among the visitors were Messrs Walkley, Cook, Bradbury, Hards, Walters, Morris, Sims, Dunn, &c.

The ménu was varied and ample, and exceedingly well done, the dinner being put on the table in the usual excellent manner, in which Host Keeble has distinguished himself on other occasions. After doing justice to the viands the tables were cleared.

The Chairman, in very graceful terms, gave the first toast of the evening, viz., "The Queen and Royal Family."

Mr. Hoole, in his well-known style, sang "Good Old Jeff," which was loudly applauded. Mr. W. Allsop, who presided at the piano, gave the next toast, "The Brunswick Piscatorial Society." He then beautifully rendered "My Sweetheart when a Boy."

The Secretary, in responding, stated that although at the present time their number was but small, he trusted during the ensuing season to add a good many members to the roll. Mr. Bonvoisin then gave a very amusing recitation entitled "The Frenchman and the Rats." Mr. Morris sang "Ye Men of Harlech" in Welsh. Mr. W. Booth, "Jack's Yarn."

Then came the toast, "The West Central Association," proposed by the secretary, who dilated on the immense benefits derived therefrom. Mr. Bradbury sang "Tom Tough." Mr. Bonvoisin, in responding, among other remarks, said the association wanted the support of all—he spoke of the culture of fish—capitalists buying up the best waters; so we must look after ourselves and secure water that would furnish us with sport. He strongly advocated the cause of the Anglers' Benevolent Fund, as it was most deserving of support. Mr. Bonvoisin then presented the prizes. Mr. Keeble sang "Glorious Vintage of Champagne."

The Secretary proposed "Kindred Societies," which was responded to by Mr. Walkley. Mr. Hards sang "Nil Desperandum."

The next toast was the "Chairman," given by Host Keeble (with musical honours), who spoke in very eulogistic terms of the untiring exertions of Mr. Bonvoisin. Mr. Worth sang "When the Bird is on the Bough." Mr. Bonvoisin, in responding, in the course of his reply said that no man deserved credit for doing that which he liked.

The next toast was given by Mr. Walkey, the "Vice-Chairman" (with musical honours), and spoke very highly of the inexhaustible manner in which Mr. Hoole worked for the cause of angling. Mr. H. Dunn sang "The Midshipmite." Mr. Hoole responded, and said he had wielded a rod for twenty-five years, and nothing gave him greater pleasure than to be amongst anglers. Mr. W. Sims sang the "Dorking Night."

Mr. W. Booth proposed the "Visitors," coupled with the names of Messrs. Hards and Bradbury. Mr. Allsop sang "Good-bye at the Door." Messrs. Hards and Bradbury very suitably responded,

Mr. Fullen proposed the next toast, "The Treasurer," to which Mr. Keeble responded.

The next toast was "The President," proposed by Host Keeble, to which Mr. Pullen responded; and in doing so said he had a pleasing duty to perform, viz., to propose the "Secretary," and spoke in laudatory terms of the efficient manner in which he performed his duties.

The Secretary in responding was deeply sensible of the kind manner in which the toast had been given, and said he was always ready to do anything in his power in connection with angling.

Mr. J. Weston proposed the next toast, "The Press," who spoke of its immense value in ventilating angling topics. Mr. Pullen responded.

The Secretary proposed "The Host and Hostess," to which Mr. Keeble responded. "Auld Lang Syne" being rendered, concluded a very happy and enjoyable evening.—Esox Lucius.

CANADIAN FISH-CULTURE.

Visit to the Newcastle Hatching-House—New Method in the Hatching of Whitefish—Introduction of the German Carp into Canada.

California Salmon for the Maritime Provinces—Description of the Glass-Bottle Hatchery—Deterioration of River Fisheries Explained—Preparation for Receiving "The People's Fish"—Curiosities in the Hatchery.

The history of the origin and development of fish-breeding by artificial means is one so interesting, and its object of so great commercial importance, that it has always received from the public a large share of attention, and from the Government all the aid which seemed needed to its success, The project, it need not be said, in Canada, was largely, in the beginning, experimental, for at the time when Mr. Wilmot so urgently proposed giving it a test there was not on the continent another similar establishment. The work was, therefore, commenced at Newcastle with nothing complete save the idea of the continued supply and re-generation of the fisheries; all the appliances needed to the prosecution of the work had to be devised and made, for there was no institution to which Mr. Wilmot could go for inspiration or models. As in the beginning of every artistic enterprise, the appliances first used were only in a measure adapted to their uses; but now, after long study and many contrivances, all that the present stage of fish-culture seems to need has been supplied, though there is not any doubt, as the institution grows older, provided it be proved that it has compassed the objects of its institution, its sphere will grow larger as demands upon it increase, and internal improvement will develop with its growth. At the present time the institution is working in concert with what seems to be nature's idea, and devoting itself to the production and development of the fisheries having commercial importance in their respective provinces. It would not be wise, for example, to try to set Lake Ontario swarming with dolphin or South Sea seal; neither is it wise, so far as what is known in the history of fishes shows, to attempt to overawe a certain class of fishes into increasing and multiplying in waters which by choice they would not make a *habitat* the year round, and which may be incapable of sustaining their existence at all. Novelty is not alone the most interesting of all the sciences, but the search after the novel is highly commendable, provided the explorers stop after experience has taught that no tangible benefit can come of further search. The whitefish and the salmon trout are both commercial fishes, of much importance in Ontario's trade, and inhabit Lake Ontario. No doubt they are the descendants of some adventurous salmon who, perhaps thousands of years ago, came up from the Atlantic, and never found their way back again. It is well that the money to be expended for fish-culture in Ontario is to be devoted to the propagation of these whitefish and salmon trout; and the public will be glad to know that the eggs obtained for the hatchery are got from the fish caught for the market, so that there is no sacrifice of the spawn fish for the sake of experiment, and the ova, if not used in the hatching-house, would be lost. The changes from time to time in the methods employed in breeding in the hatchery have been referred to, and it may not be uninteresting, before describing a new method just adopted in the establishments, to state what for years the method in whitefish hatching was. The ova were put into a tray, through which a stream of water unceasingly flowed. During the time the ova remained in the incubating condition, from day to day large numbers, though relatively to the whole number few, of white eggs appeared among the rest. Each white egg was a bad egg, and it was essential that such should be at once picked off. If allowed to remain it began after a day or two to put forth processes, which processes seemed to be a

FUNGOID EXCRESCENCE,

which laid hold of and contaminated the next egg; the process went on, the affected eggs grappling others, till every egg within touch became a member of the foul confederacy, and was spoiled. It may be said that Professor Huxley and other distinguished writers on fishes have lately pointed out that the marked decadence of the salmon in several of the Scotch and English rivers is due the destructive work of the fungoid pest, but whether the pest is a protoplasmic parasite or a vegetable aggressive excrescence has not been defined. By the way, this might prove an interesting study for some of our own scientists expert with the microscope. Mr. Wilmot also states that the same disease has prevailed to a serious extent in many Canadian rivers, and he showed the writer fishes which had been attacked while under his own eye with the fungoid disease. One was a salmon trout, which, for its beauty, Mr. Wilmot had kept. Forty hours after the excrescence appeared upon it the fish was dead. Mr. Wilmot is of opinion that the excrescence is of vegetable origin, and that the disease menaces only the higher and more sensitive order, the salmon family for example. This is why it becomes apparent that the salmon does not thrive, but dies out in those rivers which for the greater part of their course run through a cultivated region. In olden times these rivers ran through a continuous forest, which protected them from the too great influence of the sun. Now the country is bare, and with each rainfall large quantities of organic matter are carried down into the rivers from the country on both sides; while evaporation is more rapid and far greater by reason of the full force of the sun upon the river. Thus there is a superabundance of organic matter in the river now on the one hand, and a lesser volume of water on the other; hence in the summer heat in such a river will the salmon die. Put a salmon into such water as the citizens of Toronto have often drank in the dog days, and it will die. It will become attacked by the fungoid enemy, and will be killed by it in forty hours. Out in the Newcastle hatchery two kinds of water are used, the creek and the spring. At this season the salmon seems to thrive as well in the former as in the latter; but put it into the same water in the heat of summer and it will die. Mr. Wilmot has made the experiment. The same fungoid that attacks the fish it is that the unsound egg develops. It is therefore the continuous duty of those in charge of the hatching-houses to pick off the infected egg as soon as it shows itself. In the case of the salmon fry, of which the egg is as large as a pea, this is quite a practicable task, but in the case of the whitefish fry, the egg of which is no larger than a grain of partridge shot, and where several millions of them have to be scanned, and the bad ones picked out one by one with a wooden pincers, the task was almost impracticable. Thus in the hatchery at Sandwich it was found necessary to employ from thirty to forty little boys and girls to pick the eggs, and corresponding numbers for similar work in the other establishments.

(*To be continued.*)

WORMS IN MACKEREL.

I should be glad if someone could tell me whether the following is a common or unusual fact. I was splitting a mackerel for broiling, which had been washed and cleaned by the fishmonger, and observed some very small transparent discs, which seemed to be strung together and adhering to the (soft) roe. On looking more closely I found that each disc was really a very minute coil, unpleasantly suggestive, and that the roe was so full of them that they could not be removed without tearing it into shreds; a sprinkle of salt confirmed my suspicions; some of the larger discs uncoiled themselves into thread worms, quite an inch long. Now, are these parasites common in mackerel? because I remember once offering some of the fish to an old French lady, who declined with a shudder, saying it was "full of worms!" for which she was laughed at. If this mackerel had been boiled, the worms would have been cooked too, and eaten; it was perfectly fresh, and a fine, large, full-roed fish. I am afraid I shall disgust others as much as I was disgusted myself, but I shall shudder at mackerel as did my French friend; and I think many people would be glad to know of this, that proper precautions may be taken.—PETIT VER.

[The above query appears in the *Bazaar*. We can answer it in a general way by saying that the intestines of fish are rarely, if ever, entirely free from animal parasites; and fish, like pork, should be thoroughly well cooked before it is eaten.—ED.]

JAMES OGDEN, 28, Winchcomb Street, Cheltenham
PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE,
Solicits a trial of his
WORLD-RENOWNED TROUT AND GRAYLING FLIE
Also his

THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

- The Sportsman Tourist.
- Sea and River Fishing.
- Game Bag and Gun.
- Yachting and Canoeing.
- Natural History.
- Fishculture.
- The Kennel.
- The Rifle

The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park Row, New York, U.S.

Subscription agents for Great Britain:

CAPITAL ACCOMMODATION AT WARNER'S.

BOATS, PUNTS, &c.

" Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid. The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. DAVIDSON, Manager.

THE RIVER DOVE.

Wanted, a few Rods to join an Angling Club on the river Dove.

It is well stocked with Trout and Grayling only.

Apply in first instance to A. K., Post Office, Ashbourne.

TROUT FISHING (lake and river,) about best in North Wales, FREE to VISITORS. Excellent sea fishing and bathing, boats on lake and sea Best places in Anglesea can also be fished from MAELOG LAKE HOTEL. Ty Croes Station, near Holyhead.

IMPORTANT TO SALMON AND TROUT FISHERS ON THE RIVER DOVEY, WALES.

THE "GARNETT" MINNOW.

SOLE MAKER,

WM. ATKINSON,

GUN AND FISHING TACKLE MAKER, KENDAL.

(COPY OF TESTIMONIAL.)

May 3, 1882.
J. Lamb, Esq. Tammerfors, Finland.

DEAR SIR,—I am afraid you will think me a long time in writing to you. It is now nearly a year since, and even now my wants compel me to do so. My brother, J. C Fell, starts for Finland on Friday, the 12th of May, and I want you to send to his address 12 of Atkinson's Quill Minnows, ranging from 1½ to 2½ inches. I have used up the stock you so kindly sent me last summer; they are a splendid bait. I made an attempt at fishing on Friday, and succeeded in hooking a fine fish, only to be broken, and lost all my trace and minnow. On Saturday got one, and on Monday two; on Tuesday I went out at 7 o'clock, and by a little after 8 o'clock laid out four on the bank, the least was 12 lb., all with the Quill Minnow. . . .

Yours truly, R. H. FELL.

Price list on application to

WM. ATKINSON, Fishing Tackle Maker, Kendal.

TO SALMON, TROUT, AND PERCH ANGLERS.

THE BEST AND CHEAPEST MAKER of the real DEVON MINNOW is ROWE, Fishing Tackle Maker, Barnstaple, (maker for 50 years).

Edited by RICHARD A. PROCTOR.

"Mr. Richard Proctor's New Magazine, KNOWLEDGE, promises to satisfy a want which has been long felt."—*Saturday Review.*

"Mr. Proctor, of all writers of our time, best conforms to Matthew Arnold's conception of a man of culture, in that he strives to humanise Knowledge, to divest it of whatever is harsh, crude and technical, and to make it a source of happiness and brightness for all."—*Westminster Review.*

Yearly Subscription, post free, 10s. 10d.

WYMAN AND SONS, 74 & 75, GREAT QUEEN ST. LONDON, W.C.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No. 12, Fetter Lane, London, E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

or

Mr. B. R. Bambridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-street, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 1, Sabina-street, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.
Mr. E. Perks. Evesham-street, Redditch.
Mr. J. Walsh, Bookseller, 5, Harpur-street, Bedford.
Messrs. H. and C. Treacher, Booksellers, Brighton.
Messrs. Gaynor and Son, 10, Royal-terrace, Richmond, Surrey.
Messrs. O'Handlen and Co., 48, Victoria and Temple-street, Bristol.
Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons. Midland Tent Works, Loughborough.
Miss G. Wells. 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Briggate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

⁂ The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No. 12, Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, MAY 27, 1882.

RIVERS OF ENGLAND AND WALES.

PERHAPS there will be no better time to give a digest of the fishable rivers of Wales than at the present; and to do this with accuracy, we are greatly indebted to the thorough experience and courtesy of Mr. William Pritchard of Wrexham, who has admirably classified the several groups of streams into districts for our use.

THE VALE OF CLYWD.—Rhyl (head-quarters). This district is very large and may be divided into three portions (1), all along the coast from Rhyl to Chester; (2), from Abergele and up into the heart of the country; (3) the Vale of Clywd from Rhyl to Ruthin. From Rhyl, the railways will take the angler to all the the places named; of which the rivers Clywd and Elwy are the principal. The only station in immediate connection with Rhyl is Rhuddlan. Inn, the Black Man. Salmon, sewin and trout. Leave must be obtained of the riparians, but this is seldom refused. There are about three small rivers in that locality, and the largest may be fished as far as the village of Dyserth and on to Newmarket.

ABERGELE AND PENSARN.—First proceed to Bettws and on to Llanfair-Talhaiarn, for the river Elwy; and further on for the Aled, and on to Llansannan, a convenient station for the Aled The river Brenig, the lakes of Llynbean, Aled and Alwen, are not far distant.

LLANDULAS is a convenient minor station. The Dulas runs by the village, and can be followed on, with other streams adjoining, to Llangerniew which is convenient for the Elwy, the Hyrdd, and Dyffryn Gallt. The village of Colywn further towards Conway is also a very useful place for following the rivers up towards Llangerniew. The third portion, from Rhyl to Ruthin, is an important one and the first station is St. Asaph. (Inns, Mostyn Arms, Plough, and Railway Inn.) This station consists of an extensive extent of country, and is considered the best in the vale. The river Elwy runs right under the city, and the river Clywd only a short distance on the other side, so that both are available to the angler. A favourite spot to begin fishing is at Rhuddlan bridge to Rhyd-y-Dau-Dwr where the river Clywd and Elwy fall into the Voryd river and which is about 1½ miles from St. Asaph. Another chosen spot on the Elwy is Pontrallt-Goch. From St. Asaph, take the train to Trefnant Station, and fish the river Clywd as far as Pont Ruffith where the river Wheeler falls into it; follow that river, which is a good one for large trout, to the valley of Bodfari, a minor station, and where accommodation can be had at the Derorben Arms. Follow the river to four crosses near Caerwys, then fish the river Chwilor which runs towards Newmarket. At Tefi-y-Dorf you have, in addition, the river Ffynnon Fair which you can fish as far as the village of Ysceifiog. Following the river on the lower road towards Denbigh, Pontnewydd is a prominent place for the angler to begin close to Cefn Mansion; then follow the river to Llanfair-Talhairn (Harp Inn), and on to Llangerniew (Stag Inn). Denbigh: this is not so important a place as St. Asaph, but it will be found a useful station as it has direct roads into the heart of the country to both rivers and lakes. Although somewhat distant, it is available for the rivers Clywd and Clwywedog which run towards Ruthin. Llanrhaiadr is a convenient minor station between Denbigh and Ruthin. A good river, the Ystrad, runs from the Clywd to Nantclyn. Denbigh may be also used for the river Aled and for the lakes Aled, Elwy, and Llynbran, which abound in fish. The distance to those lakes is 8 to 10 miles, and well worth the journey. Ruthin station is somewhat like Denbigh, the Clywd runs through close to the town, and there is a small river flowing through Llanfair, Llanrhyd, and Llanbedr. The Alyn is only about three miles distant, commencing at Llanarmon. Fish on to Llanferris in one direction, and to Llandegla on the other. The other rivers in this part may be fished as follows:—To Llanfwrog, Pont Uchaf, Gyffeiliog and the river Bechan; this course may be followed to the lakes of Llynbran, Aled, and Elwy. Another course to Llanfair and on to Llansledan; another to Llanfwrog, Efenechtyd and to Clocarnog; for the river Clywyedog. Take the train as far as Derwen station, on the Ruthin and Corwen line, from thence various rivers may be fished back to Ruthin. Those who wish a day's fishing on the Dee, can take the train from any station in the vale of Corwen.

To be continued.

THOUGHTS ON THE THEORY OF FLIES.

BY ROBERT BALDERSTON.

(*Continued from page* 220.)

THE Naturalists have some very serious objections to make to these premises and surmises, which are rather awkward bugbears for their opponents to grapple, and which they will find it better to leave alone.

1st. Very great doubt may be thrown upon the statement made by the Nondescript alliance regarding rejection of the pattern which is like, and reception of that which is unlike, the fly at the moment on the water. It is not meant here to impeach the veracity of the opposing faction, but rather to demand a more full elucidation of the matter; as amongst anglers generally such preposterous statements regarding sport and all the circumstances connected therewith are daily heard, and believed or discredited according to the credulity of the unhappy listener, that only authentic and well verified statements can be adduced. Luckless indeed must the angler be who, on the strength of some fictitious exploit, sallies forth a score of miles or more for meagre sport, merely because foolish enough to trust the honour of a boastful friend; for a fly-fisher has always to weigh arguments and accounts to which he listens before having even an approximate idea of weights and numbers given in various stories of captures he may hear; as he knows full well the mere words of narrative count for nothing, and that deductions must be made on every hand before the truth is reached.

He has been led to understand from what he has seen in others—certainly not in himself—that the mountain air or the peculiar nature of the sport have such an influence on its devotees that numbers lose all significance; and that conditions and details get so interwoven with others from some mystic fishing grounds, that when he has heard all and learnt all, it is so associated with unknown quantities that he has then neither time nor inclination to work out the problem, but is perforce obliged to allow himself remain in ignorance; the tale of his angling brethren, to which he has listened, yielding no reliable light. On account, therefore, of this peculiar influence of the air and the exciting nature of the sport, it is as well for all anglers who wish to be argumentative in matters relating to their pastime, to commit at once to paper in writing whatever circumstances they may consider peculiar or worthy of notice; and to do this on the spot where the thing occurred, or at the end of the day's sport, entering the account in a note-book specially devoted to the subject. By adhering to this plan, a single wonderful feat, or a simple fact which has occurred once or twice in the angler's rambles, will not be multiplied into a dozen or more such incidents; this multiplication arising more from the constant tendency of the angler to gloat or ponder over any unusual feat, so that in the space of several years the memory recounts not only the real facts, but memories of memories, which are themselves at length supposed to be the real actions; whilst indeed they are only the imperfect images of one thing, not recognised as the same because so incomplete. In therefore remarking that great doubt may be thrown upon the statement made by the Nondescript alliance, allusion is made to this multiplication of single events, making them appear repetitions of similar, but not identical, circumstances. Now a single occasion occurring at rare intervals, like the one advanced, cannot be brought forward as bearing any weight against the practice of the naturalist; but when it is urged as being a thing of constant occurrence, some remonstrance against such perversions of truth must be made, the frequency of such occasions being doubted in the absence of any record of the number of times in which the supposed anomalies occurred.

2. The preceding objection was only raised against the presumed frequency of the alleged caprice; no question being made as to the cause of this whim, and no doubt being expressed as to the accuracy of some of the premises. But what was the cause of fastidiousness?

Was it a desire on the part of the fish to eat something of which they knew nothing, in preference to devouring a likeness of insects on which they were undoubtedly feeding at the time? The cause of the caprice was the imperfection of the artificial representation, coupled with the inartistic mode of manipulating that structure on the water. A slender, delicate dun is very difficult to imitate with such materials as feathers and silk; whilst the dry floating state, with wings erect, is still more difficult to represent. It is not to be wondered at that such a cunning fish as the trout should reject the bait on account of failure in either of these respects, or both combined. On the other hand, it assuredly was no desire on the part of the fish to eat something of which they knew nothing, in preference to devouring the likeness of insects on the water at the time; for the anomalous flies were, although somewhat imperfect representations, the water-cricket, black gnat, and cowdung, &c.; as the black and red hackles are simply bad dressings of these flies. These hackles, too, can be manœuvred much more naturally than can the bad patterns of the duns, which do not display deceptive movements; whilst the quivering fibres of the former cover defects with naturality, all of them being rude copies of first-rate killers, taken from the naturalist angler's list. The argument of these outlandish fly-fishers, regarding the taking of nondescript flies by trout, is therefore at once confuted on the ground of imperfect handiwork.

3. Neither have these angling demurrers any ground for supposing that the fish took their red and black hackles, &c., as nondescripts, simply because another fly was swarming on the water; for, as already shown, the prototypes of these are general flies, existing throughout the year to a greater or less extent, and no doubt actually upon the stream amid the crowd of duns, though very sparsely scattered.

4. In refutation number two it was stated that the artificial dun might be rejected, because of its imperfections both in dressing and manœuvring. Now the cowdung, house-fly, black gnat, and many others, are insects easily represented, not only in colour and form, but more especially in their mode of behaviour on the water. The case, as regards the foregoing heads at least, may therefore be reduced to this: "The trout refused a bad, and were hooked by a good, imitation."

5. The number of fish caught in each instance by the substituted fly is not stated, and may not have been great; neither is it proved that a dry, or even the wet, dun would not have caught the trout if on the line at the time; for fish on such occasions may for long refuse, or play with, the fly, and after a time take it surely and ravenously.

6. When fish are feeding on the dry floating duns, as has already been stated, they are not easily taken, owing to the difficulty of representing that particular state. A fly which has been employed some time becomes so soaked with water that, despite a few casts in the air to dry the hackles, the bait floats for a moment or two only, and then sinks some distance below the surface. The Nondescript alliance, in changing to another cast, have forgotten that they are also changing from a wet to a thoroughly dry set of flies; and that these, if made of proper materials, will retain their floating power for a long time, especially if the angler wishes it should be so. Many fish may be caught, simply owing to this change; and there is no proof or testimony given to show that had a dry cast of duns been substituted, still better sport might not have been obtained. It is a well-known fact that a fresh cast of flies often kills fish for some time, and then suddenly loses its otherwise unaccountable killing power.

7. Another circumstance exerting a considerable influence over the selection of the fly by the trout is worthy of attention, though apt to be overlooked. When the natural insects swarm on the water, fish rest, in pools, much farther from the bottom than they are in the habit of doing at other times; and, in the streams just under the surface; so that, unless the fly is taken as it drops, which is very often the case, trout are so near as to detect blemishes in the bait or tackle, and the angler is acquainted with the results of such reconnaissances. With faulty lures, and plans of operation likewise defective, the creel remains empty, or only casually receives an occupant; and the unskilled and prejudiced practitioner has the annoyance of seeing the great trout rising all around his flies, or rolling over the cast in utter disdain of himself and tackle.

8. Let the individuals who think they are in the habit of catching fish with nondescript flies, after the refusal of the Naturalist's patterns, adopt more perfect representations of the actual insects discarded—dressed on hooks as good as those which accompany the so-called nondescripts, tied to gut as fine and clear—and they will find themselves in a better position for comparing respective merits; insomuch that the asserted anomalies will now be discovered to have ceased to exist. It is undoubted that many excellent flies are rendered useless by being tied to defective hooks and gut.

It is, therefore, apparent that the unorthodox professors plainly belong to the unreasoning section of the brotherhood; that they argue from false premises and build up doctrines upon these still more erroneous; and that whatever success attends their practice begins when they deviate unconsciously from crude theory. The untruth and absurdity of such doctrines having been thoroughly exposed, the surmises, and most of the premises, on which they are based may be at once and for ever dismissed. One of the premises, however, remains for discussion; as well as a circumstance which may considerably affect the grounds on which Formalists, Colourists, and the Nondescript alliance, as a whole, base their opinions. In dealing with this one remaining premise, the Naturalist may ask, "After all, what is this nondescript of which so much has been made?" Two meanings have been given to it.

I. It is the representation of a fly which is not actually in season; that is, which has not yet assumed the imago state, or has ceased to exist as the year declines.

II. It is something employed as a bait by anglers, apparently endowed with life, but belonging to no group of known animals, or rather a copy of nothing known or described.

When the Nondescript alliance employ the first definition only, the meagre and shallow basis on which they lay their arguments is easily apparent; for it has been shown already that the adduced heterodox flies were "general flies;" insects not out of season during any of the angling months, and therefore not nondescripts. Perhaps these flies were used during a month in which they do not appear in the angler's list; but, for all that, when in season, most of the angler's best flies, having once appeared, no matter what the month, do swarm more or less upon the water during the remainder of the angling year. On the other hand, when used before the inaugural month—or, rather, before the month in which they are said to appear in books on angling—it is not shown that the real insects were not already on the water. The nature of the season greatly influences the time of arrival of insects; one year flies may be seen a month earlier than usual, another it may be as much later before they are observed. No book on angling can state when the appearance will really be; the average date may be mentioned, that is all. Moreover, in naming any particular time as being that in which a certain fly may probably be used with advantage, it is to be understood that it is meant, that at such a time a certain insect usually exists in numbers sufficient to stir up the fish to frequent brisk rising in quest of it as food, and therefore that the angler will find it worth his while to attach its imitation to his link; but it is not stated that such a fly is not developed sparsely at an earlier date; and, if appearing sparingly, why may not the scattered individuals at times be more rank when the season happens to be less inclement. Besides this, when an insect is not swarming on the water, it may still be there in small numbers, although unnoticed and even sought. If, however, a solitary specimen or two of some insect, either too early or too late, should happen to float along the stream, who shall say that even a hungry or old and wary trout would rise much less eagerly to it, should it meet the fish's gaze, than to some more plentiful variety? Why, then, may not trout take a first-rate pattern of some real insect when manœuvred naturally by some old craftsman; although the real creature be a little out of season, it resembles a reality; it is sure to take fish, but it is not not said "sure to take fish as well as any faultless patterns of the flies swarming on the waters, and favourites with the trout." The first has likeness in form and colour to something natural, but wellnigh forgotten; the second has this likeness added to the presence of the reality, on which trout were feeding without feeling the pricking hook of anglers, or the restraining gut. The fish do indeed take so many of these with impunity, that they get for the time unsuspicious; so that, when the artificial form is suddenly presented, they rise at once to it and may be hooked. This is an undoubted fact. Let, then, the angler be on the alert to make sure that the hook is struck truly home—for it is the first rise of each fish which is the important act at such times—for, once missed, the trout relapses into its former state of wariness, and, with truth and falsehood before its eyes, when warned, it is not slow to discriminate the virtues of the one and the vices of the other.

(*To be continued.*)

A PLEA FOR THE EEL.

THE family of the *Murana anguillas* has in recent days to sustain very heavy charges against its character for harmlessness; but, in this respect, what creature on the earth, or beneath the water, is exempt? Still, it is refreshing to learn that the traduced eel, however lowly, can find a champion. For this chivalrous purpose, Mr. T. W. Wickens, a member of the Ant (Norfolk) Preservation and Anglers' Society, comes to the fore, as shown by a letter addressed to the hon. secretary of that association. Mr. Wickens writes:—"Sir,—In compliance with your wish, I beg to state that my observations with regard to eels differ from most others; but as I have, to the best of my ability, formed them according to reason and common sense, there may be some truth in them. I contend, firstly, that eels greatly benefit the preservation of the rivers and broads, and induce materially to promote the increase of other fish. Secondly, eel-nets destroy very many more eels than they take. Through having always observed in my angling wanderings that the more eels there were in a river, the better the angling for other fish, I was led to consider how that could arise. In some rivers about the end of May, there were an enormous number—millions and millions—of very small eels, thinner than a straw, and an inch or so long. The edges of the banks were clouded with these little eels, always working up the stream, and around the mill pools were immense numbers. Women and children came there with small hand nets, and took them by quarts. They entitled it 'eel fair,' or as they made the little eels into compressed cakes, or pies, it might have been 'eel fare.' It is noteworthy that these young eels arrive just at the very time when the other fish have about finished spawning, and are greedy after food to repair their exhausted energies. Take roach, perch, dace, bream, &c., at that time, open them, and you will find them gorged with these little eels, which appear to suit them well, for they rapidly grow into condition and get fat; therefore the eels supply the other fish with enormous quantities of food, just at the very time they most require it. Some people will say that the eels eat the spawn of other fish. I doubt that, to any great extent. When eels, as well as other fish, are about the process of multiplying they are sick and ill, and out of condition, and eat little or nothing; but by the time they recover and require food, the spawn of other fish is hatched and out of danger. You have here, in Norfolk, the strongest possible proof of the truth of these remarks. The best angling is in the Yare, and there you have the most eels, because you have no eel-sets there. The worst angling is in the Ant, where they have too many eel-sets. Thirdly, all eels going down the rivers and caught in the eel-sets, are not going to the sea (if at all, of which I am in great doubt) certainly, at that time. At certain seasons vast numbers are loaded, so to speak, with countless ova and destroyed before they have shed it. Leave them alone, and they would, naturally enough deposit the germ of their little ones in the river, before their supposed retreat to the sea. It appears by this, that a great benefit would arise by fixing these eel-sets, not as at present, in the very heart of the breeding places—where, generally speaking, very small eels only are taken—but within a short distance of the sea, and then only empty fish would be taken of much larger size and also in vastly increased numbers. I write this with diffidence, and subject, if wrong, to correction; my anxious wish being, if possible, to arrive without prejudice at the simple truth." Mr. Wickens then quotes Francis Francis, Cholmondely Pennell, and others, to show the nutritive character of eel-food upon salmon, pike, and other fish, and goes on to say "eels destroy a vast quantity of the larvæ of all sorts of water-insects, as well as the predacious water-beetles, than when nothing can be much more destructive to the spawn of the fish; and those insects abound to such an enormous extent in these Norfolk waters, that the quantity of embryo fish destroyed by them every year must be prodigious. These larvæ are so destructive that, in fish culture, the gravel, sand, or silt used in the troughs, is first boiled or baked to destroy the brood of water-insects therein and save the ova. Nature provided these eels for purposes of great utility, and the eels seem to supply food for fish and waterfowl, in the water, as the worms feed the birds on land; and it seems to me that as the martins, swallows and bats, destroy in the air the various moths and insects, so do the eels in the rivers, as they progress in size, destroy vast quantities of water-beetles and larvæ of insects, which, if left undisturbed, prey upon the spawn of the fish. That is, if the eels are not disturbed by man to any greatly appreciable extent in the course of progress alloted to them by nature. Swans do an immense amount of mischief to the spawn of fish. One swan would devour a gallon of spawn in a day. They should be kept out of the rivers and broads in March, April and May."

If there be any truth in the above hypothesis, we may perhaps recognise in the known fact that the Barking and Crossness sewage, intercepting and destroying the adult and young of the eels, cuts off the food of the fish in the Upper Thames; and thus the falling off of the river resources, may be thus far accounted for.

CREEL.

A DAY OF DAYS.

THE thirtieth of July, 1881, and it was a Saturday too, opened very brightly—too brightly to promise anything like success to him who was intent on tempting the silvery denizens of the Inver. The day before had been somewhat damp in the evening, and the night more so; but oh, the sun was burning hot as we sat at breakfast in the "little hotel" at Lochinver. The old hostelry is now called "little"—the grand resort of the grand swells being known as the Culag. Both are excellent houses of entertainment, in the hands of the same lessee; and but that there is a guinea a week difference in the cost of board, and that the Culag is more pretentious looking, we can see no difference between them. The management of either is admirable; a mile separates them, but a telephone unites them. The telegraphic communication is instantaneous, and it is *viva voce*. As this Highland correspondent of yours, Mr. Editor, sat talking to a clergyman of the Church of England, hailing from the very south of glorious Devon, arrangements were being discussed for the day's proceedings. He apparently, did not care for a long walk, while walking was a matter of indifference to me. So it was agreed that I should give him my lower beat on the Inver, which is within gunshot of the hotel, while I walked about three miles to his lower beat on the Kirkaig. Having started his reverence, in grand spirits, to what he hoped, and I thought would be the scene of his conquests, I at once walked over to look up that famous Trojan, "Little Grant," the keeper, who was always my "guide, philosopher, and friend," on the river bank, and found him at the Culag busy trying to send away dilatory sportsman, and their clever, civil, careful gillies. I had not been long at the Culag when it became clear that, through some misunderstanding, the beat I was to take on the Kirkaig had been giving to the Hon. Charles Erskine, a keen angler, as well as a good one, and an enthusiastic—he vacating No. 2 beat on the Inver, which I took as a sort of "Hobson's choice," although at first there were stern vows that I would be "salmoned!" if I went to it. Grant is a perfect Bismarck when he likes, and as nice a little mannie as ever poor sinner need look for or ask to have with him at a riverside; and he, somehow or other, poured oil on the troubled waters, mollifying me almost completely. Away we went, briskly enough, over the occasionally boggy, rough ground which his Grace the Duke of Sutherland, through his *alter ego*, Sir Arnold Kemball, K.C.B., permits to remain, as a reproach to himself and as a source of no small disgust to anglers on the left bank of the Inver. As we stepped along we saw the Devonshire cleric fixed, but not in a fish, at the "Ladder pool," a very common catastrophe at that spot. Full many a good fly has been lost through overcasting—a fault I am not able to be guilty of—where the Ladder pool rolls rapidly along and looks, what I always found it, one impossible to angle successfully. Salmon rise on it, and sometimes get hooked there, but one to be landed there is a matter of the future, so far as I am concerned; yet Grant and others consider it a grand pool! Feeling deep sympathy, that fellow-feeling which makes us "unco' kind," we passed by the friendly Englishman, wishing him better luck. He was in good hands, with Norman for his man, anyhow, we knew.

At last Grant and myself got to the "Red" pool, the first on our beat, and the best on the Inver. Our stock of flies was very limited. There were several "duffers," and not a few "dummies"—fellows that had been expended on duty. The stream did us no good, but as we moved down, every now and then a big fellow would be seen taking the cool of the day, and showing himself mightily—a fearfully bad sign. The very tail was reached—a spot never without fish—below it was horribly rough, broken water. Last cast across to the big stone—the fly is allowed to drift as if going clean over the brim, and then it is moved gently against the stream—a splurge—a rush, as the water was going, when all would be over—a gallant resistance, and then along the pool our gentleman rushed "like mad." He fought a brave battle, and only gave in when he couldn't help himself. We rested, had a "nip," and went up to the "Island" pool. Tried it; no go. "Whirlpool," ditto. The "Dyke" pool the same, of course; never knew it better! Then on to the "Long" pool, our last. There the liveliest grilse that ever was seen "came" just where Grant said it would. Conscience! how it did skip along, like a living telegraphic message! The ground was level, and if the fish had scope to "play," the angler had ample room to do his part. Such a frolic as it was; and the agony of suspense, as the beast scrimmaged along very much on the top of the water, was something desperate! However, there was rejoicing when on the green sward glittered No. 2, while we expected that day none. Another small "liquor up," and away down to the "Red" pool again. *En route*, whom should we meet, but John Smith, one of the keepers of Mr. Whitbread, M.P., and Grant hints that I should have look at his flybook. Mr. Smith makes his own flies. They looked beautiful, truly, and I came into possession of some. We were just at the "Island" pool then, and we tied on a "captain"—one of the Smith's—with which, while Grant and Smith were having a chat and pipe, I began to thrash the water in that rough, uneducated sort of way which the uncultured in the art always show—when as the fly was coming gradually along the side of the stream, I saw a flash of silver-grey, and knew that the *Salmo salar* was well on. Here I may remark that anglers in the Highlands never "strike;" at least, the best of them say that the fish hooks itself, and so much the better. Grant and Smith quickly heard my shout, and speedily came with counsels of the wise and strong to the unlearned, and No. 3, a real beauty, was landed. We then turned back and tried the "Dyke" pool again, much to my disgust. Eureka! a dozen casts or so, and No. 4 was on, a vigorous, restless beggar, that rushed all over the pool, but came to basket, notwithstanding. Good—four fish; and we looked for none! We tried the "Whirl" pool patiently and diligently, but it was no go. On to the "Long" pool we went again, and again a grilse "came"—a regular trimmer! It seemed emulous of proving how "Long" pool fish can "play," but it gave in at last. No. 5. Tried the "Whirl" pool again; not a rise. The "Dyke" pool came next. I was just preparing to draw in for another cast, when I got a sort of under-water tug, the boil from which was scarcely perceptible. "I'm into him, Grant!" "It's in a log then, Sir," was his reply. "If it is a log there is life in it," said I, and so, indeed, there was, and abundance of it. However, by and by, the gentleman gave in, but proved a slippery customer to gaff; was very like a "Long" pool fish, in fact. The day was magnificent, and it was now nearly 6 p.m.. We gave a sort of trial to the "Island" and "Red" pools on our way home, but saw nothing. Indeed we were not keen for more, or there is little doubt, if we had been, that we would have waited for a while and got more. As has been said, we expected a blank and we bagged six, and our concern was how to get them home with us over Sir Arnold Kemball's nasty path. Grant searched for luncheon-paper twine by the way, and got enough to secure the fish in true angler's style. He then took off his jacket, and turning it inside out, put most of the salmon across his shoulders. Thus we walked home in triumph, and, if the truth must be said, each of us felt as proud as a peacock with two tails. And we were ready for the ginger ale and whisky which Miss Ross, the ever kind and attentive housekeeper, gave us, even before she telephoned Culag that we had arrived, with six salmon. It was thought, when the message reached the swell establishment, that the telephone, if not telling lies, was anyhow humbugging. Bravo little Grant! My day of days was destined to be a legacy to the anglers I left behind me to beat. But among them all Grant was the wee Highland prince. We got three, and even four, a day after, but not six.

Perhaps some of your readers—if any anglers can possibly be ill-natured and peevish—may exclaim "much ado about nothing." But I risk all that, as it is desirable to magnify the value of patience, perseverance, and placidness on the part of all mankind, but especially that delightful clan whose chief and model is gentle Izaak Walton; for he, though safe across that "bourne whence no traveller returns," is still named with lovingness, and looked up to as, the *facile princeps* of the craft.

It would scarcely be right to close my chapter in a day of days in 1881 without expressing a hope that in 1882 we may foregather with the Erskines, the Almonds, the Burstalls, the Pretymans, the Neills, the Smiths, and the Grants, Burds, Kerrs, McLeods, Mackenzies and Macdonalds who, under the pleasant rule of *the* Burns-Brown, had so many pleasant days last year.

The season, so far, has been and is marvellously mild and open; so that if the bagnets are made to observe the weekly close time in the spirit and letter of it, glorious sport may safely be looked forward to. The rivers promise to be not dry, anyhow. Since October we have had gale after gale in close succession, and rain in such abundance that waterproofs were of little avail. Sport on dry land was impossible, on account of the torrents, and on the deep. deep sea the frequency of the gales made matters piscatorial equally out of the question. There was a high tide on 22nd November, which flooded the humble cottages of many an humble fisherman and crofter, and causing the increase of dangerous fever until it has become epidemic in some places. Houses unroofed by the gales, laid open to the incessant rain, and flooded by the sea! What could we expect but sickness? But we are not Irishmen, those deserving souls, or something would be done for us. As always happened, the more desert on the part of the poor the less regard on that of the wealthy. I am not a groaning Waltonian, but, seeing, that my countrymen will not condescend to commit murder, it is evident that no fishery company will be set going to encourage Highlanders. It is an odd world we live in, my masters—at all events, the people in it are extremely, singulary queer in their modes of distinguishing and rewarding good and evil. Half a million sterling to stir up the Boycotters, Moonlighters and other heroes whom a beneficent Government and a discerning public delight to pet. Don't put me down for a cross-grained, growling, good-for-nothing malcontent; but how can I close my eyes to what is startlingly unworthy? We need encouragement and help in order to live—not in order to hide behind hedges and bang away at the first man we owe a grudge to. By the way, a thousands of thanks to him who contributed "One Day of my Life" to the GAZETTE. It did my heart good to read it, stirred me up, and made me feel amiable. I trust he'll send you more. My cry is that of the horse-leech, "Give, give!"

CAMPBELL ROSS.

MORE PRIZES FOR THE "FISHING GAZETTE" TOURNAMENT.

MR. WARNER, of the Welsh Harp Fishery, who kindly promised every assistance in carrying out the tournament on July 8, at three or four o'clock, also renews his promise of £5 worth of angling tickets as prizes. Messrs. S. Allcock and Co., of Redditch, are good enough again to promise a trout-fly rod fitted with Hardy's winch-fitting. Messrs. F. T. Williams and Co. say, "We shall have much pleasure in presenting to the Anglers' Benevolent Society our new pattern ebonite spring centre winch with a line, value £1, to be competed for at the forthcoming tournament. It may interest you to know one of our customers took a fine trout of 3¾ lb. in the Lea last week. He was using our 'Crystal' roach hook."

Mr. Wm. Sang, of Barnard Castle, has kindly sent six copies of his pocket "Dictionary of Trout Flies."

In addition to the above, we have a picture by Mr. Greville Fennell in frame, a Freake fishing bag from Mr. Malcom, a splendid jack-rod from Mr. G. Yarde, &c., standing over from last tournament.

Any other donations will be "thankfully received" and acknowledged. A tournament on a large scale is also spoken of in the provinces as to come off this summer.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

GREAT EASTERN RAILWAY AND THE HOLIDAYS.

We have received the new programme of the Great Eastern Railway, giving particulars of the arrangements made for the Whitsuntide Holidays, and the additional facilities offered by this Company for obtaining tickets at City and West End Booking Offices, and at Liverpool Street Station. Holiday makers should consult this programme, the Great Eastern Railway being a great favourite with London anglers. It can be obtained at the Great Eastern Railway Stations; at Messrs. Cook and Sons, Ludgate Circus; Messrs. Gaze, 142, Strand; 70, St. Martin's Lane; Mr. Whiteley's, Westbourne Grove, &c.

GRESHAM ANGLING SOCIETY.

The annual meeting of this society is announced for Thursday, June 1, when it is hoped the members will attend largely, as a new committee and officers have to be elected, on whom the future of the society will, of course, greatly depend. We are glad to learn that numerous papers on subjects of practical interest to anglers are in hand, and that a complete programme for the season will soon be issued. The society has also other projects in view; and we trust will secure such a working committee in the ballot about to be taken as will enable them to do even more, if possible, in the coming year than they have in the past.

THE PISCATORIAL SOCIETY.

Musical evenings, under the more popular name of smoking concerts, have become a permanent institution in this old-established angling club, as it has been decided to make them monthly items. The second of the series took place in the club-room, Ashley's Hotel, Covent Garden, on Monday evening last, when Dr. Brunton occupied the position of chairman, and Mr. Norman F. Harrisson the vice-chair. The large room was completely filled with nearly 100 members and visitors, amongst whom were Doctors Startin and Coates, Capt. Alfred, Messrs. F. H. Lemann, B. Perelli-Rocco, C. P. Wheatstone, W. H. Brougham, James Lander, J. Pattison, S. C. Harding, H. Grey, Thomas Crumplen, J. Bates, J. Ross-Faulkner, R. S. Fenning, W. B. Adlington, T. Gillatt, G. Gillatt, David Goodger, F. C. Hatfield, &c., &c. The musical arrangements were principally in the hands of Mr. N. F. Harrison, who throughout the evening displayed great energy in that department, and Mr. Pond, who accompanied the songs on the piano, evidenced first-rate skill both as a pianist and a vocalist. His solos on the pianoforte were warmly applauded. It would be invidious to make a selection of names either as vocalists, instrumentalists, or readers, as all did their work so well, and it may fairly be said that a more successful or enjoyable evening could not possibly be held. The concert was kept up until midnight, and an universal expression of approval was accorded on leaving. Previous to the concert, Mr. J. Ross-Faulkner registered a handsome Thames trout of 6½ lb., and Mr. Bates showed a fine tray of trout taken that day out of the Itchen. The collection of fish specimens which were awarded the gold medal at the Edinburgh Exhibition are now safely returned, and have been arranged according to species on the walls of the club-room, the 40 lb. pike from Suffolk and 4½ lb. black bass from America being conspicuous objects, as also two very fine bream and one chub, kindly lent by Mr. Winton. As this is the time for the renewal of the privilege tickets, Messrs. Thomas and Co., of Coleman Street, have designed and supplied a most suitable leather case, which is made to hold the privilege cards, the card of membership recently introduced in this society from a design by Mr. N. F. Harrisson, the little brochures published by the club, the railway ticket, a pocket for address cards, and places for postage stamps, and supplied to the members at the trifling charge of two shillings. A more unique ticket-case could not possibly have been invented, and this is also due to the inventive genius of Mr. Harrison. In their separate departments as honorary secretary and honorary librarian, Mr. James Lander and Mr. H. Gray are labouring to keep up the prestige of the old society, and the performance of their work is accompanied with great success. B.

CLUB AND OTHER JOTTINGS.

By L. B.

Mr. Thos. Spreckley, fishing with Hackett the other day, managed to get a nice trout on, estimated at between 8 lb. and 10 lb., but after an exciting run the fish's teeth proved more than a match for the gut trace.

Messrs. Geen and Hobden had a long day after the trout, but, to use Mr. Hobden's own words, "didn't even see a fish feed all day, much less catch one."

A well-known member of the T.A.P.S. and an eminent surveyor of piscatorial proclivities have been down to Sunbury on business bent; and it is the latter's opinion that that stream and those ponds, with some slight alterations and enlarging, would be the very thing for coarse fish culture. Not a bad idea. What say the powers that be?

In a contemporary I read of the capture of a fine 8 lb. trout, from Walton's sedgy Lea, which, after an exciting struggle, was, in the absence of gaff or net, safely landed in a small washing tub procured from the keeper's cottage.

Mr. Hoole asks me to state he will feel extremely grateful to the secretaries of angling societies if, in the event of giving up office or changing their address they will be good enough to inform him of the same; dozens of letters are annually returned through these two causes, and often cause long delays to advices reaching the societies, and in some cases serious inconvenience to individuals.

A new angling society, to be called the London and South-Western, is forming, and will shortly enrol on the West Central Association books.

A rare muster of anglers and friends at the "Hammersmith United" on Thursday, 17th. With Mr. P. Geen in the chair, and Mr. Adeane in the vice, things went along swimmingly. Among the singers and songs were, Messrs. Reynolds, "Jolly Angler"; Adeane, "For a widow I am a dangler" (I can't help the words rhyming, the report was sent to me in verse); Retters, "The Frenchman"; Green, "Chiming Bells of Long Ago,"; our old friend, host Chandler, of the Rent Day, "Joe in the Copper"; Dobell, "Simon the Cellarer"; Mr. Melville, "Harum Scarum"; Penney, "My Guiding Star." That Mr. Burgess' songs were appreciated is proved by the number he had to sing, "Dear Nancy," "Merry Family," "The Broken Jug," "Little Miss Muffit," and the "German Band"; Mr. Messenger, "The Sussex Warbler"; Mr. Downing, "The Dutchman," &c., &c. The Hammersmith Club, an offshoot of the Hammersmith United, was numerously represented, the best feeling prevails between the two societies, and several friendly competitions are likely to come off between them during the coming season.

THE MAKING OF FISH-HOOKS.

An interesting account of how a Swiss angler makes his own fish-hooks out of needles, appears in the last issue of the Fishing Gazette. But the writer must, of necessity, have omitted to state that after the hook be made red-hot and then plunged into cold water, it must be what is technically called "brought back" to a spring temper. When taken out of the water, the hook will be as brittle as glass. On the small scale of making one hook at a time, the easiest way of bringing it back would be to lay it upon a piece of hot iron (an iron poker would do) and at the moment the wire becomes blue, to throw it off. Hooks are not difficult of manufacture. No one in this country would even think of making their own, but in out-of-the way places, where they are not to be procured, there need be no great difficulty in making them. If steel wire cannot be procured, needles may. To make up for the want of a barb, the point should stand out a little, on the principle of a chisel, which we all know cuts the more keenly into wood, owing to the bevel on the upper surface of the edge. The shank of such a hook should be perfectly straight Under the barbless conditions the strain on a hooked fish would, by the resolution of forces, pull the hook out of its grip, if the shank were conversely rounded. Even with a barb, a hook highly arched in the shank may be drawn out of its grip by a prolonged and steady strain. The strain on a straight shank and a slightly standing-out point, only drives in the latter deeper and deeper. To illustrate this, let us suppose a hook to form the greater portion of a circle, and a strain be brought upon one of its terminations by a line affixed thereto, when it is clear that this strain would draw the whole out of any thing it was inserted to, such as a fish's lip. When a boy, I made tens of thousand of hooks, my father training me carefully in every branch of business, and also in fishing and shooting. I was a good trout-fisher at ten years of age, and my father gave me my first gun—a flint, and a good one it was—when I reached the mature age of twelve.

J. D. Dougall.

THAMES TROUT.—IMPORTANT CASE.

William Kirby, watchmaker, Chain Street, was summoned for having taken a trout of less weight than 1 lb., viz., weighing 9 ounces, contrary to the Thames Conservancy bye-laws, in the Thames on the 11th inst.

He pleaded guilty.

Mr. Henry Creed, solicitor, said he appeared on behalf of the Reading and District Angling Association to prefer this information against the defendant, and he had received instructions to press the case very strongly. He had also instructions from Captain Etheridge, Superintendent of the Upper Thames, to say that he quite concurred in this prosecution and he would make an example of the defendant. One reason why the Association wished to press the case was that the defendant was a well-known experienced fisherman, and he knew well the law, and had clearly broken it. The full penalty which the law imposed was £5, and he was instructed to ask for a fine of that amount. Mr. Creed then stated that the defendant was seen to catch the trout in question while fishing at Caversham, and to retain possession of it, though evidence could be given that the fish only weighed 9 ounces. On being questioned the defendant at first denied taking it, but afterwards produced it. Mr. Creed added that Captain Etheridge would have been present but for a prior engagement.

The defendant said the fish was hooked top and bottom, and would have died if he had returned it to the river.

Mr. Creed said he had ample evidence to disprove that. Mr. Butler (the secretary of the association) saw the fish, and he would say the injury the fish received was very small.

In reply to the Chairman, Mr. Creed said that undersized fish were bound to be returned to the river, however badly they might be injured.

The Chairman said the costs were 8s. 6d., and the Bench would impose a fine of £1 besides. He warned the defendant that if he offended again they would impose the full penalty. It was a great shame to kill fish in the manner he had.

RIVER REPORTS.

MID-THAMES.

" My business in this State
Made me a loooker-on."
—SHAKESPEARE.

My business this week has made me little else than a looker-on of the river, and also of lack of sport by toilers and spinners, who thoroughly deserved success. The water is in magnificent order for trout work, but few punts have been out to my knowledge, or surely sport would have accrued. At Hurley, a pretty fish of 5 lb. has succumbed to the prowess of a stranger. I knew the fish was there, and have over and over again tempted him with glistening baits; but I piped in vain, and he fell a prey to a brother rod, whom I congratulate fairly and squarely on his success. At Henley, Dr. Brooks has taken a fish of 5 lb. from Marsh Pool and returned another captured beauty. In reply to a query I see addressed to me in last week's GAZETTE: if W. B. will inquire at Paddington, I think he will find he can get down to Maidenhead and back for 2s. 6d. from May to October in less than an hour each way, or to Bourne End and Marlow for 3s. return.—MARLOW BUZZ.

Ancholme.

The Ancholme anglers are beginning to wake out of their lethargy, and are already preparing for the advent of coarse-fishing. For the first time in its history the quiet town of Brigg has an angling club. It has been inaugurated under the most favourable auspices, and a goodly number of members have already joined, whilst suitable rules have been made and officers selected. Mr. T. Watson has been chosen as president, Mr. R. Stringer vice-president, Mr. A. C. Finney treasurer, Mr. G. Clark secretary, and nine or ten other local gentlemen as committee. The resources of the Ancholme are well known, and many are the visits made to this river, especially by the Sheffield anglers. By reasonable terms for membership and the judicious arrangement of angling contests, it is hoped that the society will receive the patronage it so richly deserves. The weather has been too bright for heavy bags on the trout streams; I caught ten one evening during the last week, and on another a brace weighing respectively 1¼ lb. and 2¼ lb., also two *salmo fontinalis*. The black gnat, hawthorn, oak fly, are out in full force; but we are all anxiously awaiting the advent of the green drake, which is the premier fly for the chalk streams hereabouts.—THOMAS FORD, Caistor.

Ballynahinch.

This last week we have had very bad fishing weather, low water, and east winds. Still Mr. W. H. S. Openshaw on the 19th succeeded in killing a fine summer fish, 12½ lb. But nothing has been done since. Mr. Openshaw, above mentioned, is the only rod that has fished all the week. There is little or no appearance of a change.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

On the 17th, Mr. Hutchinson, of Buckenfield, killed a good basket, 8½ lb.; Mr. Marell, of Felton, killed 5 lb.; the Rev. Mr. Oliver, 4½ lb. On the 18th, Captain Saltmarch killed 4 lb.; Mr. Swinney Morpeth killed nine trout, 4 lb. On the 19th Captain Saltmarch killed a good basket, 8½ lb. On the 23rd, Mr. Thompson, Sunderland, killed 2 doz. good trout; Mr. Tripp, Sunderland, fifteen splendid trout; the Rev. Mr. Oliver, 6 lb. The river is very small and clear, and fishing up stream with worm is the sport at present. On the 24th, Mr. Stebb, jun., killed 7 lb. of splendid trout.—A GLASS, Anglers' Inn.

Dove.

The long-wanted rain has come at last. The Dove was getting as low as a puddle, and sadly required freshening up. Vegetation, too, was suffering greatly everything being at a standstill. There has been a good deal of electricity in the atmosphere all the week, which has to some extent affected the fish. But there has been a fair rise on every day, and as anglers may now be numbered by scores on every length of the water, many of them have been well rewarded. All kinds of flies are now on the surface, and the trout will bite almost anything in the shape of a wing. The best reports come from Rocester, Sudbury, Dovedale, Ilam, Ashbourne and Mayfield. The members of the Norbury Club are also doing well. The average takes this week is quite six brace per rod. The May fly will shortly be out in full force.—THE SPLODGER.

Findhorn.

This river has been in bad order for fishing lately owing to low water. At Relugas, Mr. George Rigs, gamekeeper, killed four fine salmon within a week. On Tuesday of last week he got one weighing 8 lb.; on Thursday one weighing 10 lb.; on Saturday one weighing 12 lb., and on Monday one weighing 10½ lb. The pools are reported to be well stocked, and with propitious weather good sport may be got. In the meantime the water is so clear as to be very unfavourable to successful fishing.—B. FOORES.

Ifracombe.

The rain this week has improved the streams for angling. A few trout has been taken this week from the Wilder stream. Two monk fish were caught last week with hand lines, and a few fine cod and ling. Saturday some fine lobsters and crabs were taken from the pots; one crab weighed 8 lb., the others from 2 to 4 lb. each. Mr. Teape and friends were out for an hour or two on Monday; they brought in 10 bream, weighing about 5 lb. each, one skate 60 lb. Other boats brought in a good quantity of cod, ling, and whiting. Some fine plaice where also caught with ground lines. Wednesday two boats out; one brought in 4 ling weighing 61 lb., the other 2 cod 39 lb. The trawling skiffs has been down in the Bay several times this last fortnight. Their catches of fish has been very small, mostly thornback, a few pairs of soles and some plaice. The sport continues very good for rod and hand lines from the pier and jetty for small pollack, glovers, tamlin, cod, &c. Weather at present very fine.—E. COMER.

Lee (South of Ireland).

Angling is losing interest as the fine weather approaches. The bright sunshine of summer is unfavourable for fishing, even when practised by the most dexterous hands. Hence lately I have had little to chronicle, but this week there is a departure, and with a plentiful abundance of rain we have a fine run of fish and a prospect of good sport; and we have what may not interest Waltonians so much, a great advance in vegetation; the crops were undoubtedly very backward in consequence of the drought. The rain has come opportunely, and neither agriculturist nor angler would object to a little more of it. There is a very slight rise in the river, and salmon and peal are rushing up in great quantities as far as the height of the water will permit them to go. On last Monday three hauls of the net in the pool under Wellington bridge resulted in a total take of seventy-six; and the same night the poachers, who were very busy, landed a large number of salmon. These were principally fish that in consequence of the low state of the river, could not ascend the water-works weir, and congregated in Wellington Hole, and in the pool under the weir. Mr. Wm. Haynes had a very successful day on the Blackwater last week, having landed five springers to his rod. His brother George was out on the Lee on Tuesday and caught two. The net men in the tidal waters are every day making good hauls, showing that the break in the weather has fetched up the fish from the ocean depths.—ANGLER.

Nairn.

Fair sport has been enjoyed this season on the river Nairn. Gentlemen have landed average numbers of unusually large salmon, and trout are by no means scarce. The weather is scarcely suitable for the water, but pools are believed to be well stocked. No complaint is now made regarding the salmon disease which was reported to exist at the beginning of the season.—J. B.

Severn and Teme (Worcester).

Our streams in this district are in fine order for angling, and some good sport has been had amongst the trout, though the fish did not run large—from 4 oz. to 14 oz. I have not seen a one-pounder this week, but they are in fine condition. The members of the Boughton Angling club held their annual dinner at the club house, the Portobello Inn, on the 16th. Since then Mr. Bosworth, Mr. Hopkins, Mr. Langford and myself were out together; our take of trout weighed 17 lb. 10 oz. Mr. C. Watkins weighed in 2½ brace last night; he caught them after tea, and within ten minutes' walk of the club house. The trout are rising well every evening; the flies I prefer are the yellow dun, red spinner and orl fly.—J. A. GRIFFIN, St. John's.

Suir and its Tributaries, Clonmel.

The cots did nothing last week, owing to the fine weather and water so very low. Dudley's was then in nice order, and James Donohue killed the first peal for the season, weighing 5 lb.; Tom Russel got a salmon there also of 10 lb. We have continued rain since Sunday last, so that we have a nice fresh in the river which will bring up plenty of peal to the upper waters. On Tuesday Tom Hogan killed a fine salmon of 26 lb. at Roulmaquorish; Mr. J. L. Wirrall, jun., one of 12 lb. at Newcastle; Hon. Hely Hutchinson one of 6 lb.; last week he got six fish in five days. The streams are all in splendid order for trout fishing, and while the river continues a bit high and beer colour, there will be excellent fishing in the evenings. The rails are the principal flies at present; green drake just coming on the water.

Taw and Tributaries (N. Devon).

Waters are now rising and good fishing may be expected next week. Not much sport to record but a few dishes and fish small; some of the best catches were with the maggot and coachman fly at night time.—RUSTY GAME.

Thames (Walton).

Reports from Walton in the FISHING GAZETTE are conspicuous by their absence, and it is peculiar that there are plenty of trout seen daily (I have myself seen several on the feed opposite my place), still there appears to be nobody to attempt a take. A gentleman fishing from the bank here hooked a beauty, but somehow he managed to get away. This seems to have been the fate of all those hooked, and Mr. Lucken, at Sunbury, seems to have had the only trout taken in this neighbourhood. I enclose a bill which speaks for itself. The number of eels lost is 25 lb., which, at a low figure of 1s. 3d. per lb., makes Hone's loss over 30s. Trade has been very bad with the fishermen lately, and George has been no exception, and to make matters worse he has been suffering from his old complaint, asthma, and I think that if you could put a line in your paper, many of his patrons would like to subscribe their mite. Any amount forwarded to me shall be acknowledged in your paper. I have nothing to report this week. A gentle rain is falling and the wind is south. Everything in favour of trout-fishing, but nobody to try.—HENRY WOOD.

[The bill offers £1 reward on the conviction of the party or parties who stole 25 lb. of eels from George Hone's punt, on Saturday night, May 13.]

Thames (Windsor).

Since my last report several trout have been had in this neighbourhood, Lumsden, of Eton, having no less than five in ten days, two of which, I believe, were returned, the others ranging from 3 lb. to 5½ lb. At Old Windsor, one of the members of the Windsor and Eton Angling Society, Mr. Pritchard, took a good fish, going 7½ lb., on 23rd inst. Mr. Howard, of the Friendly Anglers, fishing with James Gray, took two on 21st inst.; one had to be returned, and the other weighed nearly 4 lb. One of the Eton College students, Waterfield, has been trying the fly in the weir stream that runs through the college grounds, and succeeded in getting three fish, two with the Alexandra, and one with the coachman. Unfortunately, they were under size and had to be returned. This is a good sign that we are well stocked with trout, as the fishable water for fly in the neighbourhood of the college does not consist of more than fifty yards, unless a boat is used. Several good fish have been seen in the Windsor weir stream, and I expect daily to see one of them come to grief. Water in capital order at present, but as it looks stormy a quantity of rain may be expected, which would put colour in it.—B. R. BAMBRIDGE.

Tweed and Teviot.

Very little salmon angling has taken place on these streams during the past week, the weather being too brilliant for day fishing—and any captures that have been made have been effected in the early morning or in the evening. On Wednesday last week Mr. James Kerss killed one salmon on the Hendersyde water, and on Saturday he secured another fish. I have been informed that on some of the upper casts of the Tweed five salmon were killed in one day lately. Since Saturday no salmon had been got on the Hendersyde water until Wednesday, when Mr. James Kerss caught a couple. The net fishings on the Tweed continue to be much about the same as at the end of last week. Salmon are scarce at the mouth of the river, and trout are not appearing in such large numbers as should be the case at this time of the year. Rod fishing for trout proceeds apace, the best baskets being got during the evening. On Thursday last some splendid takes were obtained in several of the minor Border streams. Fishing in the Bowmont, Mr. Thomas Herbert, Yetholm, caught 15 lb., and Mr. James Storey, Cocklawfoot, and Mr. John Kerr, Yetholm, angling in the same river, secured baskets weighing 11 lb. 5 oz. and 10 lb. respectively. On Kale water Mr. John Currie, Morebattle, killed 3 lb. 9 oz., and in the same stream Mr. John Shotten had half-a-dozen trout, weighing collectively 1 lb. 14 oz. Mr. Robert Gray, Morebattle, caught 5 lb. 6½ oz. also in Kale, and a dish of a like weight was secured by Mr. T. Black, Yetholm, while angling in the Colledge. In four hours Mr. R. Black, Yetholm, caught 2 lb. 4 oz. The weather on Thursday last was not so bright as for a few days past, and there is every appearance of a heavy rainfall. A flood in the rivers, which have nearly assumed their midsummer level, would greatly improve the the chances of anglers.—Maxwheel, May 25.

Wye and Derwent.

Thunder clouds have been hanging about nearly the whole of the past week, with slight showers of rain falling daily; but we did not have enough downpour to discolour the water till Thursday. Both rivers are muddy from the limestone roads, and are rising. This rain falling will benefit anglers very much, especially the trollers and bottom fishers. Sport during the week with the artificial fly has been but middling, and only small baskets have been made, with the exception of a few experts, who have killed their six to nine brace of an evening, chiefly with small black gnat and yellow duns. There have been some nice trout killed by dibbing with the natural flies, under the bushes and trees in the middle of the day. Several trout, nearly 1 lb. apiece, have been taken; trolling the last thing at night has also been followed with good success, chiefly in the Derwent (the Darley Dale length). The bottom fishers have done well during the past week on various parts of the Derwent, with both maggots and ant eggs, and a good many trout up to 2 lb. each have been killed; one old veteran got sixteen fish out of one swim on Wednesday night with rhe ant egg, close to Matlock Bridge. The night-line party on various parts of the Derwent keep killing a few trout. Mr. W. King, of Matlock Bath killed a most splendid, well-fed trout, of 3 lb. 6 oz. on one of his light lines with live minnows. I hear that there have been four trench taken out of the Cromford Canal between Lea and Whatstandwell that weighed over 10 lb. Sport on the ponds still continues good, both with artificial fly and bottom fishing. There is no appearance of any green drakes or May flies on either of the above rivers yet. We generally expect them to be at their height about the 6th of next month. The artificial floating May flies or green drakes are a complete failure on either the Wye or Derwent. There is every appearance of the Whitsuntide holiday piscators having a first-class time of it next week.—George James Eaton, Starkholmes, Matlock Bath.

CLUB REPORTS.

THE UNITED LONDON ANGLERS' CENTRAL COMMITTEE.

Important Notice!! Change of Privilege Tickets.

Secretaries and members are hereby informed that the present privilege tickets, cerise, will be cancelled on Thursday, June 15th, and the new tickets, green, come into operation on Friday, June 16th. Instructions to secretaries: —secretaries are requested to send the names and addresses in full, of members requiring the new privilege tickets to the secretary of the Central Committee as soon as possible, and all tickets applied for will be ready for delivery, at the Central Committee Room, on Monday, June 5th, 1882, from nine till eleven o'clock. It is to be understood that all tickets applied for will be charged, as no deduction can be made from the list of tickets made out. The charge for privilege tickets and yearage will be 1s. All holders of privilege tickets will be charged 1s. in addition for card of membership of the United London Angling Associations Fishery Society, established for the purpose of acquiring, renting, stocking, and preserving waters for the exclusive benefit of its members, such sum to be paid on the delivery of the privilege and the society's tickets. The committee respectfully solicit the patronage of societies enrolled on the Central Committee. They defray all the expenses of printing, posting, rewards, watching and preservation of the River Lee from their funds. They also pay an annual subscription to the Thames Angling Preservation Society. Tickets will be forwarded by post on application. N.B.—Members of all clubs that have been enrolled on this committee are entitled to their privilege tickets without any extra enrolment fee.—By order, R. Ghurney, Secretary, 10, Baches Street, Charles Square, Hoxton, N.

CITY OF BRISTOL ANGLING ASSOCIATION.

A special meeting of this association was held at the club house, Tuesday May 9, 1882, for the purpose of making a presentation to one of the committeemen who was about to leave this country for America. Mr. J. A. Jones, the president, in making the presentation to Mr. H. Parsons, consisting of one set of jack tackle, spoke with extreme regret with having to part with one who had been so long amongst them, and he felt sure that the association would feel its loss; in so saying he was only speakimg the feeling of both present and absent members. But still, it so happened that the best of friends must part, and in making this small present he only regretted that they had not had more timely notice, when no doubt it would have been considerably largely subscribed to. He would now wish him a safe and speedy journey to those parts of America he was going to and also the best of success when there, hoping they should soon have the pleasure of hearing from him. Several members spoke, wishing him a hearty success in the new country. Mr. H. Parsons, in responding, said that he much regretted to have to leave them, but he did so to try and better his position in life, and hoped he should be successful; and in returning thanks for this useful present, for it was a very useful one to an angler, he would have the first jack that he caught with it stuffed and present it to the association if he could get it brought over; and likewise that they should be sure to hear from him. In concluding he said he hoped the association would continue to prosper.—J. H. Stantial, hon. sec.

GRESHAM ANGLING SOCIETY.

The members met as usual on Thursday evening, Chas. Bates, Esq., and afterwards Captain Alfred, in the chair. The secretary having read the correspondence, including an interesting letter from Mr. Wood, of The Anglers, Walton, gave the usual epitome of the events of the week, so far as the objects of the society were concerned, and announced that Mr. Jardine had weighed in fourteen trout, ten of which went 15 lb. 4 oz., the other four going 2 lb. 14 oz., a total weight of 18 lb. 2 oz. The largest weighed 2 lb. 3 oz., the smallest about 11 oz., many lesser fish being returned to the stream. They were all taken with the ash fly, in private water. Dr. Brunton brought up five trout weighing 10 lb. 5 oz., the largest 2 lb. 15 oz., and magnificent fish they were. The Doctor gave a very interesting account of his hour and a half's fishing, the whole of these being taken in that time, and many more of the same size returned to the water. The secretary again reminded members that the annual meeting was to take place on Thursday next, when the committee and officers for the ensuing year would have to be elected, and hoped there would be a large attendance on the occasion. It was intended to issue a circular in the course of two or three days, which would be sent to all members. Messrs. Bates and Parker were elected auditors. Several of the members intend trying the trout on Monday next, when a good show is again anticipated. It was also announced that several important papers being in hand, the first of the series would be read next Thursday week by J. Callaghan, Esq., on his experiences of fishing in Ireland. In drawing attention to the Anglers' Benevolent box, the secretary said he was pleased to find its weight increasing, but he would be happy to take charge of larger contributions, or forward subscribers' names to the secretary of that "honest anglers'" fund. A long discussion on matters relative to the Great Internation Fisheries Exhibition of 1883 then took place, in which several members, including Mr. Jardine and Mr. Crumplen, took part. Following this, Dr. Brunton gave a graphic account of his hour and a half's fishing previously mentioned, which he described as one of the most extraordinary in his long experience. Mr. Jardine also narrated his adventures in his usual able manner, the meeting closing with very cordial thanks to the gentlemen who had so very ably conducted the proceedings.

HAMMERSMITH UNITED ANGLING SOCIETY.

The combined visit to the above society, and the Hammersmith Angling Club, took place on Thursday last, May 18, at the Builders' Arms, Bridge Road, Hammersmith, when the large club-room was well filled by at least eighty gentlemen. The chair was taken by Mr. Philip Geen, the president of the H.U.A.S., and he was ably supported by Mr. Adean, of the Westbourne Park Society, in the vice-chair; Mr. Tom Hoole and Mr. Penney acting as stewards and contributing to the comfort of the visitors. A most pleasant evening was passed by all, and many capital songs were well rendered; Mr. Reynolds' of the H.U.A.S., leading off with "The Fine Old English Angler"; Mr. Peachey, of the H.U.A.S.; Mr. Jones and Mr. Melville, visitors; Mr. Downing, of the Hammersmith, Mr. Messenger, of the Hampstead, Mr. Fair, of the Queen's, Mr. Penney and Mr. Toms, of the H.U.A.S., and Mr. Burgess, all contributing to the evening's enjoyment, the "Merry Family" of the latter gentleman, and also his parody on the same song, deserve special mention, as also does Mr. Jones' "Vagabond." In reply to an invitation to speak to the meeting on any matters of interest to the anglers, Mr. P. Geen, in the course of an address in his well known spirited style, mentioned that with their usual generosity the Society of Arts had given the free use of their hall, for Monday, June 26, when the chair would be taken by Mr. E. Birkbeck, and the long expected paper on the propagation of coarse fish would be read by Mr. Marston; he also remarked that he was sure this paper would be very interesting and practical, and hoped it would lead to the re-stocking of some of our almost depleted lives; the presentation to Mr. Bonvoisin would also take place on that evening. On the roll being called by Mr. Osman sixteen clubs answered; Mr. Osman then proposed "Health and Prosperity to the H.U.A.S." to which Mr. Geen responded on behalf of both clubs. A very pleasant and interesting evening was then terminated by a vote of thanks to the chairman, proposed by Mr. Hoole and Mr. Downy, who expressed the pleasure the Hammersmith Club had derived from combining with the H.U.A.S. to receive the visit.—R. W. H.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The first annual supper of the above society took place on Monday last. Mr. J. C. Murray, Chairman of the Central Association and United London Angling Associations' Fishery Society, in the chair, Mr. J. Obbard, vice. After ample justice had been done to the good things provided by host Morris, the chairman distributed the prizes to the several winners, Mr. T. Longman taking five; Mr. Obbard, four; Mr. Lucy, sen, three; Mr. W. Longman, two; Mr. W. Gorsuch, two; Mr. Neagus, two; and several other members one each. After the health of the Queen had been drunk, the vice-chairman proposed the health of the Army and Navy, which was responded to by Sergeant Major C. Murray, the hero of Lang's Nek, lately decorated with the distinguished medal. The health of the chairman, vice-chairman, secretary and visitors, and success to the Original Clerkenwell Piscatorials having been responded to, harmony was indulged in, ably assisted by Mr. W. Gorsuch and Mr. Taylor on the violin and guitar, till the hour for closing. Several valuable prizes are promised for the season 1882-3.—Thos. Wm. Lucy.

PECKHAM BROTHERS ANGLING SOCIETY.

At a meeting of the above club on Tuesday last the president, A. Brodie, Esq., promised a challenge cup of the value of £5 5s., to be won three times before becoming the property of the holder. Messrs. Reed, sen., Reed, jun., Gendle, Stidolph, Sweet, Cox, Bignall, Williams, Garrad, Minard and Page also promised prizes for the ensuing season. The first match will take place on Sunday, June 18th, at Weybridge.—W. H. Page, hon. sec.

ST. JOHN'S.

The half-yearly dinner of the above took place at the Three Compasses, Cow Cross Street, on the 17th. Mr. G. Pledge presided, assisted by Mr. F. Thorling. Between thirty and forty were invited to partake of the good things provided by Mr. H. Gill, whose catering needs no praise from me as it is well known. The cloth having been removed, the rest of the evening was devoted to harmony and the giving of prizes for the coming season, and a heavy and substantial list of prizes has been announced for the ensuing season (a list of which I will give in my next). During the evening we had some first-rate music by Mr. T. Newton and A. D. Hull, and some good songs by the members and friends. As the books of the society will shortly be closed, gentlemen wishing to join this society can receive every information of Mr. H. Gill, Three Compasses, Cow Cross Street.—F. Thorling.

May 22.

WEST CENTRAL ANGLING SOCIETY.

The annual supper of the above society will take place on June 16 (the opening day of the waters for angling), at the club house, the Cross Keys, Theobald's Road. The supper will be supplied by our host and treasurer, Mr. R. I. Beard, sen., the chair will be taken by Mr. C. Ball, and the vice-chair by Mr. Gr Randall. After the removal of the cloth, the winners of the numerous prizes taken during the previous season will be announced, and prizes for contest during the forthcoming season entered on the books. The opening match of the season will be fished at Amberley on Sunday, June 18. The distribution of prizes taken during the previous season will take place at the club house on Friday; June 23. Mr. W. Webster gladdened the eyes of the members on Sunday last with a splendid trout weighing 3½ lb., taken by him in the Lea at Ware, with one of Mrs. Williams' crystal hooks.—R. I. Beard, jun., sec.

WOOLWICH BROTHERS ANGLING SOCIETY.

On Monday evening about forty members and their friends met at the Prince Regent to celebrate their fourteenth anniversary. The dinner was served - Host Gladwin's excellent style, which was fully appreciated by all presen The chair was occupied by W. Reed, and the vice by A. Bridges. After th removal of the cloth the usual loyal and patriotic toasts were given and responded to. The toast of the evening, "Prosperity to the Woolwich Brothers Angling Society," coupled with the name of Mr. John Shipston, the secretary, was given by the chair, and duly acknowledged by the secretary, who congratulated the club on its success during the past year. The results of their fishing, he might say, had far exceeded previous years; although some members had not been successful as previous years, had yet had some good sport. And as an encouragement for the future exertions, he was enabled to announce a good prize list for the coming season, there being already in hand a sum of over £10, which he believed would be largely augmented before the opening of the season, when the allotment of prizes would take place. Votes of thanks were accorded to the host and hostess, the chairman and vice-chairman, and responded to. The proceedings were very much enlivened during the evening by the good singing of a number of the members and visitors present, when one of the most enjoyable evenings was brought to a close by singing "Auld Lang Syne" and "God Save the Queen." During the evening the prize list was increased by the Host £2 2s., Mr. Beech £1 1s., Mr. Shipston 15s., Mr. Davis 10s. 6d., Mr. Weaver £1s. 1s., Mr. Hemmings 10s. 6d.—John Shipston, sec.

THE UNITED STATES AND THE LONDON 1883 INTERNATIONAL FISHERIES EXHIBITION.

OUR readers will be glad to hear that the Americans intend to send a most splendid exhibit for our edification next year. They have voted a preliminary fifty-thousand dollars to defray expenses, and will also lend free of charge a man-of-war to convey the exhibit and the commissioners. This is splendid and we prophesy that in extent, completeness, interest and value, the American exhibit will be second to none.

MR. JARDINE AMONG THE TROUT.

As an enviable result of two days' trout-fishing west of Salisbury, Mr. A. Jardine took fifteen brace of trout, total weight 31 lb., all with artificial fly—iron blue cow-dung, and Wickham's fancy. The largest fish, weighed-in at the Gresham Angling Society, were as follows:—One 2 lb. 3 oz., one 1 lb. 13 oz., one 1 lb. 12 oz., one 1 lb. 9 oz., one 1 lb, 8 oz., one 1 lb. 7 oz., one 1 lb. 6 oz., one 1 lb. 4 oz., two 1 lb. 3 oz. each; total, ten fish, weighing 15 lb. 4 oz.; and, in addition to the fifteen brace kept, six brace of others were returned to the river under 11 inches in length. What lovely jack and trout waters Mr. Jardine "knows of"!

Curious Situation for a Bird's Nest.—Workmen engaged on one of the screw steamers at present being built in Leven Shipyard, Dumbarton, for the Union Steamship Company of New Zealand, are "immensely taken" with a curious fact which has come to their knowledge within the last few days. It is that at the top of a shore which supports one of the beams on the upper deck of the vessel a bold little bird, of the kind known as the white-winged sparrow or "shelfie," has been found to have built her nest and deposited three eggs therein. The curiosity of the thing is enhanced when it is stated that the spot selected is not isolated or retired in any respect, but immediately under the deck beam as described, near the centre of the vessel. While the operation of riveting the stringers and deck plating has been going on, the resolute bird has been busily setting her house in order, By happy chance the vicinity of her home does not require to be oparated upon until long after the surrounding parts, the spot being exactly where a space is left for the erection of a winch foundation. Facetious workmen aver that the little creature, like a wise builder, must have studied the plans before beginning operations. Workmen are constantly employed within a few yards of the nest, but the bird seems thoroughly domiciled, even although the noise and movement about the ship are distracting enough even to persons accustomed to shipyard work. The roughest of the workmen look with intense kindness on their little rival in the building trade, and she hops about the uprights and staging, in the vicinity of her home, as any other bird, safely embowered in some pleasant greenwood, might do. It is anticipated that the eggs may be hatched in two or three days, and the young brood brought to maturity before the rude necessities of shipyard progress will have despoiled her home.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE PROPOSED FRESHWATER FISHERIES ACT.

Sir,—I desire to thank Mr. J. Gibbs, of Landport, for calling attention to this subject, as it will not only give me an opportunity of correcting the error respecting size of roach—which should have been seven inches, not nine—but will also, with your kind permission, enable me to write a few lines on other points which, in my opinion, it is desirable should be made clear to all, so that when the bill is finally drafted no angler shall be able to plead that he is taken by surprise.

No doubt, sir, you, together with many others, were astonished at the almost perfect unanimity which was displayed at the Society of Arts room when the resolutions, which will form the groundwork of our bill, were passed. Questions so important and intricate, which under ordinary circumstances would lead to lengthy discussion, and anything but an unanimous vote, were carried, one after another, as if they were mere questions of twice two. The explanation is to be found in the fact that for years the West Central Association and the United London Anglers had been working out these problems, so that we might be ready with our opinions when the time should arrive that our coarse fish interests would be deemed of sufficient importance to justify legislation. Could you learn the number of speeches made, and the letters written by our friends Messrs. Bonvoisin, Hoole, and Ghurney, upon the one question of undersized fish, it would astonish you. At times these indefatigable workers must have felt that agreement upon this important matter was impossible; but "peg away" was their motto, and the result was that sizes were decided upon which have recommended themselves for adoption to every angling and preservation society in London, and many in the provinces.

Mr. Gibbs asks a very pertinent question, and one which has been put to me frequently by anglers from all parts of the country. More especially has it been laid stress upon by our friend Mr. Walker, the secretary of the Sheffield Association. They in effect say—Is it fair to restrict those who fish in rivers where roach seldom exceed seven inches to the same standard as those who fish in such rivers as the Thames, Lea and Colne; why not leave the question of sizes to the various preservation societies which you hope to see spring up wherever there is water to preserve. I venture to say that this argument is unanswerable, especially as, without exception, every correspondent is willing and anxious that a clause should be inserted which shall make the sale of undersized fish—as per our standard—an offence against the law.

It is now proposed that the clause shall read:—

If any person or persons, at any time or season, sells or has in his possession for sale, any of the following fish of less dimensions than:—Jack, 18 inches; dace, 6 inches; barbel, 13 inches; perch, 7 inches; chub, 10 inches; carp, 8 inches; roach, 7 inches; bream, 9 inches; tench, 8 inches; he shall be liable, &c., &c.

No one who has devoted so many years to the subject of our coarse fish rivers, lakes and canals, the fish and the anglers, as myself, can be blind to the fact that the future welfare of all these are dependent on speedy legislation and the appointment of a responsible individual to whom we may look for the carrying into effect of our new act; together with the enforcement of those laws which were intended to purify our rivers, but which are now in many instances so glaringly transgressed that fish life has become impossible.

We must in my opinion respectfully insist on the absolute necessity for the appointment of a freshwater fisheries inspector; and we should urge upon the Government the desirability of following out in this case the policy inaugurated by the recent appointments of "Factories Inspectors" from amongst the most practical of the workers themselves. We do not want a profoundly learned professor whose knowledge is so vast that he would, seven eighths of his time, be occupied with more profound and, to him, more interesting subjects; neither do we want such a man, as there are far too many of, who will make us all sorts of promises of never failing to keep in view the object for which the coarse fish anglers worked for his appointment, and then in a year or two fall away and begin to think and talk of nothing but the salmonidæ.

You paid me, Mr. Editor, a very great compliment in so prominently associating my name with this post. Did I think myself competent, and were I free to accept it, I know of no position which I should be so willing to undertake. What an unlimited field of deep interest and usefulness it would open up to a man who could throw his whole heart into the work; working, not solely for the money which the appointment will bring, but with the hope and determination that ink-black rivers shall once again run pure, and be the means of giving sport and pleasure to all comers.

I intend to speak, to write, and to work, to get this post created; not for P. G., but for the best possible man amongst us, and not necessarily a Londoner.

I cannot help saying that we are more indebted to yourself than to any other individual for most valuable information as to what continental countries are doing for their inland fisheries. We are by this means enabled to gather the fruits of years of study and experiment, and we are shown as clearly as possible how to make coarse fish waters pay a net profit of twice the amount derived from the surrounding land. Surely this in itself is a sufficient reason why Parliament should be willing and anxious to assist in the passing of such a measure as we shall submit to it. We are further encouraged to hope that we shall be successful, from the fact of our having so many friends on both sides of the House of Commons, and from our being so unanimous as to the objects we desire to achieve.—I am, &c.,

P. Geen.

[copy.]

"24, Blue Boy Street, Sheffield.

"Dear Sir,—In reply to yours respecting the proposed amendment of the Freshwater Fisheries Act 1878, my committee are unanimous as to the necessity of an alteration in the law so as more effectually to protect the fish. Our member, the Rt. Honble. A. J. Mundella, acknowledges this necessity, and promises to assist anyone who will try to make the law more perfect and effective.

"My committee paid very great attention to your suggestion that we should try to induce the Government to follow in the footsteps of many smaller countries, and appoint a freshwater fisheries inspector; they think it a matter of the greatest importance, and hope that the London and country anglers combined will make the necessary effort to bring about the appointment of a fit and proper person, whose duty it shall be to enforce the Rivers Pollution Acts and our new Freshwater Fisheries Act.

"In reference to the proposal that, in drafting the new bill, we should commence with repealing those portions of the 1878 Act which apply to our fish, and from thenceforth keep our legislation separate from the laws affecting the salmonidæ, we agree with you, and are prepared to leave this matter in the hands of your association.

"My committe, while desiring to see eel and flounder fishing permitted during the fence season in tidal waters, with rod and line only, is very anxious that the clause should be so drafted as to prevent abuse, and they suggest that from sunrise to sunset be added.

"We are strongly against the proposed clause in respect to sizes for the different fish, as there are many ponds, lakes, and scores of miles of water, where the fish do not grow to the sizes mentioned; the committee desire that this clause be left out altogether, and that the various associations decide the question of sizes as may best suit their waters.

"Another clause requiring great care in drafting is the one in respect to the taking and retention of fish for bait. Evil-disposed persons take, and will continue to take, every possible advantage of any loophole.

"I have also to ask your most careful attention to the wording of the clause which permits the capture and retention of fish for scientific purposes. Publicans here have glass or aquarium cases put in their windows to attract customers, and the fish to fill them are obtained—for scientific purposes, of course—openly and as frequently as required. Very strong restriction should be placed on the scientificially-fishey publican.

"In respect to the fence months we can suggest no improvement on the resolutions carried at the Society of Arts.

"I have in conclusion to give you the committee's warmest thanks for your communications, and to express the hope that you will shortly be present at one of our meetings in Sheffield—Yours, &c., T. Walker.

P. Geen, Esq.

"P.S.—I have just received yours respecting the alteration of the sizes clause. You may rely on the staunch support of the Sheffield anglers, who will be delighted to see the sale of undersized fish made illegal; it was the disgraceful sight of small fish in our markets which caused us to work for the Mundella Act."

A STRING OF QUERIES.

Sir,—Can you, in the first place, tell me what make of hook the one enclosed is? It seems of a very good form, and it is nearest in shape to the twisted Limerick, but not so round in the bend?

2. What is the peculiarity of the rod joint which you recommend in your review of the Edinburgh Exhibition—made, I think, by Dickson? The ordinary loops for tying together the joints of a rod are a great nuisance in catching the line, but the screws are objectionable as they must give a little by use, and then your rings are not in a line.

3. In speaking of casting at your fishing tournament do you always understand that the distance is the length of line from the reel to the fly?

4. I see in a back number your advice to a querist as to killing trout, in which you recommend what—if you will excuse me saying so—seem to me two rather nasty, as well as complicated, methods, viz., putting a thumb into the trout's mouth to dislocate its spine, or sticking a knife into the same. Surely the most simple and quickest manner of killing them is by a blow with the end of the handle of the landing-net on the top of the head about one inch behind the eyes.

5. Have any of your readers ever found an American glued rod come to pieces when wet? I have seen it asserted that they do; and, if so, it would be worth while knowing where these defective rods came from, as I heard an American maker assert, not long since, that his rods, even if boiled in water, would not do so, as they were fastened with a waterproof cement.

6. Have any correspondents given a practical trial to the eyed hooks for salmon flies, and with what result?

7. Could you, some day, devote half a page of the Gazette to illustrations of the different makes and sizes of hooks? The numbers of hooks are now so various that, in descriptions of flies and the size of hook intended for them, it is perfectly useless attempting to understand what sized hook is really meant; and I should imagine that numbered drawings of, say, half a dozen sizes of each of the different makes would be very acceptable to many of your readers. —I am, &c., M. B.

Answers to M. B.

(1) The hook sent is a short-shank Kendal, made by Allcock, of Redditch, used chiefly by Thames roach anglers. Some use a wider and rounder bend. We much prefer the sneck bend for flies.

(2) The rod-joint, made by Dickson, of Edinburgh, is a very good one, and cannot very well get out of order. Mr. Francis Francis told us he had used it for three years, and was quite satisfied with it, and he is not easily satisfied. It is a combination screw guide, and over-screwing is prevented by a metal stop.

(3) We feel sure the measuring was all from the reel, but will get Messrs. Jardine and Wheeldon to settle this point.

(4) If you are wading a rapid trout stream and don't want to walk ashore to kill every fish you catch, you will find our plan of breaking the neck of the fish much the safest. You simply hold him in the net, insert your thumb, and then quickly bend the head back at the shoulder and your fish is dead in an instant. As for its being nasty, anglers are not so squeamish as to think so, we fancy; it is far more humane than whacking your fish on your boot-toe or using a stick, which often only stuns the fish. For big trout the use of the knife is to be recommended, as it ensures quick death to the fish. But it is not likely anglers will all adopt one plan; they will please themselves. We only give our experience.

(5) We do not like the glued-up rods, and our experience has not extended beyond testing their casting qualities, which, in all we have seen, have been very far behind our hard wood rods.

(7) We have long thought of giving this illustration of the various sizes and makes of hooks with their respective sizes, &c., and will endeavour to do so shortly.—Ed.

MACNEE'S FISH-SCALE FLY.

Sir,—Will you kindly permit me to say to your very numerous readers who, in consequence of your notice, have sent to me for specimens of my new flies, that, owing to illness in my family, I have had to leave Edinburgh and return to the country. My address is Loch Tummel Side, Pitlochry, N.B. I will endeavour to kill some large pike soon to enable me to send you some loch size flies; but you have so kindly showered down upon me so many customers for flies that I cannot see my way to get a day to myself. I am perfectly bewildered with orders and all seem in such a hurry to obtain specimens of the new fly.—I am, &c., James Macfee.

[Mr. James Macnee is a professional fisherman on Loch Tummel and deserves great credit for his invention which, while it is not intended to supersede the ordinary artificial fly, forms a splendid auxiliary in bright still water when trout are shy.—Ed.]

SMALL TROUT AND LARGE TROUT.

Sir,—Will you kindly give me the following information? Are the small trout caught in the streams of Devon, Worcester, Sussex and Lincoln *S. fario* or are they brook trout? If the former, would they not grow larger in more extensive waters?—I am, &c., Vortex.

[They are all *Salmo fario*, and will grow up to any weight if they have a quiet life and plenty of good food.—Ed.]

LARGE LEA TROUT.

Sir,—Mr. J. Grimme caught a trout of eight pounds at Flanders Weir Fishery, on Thursday last; also one of two pounds and one of four pounds weight at Carthagena Weir, Broxbourne, on Saturday, all taken with the "Bell's Life" spinner.—I am, &c., Anti-live Bait.

CONSIGNMENT OF YOUNG FRY FOR THE THAMES FROM HUDDERSFIELD.

Sir,—At the annual dinner of the Thames Angling Preservation Society last year, Mr. Byram Littlewood, of Cecil Street, Huddersfield, in replying to the toast of "The Visitors," promised to send, through Mr. T. Spreckley, the treasurer, a contribution of at least 10,000 fry of salmon, trout and charr during the next season of fish-hatching. In redemption of this liberal promise, and as an evidence of Mr. Littlewood's sincerity, Mr. Spreckley received a letter from that gentleman couched in the following terms:—"I am quite ready now to send you a lot of salmonidæ of ten different kinds, all suitable for the Thames. They are of the following kinds:—*Salmo salar* from east and west coast of Scotland, Great Lake trout, English and German fario, Loch Leven trout, salmon trout, Welsh charr, Windermere charr, Alpine charr, a new kind, better than either trout or charr, *Salmo carpioni*. There are also salmonidæ, and only to be had from Lake Garda in Italy, and for which I am awarded a diploma for having introduced them for the first time into Great Britain. They grow to 15 lb. and 20 lb. I shall also send some American charr, *Salmo fontanalis*—these are not trout, as commonly called so, but they are charr." In reply to this letter, Mr. Spreckley informed Mr. Littlewood that the nursery at Sunbury was quite ready for the youngsters, and he could send them as early as convenient. On the following day a memorandum was received to the effect that by the Great Northern train leaving Huddersfield at 10·20 that day two carboys of fish would be sent, and arrive at King's Cross at three o'clock. Mr. Spreckley sent one of his men to meet the youngsters at King's Cross, and to take them with all possible despatch to their new home at Sunbury, a somewhat difficult journey to undertake, as there were several changes to be made on the road. On the arrival at King's Cross Mr. Kellow found the young fry in splendid condition, and to all appearance none the worse for their lengthened journey. The journey to Sunbury was successfully completed in about three hours, and under the directions of Mr. Kellow the fish were safely landed at the Sunbury Rearing Ponds, in the same healthy condition as when they first got into his charge. It is evident from this there is no difficulty in transporting Mr. Littlewood's healthy fry to any distance, and with several changes of conveyance. It was the opinion of some practical men at Sunbury the young fish were more healthy and strong than any previous consignment.—I am, &c., B.

[There is an old saying that one should never look a gift horse in the mouth. We are as grateful as anyone for the kindness which prompts these gifts from Mr. Littlewood, but we cannot help wishing that he knew the fate that most certainly awaits his young salmon and salmon trout, his English, Welsh, Swiss, Alpine and American char—in fact, the whole batch of his salmonidæ. They will simply be thrown away. The Thames is utterly unsuited to such fish. The char ought to go into a cold, deep lake, and not in a hot, muddy-bottomed river; the salmon and salmon trout cannot go to the sea, and must also die of disease or be eaten by the jack. The common trout may do if not turned in until they are half a pound each at least; but they will not stop in the main river, they will run up to the tributaries—or down the jack.—Ed.]

THE WEST CENTRAL ASSOCIATION.

Sir,—The Central Association at their last delegate meeting fixed the yearage for the new privilege ticket at 1s., as before.—I am, &c.,

R. Stebbings, hon. sec.

SLIME OF FRESHWATER FISH.

Sir,—Can you or any of your numerous readers give me any information as to the constituents or an analysis of the slime of salt or freshwater fish? Can I find this in any work on fish?—I am, &c., E. A.

HASTINGS PIER.

Sir,—Will you kindly inform me through the Fishing Gazette whether I can fish from Hastings Pier, and what class of fish and what class of tackle required, and bait? By doing so you will greatly oblige an old angler.—I am, &c., W. Johnston.

Charlton, May 22.

[Take a strong jack rod and fish ledger fashion, *i.e.*, feel the bites by holding line in the hand? Use stout gut, and the ordinary sea-hooks, which do not rust. Lug worms and mussels or shrimps are best baits. You will catch whiting, codling, eels, dabs, &c.—Ed.]

Bold Capture of an Otter.—A fine female otter was captured on Tuesday week by a labouring man in a ditch at Eynsham close to the river. The man in a daring manner sprang at the animal and seized it by the throat. It was put into a sack and brought alive to Mr. Darbey, Market Street, where it was killed and will be preserved. Its weight was nearly 19 lb., and measured 4 feet 1 inch. It appeared to be four years old.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

Dogs.—*Naldire's Prize Medal Dog Soap* destroys Fleas, Cleanses the Skin, and Improves the Coat and Health of the Dog. "Naldire's Soap is harmless to Dogs, but fatal to Fleas."—Frank Buckland. Price 1s, of all Chemists, Perfumers, and Grocers. N.B.—See that you get *Naldire's* Soap.

CANADIAN FISH-CULTURE.

(*Concluded from page* 238.)

CHIEFLY to get rid of this difficulty a

NEW METHOD OF HATCHING WHITEFISH

has been lately adopted in the hatching-house at Sandwich. The method was to put the ova upon a perforated tray, through which a stream of water flowed continuously, and from these trays to pick off the affected eggs. Now, instead of this tray a glass jar is used. The jar is cylindrical in form, and is capable of containing from 150,000 to 200,000 eggs. These jars are arranged side by side in a straight line, and in rear of this row runs a water pipe. From this pipe a number of smaller ones branch off, each connecting with the jar. It is in the conveyance of the water through the jar that the merit of the invention lies. A glass tube, the length of the jar, and about one inch in diameter is inserted into the jar. The lower end of the tube is larger than the upper portion, and is notched as one sometimes sees the top of a lamp chimney. Now the end of the branch water pipe, which is rubber, is put over the top end of this tube; the water is forced down and escapes through the notches in the lower end, and flows up through the eggs in the jar and escapes by a spout at the top of the latter. It will easily be seen that the motion of the water from the bottom to the top of the jar sets the fry in motion; and the diseased egg having less specific gravity than the sound one, comes to the surface and is borne away through the spout. Thus the work which in Sandwich it took forty little boys and girls to do can be attended to by one, indeed is accomplished of itself. This then is the great merit of the invention; but it likewise is superior to the old way in requiring only about half the quantity of water for the ova, and this, as in the case of Sandwich, where the water has to be raised by steam-power, is an item well worth considering. As to the effect upon incubation, there is none one way or the other, the process going on as well on the tray as in the jar. The system cannot be applied to salmon fry, for the continuous motion would addle the egg. These jars are now exclusively employed in whitefish culture at Sandwich. At the present there are in that hatchery one hundred and fifty jars, each containing upwards of 150,000 eggs, or the whole aggregating about 24,000,000. The principle present in the glass jar existed in a tin jar which had been invented by Mr. Wilmot several years ago, and been used for some years past in the Newcastle hatchery. A patent, after the invention, was taken out in Washington, but nothing was charged to anyone for its use. After a certain number of years the patent expired, and an "enterprising Yankee," getting the idea from the Newcastle tin jar, constructed a glass jar. The American having produced the glass jar, Mr. Wilmot saw it was best, and used it in the establishment. The Yankee patentee came over, and thought he should be "allowed something" for the use of his patent. Mr. Wilmot was much amused; certainly did not treat the request seriously. But he set at work, and instead of using a glass jar with a tin top, like the Yankee inventor's jar, he had his entirely constructed of glass, which is a decided improvement, for it shows if the work of separation is being properly carried out. It may be here stated that the hatchery at Newcastle has been the model school of the continent. It was the first established, and every step it has since made has almost invariably been copied by the American fishery officers.

INTRODUCTION OF CARP.

The most important movement made in the fish-breeding division of the fishery department for some time is the step which has been taken towards the introduction of the German carp into our Canadian rivers. The carp is known in Germany as the "poor man's fish," because it is more plentiful and is produced in rivers unsuited for the higher order of fish, and is of consequence cheaper. It is extremely prolific, of rapid growth, reaching three or four pounds in one year, and up to fourteen pounds at its full growth; while, better than all, it thrives upon the very fungus-producing or vegetable matter which will kill a member of the salmon family. The carp is a vegetable feeder, in contradistinction to most of the other fishes, which are animal feeders. Therefore the ponds and streams abounding through the provinces and sur-charged with organic matter or spohrs are exactly adapted for the sustenance of the carp. An experiment of how this fish would thrive in America was made three years ago by Professor Baird, who brought several from Germany and put them in ponds which he had created for them. They throve wonderfully well, reaching the maximum of growth for each year till they attained maturity. Last season Mr. Wilmot, through Professor Baird's courtesy, obtained thirty or forty carp, which he has kept since. Most of these lived, and have thriven so well that Mr. Wilmot had several ponds near the hatchery ready for the reception of a sufficient number for breeding purposes. Next season, therefore, hundreds of thousands of carp fry will be in process of maturity at the Newcastle hatchery. It is the intention to supply all the suitable ponds and rivers as fast as practicable, which will be at a rapid rate when all the hatcheries in the Dominion will have begun the work.

TRIAL OF CALIFORNIA SALMON.

There are now in the Newcastle hatchery 250,000 eggs of the California salmon, which have been obtained from California, likewise through Professor Baird's courtesy, for the mere carrying cost. Besides this number, 300,000 have been sent to the house below Grand Falls on the St. John River in New Brunswick. It is believed, and it does not seem unreasonable, that the salmon from the Pacific coast will thrive as well in the Maritime Provinces as in its native waters. As for the River St. John, it needs supply from some quarter, being now almost entirely barren of fish.

PROGRESS OF FISH-CULTURE.

The number of salmon, salmon-trout, and whitefish eggs in the Dominion hatcheries now is about 34,000,000, which is considerably in exceas of last year's number. There is, likewise, being established on the Restegouch River New Brunswick, aalmon hatchery, which will be much the largest in the Dominion. This building will be not less than 100 feet by 40 feet. It is also proposed to erect a breeding-house for salmon at some convenient point in British Columbia. During next season it is decided to remove the cause of complaint on the Miramichi, N.B., respecting the alleged taking of breeding salmon off the spawning beds for the hatcheries, by catching the fish on the common fishing grounds instead, and keeping them in ponds prepared in conjunction with the hatchery there. It is the intention now to take for the house about 200 female and 100 male salmon; which allowing 7,000 eggs to each fish would give 1,400,000. The numbes of eggs which will be used in the Restigouche house will be largely in excess of this. Then as to the progress in the increase of the fisheries from all these eggs and all this culture, several practical fishermen, perhaps because they do not understand the subject, maintain that fish culture does nothing but waste money. All the writers of note upon fishes give opinions contrary, and to their testimony is added the strong argument of men like Mr. Wilmot. Prof. Buckland and other writers agree that the number of fishes' eggs maturing in a course of nature does not exceed four or five per cent.; while it is known by actual computation that an average of seventy-five per cent. of the eggs mature in the hatching houses. This difference is thus and reasonably explained. Take the case of the salmon. She deposits her ova on the spawning bed, but before she can succeed in covering it, and often she does not securely cover it, it is borne away by the current. Then in rivers subject to heavy floods the river bed at the spawning grounds is frequently scoured and the eggs totally destroyed, while there are always on hand a number of freebooters ready to feast on the eggs. In the hatchery the art of man keeps all these dangers away. The fish is liberated just after it has absorbed the umbilical sack and begins to look for food; so that in all respects it would seem as well equipped to do for itself then at if it had remained covered under the gravel and rocks during the winter. Certainly all the argument is on the side of the theorists. The hatchery at Newcastle now is so full that, instead of keeping the little fishes, as has been the custom, till the spring, it will be necessary to put them now into the lake. So long, however, as care has been taken that the water in the nursery was maintained at the same temperature as the lake water, the little creatures will be as well let go now as in the spring.—*Toronto Globe.*

THE GREAT INTERNATIONAL FISHERIES EXHIBITION, 1883.

PRIZE ESSAYS.

I. £100. The Natural History of Commercial Sea Fishes of Great Britain and Ireland, with special reference to such parts of their natural history as bear upon their production and commercial use.

Note.—This would include Natural History, habits and localities fish frequent at different seasons, and artificial propagation.

(This will not include the Salmonidæ.)

Prize offered by Sir H. Peek, Bart., M.P.

II. £100. The effect of the existing National and International laws for the regulation and protection of Deep Sea Fisheries, with suggestions for improvements in said laws.

III. £100. Relations of the State with Fishermen and Fisheries, including all matters dealing with their protection and regulation.

Note.—This would relate to home legislation affecting regulations for fishing vessels, protection of spawning beds, close time (if any) for salt-water fish.

IV. £100. On improved facilities for the capture, economic transmission and distribution of sea fishes.

Note.—On improved nets and modes of catching salt-water fish, the application of steam to Deep Sea Fisheries, the advantages of steam carriers, greater facilities to be given by railway companies in regard to rates, refrigerating vans, new and improved fish markets, cold storing rooms for ditto.

V. £100. On improved fishery harbour accommodation for Great Britain and Ireland, indicating the localities most in need of such harbours, the general principles on which they should be constructed, and the policy the State should adopt in aiding and encouraging harbour accommodation for fishing purposes.

Note.—The effect of the Passing Tolls Act, 1861, the causes which led to its failure, grants to supplement local efforts, loans at low rate of interest, period to which they should be extended.

Second-Class Prizes.—(Amount not determined.)

I. On the legislation at present applicable to the Salmon Fisheries in Scotland (including the River Tweed), and the best means of improving it.

II. On the legislation at present applicable to the Salmon Fisheries in England and Wales, and the best means of improving it.

III. On the legislation at present applicable to the Salmon Fisheries in Ireland, and the best means of improving it.

IV. On the introduction and acclimatisation of foreign fish.

V. On oyster culture.

VI. On the best means of increasing the supply of Mussels and other Molluscs (Oysters excepted) used either for bait or food.

VII. £25. On the best system of Life Insurance for Fishermen, and of insuring boats, gear, nets, &c.

Prizes for Essays on the Propagation of Fish will be published shortly.

REGULATIONS.

I. All competitors shall enclose their names and addresses in a cover to the Secretary; the subject of their Essays and their motto to be clearly written on the outside of such cover.

II. Jurors will be appointed to adjudicate upon the various Essays, and, where possible, it is proposed to secure the aid of foreign experts for this purpose.

III. After the Jurors have awarded the prizes, the covers above referred to shall be opened in the presence of the Chairman of the Essay Committee and the Secretary, who shall declare the names of the successful competitors.

IV. The Committee of Management have power to publish the whole or part of any, that may be submitted to competition. Essays not published will be returned on the application of the writers, but the Committee of Management do not make themselves or any of the officers of the Exhibition liable for the loss of any Essay or Essays.

V. The Judges are not bound to award a prize unless they consider one of the Essays deserving of it.

VI. No prize shall be given for an Essay which has already appeared in print.

VII. All Essays, with the motto attached, must be addressed to the Secretary of the Great International Fisheries Exhibition, 1883, London.

VIII. Every Essay must be written in the English language or must be accompanied by an English translation, and must be sent in, so as to arrive at the offices of the Exhibition, on or before May the 1st, 1883.

THE ODOR OF THE FOREST
THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The Forest and Stream has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—
The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.
The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the Forest and Stream annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

ublished by the Forest and Stream Publishing Company, 37, Park Row, New York, U.S.

Subscription agents for Great Britain:
Messrs. Sampson Low, Marston, Searle, and Rivington, Crown Buildings, 188, Fleet Street, London, who can supply specimen copies.

THE
NORWICH ARGUS,
BEST EASTERN COUNTIES PAPER.

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties. —Address, Mr. W. BABB, Melton House, Dulverton.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head-keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.
SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

THE GRAND HOTEL,
CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. DAVIDSON, Manager.

THE RIVER DOVE.

Wanted, a few Rods to join an Angling Club on the river Dove.

It is well stocked with Trout and Grayling only.

Apply in first instance to A. K., Post Office, Ashbourne.

BEDDGELERT.
The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,
CAMBRIAN HOTEL,
Towyn, Merionethshire.

TROUT FISHING (lake and river,) about best in North Wales, FREE to VISITORS. Excellent sea fishing and bathing, boats on lake and sea Best places in Anglesea can also be fished from MAELOG LAKE HOTEL, Ty Croes Station, near Holyhead.

IMPORTANT TO SALMON AND TROUT FISHERS ON THE RIVER DOVEY, WALES.

COMFORTABLE APARTMENTS at Moderate Charges can be had at Mrs. JONES, 3, Londonderry Terrace, Machynlleth, Montgomeryshire.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation at the "ARUN" FAMILY and COMMERCIAL HOTEL, Pulborough, Sussex. T. PEARCE, proprietor.—There is in connection with the hotel, for the use and enjoyment of visitors, a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. PEARCE, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

C. J. GREENE,
54, LONDON STREET, NORWICH,

Hon. Sec. to the Yare Preservation Society, invites inspection of his Large and Superior Stock of Fishing Rods and Tackle of every description.

NATIONAL FISHERIES EXHIBITION, 1881.—Special Prize £10, and Prize Medal awarded for the Best Collection of Rods and Tackle suitable for the Norfolk and Suffolk Inland Waters.

Hickory and Greenheart Salmon, Trout, Pike and General Rods. Telescope Gaff Hooks. The "American" Braided Silk Waterproof Lines, 2d., 2½d., and 3d. per yard. The "Acme" Lines. Braided Waterproof Silk Lines, 1½d. per yard, various thicknesses. Collapsing Landing Rings. Russia Leather Salmon and Trout Fly Books. Salmon Flies to Standard Names. The Best Flies in London, 36 varieties, 1s. 6d. per dozen. "Alexandras," 2s. and 2s. 6d. per dozen. The cheapest house for repairs of all kinds. The worn ends of Spinning and Fly Lines, Waterproofed, 6d. per score yards. Double Live Bait Hooks on the Best Pure Silk Gimp, 1s. 6d. per dozen. Waterproof Fishing Bags Good Gut Lines, 3 yards, 3d., 4d. and 6d. each. Drawn Gut Lines, 3 yards, 8d. each.

Every Article Warranted the Best Quality and Make at Moderate Prices.

THOMAS H. CHUBB,

Manufacturer of FISHING RODS, ROD TRIMMINGS, FLOATS, REELS, TROLLING SPOONS, Brass and Wooden Landing Net Frames, Camp Chairs, &c. Also turned stock of ash, lancewood, hornbeam, &c, furnished to pattern.

ADDRESS:
THOMAS H. CHUBB,
POST MILLS, VERMONT, U. S., AMERICA.

Send for price List on post card. (Foreign post cards can be had at any any Post Office for 1½d. each.)

ESTABLISHED OVER HALF A CENTURY.

JOHN COOPER,
(Only son and successor of the late Mr. John Cooper,)
BIRD AND FISH PRESERVER,
To H.R.H. the Duke of Edinburgh,
28, RADNOR STREET, ST. LUKE'S, E.C.
NEAR THE CHURCH, OLD STREET.

SILVER MEDALS IN 1878 AND 1880.

The Silver Medal, 1878, was awarded to Mr. John Cooper at the Piscatorial Exhibition, at the Westminster Aquarium for the best specimens of Stuffed Fish.

KING'S
"NATURAL" BAIT.

Is the most successful known for all Coarse Fish Of Tackle Dealers, in packets, 3d., 6d., and 1s. each. Postage extra.

Testimonial from J. Harrington Keene, Esq:

My dear Sir,—I have tested your "Natural" Bait with admirable results amongst roach, bream, and chub. I cannot speak too highly of its attractiveness as a bait, and its tenacity on the hook.—Yours, truly, J. H. Keene.

WM. KING, 1, New Road, Commercial Road, London, E. Please order early.

SCOTCH FISHERIES IMPROVEMENT ASSOCIATION.

The Second Annual Meeting of this Association will be held in Lyon and Turnbull's Rooms, 51, George Street, Edinburgh, on Monday the 29th current at two o'clock afternoon.

The public are invited to attend.

J. BARKER DUNCAN,
Hon. Sec. and Treasurer.

6, Hill Street, Edinburgh,
20th May, 1882.

THE REGISTERED GLOUCESTERSHIRE SPINNER FOR SALMON, TROUT, AND PIKE.

Awarded the Government Silver Medal at Norwich, and Diploma of Merit at Edinburgh. It has received the patronage of royalty, the nobility, officers of both services, and many of the most distinguished anglers of the day. Its reflection in the water from its construction, spinning powers and durability cannot be surpassed. Numbers of most gratifying testimonials have been forwarded to the inventor from gentlemen using it in lake and river trouting. Price on application to W. WIGLEY, Cheltenham.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of The Fishing Gazette, *No. 12, Fetter Lane, London, E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

The Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

or

Mr. B. R. Bambridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.

Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons. Midland Tent Works, Loughborough,
Miss G. Wells. 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Briggate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

*** The "Fishing Gazette" Spinner (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of The Fishing Gazette, *No. 12, Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. Sampson Low, Marston and Co., the Proprietors.

The Fishing Gazette.

SATURDAY, JUNE 3, 1882.

THOUGHTS ON THE THEORY OF FLIES.

By Robert Balderston.

(*Concluded from page 243.*)

In employing the second definition of the feathery-bait the Nondescript alliance, commit a still greater mistake; for at the outset they start from the premise "that they themselves, as well as the fish, are fools;" the first for employing baits, the semblance of something living, whilst that something does not live, viewed according to their own discoloured conception; and the second, for attempting to eat something which, according to the first portion of the premise, cannot exist; for something life-like must resemble something living, and in this case it is a fly; otherwise the angler might as well make his fishing sorties and go fly-fishing with a bare hook and give it life-like motions. In fact, the feathers of the so-called nondescripts, are tied on, much in the same way as are those of other flies, especially the kind called "buzz;" the bodies are alike, and the only attempt on the part of those who use such lures, to make them as unflylike as possible without destroying the poor creatures' killing powers too much, is the combining of colours in an extraordinary way or the adding of tails prodigies of structure. After all these poor attempts to make a nondescript, the completed bait is fairly like a fly, and, when manœuvred, closely resembles a disordered and drowning insect. As these creatures possess all colours, the attempt to select something unnatural in this respect, is to a certain extent a failure, though some uncommon hue may be chosen. The matter of colour leads to a subject worthy of consideration: the colour and form of things on or in the water, as observed by fish lying at a lower level and in various positions. The power of distinguishing colours may be so affected by the relation of the fish to the fly and light, that at times the Colourist's theory is utterly at fault; while that of the Formalist may stand triumphant. When trout are below the fly, and light comes directly thence to that inferior position, it may frequently happen that the sunbeams, or light of the sky, is so dazzling as to render kinds of colour unapparent, though not hindering the detection of the insect. This dazzling power, however, is not so great as some anglers suppose. Owing to the lateral position of the eyes, the retinas do not become so flooded with light as they would were these organs both on the top of the head. When, then, the dazzling influence is small, owing to depth of water, lack of intensity of light, or difference in position, the colours, instead of being indiscernible, are more vividly depicted than they appear to the angler; for the hackles, wings, and tinsel of the bait become so replendent and lustrous under the beams of the sun, that in some respects the beauty which the natural insect possesses, instead of being decreased in the imitation is increased materially; not, perhaps, that this is any great advantage, but that it does increase its visibility when the fish are lying low in the water. Now this is one of the advantages of fishing with the sun shining to a certain extent in the direction of the cast; for then the trout which are lying nearer the angler, if he is fishing up-stream, are not dazzled by the light, and can therefore appreciate the beauties of the lure, provided it has sufficient naturality to be deceptive; if it has not, by all means let the fish be dazed or somewhat dazzled. But in angling down the stream, the reverse is the case; and it is better for the sun to be shining slightly towards the angler, for the fish lie beyond the cast. When dazzled, or when the light is not sufficiently strong to illuminate the hackles, as at twilight, most flies appear black. Hence the good qualities of so many deadly killers which are black, or tend in that direction, as the black palmer, black gnat, water-cricket, black ant, and even the house-fly and iron-blue dun. Hence the killing powers of many of the so-called nondescripts, which are either black; or may be deadly when in positions where they appear black; for, as before stated, the Nondescript alliance adhere to a general fly-like form, though they denounce naturality for adopting such a shape more or less varied. But it is not to be supposed that trout are not usually cognisant of the colour of their prey; in fact, they are generally aware of the exact hue, partly owing to keenness of sight, and partly because occupying lateral positions near the surface, where they can readily detect the colour of the fly on or in the water, or, in fact, even in the air before alighting. Form, therefore, may always be detected, though sometimes the fish only waits to ascertain that it is a fly-like shape which is descending on the pool; whereas colour is not so certainly discernible. General form, consequently, ranks first; colour is certainly worthy of a second place; special shape may be ranked after colour, whilst special colour-markings, though last on the list, are worthy of great attention, and may secure for the angler the victor's place, both in weight and number of fish, when measuring his skill against a rival, all other things being equal. It may, moreover, be remarked that the master who employs special varieties of flies and imitates the insects actually on the water, deservedly ranks before his compeers. Because, not only does he employ, and attempt to do, the right thing; but also his constant practice in depicting the various actions of many different insects, so perfects his system of manœurving that he far outrivals, in one great branch of the art, the adept who, though master of one or two particular modes of working the flies, is ignorant or unskilful in matters concerning the others.

Many authorities have advocated certain colours for particular states of the water, for what exact reason cannot be decidedly stated; but it has, no doubt, something to do with visibility, naturality, and experience, all combined. A bright orange-red hackle and a black palmer have been found very killing in a heavy rolling freshet. Now both of these colours are the two hues most distinctly visible in such a water; but not only this, there are, during such a flood, a great number of caterpillars red and black, beetles red, brown and black, but especially black, yet many red or sometimes brown, for either of which the reddish hackle and palmer may, in the discoloured water, be easily mistaken; the fish feeding boldly when the river is heavy and being equally ready for a cow-dung fly, a beetle, or a caterpillar.

Thus experience declares these two colours are good, and many anglers will almost swear by the red and black palmers, seldom fishing except in this state of water, and doing little at any other time with other flies. For deep pools or lakes, a bright yellow or orange fly has been much recommended; and it is in deep pools, under bushes or nettle-clad banks, that the red palmer is often very killing, the hairy caterpillar, red or red and black, dropping naturally in such places into the water. The greendrake, of a greenish yellow colour, is often killing in lakes and deep waters elsewhere. It is a natural fly of large size and easily distinguished colour, hence of great visibility.

The stone fly may likewise be used in lakes with success, and also in heavy, rough streams in strong rivers; it also is of large size, and visible in water where smaller insects are overlooked. The sand or sedge fly, a large reddish brown or yellow insect, is easily discernible, and so has been found a killer in deep waters generally. The ruddy variety of the whirling dun is a fly of moderate size, bright colour, and clear delineation, and is one of the very best killers in all waters, and in part owes its great killing power to its being easily mistaken for two of the best flies on the angler's list, namely, the yellow and blue duns. For low water small pale and iron-blue duns or hackles on minute hooks, and the small grey mottled mallard beetle, are the most natural and deadly baits. In cold windy weather the blue dun, whirling dun, and March brown, or flies closely resembling the latter, are most efficacious. In warm windy weather the cow-dung, alder and oak flies, bluebottle, and hawthorn fly are found upon the water. In the evening, small light duns, brought into life by the heat of the day, such as the pale evening dun, are plentiful in summer. During a sudden shower the spinners are peculiarly fatal, whilst at twilight anything in the shape of a fly is greedily devoured. It has generally been owned by anglers of all shades—Naturalists, Formalists, Colourists, &c.—with a certain feeling of haziness and hesitation, that even if trout do mistake the artificial lure for an insect, or whatever their ideas may be on the subject, one thing at least is certain: it is, at any rate, undoubted that salmon do not make any mistake when they endeavour to swallow the gaudy, glittering, many-coloured lure specially contrived for their peculiar advantage; for few have been audacious enough to presume that the structure is meant for the copy of any insect. The long-bodied, sparsely-winged and hackled salmon lures have not inaptly been compared to the huge and attenuated dragon fly; some of the bushy lures may have almost as close a resemblance to humming birds. Dragon flies, assuredly, have an aquatic origin; but with how many humming birds can a young salmon have met? Disbelieving the bird theory, others have no less presumptuously declared that the bait resembles nothing in heaven above, nor in the earth beneath, nor in the water under the earth; this being, no doubt, the reason of the salmon's adoration. Yet stop; rush not so headlong to a rash conclusion; but before so bluntly denouncing the structure as lifelike, but still resembling nothing living, wait till your knowledge is a little more complete. Let it be admitted that your experience of earth and air is not utterly despicable, but pause awhile. The master of the art will not yield you any admission further. You know the depths of ocean, do you? You have followed the young salmon to ocean's murky depths, and are well aware of all the glittering, many-coloured denizens of the deep? Tush, it is not so! Away with you! What know you of the sea's dark mysteries, or of the sparkling lights of its dim remote sub-aerial halls? You are beside yourself if you say, "Nothing in the sea!" Walk into the museum of the Naturalist, and a few of those many-hued and dimly-sparkling candles of ocean's inmost rocks and caverns may be seen. An animal, the very size of your gaudy silver and gold, purple, blue, and green, your many-tinted salmon lure, with moving, glittering, many-coloured scales and hairs planted all over its lovely lustrous form, may there be seen; the namesake of the Queen of Love and Beauty, the lovely Aphrodité. Here is your gaudy salmon lure, such as the Britannia and Undine, clad in regal purple, the long-lost reminiscences of which are briefly re-awakened in fresh water to gladden the triumphant angler's heart. But are not other iridescent forms found in the watery deeps? Rich-hued actimae, medusoids, and polyzoids of every size and shape and countless colours. Such myriads, indeed, that it were a feat impossible for even an aged salmon to remember each after an absence in fresh water? So numberless that anything of many colours, actively moving, and of bulk like that of ocean prototypes, has such magnetic influence that the huge fish is drawn towards it, and bristling jaws enclose a rare, and, for them, too fell deception.

Thoughts on the general theory of flies naturally lead to the attentive study of the numberless varieties of insects on which trout feed most voraciously. It is as well to review the natural history of these creatures alone, and not mingle the two phases of the case together. These subjects at last involve the fly-fisher in the abstruse and practical system of manœuvring elsewhere discussed, including the most important operations in the whole art; perfection or consummate deftness in which stamps the owner as a master of the pastime. Before the old angler I need hardly demur in placing at such length, and disposing as my own thoughts dictate, so many pithy points. The goal I have sought to reach is, on one hand, truth; good craftsmanship on the other; and it is for the old practitioner to judge if I have conned the art aright. Upon the young fly-fisher I must urge that, though the subject may appear tedious at the first glance, it is worthy of much consideration; and is, as laid forth by me, whether rightly or wrongly, the the result of long years of pleasant labour by the river side in many countries; moreover, it is by toil proficiency is attained. We cannot all be born masters, though we may inherit a love for the art. Therefore, follow up unceasingly all the best maxims by the banks of the stream; and perhaps, in time, you may croak more loudly than THE RAVEN.

BLANK DAYS.

By J. P. WHEELDON.

I MET a very good friend of mine the other day, whilst mooning meditatively through St. Paul's Church Yard; and being an ardent gossip, he instantly buttonholed me. If I could have shirked him decently, I would assuredly have done so; for, apart from the fact, that he thinks no sooner is one "Scotch cold" swallowed, than it is an immediate signal for filling the tumblers afresh, and emptying them again as speedily as possible, but he is an inveterate and painful stammerer. Therefore with a frame of iron and a stomach capable of sustaining any number of liquid assaults of any known quantity, quality, and strength, he can very soon settle me; while his longing for gossip, and particularly fishy gossip, is as unbounded as his hospitality and his capacity for swallowing whiskey.

"My-de-de-did-dear fuf-fuf-fuf-friend," he at last sputtered out—"How are you-an-an-an-an cuk-cuk-cuk-come and have-a-a-whiskey." In vain did I assure him—which, by the bye, was an utterly unnecessary untruth—that I had just had one. "All the more reason," he instantly blurted out, "why you sh-sh-sh-should have another." I pleaded liver next, and his immediate reply was that, "Whiskey, so long-long as you take e-e-e-nuff of it, is the fuf-fuf-finest med'cine for liver in the whole bl-bloo-blooming world, my boy." After that I hauled down my fighting flag and surrendered; and the very first question that my chum put to me, after nodding over the edge of the tumbler and moving it slowly across his upper lip, and just under his nose in a very mysterious manner—motions which may either be a sign of Freemasonry or Fenianism, and I'm sure I don't care which—was this, "Why," said he, "how is it that in every blessed article you write, old fuf-fuf-fellow, you're always catching fish and nev-nev-never have any bl-bl-blanks."

Blanks! Good heavens above, why I've perfectly revelled in blanks in my time, and I doubt not that every fisherman that has ever handled a rod has had his full share into the bargain, if he were only honest enough to admit it. The marvellous fisherman—that man who is always doing something to rouse the bile or enthusiasm, as the case may be, of his many friends—is the man who has ample time, money, and opportunity at hand. That is the stuff of which your "crack" is made, as a rule; and I fear me sometimes, that the item "money," plays no inconsiderable part in the size and multiplicity of his bags. This gentleman probably goes out day after day, week after week, and his blanks are kept carefully in the background. The captures only—and in some cases they are the result of commercial speculation—come to the surface, and the world lifting up its hand says, "What a wonder he must be." I know sundry men whose names hardly ever come to the front, and I know others whose names literally coruscate as bright particular stars in the piscatorial firmament. I should much like to have a shy at one or other of the stars, nominating a hole-and-corner man as my representative, and somehow fancy that in an all-round game I should have a bit in hand. Fancy! it isn't fancy, I am certain of it.

Can I, say you, call to mind a blank or two, as a refreshing difference to papers which may frequently tell a reverse tale? I can that. Tons of 'em. I recollect an occasion when, after a lot of trouble and beating about the bush, I got permission to fish in a private park, through which a most beautiful section of the Mole runs. I had as companion one of the best anglers that ever fisted a rod; and I think, if I recollect aright, we took down with us something like five thousand Nottingham worms, tough as bits of wire, and scoured as bright as kitchen pans at Christmas time. The principal pool, and a very extensive one it was, lay at the foot of a delightful dell, which we christened "the wilderness." It was clothed, each side of it, with Scotch firs and great sturdy oaks, round the roots of which grew a perfect carpet of blue hyacinths, thick green moss of the brighest and most verdant hue, in and amongst which tall brackens and ferns flourished luxuriously in the moist cool shade. In going down the sides of this deep dell to reach the calm placid pool lying below, one had to be very careful, owing to the quantity of matted ivies of every description which trailed over the surface of the ground. I once caught my foot in some of these tough bines, and the result was an utter cropper and a fine growth of gravel rash along the bridge of my nose. At the head of the pool were some sluice gates, through which the current flowed lazily. It was intensely still in the dell; and the water falling with a sleepy subdued plash and murmur, and then going dimpling and curling downwards through the centre of the pool, was the only noise, and the only sensation of life, in the place. Even that was transitory, as the motion was soon lost in the deep shadows cast by overhanging trees.

When I first saw the pool, a year or so before I ever wetted a line in its solemn depths, I had been rabbit shooting in some covers on the opposite side. After the day's sport was over, I had followed the keeper upon a short cut through the woods, and pushing through the tangled trees, down the sides of this dell, we had struck the sluice gates, over which we presently passed. Of course I looked over. Did ever any angler in the world pass a bridge of any sort without peering over it? Not he, I'll warrant, and by the powers, I saw a shoal of topping great perch—eh, such "Tommy Splorgers"—slowly and sleepily, as befitting such a deep solemn secluded pool, sailing round the black slimy timbers of the sluice. "Are there many fish here, Morgan?" I queried in an unconcerned tone. "Fish is it!" said Morgan, a Welsh man, by the bye, and a very keen sportsman, "Fish, sir? Hech but there's shust cartloads, whateffer." "Cartloads, eh!" said I inquiringly, "and what are they then?" "Ah!" he replied, "And it's now ye'll shust puzzle me—there's them with the striped backs, peerch ye'll call them; and there's big pike, and shoals of of other sorts which lay sunning and basking all day long whateffer." They'll be bream I thought, or else, what so likely, big carp, and I'll never rest till the old lady gives me permission to try for them. Thus it was that I badgered and worried till I got it; and now, there we were, two fairish anglers well armed, with the family away up in town, monarchs of all we surveyed, plenty of capital bait, and Morgan ready and willing to give us every possible assistance.

It looked absolutely a certainty; and no man counted chickens so rapidly, or built more towering castles in the air than I, when, at the close of a charming day, my friend and I brought the sack of worms up to the hatchway and baited the pool thoroughly well. We left them the next day entirely to themselves; but on the morning of the following, daylight found us fishing carefully with float and leger. Breakfast time came round without either having had the shadow of a bite. "Funny, is't it, old man?" said my friend, as after winding up the lines, we leaned the rods against the trunk of a noble oak preparatory to going up to Morgan's cottage in quest of eggs and bacon. I said it was; moreover, I thought it, too; and when we got back, and, finding the sun shining full down upon the pool from between the boughs of the trees, saw the surface literally alive with a great shoal of bream, amongst which there were one or two veritable "scorchers," I thought it was funnier still. Dinner time came; not a bite. Tea time, ditto. The light died out, my big quill began to grow very hazy and indistinct, bats to squeal overhead, and the state of the poll was precisely in the same condition; we stuck to it till it was absolutely too dark to see, and Morgan came down to see if anything was wrong. I well remember how eerily his voice sounded as he shouted to us from the ridge of the gloomy woods above. The result, at the end of day, was an absolute, unmistakeable blank.

Many pipes did we three—Morgan, my friend and I—smoke that night; and many were the theories discussed as to the curious issue of the day's sport. The keeper was confident we had not baited properly, and thought if we had tried blood and grains, a sweet mixture, that we should have fared better. I differed, and so did my friend; but we, nevertheless, determined next day upon trying some big boluses of paste upon triangle hooks. If a fishing day could have been specially ordered, surely there never could have been one like this. Imagine everything in our favour. A soft sou-westerly wind, which barely ruffled the leaves of the oaks or caused the aspens to tremble. A day when fleecy masses of white clouds sailed slowly over a beautous arc of palest turquoise blue, and the hum of the bees' wings, hovering over the nodding heads of hundreds of blue bells, sounded drowsily and sleepily. Not one solitary touch did we get the whole day through, not a bite of any description; and if any two men went home disappointed and disgusted, we did. On another occasion I had an opportunity of fishing the same pool, and the result was precisely similar. Although I knew that it was "chock full," as the keeper said, of splendid fish, somehow I did not "hanker arter it" quite so much after that second and third edition.

I call to mind a certain day upon a delightful bit of trout water, where abided some perfectly awful trout, but a stream wherein my favourite game of spinning was strictly tabooed. It was a water abounding in stickles, hatch-holes, and foamy bits of weir head; but it was "Fly sir, nothing but fly," said the keeper; "and bear in mind, please, that we strictly bars the Alexandra." It turned out to be a scorching hot day, the water was as bright as crystal, and there was a beastly glare and glitter on the river, that made all notions of fly-fishing hopeless. I sat under a fine old oak, standing in a field bordering the river, wherein a lot of haymakers were at work, and owing to the presence of a multitude of gnats, nearly asphyxiated myself with tobacco. The hay makers' beer-barrel stood under the tree, in company with sundry frugal dinners, tied up in blue and white or checked cotton handkerchiefs. Presently the labourers came trooping in, and amongst them was one remarkably pretty girl, to whom, as she happened to sit near me, I tried to make myself as agreeable as possible. And indeed, I was getting on very swimmingly, until an ill-conditioned young male person, about six feet high, and with a fist like a shoulder of mutton, growled out "Yow'd better drop that young man; an' yow, Polly gal, yow coom and set by mey, or mebbe ar' shill poonch sumbuddy on the noase." He did not mean me, of course, or otherwise I should have felt bound to resent such a piece of familarity. Nevertheless, Polly went; and presently, as they trooped back to the field to their work, sundry hearty guffaws of laughter went up to the brazen sky, and I was left all alone in my glory—feeling still an aristocrat, yet, perhaps, not quite so much bloated as usual.

It was nearly dark, and the river was alive with dimplingrings, just as though a handful of shot had been thrown in here and there. A clinking good fish was rising just under the bank at my side, and covering him with a big "Wickham's Fancy," always a good fly on a strange water, he had it in a jiffy. I did not hit him hard, and I only felt one fell tug at the top joint, nevertheless, he was gone, breaking the gut just above the fly link. I cursed a little, and put up another. Another great fish, I should say a full five-pounder, was rising boldly in a patch of clear water, amongst some very thin weeds. Him I covered, although a little behind, perhaps, and letting the current sweep the fly round, he came up with a rattle. And now, thought I, I'll be very careful, so I treated him to a gentle snick only, as I almost felt the line tighten in the darkness. The instant he was struck, he bounded out of the water like a buck shot through the heart, and with one terrible fierce rush, was across at the other side. There he was fast somewhere directly, amongst roots I expect, and do all that I would, I could not clear the line. I pulled gently, and then hard. No go. Then I put my rod down amongst the long grass and taking the line in my hands, pulled at it until I began to wonder what sort of a trout it would have held in clear, open water. Five pounds! bah, so it would ten, said I quietly to myself. "Now then, you must break sometime," I added, apostrophising the line, and I pulled at it harder still. It parted with a faint twang, and as I stepped quickly back to pick up my rod and gather up the loose line, I heard a sharp quick crack and I had put my foot—oh, only on the middle joint, and it had snapped in twain, as clean as a carrot. After that I went home, and my muttered meditations on the long homeward journey, and particularly when I thought of my dear old slaughtered Chevalier, were peaceful, not to say holy.

ANGLERS ON WHIT-MONDAY.

WHIT-MONDAY is always noted on the Thames for the influx of Cockney anglers; if the word anglers can be rightly applied to them. In spite of bye-laws or Acts of Parliament, which they appear to know nothing about, the river-keepers will always find them on the banks. They are for the most part very harmless people—if they are told the law is against them, and the act of angling renders them liable to a summons, they peacefully desist, though with a look of sad disappointment. "What a pity to stop those people from enjoying such an innocent amusement," remarks a bystander; and when he receives the reply "They are breaking the law, and we must teach them better," he adds, "For the little harm they do, they might be allowed to go on." The keepers are not offensive in their remarks, nor have they ever attempted to make an example on Whit-Monday. They do practically right in stopping the men or boys from fishing—they have a moral duty to perform ; and in explaining what the law is, and how necessary it is to be vindicated, they probably, for the first time, cause some of those people to think that, after all, there is such a thing as doing wrong, and their future life may be influenced by the thought that has accidentally been aroused. Under the old law of what was termed "the glorious first of June"—Whit-Monday has sometimes been on its very threshold—I have seen shoals of pleasure-seekers turn out of Hampton Court station, with their fishing rods, and I have witnessed the look of regret at the check which the river keepers have given them. I am speaking of a time when clubs were few, and when angling clubs neither recognised a close season or a standard of fish. There were no Central Associations then, to teach the members of angling clubs, the principles of true sport; and "railway concessions to anglers" was an unheard-of phrase. In the number of rodsters who visited old Father Thames last Monday, I am satisfied the club men would be conspicuous in their absence. I met some anglers on that day—respectable anglers—going by train with their angling implements. I soon inquired "How is this?" and "where are you going?" The reply was, "To the Black Dog water at Feltham, which does not come under the Freshwater Fisheries Act, of 1878, as it is private water, and one shilling per day is charged to anglers. It generally opens on the first of June; but as Whit-Monday this year is so close to that day, the proprietor of the water has consented to make the commencement this year on Bank Holiday;" and, as one friend facetiously remarked, "It is always a Bank Holiday there, as the fishing is all from the bank." This was a closer; but still I hold to the opinion it is far better to wait until the sixteenth of June for a general commencement. The "Black Dog Fishery" enjoys that designation from the name of the public house where the permission to fish is obtained, and it is not a bad place to go to—there are plenty of roach and perch, and big ones too. It commences at a blacksmith's shop, and the anglers can fish for a considerable distance beyond that point. If any of my friends would like to go there, they will not regret it; but let them first, after they have alighted at Feltham station—where they will find a very courteous station-master, and a lover of the rod, in the person of Mr. Martell—go across to the "Railway Hotel" for a lubrication, and my friend Mr. John Harris, the proprietor, will point out on the bar wall the measurement of some fine perch caught close to the aforesaid blacksmith's shop, and he will, if necessary, enlighten them as to the exact spot. Last season, Mr. Doman, Mr. Hawkins, and other neighbours of mine, made some splendid takes of roach and perch—I say splendid, quite as much in reference to size as to quantity. The roach anglers usually fish with a long line, and a nice red worm is a favourite bait. The angling there on this Whit-Monday, was not very much, nor the fish in over good fettle. As far as the Thames is concerned, I have found the anglers getting nothing but bleak, and as proud of them as the regular anglers would be in the season of a good roach or perch. I always advise the keepers on Whit-Monday, to do their work as kindly as they can, and it has never failed to have a proper result; nor do I apprehend it will be otherwise, from the various cautions last Monday. The thought occurred to me, as I witnessed some of the anglers at work, what a capital thing it would be for the West Central Association to circulate on that day, a nicely written paper on "The principles of True Angling," and whilst pointing out the seasons and sizes of fish to invite the reader to become a member of an Angling Society; and that on writing to my energetic friend, Mr. Thomas Hoole, he would, on stating their address, give the applicants the name and place of the nearest club. Methinks I already hear Mr. Hoole responding to the idea with "Bravo, B."

B.

[Good Lord, deliver us! Does "B" mean this little sermon as a "goak," as Artemus would say? We fancy we see "B," next Whit Monday, on the towing-path, distributing nicely-written tracts on the "Principles of True Angling," as practised by the three associations; with an appendix showing forth the brotherly love of club anglers, the morality of their prize system, and their dislike of whiskey, tobacco and late hours, dedicated to "B," and written conjointly by Messrs. Hoole and Stebbings.—Ed.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

THE SECOND "FISHING GAZETTE" TOURNAMENT IN AID OF THE ANGLERS' BENEVOLENT SOCIETY.

We have much pleasure in announcing that a certain angling club, following the example of the Gresham, is going to come down very handsomely in the matter of prizes for the forthcoming Tournament; and Mr. J. Gillett, 40, Fetter Lane, writes that he "will have much pleasure in presenting one of our best cane fly rods with two tops, fancy whip, &c., &c., as a prize at the tournament," and hopes to be present on the occasion. N.B.—The tournament is to commence at 4 o'clock p.m., on Saturday, July 8th, at Mr. Warner's Fishery, The Welsh Harp. Applications for tickets should be made at once to Mr. Ghurney, secretary of the Anglers' Benevolent Society, 10, Baches Row, Charles Square, Hoxton.

DEATH OF MR. W. J. BULLOCK.

On Thursday morning, May 31, died, at his residence, 20, Colville Square, Mr. W. J. Bullock, one of the most genial and kind-hearted of men and most enthusiastic and successful of anglers. He contributed several articles on trout and salmon fishing to this paper, and his series of articles on "Spinning for Trout with the Natural Minnow," attracted much attention; in this, his own favourite branch of the art, he was *facile princeps*. Only a few weeks ago he was fishing the rivers in the Lake district, and intended to have described his wonderful success in some articles in this paper. His death was caused by a general break-up of the system, brought on by business losses and anxieties. It is with deep regret we announce his death.

STEVEN'S DOUBLE-HOOK MIDGE-FLIES.

Mr. R. C. Steven, of 15, West Street, Berwick, whose flies we have noticed favourably before, now sends us some samples of his double-hook midgets. These diminutive yellow, blue, olive, and golden duns, &c., &c., are beautifully dressed; and, by a very happy thought, their killing powers are doubled by having, in place of the ordinary single hook, two single ones tied together, *not* back to back, but parallel, so that they look like one hook until you examine them closely. Before using them, the points must be separated a little. We can recommend these double-hook midges strongly, because the great drawback in using the single-hook midge is that it is so minute that if you hook a good trout the hold is necessarily so slight that the particle of flesh soon gives. We have often experienced this. Now with two hooks embedded in the flesh, of course, the chance of holding is doubled. Trout streams are already getting low and as clear as crystal; the only chance of killing fish in the day time is by fishing up stream with gossamer tackle, the finest drawn gut, and very small flies.

NOTICES OF BOOKS, &c.

Crisp's Handbook to Angling. Guide to the Broads, Rivers, Lakes, and Decoys of Norfolk and Suffolk, &c., &c. Published at the *Independent* Office, Yarmouth. Price 3d.

This is a very cheap and useful little guide, containing particulars of the fishing, and a list of seventy fishing places. Coarse-fish anglers who have not yet tried Norfolk and Suffolk should take our advice and go to Yarmouth or Lowestoft. The sea air is magnificent and the fishing cannot be surpassed. In a future edition of Mr. Crisp's guide, we trust he will take out the directions for the manufacture of salmon-roe bait, which, by Act o Parliament, is an illegal bait, and renders the angler using it liable to prosecution as a poacher.

The Second Annual Report of the Council of the Scotch Fisheries Improvement Association. Published at the Office, 6, Hill Street, Edinburgh.

An unusual interest attaches to this report, inasmuch as it contains Mr. Archibald Young's notes on the recent Edinburgh Fisheries Exhibition. Many of our London exhibitors' and the clubs' exhibits are highly spoken of by the Scotch Salmon Fisheries Commissioner. The report also contains a list of Scotch fishery associations and angling clubs, which will be very useful as it is the only list of Scotch clubs in print we think. The reports of the progress of the association is very satisfactory, seeing it has only been established little over two years; we wish it continued prosperity, as it is doing a great work.

Summer Tours in Scotland.

The above is the title of a neat little guide to the various tours taken by Mr. David MacBrayne's steamers, the "Columba," "Iona," &c., from Glasgow, to all parts of the Highlands which can be approached by water, and in the Western Highlands the water dissects the land in every direction. The angler will find Mr. MacBrayne's steamers offer him wonderful facilities for getting at the best fishing in the Highlands; and the beautiful coloured map and many illustrations add greatly to the value of this handy and most useful little guide.

Drawn Gut Lines.

Messrs. Gillett, of 40, Fetter Lane, have sent us some samples of their drawn gut lines for notice. They are very nice indeed, beautifully fine and nicely stained, while the price for each is only 8d. They are three yards long. Our fly-fishing friends should make a note of this item.

Mr. A. W. Warner, Fishing-tackle Maker, of 35, Cannon Street, Birmingham, sends us his new price list. We have in past years often spoken highly of Mr. Warner's goods, and anglers will do well to possess his list. Mr. Warner had the honour of fitting out the Marquis of Lorne with salmon and trout rods and tackle for the Canadian waters. H.R.H. the Princess Louise got some very heavy salmon, as well as the Marquis. Mr. Warner's "Invincible Blue Upright" is still one of our most valued flies for a rapid trout stream. Mr. Warner's list is nicely got up, and can be had post-free by sending post-card to above address.

NOTES ON THE EEL.

The following may be interesting. Every season I manage to take a good few eels, and I quite coincide with T. N. Wickens, Esq. I have noticed, over and over again, when removing their entrails, their stomachs have been crammed with water-beetles, larvæ of water insects, and a creature very much resembling the common shrimp, only smaller: this seems an especial favourite. These eels being caught so very early in the morning, the process of digestion could not take place. In fact, nearly all the food taken in the night up to the time they were hooked being in a perfect state.

There is no doubt millions upon millions of animacules devoured by the satyr (amymone)—the *Linceus sphericus* of Muller, the *Pediculus aquaticus*, or water-louse, of Baker—and, for aught I know, the little cyclops, vulgarly the jumper—in the end become food for the eel. On a warm day you should go into a bed of weeds in a rivulet or stream, and get about a dozen of the last named on your naked legs, and watch their extraordinary movements; only be careful that ferocious young gentleman, the water-devil, does not let a little blood out of your leg. The above named, with many others, feeding upon animalcules, in their turn become the prey of aquatic larvæ and coleoptera, such as water-beetles, &c., and these in due course find their way into the stomach of the eel.

Thus not only do they destroy many creatures that live on the spawn, as well as the very young fry of fish; but it is well known they are wonderful scavengers, and get rid of an immense amount of matter highly deleterious to the water.

In a summer flood on the low-lying grounds of the Trent, when the water has not been more than 12 to 18 inches deep, I have seen eels in the neighbourhood of a deep pond gorge themselves to such an extent with dead worms killed by the flood, that they have been so sick you could toss them out of the water with a stick without the least difficulty.

Mr. Wickens, in his capital letter, says:—"When eels as well as other fish are about the process of multiplying, they are sick and ill, and out of condition, and eat little or nothing; but by the time they recover and require food, the spawn of other fish is out of danger." This is so true, more especially with pike, that I cannot understand anybody believing to the contrary. I should say about the time the eel is preparing to bring forth its young, an immense amount of spawn must be hatched, and the fish well formed and quite prepared to take care of themselves, and by the time the eel has recovered from having young there is an abundunce of food in the water for it. Water beetles not only feed upon the spawn, but they attack and destroy immense numbers of the very young fry. In fact, so voracious are these creatures, they have been known to eat the dorsal and pectoral fins of both gold and silver fish." Dr. Burmeister also mentions that a specimen which he kept devoured two frogs in the space of forty hours, and, nevertheless, when he dissected it shortly afterwards it was found to have entirely digested them. When you take into consideration the size of this beetle, as compared with two frogs, even if they were small ones, this feat beats all your Ben Brusts out of the field. This, then, and other formidable gentlemen of the same kind, eels devour, and in due course save thousands upon thousands of the finny tribe for the hook of the angler, for which kindness he ought to be for ever grateful.

In conclusion, if the anglers, instead of making a raid upon the useful and succulent eel, would get the T.A.P.S. (ye gods, what visions of jollity those four letters suggest) to drive those highly poetical, yet dreadfully destructive swans from the Thames during the close season, a considerable amount of the spawn that goes down their throats might, in process of time, go down the throat of the angler instead.

Mark Antony.

P.S.—I enclose you the eel-hook I use. The taft is made entirely of horsehair, taken from the tail of a stallion, not the mane. They will last out six of the ordinary whipcord tafts. What do you think of it?

[This would be all very well for the eel's case, only, unfortunately, he is in the best condition and has an insatiable appetite just when our coarse fish spawn, from March to June. The "taft" would be good for a night line.—Ed.]

NORTH-WESTERN ANGLING CLUB.

The thirtieth half-yearly supper of the above took place on Thursday the 25th ult., and was a great success, Mr. Leo Bonvoisin in the chair, faced by Mr. Harry Wynn as vice. After ample justice had been done to the good fare provided by our worthy host, Mr. Wetenhall, and the cloth cleared, the Chairman proposed the "Queen and Royal Family," which was duly acknowledged in the usual manner. This was followed with some good songs by Messrs. Wynn, Stead, Kelsey and Aldis. The Chairman then proposed the "West Central Association of London and Provincial Angling Clubs," coupled with the names of Messrs. Geen and Hoole, to which Mr. Geen first replied, touching upon many points that he considered necessary good for the anglers of the whole of the United Kingdom. Mr, Hoole followed, referring to his duties with the association, and upon being called upon by the chairman for a song, gave "Good Old Jeff"; then Mr. Garling, a visitor, gave "Tickled Me So," in a style that kept those present in a fit of laughter during the whole of the time he was rendering it. Mr. Underwood followed with a sentimental one, which greatly assisted in bringing the faces of the company into shape again, both songs receiving an encore. After which the Chairman proposed the toast of the evening, viz., "The North-Western Angling Club," coupled with the name of the secretary. Mr. Hill replied, and after thanking the members for the kind manner in which they had received the toast, gave an account of the doings of the club during the past season. The aggregate weight of fish weighed-in was 1209 lb. 1½ oz., Mr. Stead being at the top with 226 lb., Mr. Underwood next with 141 lb., and Mr. Marshall third with 117 lb. He also gave an account of the receipts and expenditure during the past six months, and said he was happy to inform those present that the club would commence the new season with a good balance to its credit in the hands of the treasurer. Then followed Mr. Marshall with one of his amusing songs, after which the Chairman proposed the health of our worthy host and treasurer, Mr. Wetenhall, which was duly drunk. Mr. Wetenhall, in his reply, remarked that during the fifteen years the club had been in existence, he was proud that the whole of that time he had held the position he now holds; he had seen it pass through many severe trials which, in his belief, would have broken the backs of many clubs of its kind; but he was happy to say it had boldly faced them all, and was as strong now as ever it was. He then proceeded to present the prizes, Mr. Stead coming first, taking five, viz., heaviest jack, club 21s.; gross weight perch, club, 10s. 6d.; heaviest perch over 1½ lb., portraits value 30s., presented by Mr. Mayman; gross weight chub, umbrella, presented by Mr. Hillier; and gross weight all fish, pair of boots, presented by Mr. Kelsey. The following also taking one or two prizes each:—Mr. Bonvoisin, gross weight barbel and heaviest tench, both club, 10s. 6d. each; Mr. Underwood, gross weight jack, club, 21s.; Mr. Patching, gross weight roach, club, 21s.; Mr. W. Roxbee, gross weight bream, club, 10s. 6d.; Mr. Shackell, heaviest jack taken at the Welsh Harp, season ticket, presented by Mr. Warner; Mr. Fareman, same terms, cup, presented by Mr. Austerberry; Mr. Plumpton, sen., gross weight jack from Welsh Harp, season ticket, presented by Mr. Sawyer; Mr. Mott, gross weight dace, landing net, ring and handle, presented by Mr. Dillon; Mr. Harding, gross weight all fish, pair of boots, presented by Mr. Wetenhall; Mr. Marshall, same terms, 21s., presented by Mr. Gooch; also one day's outing ditto, 10s. 6d., presented by Mr. Harding; Mr. Grindley, ditto, 10s. 6d., presented by Mr. Herriott; Mr. Isaac, heaviest jack, 10s. 6d., presented by Mr. Underwood, and gross weight all fish, 10s. 6d., presented by Mr. Field; Mr. Pearse, gross weight all fish one day's outing, cup, presented by Mr. Holmes; Mr. Weaver, same terms, &c., 10s. 6d., presented by Mr. Billings; Mr. Holmes, ditto, album, presented by Mr. Grindley; Mr. Greenwood, ditto, fancy table, presented by Mr. Halse; Mr. Smart, heaviest jack, picture, presented by Mr. Bonvoisin. After which a good list of prizes was given in for the coming season. Mr. Bonvoisin also brought before the notice of those present the two handsome book-cases that the club was now possessed of, and was successful in obtaining a number of promises of books for same. Then followed the encore songs of Messrs. Stead, Underwood and Garling, the latter again setting the company into motion. After which the Chairman proposed "The Press," and coupled with it the name of Mr. Widdecombe, of the *Camden and Kentish Town Gazette*, who, in his reply, said he always looked forward to the suppers of this club with a considerable amount of pleasure. After which Mr. Lealand gave the "Mince Meat Knife." The vice-chairman then proposed "The Visitors," which was responded to by Mr. Packman, sen., of the Waltonians, and, as time was drawing to a close, the secretary proposed "The Chairman and Vice-chairman," Messrs. Bonvoisin and Wynn replying. Mr. Rodel ably presided at the piano, and a most enjoyable evening was brought to a close in the usual North-Western style, with "Auld Lang Syne."—H.

RIVER REPORTS.

MID-THAMES.

" You know
What great ones do, the less will prattle of."
—SHAKESPEAR.

I am a fisherman at heart, and try and try to catch a Thames trout, but as yet this season have not succeeded, and can thus only prattle about what the great ones do, and write myself down one of the less. The river is in first-rate order for trout fishing, and good work during this condition of the water will assuredly result in reward. At Windsor, Bray, and Maidenhead I hear of the capture of some ten decent fish, and Marlow has not been backward in coming to the front with two or three fish of fair calibre. I may here mention that Mr. Maskell, of the George and Dragon, Marlow, has recently added much to his snug hostelry, and gives every attention to piscators, and feels like a fish out of water if his well is not full of bait and plenty of "jacks," or any other gorgers to eat it. At Hurley, two gentlemen fishing in the back waters, caught two nice trout and lost a " screamer," and from Henley I glean that Mr. Johnson has had a fish from Marsh Pool, Mr. Towsey two fish (returned, as just under two pounds), a patron of W. Parrott a fine conditioned trout from near Marsh Pool. At Hambledon, Mr. Barrett a fine trout of 7 lb., and several smaller ones, taken with fly, returned ; also at Hambledon on the 30th ult., Tom White, of Marlow, with two patrons, a fine conditioned trout of 7 lb. Thursday Evening.—Water in prime trim, but a nasty east wind has sprung up during the day, which, if continuous, will lessen somewhat the chance of sport ; but I think a good angler should in all cases say—" Blow the wind."—MARLOW BUZZ.

Ancholme.

A second meeting of the Ancholme Angling Association has been held at Brigg at the Nelthorpe Arms. Mr. T. Watson ably presided, and the greatest unity prevailed. The new rules were duly approved and passed, whilst an addition of twenty-five new members took place. The green and grey drakes have appeared on the trout streams, and are taken with the usual avidity. The rains of last week improved the fishing, but the wind is once more in the east, and the days are almost cloudless. This makes against the angling, except in the evening. After the drakes are over we shall have the usual run of summer midges. One good evening fly is made from a very small feather from the top of a dotterel's wing, with bright yellow silk and 000 hook. With the finest drawn gut or hair, I have caught with this when almost everything else has failed.—THOMAS FORD, Caistor.

Ballynahinch.

For these last eight days, weather has improved considerably for angling, waters risen a little, and wind mostly to the west. Peal and white trout have been showing well on the lake, but none of the latter have been taken as yet. Mr. Walter Scott fishing three days on Monday, got a salmon $9\frac{3}{4}$ lb, and on Tuesdae got a very nice peal $5\frac{1}{2}$ lb. clean run.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

The river is very small and clear, and the sport is not good, unless with worm and minnows in the shade. On the 20th Captain Saltmarsh killed a good basket with worm—$8\frac{1}{2}$ lb. Mr. Edwin Armstrong killed 5 lb. on the 27th ; Mr. Laing, Sunderland, killed a dozen good fish ; G. Armstrong two brace. On the 29th Mr. W. Hardy, Alnwick, made an early start with minnows, and killed a splendid basket—19 trout, $10\frac{1}{2}$ lb. ; Mr. E. Armstrong, one dozen ; Mr. G. Armstrong, four brace ; Mr. G. Laing, one dozen. On the 30th Messrs. Robertson, Smith, Cairns, and Hardy, from two to six brace. On the 31st Mr. Cairns a good basket, $1\frac{1}{2}$ dozen splendid trout.—A. GLASS.

Dove.

We have had large numbers of holiday anglers out this week, and their exertions have been well rewarded. The river, after last week's rains, has been in rattling order ; and if holiday makers and piscators generally had ordered the weather from the American weather-makers, it could hardly have been supplied in more perfect order. The trout have been rising first-rate, and good dishes have rather been the rule than the exception. The best sport on the open lengths was had in Dovedale, where nearly all kinds of flies have killed well ; also the worm and maggot. At Ashbourne, Ilam, Mayfield, Rocester, and Uttoxeter, sport could hardly have been better. Barbel are now scouring on the gravels, and coarse fishers are ardently longing for the opening of the season on the 15th. I see that a storm is predicted, but it looks a good way off, judging from the weather as it exists as I write to-day (Thursday).

Lochs Vennachar and Lubnaig.

Report of fish caught on Lochs Vennacher and Lubnaig for last week :—Mr. Steel and friend, Edinburgh, on Vennachar, killed two salmon, 18 and 21 lb.; a beautiful yellow trout, 5 lb. ; a lot smaller, average, $\frac{3}{4}$ lb. At Lubnaig. Major Moore, Sterling, and friend, on 27th, killed forty-seven beauties; average, $\frac{1}{2}$ lb. and mine host of the Crown, on 23rd, killed thirty-three to his own rod ; weight, $12\frac{1}{2}$ lb.—A. MENZIES, Crown Hotel, Callender.

Maelog (Anglesea).

The trout on the above lake rose well to fly during last week. On the evening of 22nd ult. Mr. Worsley, of Liverpool, five fine fish ; on the evening of 25th ult. and morning of 26th ult., Mr. J. E. H, of Ruckley, Salop, fishing with his son, twenty fish, nine of $\frac{3}{4}$ lb. and upwards. The present week has seen fair bags taken by Mr. Lyne, of Manchester, both in river and lake, the well-known teal wing and claret body fly doing most execution. The sea fishing has been also very good.—R.

Taw and Tributaries (N. Devon).

Water very low and clear ; wind still east. The change of wind to the S.W. had the prospect of raising the rivers and making them more fit for fishing, but it only lasted for a few hours, for the water was discoloured only and did not rise. I saw a dish of four dozen caught on Monday, and heard of some other catches, but the sky has been clear and the sun shone very power ful, that every fish could see the deception. It was only early mornings and late at night that any sport could be got.—RUSTY GAME.

Thames (Windsor).

Very little has been done in trouting this last week, only a couple of fish being had ; one by James Gray, 30th ult., out of the Windsor Weir stream, weight 5 lb., and one by Mr. Bentley, 28th ult., opposite Old Windsor Church, going 6 lb. A great many fish have been playing about. On the Weir stream yesterday evening I noticed several, some of them really good fish.—B. R. BAMBRIDGE.

Tweed and Teviot.

Since my last effusion on the angling in these rivers, the weather has been very bright during the day, and while this is all very well from a pleasure-seeker's point of view, it renders the angler's calling very unproductive. Last Wednesday Mr. James Kerss was successful in killing two salmon on the Hendersyde water, and later in the week he hooked other two—one of which was a strong and heavy fish—but did not succeed in landing any of them. No takes are reported from the Sprouston or Ednam House waters. On the Floors upper waters his Grace the Duke of Roxburghe, on Monday this week, caught three salmon, and on Tuesday he was also plying his line on the silvery Tweed. The rivers are very low at present, and angling for salmon must needs be very tame until a flood takes place. Trout angling is now in full swing, it being a very pretty sight to see the expanse of water above Kelso Bridge thickly dotted over with anglers, while the setting sun lends a peculiar charm to the scene. One gentleman, angling on the Tweed with preserved minnow, bagged 15 lb. of trout, and takes with fly have been very frequent. On Saturday night last Mr. Alex-Walker, jun., Sprouston, while fishing on the Tweed, landed a river trout measuring 22 inches in length and weighing 4 lb. On Wednesday night last Mr. J. O. Wilson, stationer, Kelso, caught a nice dish in the Sprouston water, one trout weighing $1\frac{1}{2}$ lb. and other two about 1 lb. each.—MAXWHEEL, Kelso.

Wye and Derwent.

The Whitsuntide holiday piscators have had but a middling week of it on these rivers with the artificial fly, owing to the weather being so excessively hot and bright in the middle of the day. The drake, or May fly, is now out on the above rivers, but not in very great quantities at the present time, and the fish have not began to take them at all eagerly yet. What flies I have seen are very fine ones, and there is every appearance of a first-class May fly season in Derbyshire this year. I have not heard of a single fish being killed with the drake up to the present. Trout are now feeding on the little blacks and yellows. They are completely glutted with the smallest black fly possible, the yellow dun, and the smallest insect blight that falls from the trees. The abundance of flies now upon these rivers makes fish very particular, and they require most careful fishing. Early in the morning, and late in the evening, are the best times to catch your dish of fish, especially while this bright hot weather continues. We have had great quantities of anglers down here fishing from all parts of the country, and I am very sorry to say their takes, as a rule, have been very small with the artificial fly, and only small creels have been the order of the day. Dibbing with the natural down-looker or oak fly on the Derwent has been followed with poor success in the middle of the day under the bushes and trees. There were six trout killed on the Whatstandwell water yesterday (Wednesday) with it, that weighed over 5 lb. I hear that Mr. Musgrove has killed six fish between Ambergate and Whatstandwell that were fully 5 lb. each fish, one with another. The groundbait fishers only fish early and late on the Derwent, but they have succeeded in taking several ground trout with both maggots and ant eggs.—GEORGE JAMES EATON.

Yore (Yorkshire).

The weather has been brilliantly fine during the past few days, and the majority of Whitsuntide anglers have returned home with light baskets, the water also being very low and clear. Several fair dishes have been caught with the stone fly, which is now on the decline, on some portions of the river, the flies being almost as difficult to obtain as the fish. On Monday I killed some very nice trout with this bait, and could have done much better if the sun had not been so bright. For evening fishing the killing flies at present are the May brown, yellow dun, black spider, and red spinner. The black midge was very thick on the water on Monday evening, the fish splashing at them all over the river, but no other fly was of any avail. Thunder appears to be hanging about to-day ; a good flood would improve all kinds of angling greatly.—FRANCIS M. WALBRAN.

FIFTY years ago a curious and by no means reverent custom, was observed at Aysgarth Church, Aysgarth. As the parish was very large, and the means of transit not always ready or easy, the inhabitants found the church the most convenient place for paying and receiving money. So on Sunday, immediately after service, they met in the vestry and squared their accounts. From the clerk's desk during service were announced all the sales, fairs, and missing or found articles in the parish. On one occasion the then vicar, a Mr. Wood, found in the vestry a written paper offering a reward for the recovery of "a black pointer dog with four white spots." He expunged the "spots" and inserted "eyes." The clerk not noticing the alteration, gave out "Lost, a black pointer dog with four white eyes," &c., to the astonishment and amusement of the congregation. The indignant official did not wait long for his revenge. He took the opportunity of abstracting a leaf from the vicar's sermon. The words preceding the missing leaf were "Moses had." The sermon proceded all right till these words were read, but the reader finding no connection between them and the next page, again read "Moses had." The clerk, looking up from his desk said, "four white eyes, sir." It is needless to add that this state of things has long passed away.

DOGS.—*Naldire's Prize Medal Dog Soap* destroys Fleas, Cleanses the Skin, and Improves the Coat and Health of the Dog. " Naldire's Soap is harmless to Dogs, but fatal to Fleas."—FRANK BUCKLAND. Price 1s. of all Chemists, Perfumers, and Grocers. N.B.—See that you get *Naldire's* Soap.

CLUB REPORTS.

ANCHOR AND HOPE.

The third annual supper of the above club took place on Tuesday, the 23rd inst., at the club house, William the Fourth, Canal Bridge, Old Kent Road. A capital supper was put on the table by the host (J. H. Rolling), treasurer of the society. After the cloth had been drawn and the usual toasts responded to, the secretary read the report, showing the society to be in a flourishing condition, both as regards members and finances. Several prizes were given, and many others promised; the remainder of the evening being devoted to harmony—there being some capital songs during the evening. After spending a thoroughly enjoyable evening the meeting broke up, at 2.15 a.m., with "Auld Lang Syne." The next return visit, South London district, will take place at the above club cn Tuesday, June 6th.—Daniel Davis.

May 5.

ALEXANDRA SOCIETY OF ANGLERS.

The members of the Alexandra Society of Anglers dine at the Pied Bull Hotel, St Margaret's, on Sunday, June 11, being their annual club dinner.—F. Wagner.

BERMONDSEY BROTHERS ANGLING SOCIETY.

An Eastern District visit will be paid to the above society on Tuesday, June 6th, when the favour of as many members as can make it convenient to attend will oblige.—Wm. Allen, secretary.

BOSTONIAN ANGLING SOCIETY.

The annual dinner and distribution of prizes will take place on Tuesday next, June 6th, at the Club House Dalby Tavern, Dalby Street, Prince of Wales' Road Kentish Town, N.W. Mr. Goodge, chairman; vice: Mr. Grathen, will be glad to see any friends that can look in that evening.—J. Jennings, hon. sec.

May 31.

CLERKENWELL PISCATORIAL SOCIETY.

The fourth annual supper of the Clerkenwell Piscatorials will take place on Monday, June 12, at 9 o'clock, at the Horse Shoe, Clerkenwell Close. Messrs. Emblem and Morgan will preside on that occasion. After supper the annual distribution of prizes to the successful winners will take place.—B. Stebbings, sec.

May 31.

CROWN PISCATORIAL SOCIETY.

This society is progressing favourably, the Thursday concerts proving very successful. Last meeting night there were several valuable prizes given and promised for the opening season. A complimentary visit will take place at their head-quarters, the Crown Tavern, Clerkenwell Green, on Tuesday, June 13th, 1882, and the following gentlemen have kindly promised to preside on this occasion:—Mr. Murray, of the Central Association, faced by Mr. Bonvoisin, chairman of the West Central Association, when we hope to have the company of all those that can make it convenient. Music provided.—W. H. Burwash, jun., sec.

May 31.

GOOD INTENT.

On the 21st inst., Mr. H. Brookwell brought in a pretty trout, 4 lb. 3 oz.; Mr. W. H. Beckett, one, 1 lb. 9 oz. On the 29th, Mr. Beckett, three nice fish, 4 lb. 3 oz. On the 31st, Mr. W. Roberts, four fish, one fish 2 lb. 6 oz., the others 1 lb. each, all from the Lea. Our district visit No. 2 West Central, takes place on Wednesday, the 14th inst., when we should be glad to see as many friends as can come on that occasion. No tidings of the medals from Edinburgh yet.—R. Murphy.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

Our nineteenth annual distribution of prizes will take place on Tuesday, June 6th; Mr. W. Phillips chairman, Mr. J. Page vice. One hundred and twenty prizes will be distributed. We shall be pleased to meet our brother anglers on the occasion. The annual supper will take place on Tuesday, June 13th.—J. A. Fitch, jun., sec.

GRESHAM ANGLING SOCIETY.

The annual meeting of this society was held on Thursday evening, Dr. Brunton in the chair. The meeting was largely attended and great interest was excited by the ballot taken for the members of the new committee. The gentlemen elected were Mr. Bentley, Mr. Harding, Mr. Bates, Mr. Austin, Dr. Lloyd, Mr. Parker, Mr. Frost, Mr. Graham Bennett, and Mr. Cartwright. It is strongly hoped that the society has secured a good working committee, and that truly good fellowship will prevail, so that it may still carry on successfully the objects for which it was founded. Lord George Hamilton, M.P., was re-elected president of the society amid a storm of applause, Major the Hon. E. R. Bourke and Mr. Alderman Fowler, M.P., being vice-presidents as before. We believe the society will soon strengthen its position in the city, and that another M.P. is likely to join its ranks; Captain Alfred being unanimously re-elected curator, and Mr. Bryant librarian. Mr. Crumplen received an ovation on again accepting the office of hon. secretary, probably heightened by a little discussion which took place earlier in the evening, to which it is needless further to allude. It was understood that his duties had been of a very arduous character, and the new committee will doubtless make some arrangement for him to have efficient assistance. Mr. Towse, the popular assistant secretary of the great International Fisheries Exhibition, brought up a specimen case of the American black bass, kindly lent by G. S. G. Page, Esq., Commissioner of United States Fisheries, and further added that that gentleman had very kindly undertaken to give the Gresham Angling Society an account of fish culture as carried out by the United States Government, an announcement which was very warmly welcomed, and for which a vote of thanks was quickly passed. Dr. Theodore Cash, who was present, has also kindly undertaken to read a paper on "The Barbule of the Barbel," a kindness which will be fully appreciated. It is intended to issue a complete list of papers to be read very shortly. A special vote of thanks was passed to Messrs. Jardine, Knechtli and Brett for the magnificent cases of pike and perch taken by them and preserved by Saunders for the society, under Mr. Jardine's superintendence. The evening closed with a warm vote of thanks to Dr. Brunton for presiding so ably over a meeting more than usually important, and which terminated in a very amicable manner.

IZAAK WALTON ANGLING SOCIETY.

The distribution of annual and special prizes took place on Wednesday, May 31, 1882. Prizes to the amount of thirteen pounds were presented by the president to the different winners, after which the secretary announced that there were up to the present time forty-one prizes to be fished for during the ensuing season, value over twenty guineas. The members will compete for three special prizes on Sunday, June 18, 1882, at Sawbridgeworth. All fish weigh according to the rules of the society. No competitors to leave London before the morning of the competition. The members will also compete for two special prizes on Wednesday, June 21, 1882, at Waltham, between Waltham Bridge and the lock at Ordnance Factory. Same conditions as the prizes fished for on the Sunday previous.

June 1.

KINGFISHER ANGLING SOCIETY.

Last Sunday night, about 11 p.m., Messrs. T. Stevens and S. D. Browning, of "Ours," succeeded in capturing two poachers, who were using a drag-net about 35 feet long, near Little Britain Bridge, in the river Rockingham, West Drayton. They were evidently trying to capture the roach that can be seen spawning in large numbers in the immediate neighbourhood. The fellows' names and addresses were taken, and Mr. T. Stevens has the net in his possession. It is unfortunate that our friends could not neglect their business to prosecute the poachers at Uxbridge. I almost forgot to mention that Mr. G. Hulbert, of the Westbourne Park Piscatorials, was present and rendered great assistance. It is not an easy task to tackle these hulking roughs at night and requisition their net; however, it has been done, and thanks are due from every honest angler.—G. A., hon. sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

A special meeting will be held on Monday next, June 5th, to arrange prizes for the season 1882—3. Members are requested to attend on that evening at 9 o'clock precisely.—Thos. Wm. Lucy, secretary

TRAFALGAR ANGLING SOCIETY.

The eighth annual supper will take place on June 14, the same to be paid for out of the funds. Members in arrears not clearing the books by June 7 will not be entitled to receive a ticket.—J. Gaze, sec.

TESTIMONIAL TO MR. GREVILLE FENNELL.

There are few men living whose life has been more devoted to the interests of anglers and the ventilation and introduction of angling subjects than Mr. J. Greville Fennell, or, as he is most extensively known, "Greville F."

Mr. Fennell is now in his seventy-fifth year, and at the early age of eighteen he commenced writing on subjects relating to angling.

He has recently suffered severe domestic affliction, and himself not in the full enjoyment of his usual health and strength, the opportunity of recognising his services has occurred; and it is earnestly hoped that a prompt and liberal response will supplement the effort which is now made to offer him not only a substantial appreciation of what he has done, but an evidence of respect for him in the maturity of life.

Thomas Spreckley, Treasurer,

A well-known north-country angler, whose boast was that he could catch fish with any man—honestly, when they were to be so taken, but whose motto was "fish I am here for, and fish I mean to have"—set his heart upon the capture of a fine salmon, which was known to be laid in the bridge pool. All honest means having failed, he was reduced to the painful necessity of a loaded, or leaded hook, which he very ostentatiously baited with a worm. His picturesque get up and known skill caused him to be a special object of attraction to a bevy of young ladies, who were showing some Sunderland friends the lions of the place. A youth in the party was greatly taken with the fly-fishing, which was quite new to him; and when attended by no results had his supreme contempt. A baited hook, however, was quite another thing, and meant business, and he now keenly watched the result, but judge his astonishment upon the salmon being hooked, played, and landed, to find the fish caught, not by its mouth, as he had been accustomed to see them taken at home, but by the vent! "Ah!" said skipper, "our Tees fish are queer petted things, and when they take to eating worms you never know which end they will swallow them with!"

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE THREE ASSOCIATIONS FISHERY SOCIETY.

SIR,—The proprietors of the River Wey Navigation, from whom we have rented four and a quarter miles of the river, kindly gave me notice of their intention to draw down the water between the Weybridge and Newhaw Locks, on the night of May 30th.

I had several important engagements for Tuesday evening and Wednesday, and was therefore unable to go down. I was naturally very anxious for the safety of the fish, especially as I knew the number of rascals who would appear on the scene with all sorts of appliances for their destruction. They have defied me to interfere with them on previous occasions, and I should have been pleased to witness their discomfiture in this instance.

The notice was so short that there was no time for consultation. Thompson, the T.A.P.S. river keeper, in whom I have great confidence, was just the man to manage the job. I wrote him to take it in hand, and to report to me the result I have just received that report, and, as it will no doubt be interesting to many of our readers to learn that we have fish in that water, and that they have been properly protected at a time when they would otherwise have been at the mercy of the Weybridge out-of-season, and out-at-elbow piscatorials, I will ask you to publish it.

I should like to add that I wrote to the president of the T.A.P.S. informing him of the liberty I had taken in asking Thompson to leave his ordinary duties. Mr. Spreckley, replied he was pleased that Thompson should have assisted us.—I am, &c., P. GEEN.

[COPY.]

Eastworth, Chertsey, June 1.

SIR,—I beg to report to you that I have watched the river Wey, which has been emptied, and, to the best of my knowledge, not a fish has been taken out.

Mr. Bungard, the chief inspector of police, sent me a man; he met me at Newhaw at 10 p.m., and remained with me till six in the morning. I found by the foreman of the river that they would not fill-in till about eleven or twelve o'clock that night; so, knowing that the river mustn't be left, I engaged another man (one I could trust) to assist me during the day. I engaged him from six in the morning till twelve at night for 5s. He is an ex-policeman. He relieved me while I went home to refresh, and then we both stuck to it till the water came in again and the river safe.

It was well that you took the precaution to have the river watched, for as soon as it got wind it was going to be drawn the idlers were about with sacks and baskets and landing nets to get the fish out. They couldn't make it out seeing me and the policeman there; they said they always were able to do it and ought to now. I told them the water was rented and they wouldn't be allowed to do so again. But, however, they went away again grumbling, and then again all day up to the time of the water coming down I was troubled with the street arabs after the fish, and some of them led us a fine dance, for as soon as our backs were turned for another part there would be a lot more come. We had to keep on the move all the time.

The water was lowered down to about 6 inches, so low, indeed, that the fins of the fish were above the water, and a splendid lot of fish they were too. I saw a few thousands of them, roach, chub, dace, and jack, and a few tench. Of course the biggest of them got in the deep by the flour mill bed, and there were a few bushels of them there I know by the agitation of the water. I am told that the last time the water was drawn off these fellows took away sacks full of fish and sold them, but I can answer for it, this time they didn't take one. I suppose you will want it watched now you have taken it over.

Mr. Bungard asked me to tell you that he charges 5s. for his man for the night; he is so busy or would have written to you. My expenses are 2s. and 5s. for the man, which will make 12s. in all. What am I to do, am I to charge it to our committee or to you?

Hoping, sir, that what I have done will meet with your approval—I am, &c.,
ALFRED THOMPSON.

HOOKS; AND CHARACTERISTICS OF *ABRAMIS BRAMA*.

SIR,—I ask your permission to allow me to thank Mr. J. H. Keene for being so good as to appreciate the merits of my invention so highly as to have the temerity to appropriate whatever honour may be due to the results of a long experience as his own; notwithstanding that several years have transpired since—after having already proved that existing ideas were erroneous, by imparting a proper inflection to various hooks—I brought out practically, and not theoretically, an implement with the requisite qualities, which Mr. Keene is now so kind as to adduce as the eliminations of his own inventive genius.

This hook was described and represented in diagrams some years ago in the FISHING GAZETTE, long after it had been practically and thoroughly tested—as I would not for a moment foist on the public a theoretical and untried instrument; moreover, the form was that which you yourself were convinced, at the time of publication, a hook should assume. The firm which produced the implement for me made more than one pattern of the hook, the best only being retained. A rejected pattern proved incontestibly that both Mr. Keene's and Mr. Pennell's ideas in relation to the shank were incorrect. The latter gentleman advocates the thickening of the main bend in order to secure rigidity. In my first hooks this plan was adopted; but the consequent attenuation of the end of the shank resulted in such a flexibility of the whole hook that in small trout flies the advantages of a good inflection of barb piece were annihilated; so as to make the hooks, under pressure on a bony or cartaliginous jaw, assume an ordinary Limerick or other allied form. As the result of a series of experiments on bodies of varying hardness, on the jaws of trout uncaught and of those which had already been brought to shore, I proved conclusively that the thickness of the wire from the end of the shank to the root of the barb piece should be, for all practical purposes, the same throughout its whole extent in a hook of even an approximately correct bend. A very trifling thinning of the end, however, I allowed at the head of the shank, more as a matter of convenience in relation to the tying of gut and fly-making than for any other cause. And now, turning to the minor bend at the base of the barb piece, I have only to remark that in a theoretically perfect and rigid hook there would be no strain whatever at this point, as Mr. Keene alleges; there would be no curve, but a pure, mathematical angle. On striking a fish a kind of jar would take place; but no strain that is a result of lateral leverage; yet, as the materials of hooks cannot be obtained possessing perfect rigidity, the inventor has to modify his machine in accordance with the properties of the things which he has at hand. On this account we find there is always a certain amount of leverage or strain, at the minor bend under the influence of pressure; even after we have imparted to a hook an inflection of barb-piece and point, so as to make the line of impact and line of force identical. So much is this the case, that I have had good sport with a set of hooks at which the line of impact or inflection, when produced, struck the shank at a point one third of the way down its length; whilst the mere fact of such a feat simply shows how ridiculous old ideas relating to inflection and impact have always been. The hooks last named were some which had been manufactured with the lines of impact and force identical, but which in some strange way became much more inflected in the process of tempering. In practical working we discover that the minor bend cannot efficiently be replaced by the typical angle of Euclid; as neither glass nor wire retain their perfect strength when doubled, even in a heated state, too suddenly on themselves; besides this, the exact degree of heat for such a delicate operation is difficult to attain.

Here, then, it is found that a bend must be substituted for the angle, yet an exceedingly slight curve, which differs little from an absolute angle; is all that is needed to obviate entirely the brittleness which otherwise would be produced by bending. The cases of fracture, to which Mr. Keene alludes, at the root of the barb piece, usually occur owing to three defects: 1st, too great eflection; 2nd, substitution of an angle for a minute curve; and 3rd, improper tempering or bad material.

The patterns of hooks which I have already mentioned as becoming too much inflected during the process of tempering, were also a good, but in the case of my agents, a rare instance of bad metal; the maker, however, told me that manufacturers are wholly at the mercy of the firms that supply the wire, the quality of which cannot be thoroughly ascertained until after the hooks are made. From the foregoing reasons it may be seen that any thickening of the minor bend is wholly unnecessary; and like the corresponding enlargement of the great bend in the Pennell hook, only causes the fly to float or sink in an improper position in the water. The fragile nature of the wire at the root of the barb and point, is due to other causes, being mainly the fault of bad workmanship. I wish Mr. Keene joy in the employment of his bayonet points, and deflected, or rather reflected, barbs. I can simply record that, in the first case, I had far rather have been without the hooks than with them, had not some good flies been dressed thereon; whilst, in the case of the barbs, I have always found the form insufferable; have only been too glad to replace them in their proper position; and, in case they broke off in the latter operation, to employ new flies; as experience has amply proved that a hook without a barb is a worthless machine when barbed steel is to be had. For though small fish may occasionally be caught fairly with a simple pointed hook, when they can be transferred to land at once, without playing, or sometimes when the line can be kept uniformly tight, still no sane man could believe a barbless hook to be in any way favourably comparable with an orthodox pattern; besides this, one of the great objects in the hook, which I invented years ago, and which I was the first to prove, both theoretically and practically, to be the form that hooks should actually assume—not merely as a subsequent shadowing forth, when others dared not grapple with the difficulty—is the assumption of a shape in which the barb-piece and barb are least obtrusive, whilst more effective in obtaining and retaining their hold on the fish.

Mr. Keene is again wrong in relation to Pennell's hook, which is not built on the Limerick principle—a principle that the latter gentleman says he abominates—but is merely a Kendal sneck-bend, somewhat thickened at the main curve, a trifle more inflected, yet without the lateral deflection.

I await the results of Mr. Keene's researches, which have yet to be developed, and thank your contributor for his magnanimous forecast of what his opinions will be, which lead him to adopt my views, and consequently patterns, almost in their entirety—even to the discarding of less inflected hooks, such as the "Crystal" and Pennell varieties; and for so kindly appropriating them as his own—a thing which indeed I might have expected, as my hook was a free gift to anglers, and any one might therefore think every thing connected with it, his own special property. I must remind you, Mr. Editor, that I have another hook, built on exactly the same principle as the first, but slightly modified in one respect, which I also intend to give to the brotherhood; and which, likewise, has had some years of practical work, though only intended for fine fishing for brook trout. To this, in a former article, I once made a passing allusion; and one of your printers was so good as to add the word "patent," which I know was not in my manuscript when I sent it. As this implement is *not* patent, Mr. Keene may perhaps inform us that—although, like its compeers, it has for long been in private circulation amongst my own angling friends—he shadowed forth the design in days gone by. Very well, I wish you luck with your designs, Mr. Contributor; but they both are my inventions.

Turning now to another subject, I have to report the capture of a lake bream in the Yore, a little above Ripon. The fish was shot by a rifle, and subsequently handed to me, as curator, for exhibition and preservation. Bream are very rare in this section of the Yore; and as there is such a close resemblance between the lake and white varieties, I give the detailed characteristics of the fish in my possession:—

Abramis Brama.

Body, extreme length, 24 inches; length to fork of tail, $20\frac{7}{8}$ inches; depth, $8\frac{1}{4}$ inches; width, $2\frac{3}{4}$ inches; girth, $17\frac{1}{2}$ inches; weight, $5\frac{1}{2}$ lb.

Head, length to rear of opercular valve, 5 inches; depth at nape of neck, $3\frac{1}{2}$ inches; girth at nape of neck, $9\frac{1}{4}$ inches.

Scales of lateral line reaching a width of 1 to $\frac{7}{8}$ of an inch.

Nostrils, each with double apertures, and transverse groove in front, just above the lip.

Head small; opercular arch rounded with air-tight branchial valve.

Branchiæ, three pairs, and arches provided internally with semi-cartilaginous flexible processes or branchial fringes.

Mouth small, toothless; lower lip shorter, above which a groove runs to an inch behind the buccal orifice; lower lip curved upwards as a tubercle internally.

Colour, generally a rather dark or silver grey, with a slight tinge of yellow. Body whiter below the lateral line than above. Upper aspect of head olive green; the whole of which was somewhat yellower than the rest of the body. Bright yellow spot on left pre-operculum. Irids yellow.

Form, as far as posterior extremity of anal fin, oval; vertically depressed.

Lateral line of 57 scales, 12 above and 8 below. Couch gives much fewer in his plates both of lake and white bream.

Pectoral fin, 17 rays; lower border crescentic; second and third rays longest, not reaching to the ventrals.

Dorsal fin, 11 rays; last ray double and of same length as first, which is rather less than half the length of second. Anterior root much behind that of ventral, and only very slightly in advance of vent; second and third rays longest.

Ventral fin, 9 rays, reaching vent; second ray longest.

Anal fin, 27 rays; anterior border arcuate; third and fourth rays longest. Yarrell mentions this fin as containing 27 rays, but Couch limits the number to 24 or 25.

Caudal fin, 19 rays (by 10), with five successively smaller, imperfectly developed supplementary rays supporting each border, making 29 rays in all. Couch gives 17 as the number.

Colour of fins generally dusky to a bluish grey, the pectorals being much the lightest in hue; the dorsal and caudal rather dark, and the anal the darkest of the number, with a decidedly deep bluish or smoky grey shade.—I am, &c.,

R. Balderston.
Curator and Librarian of the Ripon Naturalists' Club
and Scientific Association.

[We remember Mr. Balderston's hook, and like the shape very much, but consider the point should have the side twist, in spite of Mr. B.'s theoretical objections. Does Mr. B. know what kind of bream it is which so abounds in Semmer water near Hawes? This lake runs into the Yore.—Ed.]

FELL BECK FISHING.

Sir,—Will you kindly tell me, in your next issue, the best place in Westmoreland for fell beck fishing and the best place to stop at?—I am, &c.,

Fisherman.

[Perhaps our correspondent who wrote about the Fell Becks will answer this, although "Fisheman" might gather from that article a good idea or two as to where to go.—Ed.]

HAIR AND GUT CASTS, FLY LINES, &c.

Sir,—Believing that your columns are ever open for the furtherance and advancement of angling in all its branches, I will lay a comparison before you, which I hope will convince you of the superiority of hair and silk fly line to prepared silk braided. In the first place, we will take hair and gut casts. I will bear all criticism from my brother anglers, if I am wrong, when I say that hair lashes or casts are far superior (providing you can obtain strong hair) to the finest gut. The great secret of success in fly-fishing for trout and grayling, and even dace, in fine waters. It always was, and always will be, an acknowledged fact that you may take a dish of fish with hair, when you might throw and cast in vain with gut, in the Derbyshire and other extreme fine waters, with the same flies, and why?—because of its lightness and buoyancy. But here is an obstacle—where is this strong hair to be obtained? This is the only difficulty. We occasionally do come across this very rare article, and then we have more applications for it than we can supply. I must say he must be a skilful angler (an adept) to use hair; plenty of space to kill his fish, no bushes, stakes, piles, or stones.

I have quoted the above comparison for the simple fact of explaining the reason I give that hair and silk plaited and tapered fly-lines are superior to prepared silk braided lines, or any other yet introduced. Of late years we have been able to obtain very fine gut; but to use this to advantage we must have a good plaited hair trace, collar or point, or a well-made hair and silk plaited line for buoyancy and lightness on the water, to depend on using the dropper flies to advantage. Those who use prepared silk, or other lines than those mixed with hair, can only depend in a great measure on the point fly, or stretcher. I thoroughly agree with the writer who signs himself "Raven," in your number of May 20; I thank him very much. I must say a more able and accomplished letter on this subject (I should say a greater authority) I do not wish to quote; good, sound practical experience. You see, he adds, the great requisition is lightness, and advocates hair and silk, and states that some anglers have a difficulty in casting the fine hair and silk line. In this instance I would advise them to use not quite so fine a tapered line, it will still lie light on the water, and as they progress in the manipulation or casting the fly, the finer the line they will devise. I see again in the same number, May 20, an article "Gut and Hair," signed "Creel," a full substantiation of my words—lightness, &c.; and adds, justly, freedom from entangling itself, for its becoming straight in the act of throwing, durability, &c.

The great and main object is, when casting a long line on the surface that it should fall and lie light, and not drag through the water.—I am, &c.,

Trout.

[Having fished the Derbyshire streams for fifteen years, we may claim some little knowledge of them, and will back our drawn gut collar against any hair ever grown, and our plaited waterproofed silk against any silk hair ever plaited or twisted; we cannot say more than this.—Ed.]

HOW THE CASTS WERE MEASURED AT THE "F. G." TOURNAMENT.

Sir,—I have noticed query No. 3, by M. B., in last Saturday's Fishing Gazette, and have seen Mr. J. P. Wheeldon to-day about it.

We think your correspondent M. B. has mixed up two different things, for the length of cast from a fly-rod should be from point or top of rod to fly; and in "casting from the reel" the length of line should be measured from the reel.—We are, &c.,

A. G. Jardine.
May 30, 1882. J. P. Wheeldon.

FISH SLIME.

"Mark Antony" sends us the following for publication:—

In reply to your note, I did some years ago make an examinination of some "fish slime," but at the present moment I am unable to find my laboratory memorandum, where I recorded the results.

I remember, however, that I found a viscous or glutinous adhesive substance, composed principally of carbonate of lime, and in some cases (especially in salt-water fish), an additional element of chloride of sodium.

About this time I met the late Mr. Frank Buckland, and he told me that in nearly every case, especially in that of the eel (*anguilla*)—this slime was a true skin, which greatly protected it from cold, and its removal caused the most acute pain.

You are at liberty to incorporate this in any communication you may feel disposed to make, and in the event of disopinion I will exhaust the subject in an article for you.—I am, &c.,

J. V. T.

Chemical Laboratory, 1, Carlyle Square, Chelsea, S.W.,
29th May, 1882.

WORMS WANTED.

Sir,—I shall be glad if any of your readers could tell me where I could buy some worms, such as brandling and smalll red-worms, in quantities.—I am, &c.,

354, Moseley Place, Birmingham. W. J. Evans.

FISHING AT SANDOWN.

Sir,—Can you or any of your readers kindly tell me if there is any good sea-fishing at Sandown, Isle of Wight; and, if so, what tackle one should take.—I am, &c.,

W. R. West.

May 31.

SHREWSBURY SEVERN ANGLING SOCIETY.

A special meeting of members of this society was held on Tuesday week at the Club-house, 59, Mardol, Shrewsbury. The chair was taken by Alderman Groves, and amongst others present were—James Watson, Esq. (Berwick), the Rev. E. Myers, Councillor J. Groves, Messrs. Hawley Edwards, C. Matthews, F. Jackson, H. Smith, W. A. Smith, R. Ellis, sen., J. Woodfin, Milner, R. O. Jones, Wycherley, Morris, Geo. Groves, Fred H. Morgan, hon. sec., &c.

The Chairman said as this meeting had been called in the interests of the public at large, and not for a particular class, he had readily consented to take the chair. He warmly supported the steps that had been taken by the society to preserve the sport in the river within the limits of the borough, in the interest of the holders of rod and line licenses. It was a well-known fact that gentlemen would come to Shrewsbury during the season if anything like sport could be secured for them. It was a matter for regret to see so many of the fry of salmon hawked about, which had manifestly been caught by net.

Mr. Hawley Edwards said, as they knew, he presented the memorial from this society to the Board of Conservators at their last meeting, and he thought they would all be satisfied at the manner in which it had been received. The Board were quite willing to co-operate with any steps the Corporation might wish to take within the immediate vicinity of the borough; that being so, they had advanced one step in the right direction. There were two courses open to the Association: one was by getting the Corporation to take the matter up and support an Act of Parliament vesting in them the entire control of the river within the borough. If that were done there was no doubt that the Board of Conservators would support the Corporation of Shrewsbury in their application. The only difficulty with which that course might be met was that Parliament might say, "You are asking us to deprive persons within the borough of the right of fishing with nets." His answer to that would be, in the first place, that no person had a right to fish in the river without the consent of the riparian owners, if they chose to exercise their rights. Therefore, assuming that the riparian owners in the borough would be willing to support the Corporation if an Act conferred upon them the entire control of the river within the borough, that difficulty would be got rid of. The other matter was a question of expense, upon which he was not in a position to give much information, because he did not know what an Act of Parliament would cost. The preliminary steps might be taken by the Corporation, and they might then ask that some guarantee should be given to them in that direction. There was another course open to the association, and one which, he took it, would oust the Board of Conservators entirely so far as trout and coarse fishing was concerned, and that followed from a decision which had recently been given in one of the superior Courts as to the rights of the riparian owners as to fishing in a stream. If the riparian owners would agree to lease the fishing, the whole question of an Act of Parliament might be got rid of, and the owners could lease the right of fishing to the Corporation or any other body. At present, the granting of a license by the Board of Conservators did not give the holder of such license a legal right to fish unless with the consent of the riparian owners.

These observations led to much conversation as to what would be the best plan to pursue, in the course of which Mr. Watson thought it would be well to conciliate the riparian owners before they went for an Act of Parliament.

Rev. E. Myers thought that the practice of allowing ducks on the river was the cause of the destruction of thousands of young fish and myriads of spawn.

The Chairman replied: I'm afraid you could not stop that if the owners claimed the right of navigation.

Mr. Hawley Edwards stated that even now holders of licenses for netting salmon could be prevented fishing by owners of land adjoining the stream on either side; and that owners on either side had a legal claim to the centre of the stream, with a right to pass over it just the same as in the case of a highway.

After further conversation, the following resolution was agreed to:—"That the following gentlemen form a committee, namely, Messrs. Watson, Groves, Morris, Wycherley, Edwards, Myers, Ellis, and the secretary, for the purpose of ascertaining from the riparian owners within the borough their willingness or otherwise to grant to the Corporation of Shrewsbury, or a body of trustees, the right of fishing for a term of years so far as their respective lands extend, keeping in view their existing rights; and also, if necessary, to draw up a memorial to the Corporation if they entertain the matter."

The following letter, addressed to the secretary of the society, was read from Mr. Willis-Bund:—

"Dear Sir,—I am much obliged to yourselves and the Shrewsbury anglers for the kind appreciation of what the board did at their last meeting. I am sure that the board will always be only too happy to co-operate with the anglers in preserving the fish and promoting true sport. I wrote to the Mayor of Shrewsbury to say that we must apply to Parliament to give us power to make regulations as to coarse fish, our present power extending over salmon only; and the town clerk replies that the matter shall be attended to. Meanwhile, I trust your Society will do their best to promote action by the town council in the matter.—Yours faithfully, J. Willis-Bund."

THE UNITED LONDON ANGLING ASSOCIATIONS' FISHERY SOCIETY.

ESTABLISHED 1822.

President, P. Geen, Esq.; chairman, Mr. J. C. Murray; vice-chairman, Mr. R. Ghurney; trustees, Messrs. Jennings, Cundall and Hatfield; hon. secretary, T. Hoole. Bank—London and County Bank (Limited).

RULES.

I.—That the name of this society be "The United London Angling Associations' Fishery Society," and that whenever in these rules the word "society" is used, the said United London Angling Associations' Fishery Society shall be meant.

II.—That all meetings of the Society be held at the Star and Garter, St. Martin's Lane, Charing Cross, unless otherwise determined.

III.—That the society be in union with the West Central Association of London and Provincial Angling Societies; the United London Anglers' Central Committee; and the Central Association of London Angling Clubs, hereinafter called the three associations. That the committee be composed of 36 members, 12 from each association, to be elected annually.

IV.—That the sole objects of the society be to acquire, rent, stock, and preserve any water or waters for the exclusive use of its members, except where the committee deem it necessary to make exceptions, all of whom must hold a privilege card from one of the three associations; the tickets of membership of the society to be issued by each of the associations with the privilege card, and that one shilling per annum or such sum as the society may decide upon at its annual meeting be charged to each member for the said ticket, and handed by the said three associations to this society, which shall defray cost of printing only.

V.—That the society shall be managed by an executive committee of fifteen members, five from each association, five to form a quorum, who shall elect their own chairman, vice-chairman and secretary, one from each association. No member of the executive to hold more than one office.

VI.—That three trustees, one from each association, shall be elected annually, eligible for re-election, who shall have a right to be present at all meetings of the executive committee and vote at all meetings, such trustees not to be elected from members of the executive committee.

VII.—That the executive committee have full power to acquire and rent any water or waters without reference to the society.

VIII.—That the committee shall frame such regulations regarding close seasons, or the sizes of fish, or weights of fish to be taken from its waters, as may be deemed desirable, such regulations after being submitted to the joint committee of the three associations and ratified by them, to be binding on all members of the society.

IX.—That the executive committee shall have full power to do anything needful to carry out the objects of the society, also to prosecute or order the prosecution of any person or persons reported guilty of illegal fishing, poaching, netting, or doing anything injurious to the society's fisheries; and may also reward any person or persons concerned in the detection thereof.

X.—That three auditors, one from each association, be elected annually to audit the accounts and certify to their accuracy. That there shall be an annual meeting of the society in May, to approve of a report drawn up by the executive, a copy of which report shall be forwarded to each association.

XI.—Under no circumstances shall the funds of the society be used for the cultivation of salmon, trout or grayling.

XII.—That all funds shall be deposited with the London and County Bank, Limited, until required, and withdrawn only by the trustees after a vote of the executive committee.

XIII.—That the meetings of the executive take place on the second Monday in each month, and the meetings of the full committee once in three months, viz., second Monday in June, August, November, and February; the secretary to have power to convene a meeting of the committee at any time, should occasion arise for so doing.

XIV.—That these rules shall be final and binding, and cannot be altered or added to unless the executive call a special meeting of the society for the purpose.

XV.—That this society shall not be broken up so long as one third of the delegates are willing to continue it.

T. HOOLE, hon. sec., Mortlake, S.W.

FISH PRESERVATION IN BELGIUM.

THE Belgian Legislature has taken a laudable initiative in framing some salutary regulations for preventing the pollution of streams and favouring the increase and better preservation of freshwater fish. The network of canals and small rivers that intersect the country are well worked by the native lovers of angling, and, from personal experience, it may be stated that there is scarcely a realm in Europe where the rod and line are in greater request. In general, except in the Ardennes, where the hilly streams furnish excellent trout, the fish are poor, and of the so-termed coarse species, but good sport is to be had even with tackle of the most primitive material and with the simplest bait, in close neighbourhood of almost every town of the various provinces. The permission to fish in the running or tidal waters, and the canals, which are State property, is granted to rich and poor alike, and obtainable by annual licence in the several districts for a merely nominal sum. A special authority, rarely granted, must be procured to use nets or other engines for the wholesale capture of the finny tribe; whilst the holders of the licence are, by the terms specified on the document, individually constituted either as informers or preventive agents in any infraction he may notice against the fishing laws. The practice, it would seem, might be advantageously imitated in the United Kingdom for the benefit of the innumerable votaries of the gentle craft.

The Academy of Belgium, with the desire of fully seconding the views of the Government in the recent revision of the laws affecting pisciculture, and favouring the increase and preservation of fresh-water fish, has offered a premium for the best essay or treatise on the subject. One of the members has placed the sum of three thousand francs (£120) at the disposition of that scientific body, to be adjudged for the most complete and satisfactory answers to the following questions:—

1. The names and nature of the special ingredients used in the principal industries which, becoming mixed with the waters of streams, rivulets, &c., render them incompatible with the existence of fish, and also improper for the alimentary usage of human beings or cattle.

2. A list of the rivers, streams, &c., in Belgium which are at present depopulated of fish by this state of matters, and an indication of the special industries in the vicinity or on the banks of these rivers, as well as a list of the edible fish found therein before the establishment of the riverside factories.

3. The study and proposal of practical methods for the purification of water discharged from factories, to render them compatible with fish life without detriment to industry, by combining the resources offered in the construction of deposit-tanks and filters on the employment of chemical agents for deodorisation.

4. Separate experiments and their results upon the ingredients used in special manufactures that cause the death of fishes, and upon the resisting powers that every species of fish, fit for food, can offer to these causes of their destruction.

The essays or treatise must be written in the French language, and further particulars may be obtained upon application to the secretary to the Royal Academy of Arts and Sciences of Belgium, at Brussels.

"HELGRAMITE,"—DOBSON OR DOBSELL.

THE helgramite is a "killing" bait for black bass. By that name it is known in the south, in the north it is known as Dobson or Dobsell. Our rivers and canals are full of them and yet a large number of fishermen never saw them and few have used them. By anglers who know, it is in constant use from the last of June until the close of the fishing season. In appearance and shape it very much resembles the thousand-legged worm, and has pinchers like a pinching bug. It grows to be about 3½ inches long, and is of a dark brown colour; it instantly clings to any objects it strikes, and lives entirely under the water and feeds upon decayed vegetation and matter of all kinds. It protects itself from fish by hiding under rocks and drift in the bottom of streams, or in the crevices of submerged stone walls. They are found under cobble stones and rocks, on the riffles, or clinging under the timbers of old and decayed dams and rotten driftwood. In the canal and feeders, they live in the walls of locks, on the gates, bridge timbers, and sunken boats. They are caught in the riffles by standing in the stream with a minnow net, set so as to hold the upper end of the brails together in one hand; the lower end of the brails spread so as to stretch the lead line on the bottom of the stream; then with a hoe turn over rocks and stones as far up the stream as you can reach. Being thus disturbed, the helgramite will curl up in a ball and drift into the net, from which it must be taken before resetting the net. Timber and driftwood must be turned over, for they will be found underneath. The difficulty in finding them in canals is because of the water being too deep to wade. The theory of some naturalists is that the helgramite develope into butterflies, and that the butterflies dig holes in the river bank and deposit eggs that are hatched the next year into helgramite; but the more practical fishermen say that hundreds of small ones are found through the season, with the larger ones on rocks and decayed wood in the streams, showing that is where they breed and multiply. In early fall they burrow into the banks of the stream and remain in that condition until spring. As bait, they are better than craw-fish, and when used are hooked under the shell that covers the neck. All kinds of fish take them readily, and the angler is not annoyed by turtles eating them off his hook. They will live for months if kept in a cool place, in a bucket or box, partially filled with pieces of moist decayed wood.—From an Ohio gentleman living near the Wabash and Ohio Canal.

ALFRED YOUNG,
"The GOLDEN PERCH,"
402, OXFORD ST.,
LONDON, W.
TRADE GOLDEN PERCH MARK.
FISHING RODS and TAKLE,
of every description.

THE ODOR OF THE FOREST
THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History.

Its departments are:—

The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.

The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park Row, New York, U.S.

Subscription agents for Great Britain:
Messrs. SAMPSON LOW, MARSTON, SEARLE, and RIVINGTON, Crown Buildings, 188, Fleet Street, London, who can supply specimen copies.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM,

THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth. Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

TROUT FISHING (lake and river,) about best in North Wales, FREE to VISITORS. Excellent sea fishing and bathing, boats on lake and sea Best places in Anglesea can also be fished from MAELOG LAKE HOTEL, Ty Croes Station, near Holyhead.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation at the "ARUN" FAMILY and COMMERCIAL HOTEL, Pulborough, Sussex. T. PEARCE, proprietor.—There is in connection with the hotel, for the use and enjoyment of visitors, a bowling green, skittle saloon, quoit ground and billiard room. Special accommodation for anglers, bean feasts and private dinner parties, on moderate terms. The river Arun is noted for good fishing. Good stabling accommodation. Particulars obtained of T. PEARCE, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

C. J. GREENE,

54, LONDON STREET, NORWICH,

Hon. Sec. to the Yare Preservation Society, invites inspection of his Large and Superior Stock of Fishing Rods and Tackle of every description.

NATIONAL FISHERIES EXHIBITION, 1881.—Special Prize £10, and Prize Medal awarded for the Best Collection of Rods and Tackle suitable for the Norfolk and Suffolk Inland Waters.

TROUT-FISHING,

With FLY, MINNOW, WORM, &c

BY

THOMAS FORD,

Price One Shilling.

130 different Flies, with ways of manufacture and seasons for use. Post free from Author, Caistor, Lincolnshire. Agents wanted. Best Trout and Grayling Flies 2s. per doz. Fly List, one stamp.

Orders taken for Ova (from 25s. per 1,000), and Trout Fry, (from 40s. per 1,000), best strains only. Price List on application.

THOMAS H. CHUBB,

Manufacturer of FISHING RODS, ROD TRIMMINGS, FLOATS, REELS, TROLLING SPOONS, Brass and Wooden Landing Net Frames, Camp Chairs, &c. Also turned stock of ash, lancewood, hornbeam, &c, furnished to pattern.

ADDRESS:

THOMAS H. CHUBB,

POST MILLS, VERMONT, U. S., AMERICA.

Send for price List on post card. (Foreign post cards can be had at any any Post Office for 1½d. each.)

THE REGISTERED GLOUCESTERSHIRE SPINNER FOR SALMON, TROUT, AND PIKE.

Awarded the Government Silver Medal at Norwich, and Diploma of Merit at Edinburgh. It has received the patronage of royalty, the nobility, officers of both services, and many of the most distinguished anglers of the day. Its reflection in the water from its construction, spinning powers and durability cannot be surpassed. Numbers of most gratifying testimonials have been forwarded to the inventor from gentlemen using it in lake and river trouting. Price on application to W. WIGLEY, Cheltenham.

The Fishing Gazette.

SATURDAY, JUNE 10, 1882.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION 1883,

A MEETING of the General Committee was held at 24, Haymarket, on the afternoon of June 5, His Royal Highness the Duke of Edinburgh, K.G., in the chair.

Present: His Royal Highness the Duke of Edinburgh, K.G.; Count Gleichen; the Marquis of Hamilton; the Earl of Ducie, P.C.; Lord Suffield; the Hon. Sir Alex. Hamilton Gordon, K.C.B., M.P.; the Hon. A. T. Fitzmaurice; Sir Fredk. Bramwell, C.B.; Colonel Christopher C. Teesdale, R.A., C.B., V.C.; Edward Birkbeck, Esq., M.P.; John A. Blake, Esq., M.P.; John Pender, Esq., M.P.; Charles Poland, Esq.; E. Lonsdale Beckwith, Esq.; Mr. Deputy James Bell; W. L. A. B. Burdett-Coutts, Esq.; W. Oldham Chambers, Esq.; Henry Ffennell, Esq.; Alfred G. Jardine, Esq.; J. J. Karmé, Esq.; Professor Leone Levi; T. J. Mann, Esq.; Colonel J. C. D. Morrison; R. D. Odell, Esq.; J. L. Sayer, Esq.; James Stevenson, Esq.; C. Cecil Trevor, Esq.; J. W. Willis Bund, Esq., LL.D.; W. H. Williamson, Esq.; Fredk. Wiseman, Esq.; W. Fell Woods, Esq.; H. E. H. Jerningham, Esq., M.P.; Jethro Hornblower, Esq.; Jas. Weston, Esq.

Sir B. T. Brandreth Gibbs, the director and secretary, read the minutes, which were approved.

His Royal Highness then called upon Mr. Birkbeck, M.P., the chairman of the executive committee, to read the report, which would be found to be a *résumé* of all the important matters that had been transacted by the executive committee.

EXTRACTS FROM REPORT.

The executive committee has the pleasure of laying before the general committee the following condensed report of its proceedings since the last meeting:—

Her Majesty was graciously pleased to approve of the general scheme of the prospectus that was submitted to her.

His Royal Highness the Duke of Edinburgh, in proof of the interest he takes in the fishing industry, has permitted his name to be added to the general committee.

A public meeting was held at Willis' Rooms on the 27th of February, under the presidency of H.R.H. the Prince of Wales.

The offices at 24, Haymarket, have been taken, and the necessary furniture and fittings obtained.

The executive committee has unanimously elected Sir Brandreth Gibbs as director and secretary.

The executive committee has already received through the Foreign Office an intimation that the United States Congress propose to vote the sum of $50,000 for the purpose of defraying the expenses attendant on the exhibition of their collection, which will be so extensive as to occupy 10,000 square feet, and must therefore form in itself a very attractive feature. It is proposed to send the collection over in the Government new steamer, specially constructed for fishery purposes.

The time for entries to be received from the United Kingdom, Ireland, America, Europe, and Canada has been extended to September 1, as a final limit.

The Committee has announced that it is ready to receive and consider the offer of money-prizes made by private individuals or public bodies.

Sub-Committees have been formed for the consideration of the following subjects:—

1. An Essay Committee.
2. Deep Sea Fishing, including Herring, hand and long line.
3. Mackerel and Pilchard.
4. Shell-fish and Oysters.
5. Freshwater Fish, including Salmonidæ.
6. Pisciculture.
7. Life-saving, &c.
8. Loan Collections.
9. History, &c., of Fishing.

The proper legal form has been prepared to be signed by Guarantors, setting forth the limit, &c., of the liabilities attaching to each Guarantor, and the majority of these forms have already been returned duly signed.

The total number of documents sent from the office, in addition to the daily correspondence and ordinary work, amounts to upwards of 39,500, consisting of prospectuses, entry forms, &c., in English, German, and French, invitations, letters to Mayors, &c. All the exhibitors at the Norwich and Edinburgh Fisheries Exhibition have had prospectuses and entry forms sent to them.

The Executive Committee has appointed Messrs. Lovelock and Whiffin, public accountants, as auditors, to make a monthly examination of the accounts.

The Executive Committee has the pleasure now of drawing attention to an important matter, which must form one of the special features of this report, viz.:—Their proceedings with respect to the site of the exhibition, and the arrangements connected therewith.

The Sites Committee having viewed several localities, eventually came to the conclusion that, if it could be obtained, there appeared no site equal to the Horticultural Gardens at South Kensington.

The Fisheries Exhibition are to have the entire use of the Gardens, with right to erect glass, lean-to, or other temporary building, as they may deem fit. To erect such buildings anywhere throughout the Gardens (except a square portion allotted to the Royal Horticultural Society for their one or more great horticultural shows).

The Fisheries to make water-tight (sufficient for their own purposes) the roof of the conservatory and circular galleries, and to whitewash and distemper the inside of the arcades, circular galleries, &c. In consideration of these improvements, Fisheries not to make any further payment for the use of the site; but if, after the close of the Fisheries Exhibition, and when all the receipts and expenditure have been finally adjusted and balanced, it should prove to have been a financial success, the Royal Commissioners of 1851 are in that case to receive one-half of the net balance remaining.

On the motion of Sir A. Gordon, K.C.B., M.P., seconded by Lord Suffield, it was resolved that the report be received and confirmed. In moving this, he expressed his opinion that the interest of the general committee and the exhibition had been well attended to by the executive committee.

On the motion of Sir Fredk. Bramwell, seconded by John Blake, Esq., M.P., it was resolved that, considering the national importance of the Great International Fisheries Exhibition, and the magnitude of the expenses connected therewith, that application be made to the Treasury for a grant in aid and to the Government for general recognition. In moving this resolution, Sir F. Bramwell said that in the former exhibition, although of far less importance, aid was given, and, under these circumstances, he thought, if this application was made, it would be well attended to, more especially having regard to the extremely influential patronage of their Royal Highnesses the Prince of Wales and the Duke of Edinburgh.

His Royal Highness having inquired whether any of the members present had any subject to bring before the committee, Professor Leone Levi suggested that the executive committee should consider the propriety of appointing a special sub-committee having regard to the economical condition of fishermen.

His Royal Highness, in reply, said, Perhaps I may be allowed to answer Mr. Levi's question, because it happens to be a point in which I take special interest; and you may have seen what I said at an original meeting at Willis's Rooms, where I expressed my great hopes that there would be a conference dealing especially with the economical condition of fishermen and the owners of boats, and that with regard to the safety of their lives that would also be taken into consideration; and I think the subject which has been brought before the committee would be dealt with better by conference at the time of the exhibition than by taking any steps with regard to obtaining any special information, and it would be better for individual persons to bring forward at that time what their opinions are on the matter, and then it would be treated exhaustively. I may add, as to the condition of fishermen, that I am preparing a paper on the fishing population, containing information which has hitherto not been obtainable, and which I hope will be of service.

Mr. W. H. Williamson having asked to what extent the banks had subscribed to the exhibition, and that Sir John Lubbock was well able to bring the matter before the various bankers, and also to what extent the railways had given their support, Mr. Birkbeck, in reply, read a list of subscriptions given by the various bankers and several of the railway companies, including the North-Eastern Railway Company, which had guaranteed £400 and subscribed £100.

After various remarks by members, the Earl of Ducie, in moving a vote of thanks to His Royal Highness the Chairman, said it was a great advantage having the patronage of His Royal Highness the Prince of Wales and the Duke of Edinburgh, especially as we were about to have the great benefit of the practical experience of His Royal Highness the Chairman, which would be most satisfactory to the executive committee. The motion was seconded by Mr. Birkbeck, who gratefully acknowledged the assistance given by his Royal Highness.

His Royal Highness, in returning thanks, expressed his willingness to be of any service, and that he would give his best attention to the service of the committee and the general interest of the exhibition between now and when it took place.

LEA ROACH-FISHING.

By J. P. Wheeldon.

THERE is perhaps no class of fishing under the sun which has so many admirers, so many sturdy ardent votaries in its cause, as that of roach-fishing. To my mind it has always been a matter of exceeding wonder to think that, with rivers like the Lea and the Thames, absolutely teeming with all sorts of fish, the bank angler, at any rate, hardly ever attempts anything but sitting patiently and enduringly over a roach-swim.

In the Lea this is always strikingly apparent, and early Sunday morning at Liverpool Street is a wonderful sight. The streets are nearly deserted, save for the presence of some extraordinary kennel-hunters for unconsidered trifles, while only at rare intervals a solitary night-cab crawls along. From all the four points of the compass, however, anglers, and no other class, are seen making their way to the big station. Some few come singly; others, and more frequently, in pairs; while occasionally half-a-dozen may be noticed tramping along together, side by side, each man with a look of serious concern set upon his face, as though he felt that the business of the day had fairly begun, and that its issue was of grave, solemn, and momentous import. These are usually members of some little suburban fishing club, determined to have "a day's out" together.

Here and there,—yet among the great throng of many hundreds, gathered together for each of the early morning trains, very infrequently—may be observed a man with a small zinc bait can. He is almost certain to be a stumpy man, very red in the face, and owning a quantity of whisker. He is great at making jokes, at which every now and again a hearty burst of laughter arises; he is great likewise in the matter of boots, and leathern gaiters, coming to the very summit of his little stumpy thigh. This is a sample of the Lea jack man, and therefore mark him well. In that little can he has got about three big roach and four small gudgeon. The roach are packed gravely side by side, and gasp unhealthily. The gudgeon wriggle merrily on the bottom of the can, and, being a trifle more vigorous in their constitutions, stand the close confinement better. Presently you may find this gentleman up at "the broad water" at St. Margaret's, the far-famed "Gulls," at "Brogsbun;" that lovely stretch of deep solemn-looking water, weed and lily fringed, ominous, besides, of weighty tench and eke of mighty carp, and "situate, lying and being," above the charming weir at far-famed Carthagena. If not here, then will you find him between the St. Margaret's water and Black Pool, or somewhere about "October Hole." There, or at one or other of the places named, you will stumble across him just as surely as that eggs are not composed of pickled salmon; and, just as surely, he has a long clay pipe in his mouth, a bottle of beer, sunk somehow in the cool water at the roots of the reeds, and he stands watching a great green and white bung, with two or three pilots attached, which is lying nearly motionless at the edge of a bed of weeds, save for a little wriggle and downward stoop every now and then as the hampered bait tries to steer off.

This style is apparently the only notion with regard to Lea pike fishing, and little else is ever attempted, save, it may be, in one or two instances where good "all-round men," try other dodges.

But look round now at the crowd of men, all eargerly intent upon getting tickets at the little booking window. There are tall and short men; fat and thin men, with brown and healthy faces; men of bibulous and florid cut; others whose cast is of "the pale and sickly" order, from close confinement at the bench or loom in a fetid sickly atmosphere, or from hard work through the long tiring week in little better than a cellar, where the air is reeking of moist unhealthy exhalations and bad drainage from the surrounding dens and rookeries. Ah, sleek and saintly Mawworm; ah, reverend friend Stiggins; snuffle not unctuously, nor lift up thy holy eyes blazing either with the soul-inspiring nectar brewed of pine-apple rum and two lumps of sugar to the tumbler—or else, which is, of course, more likely, from thy known character for chastity and godliness—nor tell me that I am paving the way for the wrath to come by picturing the Sunday morning as a day of rest and recreation for these labourers with thew and sinew. Rather, let me tell you, that I believe there are truer and honester converts ever made, where nature preaches from the great book of her own faith and religion, than you and your devoted band of savers from destruction can at any time boast of, let you snuffle ever so fatly, or moan and posture fittingly with outspread hands, asking a blessing upon all sinners save thyself, who art at once the most dissolute and depraved, because thou art an abject hypocrite and an ass. *Revenons a nos moutons.*

Every one of the crowd intent upon procuring tickets are roach men. Save and except the fat man with the very little bait-can, there is not a single exception. How do I know it, you say? Well, look round, and note carefully each man's equipments.

Every one of them has either got a little wooden box, painted dark green—reminding an observer closely of the little Savoyards' guinea-pig or marmot cage—or else a short square wicker basket, either of which makes an excellent seat. In this box is contained food for the day, in the shape of portentous hunks of bread and meat, cold meat pie or pudding, or else an alarming quantity of bread and cheese, a pinch of salt, and a tasty Spanish onion. At one side of the box there is a sort of little rack, into which slides a flat tin bottle, holding a quart or so of liquid. It is usually beer, and good beer too; but I may perhaps be permitted to hint, in view of a hot and drouthy summer setting in, that cold tea, without sugar, and a squeeze of lemon-juice therein, is, for refreshing properties, a street in front of the other, and I advise anglers to try it. At the bottom of the box or basket may be noticed, if one is curious upon such matters, a heavy substance tied in a bundle and enclosed in a rough cloth or towel. This is the ground bait, upon the manufacture of which the Lea roach-man pride's himself. It is simply soaked bread worked up with bran. It must not be too soft, nor must it lean unduly to the other extremity. There is a happy medium, and the great secret is that it must be soft and pliable, yet hard, dry, and firm, so that a bit as big as a nut nipped on the shot—a wonderfully killing process, which I will describe presently—shall "shale" off gradually, not in large flakes or particles, yet leave a little tempting train of tit-bits for roach, floating in the water.

As the Lea roach fisher is, without any question or argument, the best roach-fisher in the world beyond all comparison, so is his tackle and bait, and pre-eminently his rod, excellently chosen, and especially fitted to the sport in hand. I do not fancy that he bothers his head about too many baits. First on the list, and a great and deserved favourite, is paste. It is a bait which, as a rule, if the fish are biting even a little bit, will kill as well as anything. There is no better paste than that made from the crumb of sweet and yet perfectly stale bread, worked up with a little water and thoroughly clean hands; or perhaps even better still, an arrowroot biscuit, from which the brown outer crust has been entirely scraped away, broken up, put into a clean cloth, then slightly wetted, and worked up until it becomes a firm enduring paste, and white as snow. Gentles come next; and perhaps, if I mention caddis and red worms, I shall have exhausted all the bait the Lea roach-fisher ever uses.

The tackle used, is almost invariably made up from single horsehair of good and approved quality. A man who can boast of having a hair line in his possession which, season after season, stands the repeated assaults made upon its tenacity and strength by big roach, is a happy man indeed. Yet there are many such among the Lea men; and every man's tackle—from the bit of silk "topping" at the upper end of the line, used to whip round the joint and make the line fast, to the float painted jet black, with just half an inch of white quill at the top, down to the small round shot affixed with extreme regularity and care, and the round wide bent hook—is, every atom of it, marked with a special air of delicacy, strength in fit hands, and excessive accuracy and neatness.

Then there is the rod. It is one that to the Lea, or in the hands of a London rodster, is special and peculiar. It is built solely for one purpose, and, as a weapon singularly adapted for the sport under notice, is simply perfect. The honour of originally building this excellent rod is, I fancy, due to Mr. Sowerbutts, of Commercial Street; and a wonderful impetus was given to the trade some time about the period of the great match when Woodard, of the Lea, lowered the colours of the then almost invincible "Nottingham Bailey." The butt is made of hollowed yellow line, the whole of the other joints of splendidly seasoned tough West India cane. It is usually about 18 feet in length, all the joints fitting into two. When put together it is light, handy, as straight as an arrow, and stiff and springy as a rod of steel. There is yet plenty of play in it; and it is a very pretty sight, indeed, to watch an adept upon a good swim killing, pounders, and, now and again. something bigger, with such a weapon.

We will now, if it pleases you, reader, just imagine that we have followed Woodard, Billy Bates, or the great Joe Hackett, to a swim, say at "the Ploughed Fields." In front of us flows "the sedgy Lea." It is autumn time, and the stubbles are brown and red, and yellow, while the leaves on the limes and maples are fast following the same order of colouring. The water is just of the right tinge, brown and yet green, withal a tint of blue pervading it in certain lights, and clear as crystal. The angler casts a quick hurried glance round, fixing his basket-seat down on the bank, and close to the fringe of water flags. Be sure that just at his left hand there is a little opening in the reeds, where the water comes close in and almost up to his feet. There, first and foremost, is deposited the landing net. Next the balls of groundbait and the bit of paste, wrapped in a piece of clean linen rag are produced, then the tackle-case, and these are all placed at his left hand. Now, sitting squarely and firmly upon his basket seat, the yellow cane rod is drawn from its case; and one notices how entirely unlike other rods it is, and how much time has evidently been spent on the whippings of silk which cover it from butt to point, in thin black rings. Then he carefully—ah, very carefully—unwinds one of his pet hair lines, lingering lovingly for a moment over the float. Next the bit of silk topping is twisted round the "little button on the top," and fitting the point into its place, he attaches the plummet. With a gentle swing outwards, he drops the plummet, even still more gently, into the head of the swim to his left hand, and tries the depths gradually down. Each movement of the plummet makes a charming jarring noise through the hollow cane, which vibrates through the entire length of the rod. Very possibly the depth of the swim hardly varies an inch throughout its entire length; and now, putting the rod down, so that the line may soak and stretch, the angler takes up one of the balls of groundbait, and making up a dozen pellets, of the size of a pigeon's egg, he plumps them in, one after another, each ball as it drops into the water sending up a little sprayey shower, which falls tinkling amongst the widening rings on the surface.

He lifts the plummet up, and puts in its stead upon the hook a little white pill of paste, big as a pea perhaps. Then gracefully and easily he swings his bait out, the float plashes gently in, and instantly settling upright at the head of the swim, glides slowly down, only the atom of white quill showing above the surface of the water. Swim after swim succeeds, but not a fish will touch the dainty bait. He puts a fresh bit of paste on; and anyone watching his proceedings carefully, may notice that two inches above the hook, there is a single shot fixed on the hook link of hair. Taking up a bit of his stiff groundbait, he nips it round this shot in a little irregular mass, big, perhaps, as a good-sized nut. Then he alters his float a little, adding two inches to the right depth. Out swings the baited hook once more, and now, as the shot sinks, only a very small bit of the quill is seen, while the float wants "helping a bit," as it works its way down the swim. In a very few seconds the effect will be seen. The groundbait, as I have said, "shales," off in tiny and tantalising fragments, while the little pea of white paste rolls along, over the moss-covered pebbles on the bottom of the swim. It is too much, at last, for that portly fellow at the head of the shoal, and he slowly sails up and "lips it" for one second. The float sinks ever so little. That quick eye appertaining to "the man on the bank," sees it in an instant. He raises his wrist only, with a smart gentle stroke; a melodious "tang," like a jarring note struck upon a harp string, echoes through the line; and while the fine top bends beautifully over, and the strained line twangs out, a smile of triumph curls his lip, and he says to himself, "Got yer!"

THE AVON (WILTS AND DORSET).

THIS river is formed, in the early part part of it, of two chief branches rising respectively on the south side of Bishops Cannings, on the south side of Stanton, and between Woodborough and Beeching Stoke. Bishops Cannings is three miles from Devizes (inns, Bear, Castle). Drews Pond brook not far from this empties into the Lavington stream. There are no trout in the former, but the latter stream contains some good fish. Thus far is the north-western branch of the river. The other, or north-eastern, is joined by the union, at Pewsey, of two small streams, one rising at Wootton Rivers in a corner of Marlborough Forest; the second running by the villages of Easton and Millow. At Pewsey there is a station, Great Western Railway; the inn is the Phœnix, which is also not far from Savernake Park. A little further down is Earford (Avonford). A mile further down is Nether Avon; there are trout of a fair size in both. The united stream, flowing in from Pewsey, is joined by a third water rising between Alton Priors and Alton Barnes, in all of which there are trout galore. Not far from this, and near Woodbridge, is Rushall Park, the property of Lord Normanton, who is very liberal to anglers.

The Avon now assumes the character of a voluminous stream and courses through a tortuous channel along a fine valley as it approaches the town of Amesbury (inn, George). The trout-fishing about this, particularly in the grounds of Amesbury Abbey, is extremely good but equally exclusive. We have very successfully fished it, leave being granted to us without limit, after a simple and respectful request, and being told by a then churlish landlord at the inn, that it was useless trying. The angler may be better treated at the Nag's Head, Bulford, and may get a day at Mr. Long's. But at Porton, South-Western Railway, where trout and grayling abound, there may exist some difficulty as Sir Edward Antrobus strictly preserves. Below, the Avon skirts the grounds of Lake House, a picturesque residence of the 16th century. It then flows on through meadows that are channeled for "drowning," as the irrigation is termed, to Stowford (inn, Swan), a favourite haunt of the late Mr. L. Rolfe; leave from the farmers used to be readily granted. The trout taken here are of a good size, as the jack pick up most of the small ones. We shortly after this enter Wilton Park, the seat of the Pembrokes (inn, near the gates, Pembroke Arms.) The village of Wily and station is near this, which gives or takes its name from a tributary of the Avon, over which the Salisbury and Warminster Railway passes, following the valley and close to the stream the whole of the way. There is no fishing to be had by strangers about Warminster.

We have now come thirty miles by the Avon, trout and grayling in most places *en route*. About Stowford the pike are fine, fat and fearless, doubtless being so well fed upon the sapid flesh of the salmonidæ around them.

After passing Bemerton, where the good George Herbert, as described by Isaac Walton lived, we enter Salisbury. (Inns, White Hart, Red Lion, Three Swans.) Stations, Great Western and South-Western Railways. The cathedral is situated in a valley at the confluence of three streams; our river, the Bourne, and the Wily, and near the junction of a fourth, the Nadder. Much useful information respecting the surrounding waters, used to be obtainable at the Bull's Head, a commercial house. There is likewise a fishing-tackle maker's in the town, Mr. Charles Gibbons—in Bridge Street, who has a natural eel bait for pike, singularly tempting to that fish—where serviceable hints of open and other waters may be gleaned.

The Bourne rises in the hills south-west of Great Bedwell, and flows in a southward course past a number of villages, including Boscombe.

The Wily rises on the borders of Somerset, from an ample spring in the parish of Kilmington, called Blatchwell, enters Wilts, and supplies the four villages of Deverill, commonly said to mean Dive-rill, and to be so-called from a rivulet—a source of the Wily—which dives underground near Maiden Bradley, and at Kingston Deverill becomes a permanent stream. Then the Wily rambles on to the town of Warminster (inns, Bath Arms, Lamb), where it receives the little stream of the Were on which the town is situated. The Wily now changes its course from northward to eastward, and flows past Bishopsrow and Norton Bavant to the town of Heytesbury; then pursues its course by many villages to Stapleford, and is there in close proximity to the Winterbourne, one of several chalk streams that only well up or break out in the winter months. Plenty of trout throughout; and while the farmers take a special care in preserving from the poacher, they seldom refuse a respectable angler trying his skill. From hence the Wily's course is southward to Wilton. The Wily here, says Lewes, is augmented by the Nadder.

The Anglers' Diary for 1882, tells us that the Avon is preserved by the Sarum Club of ten members for four miles. Secretary, Mr. H. Selby Davidson, 40 King Street, E.C., and Andover, Hants. At Britford near Salisbury, the Avon is preserved by the owner of the Moat. We have, however, written to Mr. Selby Davidson, without the necessary confirmation or acknowledgment of our application.

The Nadder flows from Shaftesbury, Tisbury—where a chalk stream joins—Dinton, Wilton, Winterbourne, Grately, Porton to Salisbury.

The Avon, now considerably augmented, passes at the south of the cathedral, and makes a right angle down the valley towards Christchurch and the sea. Between this angle and the back of the cathedral some hand rails will be seen, which are close to the stream, and continue for about 100 yards. These were erected, by the desire of Lord Portsmouth, for the convenience of the Hon. Mr. Fawcett, the Postmaster-General, who, although blind of both eyes from an accidental shot in each eye from his father's fowling-piece, is a good and successful angler. At Britford, just over the Avon on the right, there is an inn, from the gardens of which the stream can be reached by an ordinary rod. Our road is now on the right of the river. The first place of importance is Longford Castle and grounds, which, together with the water between it and alisbury (with a slight exception, the propery of Mr. Jervoise), is claimed by Lord Folkestone. There are but few trout, but the pike of large calibre are abundant, and other fish plentiful. The writer and his friends have never had any difficulty to obtain a day or two, but there is an exception made, as there is at most aristocratic residences, not to fish within a certain distance of the mansion. Our next reach is Trafalgar, the seat of Lord Nelson, to which the same remarks may be applied. We are now 6 miles from Salisbury, and are shortly at Downton and enter Hants; at the old-fashioned inn every information may be obtained of the course to be pursued to use the rod on the intervening water. Then Braemore, the seat of Sir Edward Hulse, Bart., who is very kind to anglers. His water widens out into a shallow broad just below a mill and extensive dam, to which salmon and trout come up to spawn; and it is at this time that the pike follow them, and, lying in wait in the deeps below, make great havoc amongst them. We have taken on more than one such occasion full one hundred weight of pike. The little Bat and Ball inn on the common close by, is a clean, comfortable, and cheap hostelry. After passing Burgate, we enter Fordingbridge (inns, the Star, Greyhound). The former hotel was the better house, but we hear it has been closed for some time. The Hon. Mr. Coventry, holds a good length of water here, to fish which application should be made to Mr. J. Hannen, his steward. The Marchioness of Anglesea, holds the continuous stream downward until we nearly reach Harbridge. Our next attractive station is the pretty hamlet of Somerley, where Lord Normanton claims a fine length of the Avon. He is very liberal to anglers, but during certain seasons of the year, reserves the privacy of particular districts for the quietude of the wild ducks, which, with game, breed in surprising quantities on this estate. We then pass Ellingham and Ashley, and enter Ringwood, where, at the White Hart Hotel, about 3½ miles of the water is preserved by the proprietor, who charges 5s. a day, and the landlord of the Crown, three miles, 2s. 6d. a day. Salmon are frequently taken here with the fly. The roach are remarkable for their excessive weight, pike and perch heavy. We have never had any trouble in getting leave of most of the owners from the preserved portions down to the Shepherd Springs. The club which once existed here at the Woolpack Inn, Sopley, is there no longer. Between this and Christchurch, the Avon is claimed by Mr. Mills; from whom the landlord, Mr. Newby, of the King's Arms Hotel, Christchurch, leases between one and two miles close at hand and free to his customers. This is the water in which Mr. Arabin caught his 34lb pike some years ago; and recently Mr. Henry Newby of the Exeter Hotel, Barmouth, killed one of 22lb, and Mr. Sanderland one of 24lb. The roach-fishing is first-rate. There are no trout, and visitors are not allowed to fish for salmon. Mr. Turner, a saddler here, is an angler, and as such will assist to the best of his abilities any brother of the rod. Mr. Tizard, of Christchurch, we believe, can give permission to fish (except for salmon) in some portions of the river. In the public water, or "run," as it is called, about 250 salmon have been taken this season (1882) with the net. This is 200 more than the average number caught in a corresponding period for the last seven years. The fish have also much increased in weight during that time; 34-pounders, both with rod and net, having been common, This, it is presumed, is accounted for by the annual season commencing on the 12th August, at the same time when the main body of the grilse (or peal, as they are called here) run in from the sea. The weight of the fish have increased from 9½ lb. average in 1869, to 16½ lb. in 1881. The smolts are also watched from end to end of the Avon and it is conjectured, from the number seen yearly at the Christchurch end of the river, during the last week in April, that they stock all the rivers on this part of the coast. There are also plenty of pike, perch, chub. These latter fish have greatly increased since they were introduced into these waters by the late Mr. Arabin. There is excellent mackerel-fishing in the season, at the mouth of the estuary, where a boat can be had.

PLAYING A 60-lb. FISH UNDER DIFFICULTIES.

ABOUT ten years ago, when the diamond fever was at its height in South Africa, I along with an old chum, determined to try our luck on the fields, and in a very short time after we had made up our minds we were ready to start; in fact, all the preparations we had to make was packing our knapsacks and buying an extra supply of gunpowder, as we intended to hunt up a few buck on our way. My chum was a young Yorkshireman, who had just landed and was eager for anything in the shape of sport; and the prospect of a tramp through Natal, over the Drakenburg mountains and through the Orange Free States, was just about the style of thing to start him going. Neither of us had much money, which was another inducement for walking the distance, instead of by the usual bullock waggons which traded between Port Dunbar and Griqualand. Some of our friends who were staying at the same boarding-house wished us to join them and go up with a trader who would start in a few days. I felt inclined to do so, but my chum would not hear of it; he had made up his mind to see the country and have some sport at the same time. This settled the matter, and early on the following morning we started off on a tramp of five hundred miles, which we accomplished in first-rate style and had some good sport at the same time. On our arrival at the Diamond Fields, we spent a few days in looking round and at last decided to work an old claim at Bulfontein; which, however, die not pay working expenses, but nevertheless, we worked away from sunrise to dark, hoping for better luck. My chum soon learned the customs of the country, and, sooner than be beaten, he commenced jumping claims and selling them again. It was rather a risky business, but it paid handsomely for a time, until the place got too hot for him. It was a perfectly honest business, but it made too many enemies, as every digger soon knew that, if they gave him a chance, he would jump their claim. He carried on this game for about a month and cleared about two hundred pounds by it, when he determined to go in for another business which promised to do well for us both. He had been one afternoon to the riverside diggings, which were about twenty miles from Bulfontein, and on his retnrn he was full of the new business and explained the matter to me while we smoked our pipes over the camp fire before turning in for the night. He had explored the Vaael river for about five miles and found it to be full of fish, which we knew would sell well on the diamond fields; and before we turned in that night, it was fully arranged that we should visit the river next day and go further into the matter. We started before sunrise and at noon we were on the banks of the Vaael; and after resting under the shade of some rocks, smoking our well-coloured pipes, my chum determined to give me a more practical sample of what we could do with a properly organised fishing station; he had all the plans arranged and we talked over the prospect of making it pay. He cut a rod from a wild cotton bush and fixing on a strong piece of whipcord, about ten feet long, on which he tied a large hook, and left me, to seek for a bait. He tried to find worms, but could not, owing to the sandy nature of the soil; he was not to be beaten, but determined to get some bait somehow. A partridge rose close behind us, and as we had both our guns with us, he was soon our own. We baited our line with its entrails, which my chum threw well out into the stream and we waited anxiously for bite, Some minutes passed and no sign of a nibble, which caused him to stick the rod into the soft mud and we, laid in the cool shade of the rock smoking our pipes and watching the stick.

I am not an enthusiastic fisherman, but my chum was, and while cutting up a pipe of hard tobacco, his attention was taken off the line. After lighting his pipe, he turned to see if the stick was all right. I noticed him start with surprise, and without saying, he made a rush past me, but just too late to catch the rod which disappeared into deep water out of his reach. He ran after it up to his middle, but had to return without it. "Jack," he exclaimed, with an expression of delight on his sunburnt face, "get well up on them rocks and look out for the stick when it rises again," at the same time he was quickly undressing himself. The river was about seventy yards opposite to our resting-place and as I looked up and down it from my elevated position on the top of the rock, I could see large fish rising in all direction, but could not see our fishing-rod, My chum stood ready on the river bank, waiting for it to appear in sight, which it did in about five minutes' time, three-parts across the river, bobbing up and down like a large float. A strong tide was running down, but the fish was working away against it up-stream at a great speed. My chum saw it at the same time as I did; he ran along the bank for about one hundred yards and taking a header in from a rising bank, was soon swimming with the tide down where I could see the rod, which now laid flat on the water. My chum caught hold of it, just as the fish was making another plunge; now commenced a struggle—it was a case of pull devil, pull baker, and after a few minutes' hard fighting, I could see that my chum was getting the worst of it. He was under the water half the time, and I begged to come out and wind, which he did, while I kept a lookout for the fish. After taking a good pull at a flask of Cape smoke, and resting a few minutes, he was ready again and in after the rod, which was laying gently in a pool of slack water, about fifty yards further up the stream. I thought the fish had broken away—but such was not the case, for as soon as he felt my friend had hold of the rod, he plashed up in the water at a furious rate, and darted off into deep water in the tide way, and then, for the first time, showed itself on the top of the water. At the sight of him I gave a cheer, which my chum answered as best he could, after blowing a mouthful of water into the air. It was fully ten minutes after this that it showed signs of exhaustion; and as it was now back into the slack water, again my chum had the best of it, and played him in fine style, and worked him in gradually into shallow water, and the prize was our own—it was a monster, weighing at least sixty pounds, and very much like an English barbel.

The Berlin missionary, whose station was close at hand, came down to the river just in time to see it landed, and, as we wished to be on good terms with him (as we intended to start a fishing station near his place), we gave it to him, and in return he invited us to his house, or rather castle, to help him to eat it. We started a fishing station, and for a considerable time we worked three nets and made a good thing out of it. AFRICANDER.

CLUB AND OTHER JOTTINGS.

By L. B.

ON Monday evening last the monthly meeting of the United London Anglers Central Committee was held at the Bald Faced Stag, Worship Square, Finsbury, Mr. S. Morgan presiding; some important business being transacted and the balance-sheet for the last half-year being distributed.

The annual supper of the Phœnix Anglers turned out a complete success, Messrs. Clark and Bentley contributing thereunto not a little by the admirable manner in which they discharged the post of chairman and vice-chairman respectively. Among the visitors present were Messrs. L. Bonvoisin, chairman, West Central Association; Thos. Crumplen, hon. sec., Gresham Angling Society; J. H. Stead, North-Western Anglers, and a number of gentlemen from the Little Independent Angling Society. A West Central No. 2 district visit will be paid the Good Intent Anglers at the Crown Inn, Church Street, Shoreditch, on Wednesday evening, when a large muster is anticipated.

The following appears this (Wednesday) evening in the columns of a contemporary, the *Echo*:—"A Shetland fisherman is fortunate in having made an enormous 'catch' in the shape of a monster turbot. This exceptional fish weighs 1 cwt. 17 lb., is 6 feet 2 inches long, 3 feet broad, and 8 inches in depth; the gourmands are happy in being provided with such an exportation."

A No. 3 W.C.A district visit will be paid the Excelsior Angling Society, the Hope, Bird Street, Kennington, on Wednesday evening June 14, when brother anglers who have an hour to spare and will look in, will be made heartily welcome.

The eighth annual supper of the Trafalgar Angling Society will take place at the Mitre Tavern, St. Martin's Lane, W.C., on Wednesday evening, June 15, when Messrs. Humphries and Richardson will occupy the chair and vice-chair respectively.

Mr. Hoole, in a letter just received, says he is very busy, as orders for privilege and fisheries tickets are pouring in wholesale. It may save a lot of trouble and delay if I may be allowed to state that the charge for the privilege ticket is the same as last year, namely 1s., but that by an arrangement between the three associations no privilege ticket will be issued without another ticket entitling the owner to fish the various waters to be rented by the representatives of the associations for the use of the London anglers, the charge for the two tickets being 2s. This rule is equally binding upon, and will be strictly acted up to by, Messrs. Hoole, Ghurney and Stebbings, secretaries respectively of the West Central, East Central, and Central Associations.

Respecting our editor's humorous note to B.'s homily in last week's FISHING GAZETTE, as several gentlemen have, under the impression I was "B.," subjected me to a good deal of good-humoured chaff, I wish to be allowed to state that I am not "B."; and, indeed, that Mr. B. and myself are by no means of one mind on several important subjects, as most careful readers of the FISHING GAZETTE may on frequent occasions have noticed.

I am glad to see the Greville Fennell testimonial progressing favourably. It should not be forgotten that the veteran writer and angler was a pioneer of fishing interest half a century ago, when the many influential gentlemen who now interest themselves in furthering angling prospects had not yet had their sympathies enlisted in the cause. There are few men who more gratefully acknowledge useful advice and valuable assistance on matters piscatorial freely asked of, and gladly given by, Grev. Fennell, even when stricken down by painful illness and scarcely able to hold a pen, than does the writer of these notes.

GREY MULLET IN THE SUFFOLK DEBEN.

COMING up to London the other day from a visit to Norfolk, a gentleman in the same carriage being attracted by one of Mr. Sach's enamelled scarf-pins I wore, the conversation naturally flowed into the channel of the fish-resources of the county we were then passing through. This was Newbridge, on the Suffolk Deben, which contracts here considerably after its upward course from its estuary, between Bawdsey and Felixstowe, into a narrow stream which is observable from the railway. My fellow-traveller told me that, born in the neighbourhood of Campsey Ash, and once holding two farms in there, he was of course well acquainted with the river and its resources; but agreed with a statement he saw in Fennell's "Rail and Rod," that although good, if not large, bags of roach and perch may be occasionally made all the way up to and above Wickham Market, the net of the poacher, as soon as the fact become known, renders a second visit of the angler to the same spot a cause of disappointment. The most suggestive article to me, however, and what may be equally so to others, was that shoals of young grey mullet were in the habit of occasionally coming up with the tide and penetrating far into the pure fresh water. On one or more of these occasions, notice having been given of their presence, he had personally assisted in placing a net across a narrow and shallow part of the stream, and thus, by intercepting their return to the sea, extraordinary numbers of these fish were captured. From the similarity of the name grey mullet to the grayling, it would seem that the notion has obtained throughout the locality that the presence of the latter fish was common in the Deben; of which, however, there are no signs or likelihood, from the character of the water and soil over which it runs.

It may be of interest to know whether the grey mullet still frequents this portion of the Deben, and if so, of what size they are taken with the net, as the old ones are proverbially crafty enough, according to Oppian, and since confirmed in modern times, to avoid the mesh—

"When encircling seins enclose."

and—

"O'er battlements of cork undarting flies."

while the first to jump, followed, like a flock of sheep, by the rest of the shoal.

The presence of the grey mullet in the Norfolk Waveney and Bure rivers, which have only one outlet to the sea, has given rise to some speculation and it has been determined, with every apparent truth, that these fish, obtaining access to these waters by the entrance at Gorleston at the mouth of the Yare, run up by the side of the Denes into Yarmouth harbour, and thus into the Bure and Waveney, which, more particularly at Oulton Broad, forms a *cul de sac*, and they become so far trapped. Indeed, the sea trout during the present season have been likewise inveigled, and seen, by those who could recognise their characteristic peculiarities, in Oulton Broad in shoals, and two or more have fallen to the angler's bait while bottom-fishing. —CREEL.

BIRMINGHAM PISCATORIAL ASSOCIATION.

THE annual meeting of the members of this association was held on Monday evening, at the Grand Hotel, Colmore Row; Mr. Oliver Pemberton, J.P., presiding. The annual report (read by the hon. secretary, Mr. J. Gregory) stated that the association continued in a most flourishing condition. With the single exception of pike-fishing, the members and their friends visiting the rivers—the Trent and Tame—had met with a fair average amount of sport. Many excellent baskets of roach, chub, and other fish had been taken during the season. Pike-fishing had not been a success, which the committee had every reason to believe had been owing to the unsettled state of the waters almost all through the pike-fishing season. For the first year since the formation of the association, the committee had given a special prize of a silver cup of the value of £3 3s., called the "association prize," for the best specimen of any fish caught by a member in the association's waters. The prize had been awarded to Mr. W. Reynolds for a carp-bream, 5½ lb. The receipts during the year from subscriptions, entrance fees, and friends' visiting tickets, amounted to £252 18s., and the balance at present in hand was £6 17s. 5d. The officers and the committee congratulated most heartily the members on the undoubted progress made, and tendered their best thanks to them for their cordial support, which had largely contributed to the prosperity of the association.

The Chairman, in moving the adoption of the report, said he must congratulate the members on the success of the association during the past year. They were now entering upon their fourth year of existence, and he was glad to be able to state that the society was in a condition of great prosperity. There was complete harmony amongst its members, who were pursuing a delightful recreation in one of the loveliest rivers that could be well imagined. He was also able to state that the river was thoroughly well stocked with fish. The great characteristic of anglers had been eminently shown in that association—namely, the perfect friendliness and agreement which existed amongst its members. The adoption of the report was seconded by Mr. A. Eaden, and carried.—Votes of thanks having been accorded to the officers for their services during the past year, the following gentlemen were reappointed for the ensuing year:—President, Mr. O. Pemberton; vice-president, Mr. Adams Parker; treasurer, Mr. J. Allday; hon. secretary, Mr. James Gregory. Mr. W. Reynolds and Mr. James Botterly were elected auditors; and a committee was also appointed.—A vote of thanks was passed to the proprietor of the Grand Hotel for the gratuitous use of the room for the various meetings which had been held in connection with the association; a similar compliment was passed to the chairman for presiding, and the proceedings terminated.

RIVER REPORTS.

MID-THAMES.

" The ample proposition that hope makes
In all designs begun on earth below,
Fails in the promised largeness."
—SHAKESPEARE.

In consequence of the excellent trim of Father Thames I had hoped to have to record this week some more than average sport amid the trout, but I am feign to confess my disappointment in the "largeness." Nevertheless, some few Trojans have been had here and there, thus proving that Thames trout proper, beyond those turned in by the various associations, are not an extinct species. At Maple Durham, on the 2nd of this month, the worthy Esculapius of Henley (Dr. Brooks) had the fortune to capture a fine trout of 7 lb, and I sincerely congratulate him on his success, for a more persevering angler of over seventy years old does not exist on the Thames. There are brooks and brooks, but this gentleman is a river that goes on for ever, and always has a flood of matters piscatorial about him, and would with pleasure give any one a blue pill and black draught to know of the whereabouts of a spotted beauty worthy his biceps, triceps, and forceps. At Hambledon, on the 4th, Mr. Alcomb got a pretty little fish of 2 lb. 13 oz., and on the following day Mr. Troupe, with a fly, nailed three trout in all but three successive casts. How about Thames trout not taking the fly now? I may here mention that the gentleman that took the 7 lb. trout at Hambledon last week was Mr. J. Bedford, of Marlow, who on Saturday last in Marlow pool captured a pretty brace of trout over, I understand returnable size. At Quarry Point, below Marlow, on Saturday (east wind blowing, but, as I said in my last note, "blow the wind"), Mr. R. Jackson, of Westhorpe Park, captured a grand trout, going close upon 9 lb. Mr. Jackson is a most fortunate troutist, seems to farm beasties of this weight, and looks upon lesser beauties as mere minnows. Thursday evening.—Occasional showers falling are simply acting as gin and bitters on the gastronomic abilities of the fish, and fair sport may be anticipated during the coming week. The coarse fish season opens on Friday, and, from "information received" a treat is in store for roach, perch, and chub men; but let me ask all true Waltonians to eschew jack fishing and thus leave well alone, or autumn real sport will be admaged.—MARLOW BUZZ.

Ballynahinch.

Yesterday we had a rattling spate, which was greatly needed, for, although large quantities of both peal and trout were seen about the tidal pools, they would not take the river, it being so low. Waters should be in prime order next week; we have fine west winds.—WALTER BLACKADDER.

Bure.

The river Bure is now in excellent condition. Fish are well on the feed. Had some very good catches last Monday. One boat scaled over 5 stone of very fine old bream, and on Tuesday a very good catch of roach, some weighing 1½ lb. Should the weather continue in the same condition, good sport will be available.

P.S.—There was a conviction for illegal netting for bait on the river Bure on June 5 at Blofield. The two men were fined £4 11s. 6d. in all, with loss of net.

Coquet (Weldon Bridge).

Owing to the river being small and bright, angling requires a little handicraft. Old sportsmen make fair creels. On the 1st, G. W. Armstrong, four brace, the largest trout 20 oz.; D. Leighton, six brace. On the 5th, D. Leighton, 2½ doz. On the 6th, the Rev. Mr. Oliver killed a splendid basket, 10 lb., one trout 1 lb. and another 1½ lb., and one 21 inches long, 11 inches the girth, 3½ lb., the greatest beauty that has been killed for years; all killed with worm. Mr. Oliver gave me the fish and I sent it to Hardy Brothers, Alnwick, to be stuffed.—A. GLASS.

Dove.

The May fly is coming up fast now on the lower lengths of this river, they being always a few days earlier than on the upper parts. Splendid sport was had with them against Uttoxeter and below Rocester before the heavy rainfall at the beginning of the week, the takes ranging up to ten brace. The stream is now in capital order after the rise, and good sport ought to be had on the whole lengths of the river. The artificial fly has been killing fairly well up to now; the water being slightly discoloured, it renders it more taking. Rodsters have this week been out in good force on the open parts.—MENTOR.

Dovey.

Some splendid catches of fish have been recently made on this river, which is located amid the most beautiful of the Welsh mountains. Excellent accommodation can be had by tourists at Mrs. Jones, 3, Londonderry Terrace, Machynlleth. The river abounds in salmon, sewin, and trout.—PETER PEDAGOGUE.

Exe (Countess Weir).

Salmon fishing in the pools has been something splendid, the catches averaging eighty and ninety fish per week, the greater portion being sent to Billingsgate and other parts. They were all of fine size, in good condition, and perfectly free from the disease (*Saprolegnia ferax*) and as they are taken so soon after leaving the salt water, they have been more than usually covered with the sea lice. Upon many occasions I have observed upon removal of some of the larger and stronger of these parasites a little red patch which seems to show through the scales, which upon removal, the marks still remain upon the skin. Query, do these spots form a nucleus for catching the spores of the *Saprolegnia* to attach to, upon the salmon's arrival further up in the fresh water? At any rate these red spots must cause much irritation, and many salmon are seen from the bridge, darting into the gravel sideways, as if to relieve themselves either of the parasites or the irritation. I have been reading the "Inspectors' Report on the Salmon Disease," for this year, and which report should be in the hands of every person who takes an interest or has any practice in the salmon fisheries, but I fail to observe any notice as to the above sea lice being the cause of salmon catching the disease. The rod fishermen have not been doing so well latterly, probably owing to the large catches by the net fishermen in the lower waters. Some excellent trout have been taken both upwards and downwards, and I have also heard of some very fine perch having come to creel, which I hope is not the case; but from the quarter my information was received I am afraid it is too true, my informant being an eye witness upon their being brought into the city. A few grey mullet and bass have been taken in the estuary. In my peregrinations I have observed several perch and minnows much covered with the disease in the neighbourhood of the canal, where salmon are also frequently seen.—FRANK GOSDEN.

Exe (Exeter).

There has been but little rod-fishing for salmon during the past week, although there has been a very agreeable change in the weather, the days being very fine and sunny, but the cold north and easterly winds will not admit of its being said that it is in any way calm or even spring like. The water is in excellent order, but rather too lumpy for fly-fishing, some very good sport has been had with the worm, and the "daisies with the dorsal fin" that have been grassed, were of no mean calibre; several perch and roach have been taken accidentally, but returned again; these fish are sporting beautifully, which is good news for those awaiting the opening of the season, which will very soon be here. For two days last week we were disgusted by the sight of several hundreds (I was going to say thousands) of roach, of all sizes, full of ova, in such a ripe state that the fish themselves were smothered in it. From whence they came I could not ascertain; but suffice to say, they had been netted, which is not only a violation of the Act of Parliament, but, as Mr. Edward Jex, of Billingsgate Market, states, "an incalculable amount of (spawning fish) small brood and fry of every description of fish is destroyed solely by the use of nets, with the meshes too small to allow them to escape." That is the case here, and it certainly is a suicidal annihilation of our fish food supply, and the only way to increase the supply and decrease the price of fish, is to prohibit the use of nets, of less than two and a quarter inches from knot to knot (after being soaked), during the close coarse-fish season, whitebait nets of course not included. Speaking of whitebait, the old custom of presenting the right worshipful the mayor of Exeter (T. Andrews, Esq.,) with the first dish, was observed on Saturday, the 13th May, being twelve days earlier than in 1881, and thirteen days earlier than 1880, and nearly five weeks earlier than 1879; they were a very even and pretty sample. Mackerel are coming along, but we can only call them "jossies" at present, that being the local term for small fish. I saw some on Sunday week taking eight to weigh a pound; that is another illustration of the destruction of the people's fish food On the other hand we have exposed for sale some really fine fish of one pound and a half in weight, and over; but even at the low price asked they were dear, for the way in which they made acquaintance with one's nasal organ can be better imagined than described. Lobsters and crabs from the estuary are very plentiful. I do not recollect so good a season so early. A few prawns have come to hand.—FRANK GOSDEN, Exeter.

Exe (Tiverton).

The river is now in good order for fly-fishing, a fair number of trout are being caught of an evening at dusk. Flies killing best, aller bud, yellow May dun, black gnat, and magpie.—WILLIAM MUDFORD, Tiverton.

Ilfracombe.

Sea fishing – There have been some fair catches of ling, skate, and whiting this last fortnight. On Friday a sting ray was found at low water, which was left there by the receding tide. The oil from them is good for scalds or burns. Sunday, one boat went out with some gentlemen to try for bass, as there had been some seen in the offing; they were not successful in getting any, though they felt several bites This week there have been a great many lobsters and crabs taken from the holes of rocks leading from the jetty to the Capstone Parade. Monday, four lobsters were taken from one hole. The trawling skiff *Wave* brought up from the bay 40 lb. soles, besides plaice and thornback. Several ling and skate have been brought in by the pleasure boats, and some tamlin cod has been caught from the jetty with rod and hand lines. The sport from there and the pier is very good now, morning and evening. Weather at present squally, with heavy rain.—E. COMER.

North Lincolnshire.

The refreshing rains of the past week have proved a godsend to the angler, and some beautiful baskets of trout have been caught by local fishermen in various quarters. The best fly has been the green drake, which is this season very early, and specially fine in size, and strong on the wing. I have only been out once during the week for two hours after tea. I took three brace of splendid fish. I hope to have an evening to-morrow on new waters about twelve miles from home. The Ancholme anglers are just now very busy preparing for the advent of the coarse-fishing season.—THOMAS FORD.

Suir and its Tributaries, Clonmel.

Though river in good order, there has not been much fishing for the past week; the cot men only meet an odd fish; the run of peal very scarce as yet; the trout fishing during the day pretty good; but the evening fishing is more successful.—DORA.

Taw and Tributaries (N. Devon).

Water has risen and very dirty. At some places, where the streams were small, they cleared by the morning, and some dishes of trout have been killed; but the Taw rose some height, and only at the edges were any chances of a catch, I heard Mr. Connop took the first peal for the season with a minnow on Wednesday, and other gentlemen have run some. I saw one gent who got four dozen fish, one of which scaled 1 lb. 5 oz., and many ½ lb., other catches ranging from one to three dozen. Should the weather continue as it is, the waters will be well up for another week, and no doubt some good catches will have to be recorded. Bass have been taken with the rod and line in the estuary, and some fine salmon got by the net fishermen. Fifty good trout caught in the Bray on Tuesday. Waters rising.—RUSTY GAME.

Thames (Halliford).

The trouting has been better here the last fortnight. A gentleman, on Saturday last, fishing from the bank, caught one of 2½ lb. Mr. Palmer, of the Friendly Anglers, fishing with me, caught two more nice ones last week, one weighing 6 lb. 4 oz., and the other 7 lb. 8 oz., making the third he has taken with me this season, bringing my total up to six, which I have had the pleasure of landing this season. Weights as follows:—2 lb. 1 oz., 3 lb. 4 oz., 6 lb. 4 oz., 8 lb. 7 oz , 9 lb. 14 oz., and 7 lb. 8 oz. The river is in first-rate order, and we hope to heve one or two more before the general fishing commences, as we have seen some large ones feeding.—GEORGE ROSEWELL, fisherman.

Thames (Sunbury).

Condition of the water good; plenty of trout seen feeding. Prospects good. Mr. Titley, fishing in one of our boats, took a handsome trout of 4 lb. Mr. Lukyn took two smaller ones, which he returned into the river again.

Thames (Windsor).

There are not many anglers nowadays who can boast of the capture of two good Thames trout in one day of nearly equal weight, and Mr. G. Hockley, of the Swan, 84, Old Kent Road, is to be congratulated on pulling off the double event. He deserves them, as a more persistent angler does not come out of London; but up to yesterday the Fates have been against him, only a few small trout falling to his rod. Now he will have as nice a brace of Thames trout to adorn the walls of this well-known old hostelry as one would wish to see. I made but a hurried inspection of them, owing to his having to catch a train; but I do not think there can be many ounces between them. Their united weights were 11½ lb., of good colour, beautifully marked, and in excellent condition. I must not omit to mention the fisherman (Richard Gray), one of our steadiest and best men who piloted this gentleman to their haunts, and he acted well in sparing them for one of his patrons and best friends. Both fish were had just below Victoria Bridge. Three others have been had, one by Mr. Hawkins, of Old Windsor, going about 6 lb, which I omitted to mention last week; one by James Gray, from the Windsor weir, on the 6th inst., going 4 lb.; and one by the waterman stationed off the Eton College playing fields, which also was 4 lb. Water is in nice order, and a great many fish are showing themselves, but very few anglers are trying them. From what I have seen, the coming season ought to be a good one, at least better than last, as regards barbel, which were very scarce.—B. R. BAMBRIDGE.

Tweed and Teviot.

. Both salmon and trout angling in these rivers continue to be moderately good. On Tuesday week Lord Kensington killed a couple of salmon on Floors upper water, and on Thursday Mr. James Kerso hooked two salmon, both of which he lost. The best basket of trout that we have heard of of late was caught by Mr. A. Steel, Kelso, weighing 7 lb., one trout in the lot scaling 2½ lb. On the Ednam House water, on Saturday night, one gentleman killed eleven trout, which weighed close upon 6 lb. Several good baskets have also been obtained on the Sprouston and Hendersyde waters. On Teviot on Monday morning, Mr. A. Steel caught about 7 lb. of trout with worm. On Monday, on the Cornhill water, Mr. John Collingwood, Esq., Cornhill House, killed a very nice salmon, which turned the beam at 9 lb. Reports from the lower districts of the river, where the netting stations are situate, state that the present fishing season has been the best that has been experienced for years. The salmon fry having reached the sea unmolested, the ensuing grilse season will doubtless be a good one, as the fish are bound to be very numerous. The *Saprolegnia ferax* disease has not yet been extirpated, and diseased fish are still met with by scores. That the disease does not entirely proceed from pollution may be gathered from the fact that affected fish are to be met with in some of the smaller rivers where no contamination is known.

Wye and Derwent.

We have had a very great deal of heavy thunder, and rain fell all over Derbyshire, both the latter end of last week and on several days this week, which has caused both the above rivers to have nice little flushes in them at times. Sport during the week has been first-class all round Derbyshire, and some fine baskets of fish have been killed. Mr. Frederic Robarts, of Liverpool, was on the Wye last Tuesday. He succeeded in killing eighteen fine trout with the artificial fly. Mr. T. Dickinson and H. Houghton, both of Liverpool, also did fairly well with black gnat, dotteril, and duns, also several other gentlemen have killed good baskets with green drake and yellow duns. The May-fly is now well on, both on the Wye, Lathkill, and Derwent, and the fish are taking them eagerly, and some fine trout have already been taken. We have every appearance of a first-class May-fly season being had this year all over Derbyshire. Sport on the Derwent, both with fly, trolling, and bottom fishing, has been first-class, and baskets, averaging fully from 8 to over 20 brace per angler, have been made, chiefly from the Derwent—in fact, I never saw more fish killed in all my life, than what has been taken since the rain fell. We have any quantity of fish in these rivers now, and they run a very nice size this season—from two to three fish to the pound. Good sport has been had about Rowsley with the worm, and several ground trout have been landed. Sport on the ponds has been A1 during the week with both fly and bottom maggots and worms, being the best baits for ground-bait fishing. Baskets, from 9 to 12 brace per angler, have been made. P.S.—Both rivers in first-class condition for all kinds of angling; fish well on the feed.—G. J. EATON.

ROKEBY, NEAR BARNARD CASTLE.—An amusing story is told of William IV.'s visit to Rokeby when he was Duke of Clarence. Whilst he and Mr. Morritt were walking in the park the river "came down" with a sudden rush, and the water, as if by magic, rose five or six feet. The Duke, not knowing the habits of our northern rivers, turned and politely thanked his host for the picturesque surprise which he had contrived for him."

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

The members of the above sciety, who have only met once a month during the fence months, commenced their weekly meetings on Tuesday, the 6th, which was held for the election of officers for the ensuing twelve months. The following gentlemen were elected by a good muster of members: —Dr. Lingham, president; Mr. A. C. Bocking, chairman; Mr. W. Eydmann, vice; Mr. C. Simpson, hon. secretary; Mr. Brooks, the host, treasurer; Messrs. Cooper and Dean, delegates to West Central Association. The first match will be fished on Saturday, the 17th June. The prizes being a gold pin, given by Mr. W. A. Brown; a silver dish, given by Mr. A. Eydmann, and other prizes to be decided upon by the committee on Saturday.—BLACK BAG.

ANCHOR AND HOPE ANGLING SOCIETY.

The return visit (South London District) took place at the above club on Tuesday, the 6th inst., the following clubs being represented: Bermondsey Brothers, Angler's Pride, Peckham Brothers, Peckham Perseverance. A roving match will take place on Sunday, the 25th June, at Weybridge, for three handsome prizes. Members are requested to see conditions at the club house.—D. DAVIS.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of £1 1s. from donation box of the Amicable Brothers Angling Society; from Edmonton and Tottenham Angling Society donation box £1 1s.; £1 1s. from T. Spreckley, Esq.; £1 1s. from H. Brett, Esq., Gresham Angling Society; and 5s. from J. Mann, Hoxton Brothers Angling Society, being annual subscriptions.—R. GHURNEY, sec.

June 7.

BOSTONIAN ANGLING SOCIETY.

The above society's annual dinner took place at the club house on Tuesday, and was a great success. The chair was occupied by Mr. Goodge, faced by Mr. Gratton. Some excellent songs were sung by the following gentlemen:—Messrs. Marshall, Slade, Goodge, Gratton, Rexley, Constable, Hind, and several others. During the evening the prizes were presented by our old and esteemed friend Mr. Vincent, hon. sec. of the Watford Piscators. The following members were the principal winners of prizes:—J. Jennings, leading with 6; Hart 5; Seymour, Goodge, Collier, Bastain, Wright, Bell, Slade, Gratton, and Adams. Upwards of £16 was promised for prizes for the coming season. All members are requested to attend the club Wednesday, June 14, to arrange prizes.—J. JENNINGS, hon. sec.

June 7,

CONVIVIAL ANGLING SOCIETY.

A complimentary visit will be paid to the Convivial Angling Society on Tuesday, June 13th, 1882. Mr. Hoole has kindly consented to take the chair on the occasion.—W. EYLES.

GOOD INTENT ANGLING SOCIETY.

The members of this club are going to open the season by fishing for twelve valuable prizes, ranging from £5 5s. to 10s. 6d., on Sunday, the 18th inst. Roam of water, the boundary from Ware Bridge to Hertford Lock. No doubt there will be a strong muster to compete after their long rest; and I am glad to say that I have not heard of any of our members who has not strictly observed the close season, and I wish I could say the same of some of our more influential anglers. I am happy to say that the medals have arrived from Edinburgh, and will be given up to the successful competitors on Thursday evening, the 15th inst., at eight o'clock sharp, by Mr. R. B. Marston, supported by Mr. F. Clench and the rest of the London Committee. I trust all entitled to awards will not fail to be at our club house, the Crown Inn, Church Street, Shoreditch, on the above date. Our West Central district visit takes place on Wednesday, the 14th inst., when we shall be glad to have the company of all anglers.—R. MURPHY

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

Our 19th annual distribution of prizes took place on Tuesday last, Mr. W. Phillips, chairman, Mr. Page, vice. Prizes to the number of 120 were distributed. The successful members were Messrs. Theobald, J. Fitch, W. Parkin, R. Watting, J. K. Fitch, Stammer, Butler, Young, Hutchings, Barker, Broach, W. Watling, Jennings, Jukes, S. Smith, Armstrong, Warne, J. Dingley, C. Watling, Mayes, Page, Walker, Baker, and Calder. Mr. Cuthbert, of the Odds and Evens, occupied the chair at our concert on Wednesday last, faced by Mr. Page. We had a large attendence, and a most enjoyable evening was passed. On Wednesday next Charles Parkin will take the chair, faced by Mr. R. Cluff. Our 19th annual supper will take place on Tuesday, June 13th, at 9 o'clock. Any of our brother anglers and friends that will favour us with a visit during the evening they will receive a hearty reception. Mr. Challen, of Pulboro', favoured us with a visit on Tuesday last, and informed me that he shall be pleased to grant the privilege of fishing from his estate as hitherto, and will endeavour to extend the same.—J. A. FITCH, jun.

June 7, 1882.

GRESHAM ANGLING SOCIETY.

The new committee met for the first time on Thursday evening prior to the usual weekly meeting of members, Mr. Crumplen said he was glad to report that they met under favourable circumstances, for subscriptions were steadily coming in; and if the new committee worked together in the interest of all anglers there was no reason to fear for the future of the Gresham. It was decided to hold a special musical evening on Thursday, June 22, an occasion which the committee hope will give them the presence of a number of their brother anglers from various societies, whom the secretary was instructed to invite. A number of important questions having been brought under consideration, the ordinary weekly meeting was opened, C. S. Bentley, Esq , in the chair. The minutes having been duly confirmed, the usual correspondence was read. Following this came an extremely interesting paper, ably read by J. Callaghan, Esq., on his angling experience during a fortnight in Ireland, accompanied by his friend Mr. Cathercole. Mr. Callaghan gave a graphic description of his sport at Lake Connemara and other places, giving a detailed account of his trip, and incidentally touching on sundry topics relative to the present condition of the Emerald Isle. He expressed a strong opinion that any gentleman wishing to enjoy really good sport could not do better than visit the Irish lakes, where he would not only enjoy most excellent fishing, but be perfectly safe and welcomed heartily by the peasantry. The paper was followed by a very pleasant discussion, in which the Chairman, Mr. Jardine, Mr. Crumplen and Captain Alfred took part, and at the close a very hearty vote of thanks was passed. The committee are arranging for the paper promised by Mr. Page, Commissioner of United States Fisheries, which will probably be given in a larger room than the society now commands. G. Challen, Esq., having been elected a member of the society, and other candidates proposed, a hearty vote of thanks to Mr. Bentley brought the meeting to a close.

June 8.

NORWICH CENTRAL FISHING CLUB.

The members of this club held a special meeting on Monday evening at the club house, the Oak Shades, Lower Goat Lane, under the presidency of the chairman, Mr. Councillor Thirkettle, for the purpose of making arrangements for the first match of the season. A discussion having been opened, in which the state of the rivers and the height of the tides was taken into consideration, it was resolved, on the motion of Mr. Burton, seconded by Mr. C. Mackie, that the match be contested on July 17, within two miles, up or down the river Yare, of the boating and yachting station of Messrs. H. Flowers and Co.; and it was further decided that the staking-out of positions be entrusted to Mr. W. Cushion, a gentleman well acquainted with the locality. Mr. Youngs, vice-chairman, moved, and Mr. Thirkettle seconded, that the boats required for the match be engaged of Messrs. Flowers and Co., and this was unanimously agreed to. The chairman very kindly offered to officiate as umpire on the occasion, which was accepted with applause, and after the transaction of some business of minor importance, the meeting adjourned till the 19th inst., when the final arrangements will be completed.

June 8.

PHŒNIX ANGLING SOCIETY.

The annual supper of the above society took place on Wednesday last, and a most enjoyable evening was spent. W. B. Clark in the chair; G. Bentley, vice. When the cloth was removed upwards of twenty-five pounds' worth of prizes were distributed, the following coming in for the biggest share:—G. Bentley, J. Grist, H. Packer, H. Parr, R. Read, T. Margetts, H. Maynard, R. Milton, W. Elbowin, H. Upton, G. Burnett, Bartrip, Murch, Titmus, and Hamilton. The health of the Qneen and Royal Family, and a song or two after the health of the president, W. B. Clark; the cheers and "He is a Jolly Good Fellow" were uproarious. After another song or two, the health of the host, Mr. Harry Murch, and then the toast of the evening, "The Prosperity of the Phœnix Angling Society," coupling with it the name of Mr. W. Elbourn, the secretary, who has seen it through many different stages, was drunk most enthusiastically. The prizes were then announced, and nearly thirty pounds were given for the ensuing season, W. B. Clark, Esq., heading the list with ten guineas. During the evening Mr. Bonvoisin and Mr. Crumplen, the secretary of the Gresham Anglers, spoke at great length upon the close time for fishing and other important matters to anglers, and all were pleased with the remarks which were passed, showing all that is done by the East and West Central Association is appreciated. The Little Independent Anglers and North-Western Anglers were well represented, and every thing went as merrily as could be wished till two o'clock in the morning, the limit of the extension.—TIGHT LINE.

June 8.

RICHMOND PISCATORIAL SOCIETY.

At the Richmond Piscatorial Society, on Wednesday evening, the chairman (Mr. Clench) proposed a vote of sincere condolence with the widow of the late Mr. W. H. Maxwell, which was very feelingly seconded by Mr. Dickinson (vice chair). Mr. Maxwell was a gentleman well known in the angling world as late treasurer of the Thames Angling Preservation Society, he was also a member of the Richmond Piscatorial Society, in which he took great interest and contributed towards the success of the silver medal won by the Richmond Piscatorial Society at Edinburgh by the exhibition of his Thames trout, taken by himself at Kingston, weighing over 12 lb. It was also decided the members should celebrate their opening day on the 21st inst., when a series of prizes will be competed for, after which the members will dine at the Ship, Halliford, at 6 p.m. The chairman will present a gold mounted crystal pin for the best show of all fish (bar jack) caught in the river Thames, open only to members of twelve months' standing, who have signed the attendance book of the society not less than twelve times from June 15, 1881, to June 14, 1882, or members of less than twelve months' standing who have signed seven times. A handicap sweepstake of 1s. each member, for eight prizes, for all roach caught in the River Thames between the hours of 7.30 a.m. and 5.30 p.m. Entries to be made on or before Wednesday, June 14, and the weights will be published on notice board in club room on Saturday, June 17, 1882. All fish to be weighed at the Ship, Halliford. First prize, 35s.; second, 21s.; third, 17s. 6d.; fourth, 15s.; fifth, 10s. 6d.; sixth, seventh and eighth, entrance fees divided. All prizes to be taken in kind. The distribution of prizes won during the last fishing season will also take place on this occasion. The members present were:—Mr. Clench, chairman; Mr. Dickens, vice-chairman; Mr. Houghton, treasurer; Mr. Rowe, librarian; Messrs. Taman, Terrill, Crewe, J. D. Johnson, W. Abbott, H. E. Smith, H. E. Davies, Giles, Munro, Hayward, East. Visitors: Rev. Mr. Runham and Mr. Adams.—JOHN M. GRANT.

June 8.

STANLEY ANGLERS SOCIETY.

On Thursday evening, 1st inst., several members and friends supped together at the Lord Stanley, the guest of the evening being the honorary secretary. The gentlemen present were Messrs. Wheatstone, Lupton, Parsons, Letts, Finer, Paramor, Rose, W. R. and D. M. Humby, Rix, Godsell, W. B. Freeman, J. Smith, W. N. Hunter, W. Ellis, and W. Jarvis. Supper concluded, Mr. Wheatstone announced to the company that they had assembled that evening in honour of their secretary, to whose strenuous efforts the present prosperity of their society was mainly due, and to whom a presentation was about to be made on behalf of himself and some other members of the society. Mr. Wheatstone stated that the presentation had emanated from Mr. H. Rose, and by whom it had been most energetically and suceessfully carried through. Mr. Rose stated that Mr. Wheatstone had been kind enough to connect the affair very prominently with his name, but, although the testimonial was of an entirely private nature and not from the society officially, the general and hearty support he had met with proved how highly they all valued and esteemed their honorary secretary. Mr. Rose, when handing the presentation (a very handsome "Tantalus" spirit stand) to the secretary, assured him that they all felt they were not making any adequate return for the labour and attention he had given the society, but, to quote the words of the inscription, "as a mark of their appreciation of his valuable services." In conclusion, he called upon all present to drink long life and prosperity to the honorary secretary. The secretary having suitably replied, "The Stanley Anglers Society," "The President, Mr. H. Rose," "The Visitors," and other toasts, were proposed and met with an enthusiastic reception. Mr. W. Ellis kindly presided at the piano, and a very pleasant and musical evening was passed. Mr. Parsons gave one of his amusing extempore songs, in which he makes it very generally warm for everybody, and, of course, on this occasion he did not neglect the secretary. Mr. Rose, whose histrionic abilities are well known to the members, gave powerful recitals of "The Outcast," "The Crew of the Nancy Lee," and "Jack's Yarn," all of which were warmly applauded. Messrs. Humley, Freeman, Smith, Paramor, Gray, and Ellis also sang, contributing greatly to the enjoyment of the evening. The trout fishing up to the present has not been very productive. Mr. Wheatstone has taken nineteen fish from the Thames, three only weighing over 2 lb., the limit at which they are allowed to be scaled at the club, the others being all returned to the water uninjured. Mr. Walker taken four from the Thames, one only weighing 2 lb. All the above were taken spinning.

THE JUNIOR PISCATORIAL SOCIETY.

On Friday last three of our members, Messrs. Palmer, Woodman, and Joyce, fishing near Harwich, caught 80¼ lb. of rudd, one going 1 lb. 15 oz., and about twelve going 1½ lb., of which six of them are being preserved by the club. On Wednesday next our second annual dinner will take place at the club house, as above.—ALFRED H. BISLEY, hon. sec.

June 8.

THE WATFORD PISCATORIAL SOCIETY.

The inaugural dinner of this newly established society, was held at the Leathersellers' Hotel, Watford, on Wednesday evening the 7th inst. Mr. C. E. Fry, of Elliot and Fry, of the well-known photography firm, in the chair, supported by a numerous company of county fishermen. The chairman, in poposing the toast of the evening, "Success to the Watford Piscatorials," stated that the club was fairly started with every prospect of success, having amongst its members a majority of the best known local amateurs enjoying all the advantages of the famous waters in the neighbourhood. In the course of a capital speech, the chairman expressed a wish that every member should take in the FISHING GAZETTE, and contribute to its columns. Mr. Fry who is well known as one of the best fly-fishermen in the county of Hertfordshire, was loudly cheered on taking the seat. During the evening some capital songs were sung, and altogether a very pleasant time was passed by all present, who, from all appearances, did thorough justice to host Griffiths' admirable repast. Among a few very good specimens of fish caught in the local waters, and shown during the evening, Mr. Vincent, the popular hon. sec. of the new society, had some first-class jack which were generally admired.

WESTBOURNE PARK PISCATORIAL SOCIETY.

Tuesday evening, June 6, being the second quarterly night, our clubroom was crowded by members wishing to pay up and obtain the privileged travelling tickets, ready for the opening day, showing the same enthusiasm for the gentle art as in years past. Six gentlemen were proposed for membership, who will be duly balloted for next week—notwithstanding the entrance fee has been raised from 1s. to 5s. It was decided to have an open match on the 18th inst., for which some good prizes have been given, among which are a box of cigars and sixty yards of best prepared silk jack line. Members requiring travelling tickets should send full name and address and 2s. at once to the secretary.—W. ADEANE.

June 7.

GORGE-FISHING AND THE SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

A CORRESPONDENT writes to us to call attention to the letters which are appearing in the *Animal World*, the organ of the above society, on the cruelty of the gorge-bait method of fishing. We are not surprised to learn that the Society intend to take the matter up, and they will have the support of all true anglers. Trimmers, night-lines, and gorge-hooks, should be scouted as poaching, and painful engines for the capture of fish.

VORACIOUS PIKE.—On Whit-Monday, while fishing for perch with paternoster, at the Stoke Newington reservoir, a small jack of about 1½lb. took the worm. As I was bringing him to bank, I saw a sudden gleam and swirl in the water and very quickly found that the small jack had been seized by a big one. I played the two for abont ten minutes and ultimately brought both on to the stones, the larger fish retaining his grip of the smaller, the latter, being hooked. I had no landing net, but a young fellow who was fishing near endeavoured to land the two fish with his hands, but failed, and the big fellow made off again. I twice after this brought both on, to the stones, but the second time the lead of the paternoster caught in the stones, and as the big fish made a sudden bolt, he tore the small one from the hook and bore him off in his jaws in triumph. I have never seen a jack so persistent; his weight must have been between 8 and 10 lb. Of course, had I landed him, he must have been returned to the water, it being a fence month.—F. HOWSE.

BALLOON VOYAGE TO THE CONTINENT.—It is stated that Sir Claude de Crespigy and one or two friends, including the baronet's sister, Miss Agnes de Crespigny, intend to attempt a voyage to the Continent in a balloon to-day (Saturday). The ascent is to be made from a field adjoining the Maldon Gasworks at two o'clock in the afternoon. The balloon is called the "Colonel," and takes 40,000 cubic feet of gas.

DOGS.—*Naldire's Prize Medal Dog Soap* destroys Fleas, Cleanses the Skin, and Improves the Coat and Health of the Dog. "Naldire's Soap is harmless to Dogs, but fatal to Fleas."—FRANK BUCKLAND. Price 1s, of all Chemists, Perfumers, and Grocers. N.B.—See that you get *Naldire's* Soap.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE GREAT INTERNATIONAL FISHERIES EXHIBITION, LONDON, 1883.

Sir,—Would you kindly oblige me by inserting a notice in your next issue that the Mayor of Reading has kindly consented to place the new town hall at our disposal, and take the chair at a public meeting to be held there on Tuesday, the 20th June, at three o'clock in the afternoon? I should be much obliged if you could do this.—I am, &c., Harry W. Towse, assist. sec.

London, June 6.

THE ANGLERS' BENEVOLENT TOURNAMENT.

Sir,—You will, I am sure, and I hope your readers may, forgive me for presuming to express the anxious hopes of an angler's wife that the Benevolent Society may be largely benefited by the tournament of July 8.

I feel that the very unusual course I am adopting needs an excuse; my plea is that I very much want to assist.

I will give a prize, sir, but is that all I can do? May I not be present? I want to meet and shake hands with the committee of the Anglers' Benevolent.

My husband has told me of the good being done, the manner of its doing, and the men who do it. I have in my mind's eye a picture of their meeting-room, and the faces of the good and true men in deliberation as to the amount to be given to relieve the distressing and deserving cases before them.

How often, I wonder, does it occur that their hearts are too big, and the case too distressing, for the funds at their disposal.

If ladies may be present, I would say to angler's wives: Do as I have done; persuade your husband to take you to the tournament, and testify by your presence that you desire to encourage those who can nobly forget self and work without reward for the benefit of their unfortunate brother fishermen.

I enclose you my name and address, but I will ask you to permit me to sign myself, An Angler's Wife.

MEASUREMENTS AT THE FISHING GAZETTE TOURNAMENT—EYED HOOKS FOR SALMON FLIES.

Sir,—Messrs. Jardine and Wheeldon, at p. 261 Fishing Gazette, have not quite understood my question. I want to know—when I read that Mr. So and So has made a cast of say 22 yards (I allude especially to the artificial fly) how said cast is measured—is it the length of line out from the reel to the fly, or from the point of rod to the fly, that is always to be understood? In addition to my question, yet unanswered, about eyed hooks for salmon flies, will some of your readers tell me if they have given a trial of any length to the Manchester Company's taper fly lines, with wire centre, for salmon fishing. Does the wire centre last without breaking up or corroding? M. B.

[We understand Mr. Jardine to mean the cast in the fly competition was measured from tip of rod and not from reel. We feel certain the eyed hooks would answer admirably for salmon flies; they do splendidly for large floating May flies. Some May flies Mr. Ogden, of Winchcomb Street, Cheltenham, sent us, dressed on these hooks, are the best we have ever seen.—Ed.]

NEW ASSOCIATION AT MAIDSTONE.

Sir,—Perhaps you will care to hear of our doings piscatorially at Maidstone.

We have just formed an association under the title of the Maidstone Angling and Medway Preservation Society, and already our numbers are over one hundred. We have put a keeper on during the close season, and the result is already wonderful; for whereas last year, and for many years before, anglers were at work through the whole of the fence months, such a thing now is almost unknown, and even on Whit Monday I went the whole distance between Maidstone and Tonbridge (nearly 20 miles), and did not see one person fishing.

The society has also taken several nets, and has arranged to procure a yearly supply of trout to be turned into the river at various lock pools. The intention is to preserve the river as far up as the boundary of the Tonbridge association, and if this can be accomplished successfully the Medway will soon have some of the best coarse-fishing in the south of England.

The Mayor of Maidstone is our president, and the riparian proprietors have most of them consented to become vice-presidents.

Honorary members are daily swelling the list, and a programme of contests for the ensuing season is being arranged. I have been elected chairman of the society, and every week meetings take place on Friday evenings at the club-house, where, after the business of the day has been gone through, papers are read on fishing, fish culture, &c., &c.

Should you care to have a weekly report of the fishings news after the 16th inst., I shall be most happy to furnish one.—I am, &c., David H. Pine.

[This is good news. We shall always be glad to have reports.—Ed.]

EYE-SHADES FOR FISHING.

Sir,—The shades which you recently noticed unfortunately do not at all answer the purpose of keeping off the glare which comes upward from the water when fishing opposite the sun, and, consequently, cannot prevent the very disagreeable form of headache which this causes; tinted goggles with wire sides are the only thing for this, but they must be very slightly tinted, or you cannot see your fly. M. B.

FISHING NEAR ST. NEOTS.

Sir,—Will you kindly give notice that the fishing in the Ouse, on the manors of Diddington, the two Offords, and Brampton, is now closed; that the keepers have had strict orders to keep off trespassers and persons fishing; and that notice boards to this effect have been put up on the banks of this portion of the river. We are also given to understand that Lord E. Gordon is strictly preserving the river at the Pastons, near St. Neots. If our readers will carefully bear in mind the above arrangements many of them will be spared vexation, trouble, and the useless expense of a sixty miles' journey from London.

PIKE-FISHING IN NORFOLK BROADS.

Sir,—I have just read Mr. Davis's book on the "Rivers and Broads of Norfolk," and a very interesting book it is, and to all those who are fond of pike-fishing I would strongly recommend it; the map, as you say, being worth double the money.

I propose during the summer having a fortnight upon the broads and rivers it describes, and if there is any gentleman who feels disposed to join me, I should be glad of his companionship, as my experience of country fishing, especially when one takes up his quarters at some lonely farmhouse, is that the evenings after the day's fishing is over are apt to become dull after a week of it, if one is alone, and unfortunately my angling friends are not enthusiastic enough to give up an entire fortnight to the sport I am so fond of, viz., pike-fishing. I shall therefore be glad to hear of a companion. Any time during July would suit me.

Will you kindly give me a hint as to the best way to angle for carp, most improved bait, &c.? Apoligising for taking up so much of your space.—I am, &c., E. T. J.

24, Gordon Terraee, Putney, S.W., June 3.

[Carp-fishing was described in a recent number of the Fishing Gazette.—Ed.]

THE "ALEXANDRA" FLY.

Sir,—As the Fishing Gazette always gives an unbiased opinion on piscatorial matters, I take the liberty of making a few remarks on trout fishing, especially as to the use of the so-called artificial fly, the "Alexandra," which I am persuaded is too often used by our crack fly-fishers, to the detriment of the true art of fly-fishing with smaller and seasonable flies. I write this in the midst of the trout season, when many gentlemen are competing for prizes of specimen fish, for which some of the most influential societies have already increased their standard. Such being the case, I think it a good opportunity, before prizes are awarded, to ask if you consider that fish caught with this popular fly should not be classified with those caught with a minnow? which it is well known to resemble, thereby giving to the pure—but less successful in weight—fly-fisher, a better chance of reaping his reward. I put this idea forward in all good faith for my brother toiling anglers, as I feel sure that many of our most scientific sportsmen are just now (I am sorry to say) becoming mere pot-hunters, and, like otters, destroying the larger fish without the skill required, and to the disadvantage of the higher art of artificial fly-fishing.—I am, &c., Insectivora.

SILK AND HAIR LINES, &c.

Sir,—Though your correspondent "Trout" clearly expected his statements to be convincing and conclusive, I must say they are utterly at variance with my experience. As I have hitherto always signed myself "Trout" when writing in your columns, I feel bouud to dissent from the principles laid down by the "Trout" who was on the rise last week, and in future correspondence I must adopt a new *nom de plume*.

I detest silk and hair lines, and would not give a penny for a cartload of them; they have, as far as I can see, no merits whatever which are not shared by a really good water-proofed line, while their disadvantages are many. As to hair casts, I have never been able to get any hair good enough for use, so I cannot speak of its merits; but when your correspondent asserts that none but a very skilful angler need try it, and that he must have "plenty of space to kill his fish—no bushes, stakes, piles, or stones," he practically deprives the subject of all interest in the mind of an ordinary angler, who has no access to a piscatorial Paradise of Elysian streams. I think "Trout" must be the first of his species who ever frequented a stream possessing the peculiarities he describes. So far as I can make out, he has made a series of one-sided statements in support of his views, but has proved absolutely nothing. Harping on "lightness and buoyancy" all through his letter, he, sums up with the obvious truism that "the great and main object is, when casting a long line on the surface (where else would you cast it, I wonder?), that it should fall and lie light and not drag through the water," leaving a reader (who did not know better) to infer that this object could not be attained with a water-proofed line aad gut collar.

"Trout" expresses himself ready "to bear all criticism from brother anglers." But if I were to criticise all his statements seriatim, it would be a tedious and profitles task; suffice to say that all that "Trout" advocates as the perfection of fly-fishing is done and has been done for years, not only in Derbyshire, by anglers second to none, who abjure silk and hair lines altogether and never risk a cast with such fragile stuff as hair. If drawn gut casts (tapered of course) and a fine tapered silk line water-proofed are good enough for the chalk streams—running clear as crystal the whole year through, with their big fish of two, three and four pounds, which only take the finest dry fly cast with the utmost precision—then I maintain they are good enough for any waters in the kingdom.

I am not so presumptuous as to expect to convince the readers of the Fishing Gazette that the views expressed by the editor and me on this question of lines are the only right ones; but I think the silk and hair advocates mostly speak as if they had never given a trial to anything else. Knowing and appreciating what they are accustomed to they extol its virtues, and condemn all else. Have the writers on this subject really tried fairly what they condemn so emphatically. Do they know the ease and comfort of throwing with a good prepared line, and that the "lightness and buoyancy" of such a line are not its least merits? For my own part I write after full and repeated trials of silk and hair lines for many years; and, like the Scotchman advising his son on the subject of honesty, I can say with emphasis "A ken it weel, Jock, for a've tried baith."—I am, &c., Olim Trutta.

Question for Students of History.—Why was the first King of England, after the Norman Conquest, called William the Conqueror?—Because we find that he was very fond of sea-fishing off Hastings, and most particularly partial to catching congers. Hence his nickname, or *nom de peche*, "William the Congerer!"

Formation of a Preservation Society for Henley-on-Thames.—For years the fine reach of the Thames between Shiplake and the Temple, of which Henley is the centre, has been sadly poached; but at length, we are glad to hear, this "missing link" in the chain of fishery protection is to be taken care of. A public meeting will shortly be held at Henley, under influential auspices, to form an Angling Preservation Association for the district, and will, we have every reason to believe, be very successful. The Right Hon. W. H. Smith, M.P., of Greenlands, Henley-on-Thames, has consented to be proposed as president, and will be backed by a strong committee. Mr. Chas. H. Cook, of Southfield House, Henley, is acting as secretary pro. tem., and deserves great praise for the success of his efforts in the promotion of the undertaking.

COMPLIMENTARY DINNER TO THOMAS SPRECKLEY, ESQ.

It will be no matter of surprise that the committee of the Thames Angling Preservation Society resolved to entertain their energetic and respected President at a complimentary banquet, in appreciation of his most valuable assistance in directing the operations of the society. It may truly be said of Mr. Thomas Spreckley that during the time he has been connected with the society he has occupied a prominent position, and "spared neither time or money in energetically conducting its operations, and his arduous labours have been crowned with significant success. It may be mentioned notably, amongst other matters in which he has distinguished himself in removing existing evils in the river, that of the abolition of night lines and the prohibition of snatching; whilst there are other advantages he has anxiously promoted for the benefit of all classes of anglers, such as the netting of ponds to increase the stock of fish in the river, the effective staking and placing other obstacles in the tideway to prevent netting, obtaining permission from owners of tributaries to the river for their protection and preservation, the management of the rearing ponds at Sunbury, and a practical and personal supervision of the whole of the lower Thames."* In these, and other matters in which he is at the present time engaged, he has given much sound practical thought and the employment of considerable time. Having in view all this work which he has done, the idea occurred to several members of the general committee to invite Mr. Spreckley to dine with them after the June committee meeting, at the Holborn Restaurant, in Little Queen Street, which has become the favourite resort of anglers. It was determined to make the banquet of a special character as regards the items on the menu, and spare no expense in carrying it out. The whole arrangements were entrusted to Mr. T. J. Hamp, and right well did he give them completeness and effect, receiving from the committee expressions of the highest praise for his admirable catering and in serving up a dinner which it would be impossible to surpass. The banquet took place in the Duke's Saloon, and was presided over by Mr. Alfred Nuthall, with Mr. John Knechtli in the vice-chair. Of the committee there were present :—Messrs. H. J. Alfred, Joseph Andrews, W. G. Barnes, A. Beningfield, J. R. Berry, E. Blank, Hickson Briggs, F. C. Clench, W. A. Crump, T. S. Davy, H. B. Eyre, R. Ghurney, P. Geen, F. C. Hatfield, Alfred Jardine, F. H. Lemann, A. J. Little, T. R. Sachs, and C. P. Wheatstone; Messrs. W. D. Lewis and F. J. T. Moore (auditors), and Mr. W. H. Brougham (secretary). Mr. Thomas Spreckley occupied the post of honour to the right of the chairman. There was no list of toasts on the occasion, as it was considered more complimentary to the guest to limit this portion of the evening to the one special toast, that of "Mr. Thomas Spreckley," and in doing this Mr. Alfred Nuthall, as chairman, referred in graceful terms to what that gentleman had done for the anglers, and who was still deserving of all the honour they could give The applause which was frequently given during the chairman's remarks, the demonstration which accompanied the response to the toast, and the ovation which was accorded to Mr. Spreckley on rising to return thanks, must have been highly gratifying to him. In his reply, Mr. Spreckley expressed himself desirous of labouring for the anglers in the interest of the Thames Fishery, and was ready at all times, by night or by day, to help in its protection and preservation. Later on in the evening there were three toasts introduced, "The Chairman," "The Vice-Chairman," and "The Secretary." Several songs were given by Mr. Spreckley, Mr. Joseph Andrews, Mr. W. D. Lewis, and Mr. Alfred Jardine, Mr. Andrews receiving a special encore in "Where the bee sucks," which he rendered with capital effect and in first-rate style.

---

* Little's "Angler's Annual," 1882.

SPAWNING OF THE "SMALL FRY."

Solomon in the old time, and Sir John Lubbock and others in the present age, have immortalised the tiny ant; Darwin also has unfolded the immense usefulness of the despised earth-worm, and I wonder whether a work will yet be written showing the undoubted curiosities in the natural history of our smallest fishes. Hard by me runs a pretty little stream, a tributary of the Gade, and I have been spending some very delightful half-hours latterly watching the movements of the spawning "small fry." The stream is not more than 20 feet wide at its widest, is practically unsheltered from the sun, and runs at a pace of perhaps two miles an hour over a chalky stratum. It is uniformly clear and comparatively free from weeds, but stones and gravel are abundant, and so are patches of the *alsinastrum* and other weeds; its depth does not exceed in any spot 2 feet, and the average is 18 inches. So much for the habitation of our "small fry."

The minnows attracted my observation first. Their size is comparatively very large—some I threw a cast net over the other day measuring 3½ inches. Just below a rustic bridge spawning the stream, and quite in the middle of the water, they are, as I write, in multitudes, occupying a patch of cleanish gravel, and maintaining themselves against the stream with salmon-like ease. Here and there a female sinks completely to the bottom, between the interstices of the stones, until her dorsal fin is just seen with the general level. Here she remains till a certain portion of the ova is exuded, as, after she rises, it will be seen by the careful observer that the eggs are apparently glued in whitish threads to the *conferva* of the stones. Thereafter follows the male, with an assumption of great importance, and I presume the operation is rendered complete. I know that this is how the minnow (*Leuciscus phoxinus*) spawns, because I only this morning (May 19th) examined a stone on which I observed the minnow lie as described, and found the attached ova, presenting under the microscope a beautiful opaline appearance. Minnows will not take a worm when spawning; and it was a treat to see them skedaddle when a quarter-pound pike came floating leisurely down.

The three-spined stickleback is also now in his full war-paint. Many of the males are already busily engaged keeping watch, and ward over the nest in which the ova is deposited. How gloriously beautiful these little fellows are.. It is difficult to describe even approximately the sheen of the gold and green iridescent armour of the little warrior. And a warrior he certainly is. I have been watching a male fish this morning in his savage onslaughts against those impertinent spawn-laden dingy females, who so inveterately seek to disturb the ova-laden and sealed nest. They would devour the spawn with relish, that their own might occupy the place; but Sir Stickleback charges and ranges over the watery field with a celerity and ferocity truly astonishing. He will not quit his post, though you worry him with the point of your fly-rod. By the bye, how these fish do lock their side spines, and yet the Gade trout prefer them to minnows. This I have proved.

It is a popular notion that gudgeon spawn in shoals in close contiguity on shallow and sandy places. My direct observation contradicts this. I have seen gudgeon at work incessantly during the last few weeks, and they are invariably apart, and almost as lethargic as the bullhead when they are in the spawning attitude. This is duly effected in the spaces of the weeds, and rarely more than two or four are found together. After this they appear in shoals of more or less magnitude. Of course the spawning water is shallow. Their shyness, when spawning, resembles that of the trout in normal season, and the least disturbance causes them to dart away in a perfectly salmonidæ fashion.

The artfulness of the bullhead (*Cottus gobio*), when feeding, is very curious in one particular. I was watching the eccentric stone-moving serpentine twirlings of the tiny lamprey—"Nine Eyes" they are called here—the other evening, when from a large stone in their rear, with some circumspection, the black muzzle of a bullhead was protruded. Presently, with additional caution, the rest of his body emerged, and taking a station just behind the other fish, I distinctly saw him snapping up the unconsidered trifles in the shape of tiny crustaceans, &c., set free from the stones as the "Nine Eyes" successively removed them. I knew of Master Bullhead's voracity, but I confess I was surprised at his broadheaded sagacity.

J. H. K.

Wait While the May-Fly Grows.—A correspondent writes —"I met a friend the other day returning from a try at the trout, and asked him if the May-fly were up?" "Yes," he said, "they are just beginning to show, but I would advise you to wait a week until they have grown bigger!" He was a member of the Watford Natural History Society, too. The idea of waiting for the May fly to grow!

The Angel Shark or Monk Fish (*Squalies squalmus*).—A fine specimen of rare fish, a species of shark, was captured at Lynn on Thursday last, and has been sent to Mr. William Howlett, naturalist, of Newmarket, to be preserved. This fish is exceedingly fierce and savage, several instances being recorded of its attacking the fishermen when extricating it from the net. It is spoken of by the ancients as being very dangerous, and as it attains to the weight of a hundred pounds or more it requires great skill and courage to take it. Like the other sharks, it has rows of teeth disposed round the jaws, and by means of certain muscles they can all be brought into operation.—W. Howlett.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

12 feet, 4s. 8d.; 14½ to 15 feet, 6s. 6d. Carriage paid for 6d. extra.
Long best trout gut, 1s. 10d. per 100; Hooks to gut, 4½d., 5d., 5½d. per doz. Stamps 1½d. extra to 5s.
H. BOOTH,
13, CHARIOT STREET, HULL.
Fishing Rod Maker and Gut Merchant.
N.B. 1 yard gut cast 1s. 3d. per dozen; 2 yards gut cast, 2s. 5d. per dozen; 3 yards gut cast, 3s. 4d. per dozen; gut, 11 inch, 9d. per 100.

SALMON AND TROUT.
GREENHEART FLY RODS.
Why our rods are celebrated for their action, durability and finish is that, being makers on the premises, we have a large stock of well-seasoned, tough, straight-grained, springy wood.
No cross-grained, knotty, unseasoned timber is used, and all rods are hand-made.
Whippings are of the very best silk, and errules of the best sheet brass, thoroughly hammered.
Approval always allowed. Price lists gratis.
Address—
B. R. BAMBRIDGE,
Maker to the Royal Family, Eton-on-Thmes, Windsor.
Established 1790.

JAMES OGDEN, 28, Winchcomb Street, Cheltenham.

PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE,

Solicits a trial of his

WORLD-RENOWNED TROUT AND GRAYLING FLIES,

Also his

CELEBRATED FLOATING MAY FLIES, GREEN AND GREY DRAKES,

Which are still being dressed by the same experienced hands as for many years past, and can only be obtained at the old shop

28, WINCHCOMB STREET.

JAMES OGDEN'S

MULTUM IN PARVO FLY RODS,

PRICE 21s.

The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading Anglers of the day.

JAMES OGDEN'S NEWLY INVENTED

NE PLUS ULTRA RODS.

For particulars of which see Article in Fishing Gazette of March 18.
All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.
N.B.—No connection with any other persons assuming the same name.

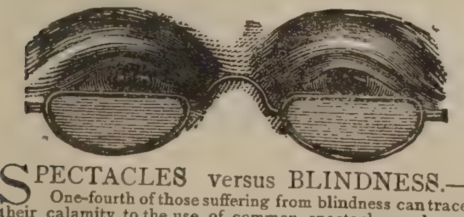
Fishing Rod and Tackle Manufacturer.
Flies made to any pattern or description.

Outfits for Norway, Canada, India, &c.



SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3. Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted). 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire. Ticket depôt for the Tiverton Fishing Association.

HOLBROW AND CO.,

THE ODOR OF THE FOREST
THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The Forest and Stream has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.

The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the Forest and Stream annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the Forest and Stream Publishing Company, 37, Park Row, New York, U.S.

Subscription agents for Great Britain:
Messrs. Sampson Low, Marston, Searle, and Rivington, Crown Buildings, 188, Fleet Street, London, who can supply specimen copies.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees, or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, furniture without removal, deeds, shares, bonds, &c., Bills discounted. THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations :—Morpeth. Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the Fishing Gazette. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht ; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS Of setting the Angling on BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8 ; ticket for the week, £2 10s. ; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for " season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair ; is newly and handsomely refurnished ; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon ; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

TROUT FISHING (lake and river,) about best in North Wales, FREE to VISITORS. Excellent sea fishing and bathing, boats on lake and sea Best places in Anglesea can also be fished from MAELOG LAKE HOTEL. Ty Croes Station, near Holyhead.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation at the " ARUN " FAMILY and COMMERCIAL HOTEL, Pulborough, Sussex. T. Pearce, proprietor.—There is in connection with the hotel, for the use and enjoyment of visitors, a bowling green, skittle saloon, quoit ground and billiard room. SATURDAY, JUNE 17, 1882.

ROACH AND DACE FISHING IN THE AVON.

THE subject of these few remarks will be on roach and dace fishing, in the Avon and Froom (near Bristol). I shall begin by giving a few hints on dace-fishing. Dace-fishing ought to commence in April; but, as the season does not open till the 15th of June, we must begin from that date. The dace is a handsome fish, and found in shoals in quick running streams. The best bait for them in June and July is the shade-fly. It is found under hawthorn bushes, all through the summer months, from 4 o'clock in the morning till 8 at night. The best time for dace is in the morning from 4 to 10 o'clock, and from 5 in the evening until it is dark. The rod for fly-fishing should be from 12 to 14 feet long, and the tackle about 3 yards long; consisting of 2 yards of silk line and one yard of fine gut or hair. Always begin fishing up-stream, and keep out of sight as much as possible. The best way is, when you see fish rising, to creep very quietly until you get within casting distance of them, drop your fly about a yard up-stream, let it float down with the stream, and they will take it freely. When you hook a fish keep it under water till it is exhausted, so as not to disturb the others. The artificial flies that I recommend for dace are, the stone-fly, the fern fly, the black gnat, and March brown. The natural flies that I have been very successful with are, the shade-fly; the common house fly, the brown gnat, and the ash-fly; the latter is a handsome fly, with spotted wings like a small butterfly, and is a killing fly for dace or trout. The following is the way I keep them:—Get a small bottle, put a spoonful of brandy in it, shake the bottle well with the brandy, and then pour it out—drink it, if you like; catch your flies over night, put them in the bottle and cork them down; by so doing they will keep nice and moist. By following these directions, and a little practice, the young angler cannot fail to catch some dace. I will now give you a little of my experience during the season that has passed. One lovely Monday morning, last June, I took my rod, tackle, and bottle of flies; I went down as far as Crew's Hole, where one of of Mr. Butler's workmen put me across the river. Walking about a quarter of a mile up-stream, I saw some fine dace rising under some withy trees. Putting my rod together, and selecting a fly, I dropped it about six feet from a fine dace; the fish took it in an instant, and after a little struggling I landed it safely, I went on and caught 18 from the same place weighing 7 lb. The next morning I went as far as Beese's passing boat, where the owner of the boat put me across the river for one halfpenny. Looking down the river, I saw a lot of fish rising under a large withy tree, just below the Tea Gardens. I made my way down there, and caught 30 dace, weighing 12 lb. On the following Saturday, I fished opposite the Whitehouse and caught 27 dace weighing 10 lb. On the following Wednesday, I caught 29 dace with the brown gnat, weighing 11 lb. On the Friday, 31 dace and a trout ¾ lb. I hooked another between 3 and 4 lb. with the brown gnat; but I was using a tight line, and could not play it. The next day I caught 28 dace and a trout ½ lb. with the shade fly. Last season, in June and July, I caught 147 fish with the shade fly, brown gnat, and house fly, between Butler's Works, and Beese's Tea Gardens. Another good place for fly-fishing is from the powder house to the tanyard brook, at Hanham Mills, on the other side of the river, from there to Swineford, and from Swineford to Tiverton, I have never been farther than this fly-fishing. There are plenty of dace between Keynsham and Swineford; and I think anglers will be able to find good sport, fly-fishing, from the 15th June till the latter part of July. Then bottom fishing commences for them. In August the angler should go to the swift-running streams, or the tails of weirs; your groundbait should be barley meal with gentles mixed inside, and let your bait drag the bottom. The best swim that I know in the Avon is at Tiverton Weir; let the angler stand on some stone steps that he will see there. Throw your groundbait ten yards up stream from where you are standing, fish about fifteen yards out and if the fish are "on," you will have a good catch. Last August I caught 20 lb. there, from 12 o'clock in the morning, till six in the evening.

On the following Monday I caught 16 lb. at the same place. I have caught more fish at Tiverton than at any other place on the Avon. One day, in 1877, my brother William and myself were fishing at Tiverton. We started at 1 o'clock in the afternoon and at 6 o'clock in the evening we had nearly 60 lb. of fish. The same year I caught 40 lb. of fish in one day, at the same place, with yellow paste and gentles. In 1877, 1878, and 1879, there were plenty of fish caught all the way up the Avon, but since that time, sport has been very indifferent. I hope they will come on well next season, for the credit and benefit of the Kingswood, &c., district. I will now say a few words on the Froom. I shall only mention the places you can fish without trespassing. The first place that I will mention is the Grove at Hambrook. It is all shallows and scours, until you come to Mr. Lewton's field, where the water is deep, and there used to be plenty of fish there. Any one can fish this water by asking permission of Mr. Lewton, who keeps a "public" close by, and is always glad to see anglers. The next place is a field that belongs to Mr. Till, and the withy bed belonging to Mr. Hobbs, then from there to Damson's Bridge, follow on from the last mentioned place to the bridge at Huckford, where there are plenty of dace, roach, carp, gudgeon, tench and eels. All the land on the Frampton side belongs to Mr. Matthews, who will give you permission to fish right to Frampton Cottrell; above there the land belongs to the Waterworks Company but they will not allow any one to fish on their property. I have caught plenty of fish at all these places, the bait being the house-fly, sinking and drawing, and on the bottom with the caddis. Before I proceed any further, I will just say I don't think you will find better caddis in England, than those found at Hambrook. I'm not a naturalist, therefore I don't know much about them; but I know this much, that it is the best bait in the Froom for dace, roach, carp and eels. The best place to find them is in the brook that runs by the Whitehorse, at Hambrook; the caddis are found in April, but are not yellow before the latter part of May. There are a lot of anglers who go to find caddis, they get about twenty, and say they can't find any more, I have been to the above-mentioned place, and found six pints in two hours. You must not expect to find all the caddis adhering to the stones; but when you pull up a stone wait till the water has cleared, then look in the sand and you will be able to find more than twenty. The best way to keep them, is to put them in a flannel bag, dip the bag in water till it is well soaked, then hang it up in some cool place; when it has run dry repeat the same process as before and as many times as needful. I shall dwell more fully on the caddis in my notes on roach-fishing. I will now say a few words on winter fishing for dace. When the first floods of October bring the eels down the brooks, the dace go up. The tanyard brook at Hanman Mills, Bitton Brook, Corson Brook at Kelston, and Tiverton Brook, are the best places to go to, when the water is bank high. The best bait for dace, from October to January, is the cockspur worm, which is found in rotten dung or straw; get some of these, and keep them in moss for a few days, and they are ready for use. I always use two worms on a hook at a time. Groundbait with barley meal and chopped worms, and let your bait drag the bottom. Always keep your line the upper side of the float, so that when the fish takes the bait you can always strike up-stream; always strike lightly; just raise the point of the rod and that is quite sufficient to hook a fish. I think the close season for dace should commence on February 15th as they begin spawning in that month and come in season on April 15th. For roach I think the close season should commence on April 15th, and end the 1st of August, as they are not in season before that date. I know that some rivers are much more forward than others; but this, the above, is my opinion of the Avon and Froom. This concludes my remarks on dace-fishing.

ROACH FISHING.

There are many people who say they would rather eat a paper of pins fried in lard, than they would a roach; but for my part I think them very good, properly cooked; and I say, if you can't get beef, eat bacon. The roach is a nice-looking fish when in condition; it likes deep running water, though it is sometimes found in quick-running streams. Your tackle should be of the finest, as the roach is a shy biting fish. Your rod should be 12 feet long for the Avon, and 10 for the Froom. The line should be the finest you can get, 50 yards in length. I would recommend the young beginner not to use too fine gut; use a float that will carry six swan shot. Perhaps it will not be out of place here to tell how I started fishing. My father was a fisherman of the old school, who believed in strong coarse tackle, and a rod that would lift a 7 lb. weight tied to the top; but if it should break it would not do. I am sorry to say there are some of his sort at the present time, whose heads are thicker than their tackle; but in my father's younger days fish were more numerous, consequently they would bite more eagerly. I remember, when quite a little boy, going to Frenchay with my father to a piece of water at that time belonging to Mr. Mage. I have stood behind him and he has kept me taking fish off the hook. I have known him catch 18 or 20 lb. in a couple of hours, with the green grub and house-fly. The fish would take anything in the shape of bait. I may mention that all our family take an interest in fishing, and we can generally compare favourably with most anglers after a hard day's fishing.

I commenced fishing at the early age of ten. I used to borrow or steal my father's tackle, and very often left the greater part of it up in the branches of some tree. Sometimes I used to catch a fish, at other times I lost all the tackle and then I got the rod on my own back. But I did not care, I would go again. Sometimes I used to find my brother's tackle and go fishing with it, then I had to keep out of his sight for the next two or three days. But at last I became the owner of two nut sticks, a tin ferrule, a thread line, and a hook on horse-hair. I felt as proud of that as a fisherman would be of a 10 pounder at the end of his line. I used to bait with bread mixed with water, a little olive oil, and a bit of sugar. Thus you see under what circumstances I started as a fisherman. Hanham Hills is a very good place for a young beginner. Your groundbait for a day's fishing should be 2 lb. of bran, 1 lb. of barley meal, and a nice lot of bread mixed together in stiff balls. When you get to some deep running water, throw your groundbait six yards above where you stand, so as not to let it go too far down stream; plumb the water, get the right depth, let your bait drag the bottom, and you will catch larger fish. I have seen fishermen fishing two feet off the bottom, and then complain because they have caught all small fish. It has been simply through not fishing on the bottom. The ground bait above mentioned is for paste and gentle fishing. In June and July the best bait for roach is the caddis, all the groundbait you require is a little chewed bread. The roach are to be found in streams running over gravelly or sandy bottoms. They spawn in shallow water and come back to these places to clean themselves, when they go into deeper water. In August, September and October, the best baits are paste, gentles, boiled wheat, and malt. The following are some good places for caddis fishing:—The tail of the old mill at Hanham Mills, the swim of Mr. Steven's garden wall, and the mouth of the tanyard brook, I used to catch a lot of fish off the lock wall at Hanham Mills, but the man who is there now won't allow any one to fish there. May he never catch a fish! At Keynsham, there are some good places; there are good places from Keynsham to Swineford, from Swineford to Kelston, and from Kelston to Tiverton. The way I use the caddis is to take it by the back (give it a good shaking), put the point of the hook just under its head, and bring it down to the other end. Let it drag the bottom and strike directly you get a bite. Another good way to use the caddis is to throw it in the water and let it remain on the bottom. Some people call it ledgering; nevertheless, it is a very killing bait used that way. I shall now say a few words on paste-fishing. In almost all books on paste-fishing, we read of scented oils and other ingredients, but I don't believe in them, with one exception. From experience, I can say a bit of bread, a couple of days old, mixed with brandy, in a clean cloth, will beat them all. Keep out of sight as much as possible; use the finest tackle you can get, and let your shot be 18 inches from the hook. Let your float be an eighth of an inch out of the water, and strike at the first nibble. When fishing with paste, very often the fish will take the bait in their mouths, and finding the hard hook will let it go again. Some fishermen will not strike till the float goes out of sight. My brother told me he saw a man fishing and while he was watching him he had a bite. The fish took the float three feet under water, he struck and missed it. "I'll give it more time if it comes again," said he. The fish did come again, and he let it take the float three yards, when he struck and missed it again, and he said he didn't give it time enough then. The same man is about to become a member of the K. and D.; and if he hears of these few lines being read, I hope he will not be offended, but profit by what I have said, I was once standing on Keynsham Bridge, and looking over into the water I saw a lot of roach and dace playing on the shallows. Thinking I could catch some of them, I resolved to try. Dropping my bait of paste amongst a shoal of them, I saw about fifty of them rush at it, without looking or smelling, to see which should have it first. As soon as I saw the fish rush I struck, and hooked one and also landed it. Throwing in again, I saw one take it in its mouth and blow out again; then another took it and disgorged it likewise, but I did not have them, through not striking quick enough; I think this quite a sufficient reason for my saying, strike at the first nibble. Yellow paste is a very killing bait for roach in all the waters I have fished. I will now say a few words on the new baits for the Avon, viz.—malt and wheat, and I must say there were a lot of fish taken with it during the seasons 1881 and '82 at the mouth of Bitton Brook. I had several good catches there with it myself. I tried it at several other places in the Avon, but without success. I think the places you are going to fish should be baited with it two or three days beforehand, so that they will have the taste of it. To prepare it, buy a measure of malt, put it in a saucepan of cold water, let it simmer four or five hours in a bag, then take it out and plunge it in cold water, and it is fit for use. The tackle should be a single hair with short shank hook, and a float that will carry two swan shots. Fish about six inches off the bottom, and strike at the first nibble. Groundbait far out and fish the same. Only put one corn on the hook at a time. I shall now treat on my favourite bait, the gentle; it is a good bait for the Avon, as the winner of the two first prizes at our competitions can testify. The gentle is a good bait for nearly any fish in the Avon. The best way to use it is on a swim; you can either let it drag on the bottom or fish six inches off. Both ways will do for roach or dace, but by letting it drag on the bottom, you will catch larger fish. Your tackle should be the same as for paste-fishing. There are more fish caught in the Avon with gentles than any other bait. If they will not take gentles in August, September, and October, I conclude that they are not on the feed, and if they won't feed no one can make them. When you are fishing on a quick swim, strike at the first tremble of the float, but in slow or still water let the float go under before you strike. You can take more kinds of fish from the Avon with gentles, than any other bait all through the summer months. I have taken roach, dace, chub, trout, carp, perch, gudgeon, bleak, and eels with them, therefore I like them better than any other bait. How to breed them: Get a large fish's head if you can, and put it in a tin with a lot of holes in the bottom of it. When the gentles leave the fish's head, they will drop through the holes at the bottom of the tin, so that you must have another tin under it full of sand, where they will scour themselves and are fit for use in a couple of days. The gentles bred from fish are the best, because they are brighter and more lively than others. Put three or four on a hook at a time. This concludes my remarks on gentle-fishing.

I will now say a few words on winter fishing for roach. In November and December they begin to bite at the worm, and from then till March, when the close season commences. When the water is bank high, you will find the roach in close to the bank or in still holes and at the mouths of brooks. The best places are where there is a lot of sand, as the roach loves sandy bottoms in winter because it is warmer; therefore, if you know of a sand bank that's the best place you can go to in winter for roach.

The best bait for them is the small lob worm; because, when the water is dirty, the roach feed on the worms that crawl out of the banks of the river, therefore I advise you to fish with the lob-worms, as they have an earthy taste; but when the water is fining down to a nice brown colour, use the cockspur or brandling, and fish in the holes or eddies where the water is still under bushes and trees. Your tackle for roach-fishing in winter, depends upon the colour of the water. When the water is dirty, use strong tackle; but after it is clear use fine tackle. Don't use too much groundbait, it is the cause of fish feeding so shy at times. I have seen anglers when they have caught a fish begin throwing their groundbait in by hand fuls, and the result is that they frighten all the fish away. When you have baited your swim and got the fish together, small bits of chewed bread is quite sufficient to keep them together. When the water is baited to excess the fish gorge themselves, and will not touch a bait on the hook, because they are overfed. I have been for a days fishing before now without any groundbait at all, and I have caught more fish than at other times when I have had 7 lb. of bait. I know that groundbait is attractive, and what I should advise you to do is to get about four lob-worms, chop them up in small pieces, mix them up in barley-meal and throw it in a little at a time. The fishermen forty years ago did not use any groundbait at all. By the way, a fisherman told me that twenty or thirty years ago the Avon and Froom were full of fish, and they used to fish with two hooks at a time, and also catch two fish at a time; but because they can't do it now, they give up fishing. I think the fish get wiser every year, for years ago they would take any bait on any tackle; but now they will come to the bait and examine it, and if the tackle is not as fine as a hair on your head, they will go away disgusted. The fisherman of to-day must be very artful if he wishes to catch roach with any amount of success. One day, in 1881, I thought I would go to the mouth of St. Ann's Brook, at Crew's Hole, as I thought it looked a likely place for fish. I went there and commenced fishing; as soon as the bait was in the water down goes the float, and up comes a fish, of six ozs. I put in again and had another; in again, had another; and I kept on for two hours, catching them as fast as I could pull them out, when I gave out; for I had enough, and that is a great thing for a fisherman to say. Picking up my fish off the ground, I counted 90 roach and dace weighing 40 lb. avoirdupois. The next day I went to the same place and caught 13 lb. and a trout ¾ lb.; two days after I went to the same place again, and succeeded in catching 12 lb. of roach and a trout 1¼ lb. I caught over 100 lb. from January to March, 1881. But this season my best catch there has been nine fish. I blame this to the skimming nets. They ruin the Avon; and if something is not done to stop them, we may as well sell all our tackle, for there will be no fish to catch in two or three years' time. I suppose some of the netters who hear of this, will pour their wrath on my head; but I don't care, for I mean to stop them if I can; but to do this I want help. But to return to my subject. When you have a bite, if your bait is swimming, strike immediately the float goes under, but when you are fishing on the bottom in the holes, give the fish more time; you will catch more roach in the Avon by ledgering on the bottom with a small red worm, than any other way. In the winter I should not advise you to go to brooks for roach, though you may catch some there when the water is high and dirty. I should not recommend any one to fish below Hanham Mills for roach in the winter; some very good places are the backwater, and the mouth of the Tary and brook at Hanham Mills, and in all the holes from there to Keynsham; the mouth of the cut at Keynsham is a very good place when the water is bank high. There is good fishing from Keynsham right to Bradford. I have never been any farther than this roach-fishing. Another great thing you want in fishing is patience. But speaking of patience puts me in remembrance of an incident that came under my own observation about two years ago. As I was walking from Keynsham to Swineford at six o'clock in the morning, I passed by an old gentleman who was fishing opposite the new paper mills. "Good morning, sir;" said I. "Good morning, sir!" says he. "Any sport, sir?" I asked. "Not a fish," says he. With that I walked on. I commenced fishing under some withy trees this side of Swineford, where I caught forty good fish. I came back the same way in the evening, when, just as I came to the old gentleman, a little dog ran out of a house close by, and bit him on the leg. Up he jumped, and said, "Thank the goodness, I've got a bite at last." It was the only bite the old veteran had had all day. I gave him a nice lot of fish for his patience, and I think if there were more like him, their success would be greater. With these few remarks I conclude; and if any one derives any knowledge from hearing this paper read, I shall think I have not written in vain.

F. ANGERSON.

[The above interesting and practical paper was read before the Kingswood and District Angling Association. ED.]

A WET NIGHT.

THERE must be something out of the common and beyond all precedent, some inexplicable subtle charm in trout-fishing which is never found in any other branch of sport. Difficulties vanish as soon as they present themselves; and, to the true angler, no obstacle is too serious, no opposition too strong, no distance too great, to put a veto upon his favourite pursuit. I fancy a slight explanation of this bewitchment may be arrived at, without going very deeply into the matter, by just glancing at the circumstances under which we are likely to meet with this delicate and most refined specimen of the finny tribe. First let us regard his haunting places, and the character of the streams he loves best. No muddy, sluggish river, slowly crawling over black ooze, and draining miles of a flat and uninteresting country, will he choose; no canal, with its stagnant waters festering and blistering under the scorching rays of a July sun, and ever and anon stirred to their very depths by the passage of steamers, barges, or canal boats; no solemn lonely pool, in the gloomy recesses of the darkest wood, choked with dead autumn leaves, and covered with green slime thrown up to the surface by the mud below. These localities may be suitable to the heavy and clumsy bream, the lazy mud-loving tench, or the inevitable eel; which latter animal may be looked upon as the angler's "bête noir," for he is always turning up when he is not wanted, and raising the wildest hopes in the fisherman's breast, only to result in a most protracted surgical operation, and the necessity for an extra supply of soap. No, the home of the trout is to be found wherever nature is most lavish of her most perfect gifts; he is to be found in the rushing rock-bound torrents, shadowed by rugged frowning mountains, and following its mad career over immense boulders, and under cavernous recesses into the very bowels of the earth. He is to be found in the trickling hill-side burn with scarcely enough water to form a continuous stream; here, every tiny clear peaty-pool holds its troutlet, and every mimic waterfall contributes to the support of scores of baby-trout; he is to be found in the silver streams which run swiftly, but calmly, through the most pastoral and fruitful lands, the banks redolent with the perfume of sweet wild flowers, where the thirsty cattle come gratefully lowing in long single file, to take draughts of the cool water, and to stand knee-deep refreshing in the shallows, wondering with their big lazy eyes what can be the meaning of the antics being practised on the opposite shore, by an evident apprentice to the art of fly-fishing.

May we not conclude then, that at any rate part of the intense enjoyment and delight of trout-fishing, is derived from its beautiful accessories and surroundings, as well as from the difficulties to be overcome before success is achieved? As an instance of perseverance, I may mention an occurrence which took place about three years ago, when I was with my father in Scotland. We were staying at the Birnam Hotel, Dunkeld, during a very warm week in the summer, when fishing seemed almost hopeless, and exertion in the daytime became distasteful. Strolling lazily round the gardens belonging to the hotel, I entered into conversation with a magnificent specimen of Caledonian manhood. "Six feet-two in his boots," was my mental comment, as I gazed with admiration upon the stalwart proportions of my chance acquaintance. I told him of my disappointments and troubles, and asked for advice and comfort. With a musical voice and very strong accent, my friend slowly filled my mind with hope, and even enthusiasm. "No use fishing in the daytime," said he; "but start away early in the morning, and fish all night; plenty of trout to be had, and an occasional grilse, but you will want a boat." This was a dilemma; but the tall man was equal to the occasion, promised me a boat for that very evening, and volunteered himself to be my guide, and to take the oars. No more laziness after this, no more aimless wanderings, pipe in mouth, round the gardens; prompt action became the order of the day, and by nine o'clock I had prepared everything, provided myself with all necessary tackle, whiskey, and tobacco, and stood at the hotel door waiting the arrival of the boatman. Visions of a "miraculous draught of fishes" filled my brain; and I was just arranging mentally how many of my friends in Kent I would make happy with a present of a Scotch grilse, when my father's voice roused me from my dreams with this practical admonition: "Take a macintosh, my boy; and if you do *not* return from this wild-goose chase, I will undertake to break the news gently to your mother." With this cheering benediction, which was suggestive of rain, and of much more unpleasant things than that, we set off; and after a walk of about a mile we came to our boat, snugly moored under the overhanging boughs of a bushy tree. There was something peculiarly oppressive in the air as we paddled into mid-stream, and there was just light enough for us to see the copper-coloured clouds piled in portentous fashion into stormy-looking pyramids. The river ran swiftly, yet noiselessly, by us as the boatman kept the head of our little craft upstream, allowing us to drop down a few yards a minute in order to change our fishing ground.

Carefully and unceasingly I cast my flies upon the black-looking water, but no sign was made; not a rise rewarded my most artistic efforts, and the fish seemed to share in the universal feeling of depression. The silence became at last almost intolerable; nothing could be heard but the monotonous thud, thud, of the oars as they worked in the leather-lined rowlocks; but a change was at hand, and one that we had not bargined for. A solitary drop of rain splashed upon my upturned face as I was scanning the aspect of the heavens, then another, and "after that the deluge." Five minutes were sufficient to wet us through and through, and to make the bottom of the boat resemble a miniature lake. Not to be daunted, I changed my flies for spinning tackle and put up a small trout for bait, hoping to be rewarded with a grilse; but all was useless; the lightning, which became more vivid every moment, only showed me the utter dreariness o the surroundings, and also gave me a glimpse of a foam f ing rushing torrent below, which I concluded it would be wise to avoid. Before my resolutions were completed, my companion said "Look out, sir, we are just going to shoot the rapids;" and then in a moment we were gliding along faster, and still faster, until we were fairly enveloped by the spray and the troubled waters. Skilfully the boatman guided our fragile craft through the narrow channel, and in a very few seconds we were quietly floating upon the still black pool below. Here was an opportunity not to be neglected, and we had "Five minutes for refreshments," which short period convinced me that my companion was not a whit inferior to his countrymen in his appreciation of "Mountain Dew." Dropping the flask and grasping the rod with desperate energy, I bore the fury of the elements for another hour; and then, hopeless, drenched and miserable, I gave the word to put about. My consternation may be imagined when the boatman told me we could not possibly row up the stream again, but a tramp of some three miles, through a thickly wooded and boggy country, would be our portion.

I was too disheartened to become violent, but mentally I registered a vow, couched in Biblical terms, but substituting the words "Scotch boatmen" for the original illustrious personage named.

To make a long story short, I struggled towards home in the wake of my companion, nearly blinded by the rain, and every now and then coming violently into contact with mother earth, through the slippery and treacherous nature of the ground. All things, however, have an end; and after an hour of incessant toil, I saw the welcome lights of our hotel, and was greeted by my drowsy parent in terms the reverse of complimentary. "Past four o'clock, you madman; what an infernal pickle you are in, you look more like a half-drowned navvy than anything else; how many fish have you got?" "*How many fish*!" This was the last straw. I rushed out of the entrance hall into the little smoking-room to give vent to my feelings in solitude; but there my tide of misfortune turned, for I found that the good old pater had kept up a magnificent fire, and the kettle was singing away merrily; and soon, as the grateful steam of the toddy filled my nostrils, I began to realise that the pleasures of a comfortable room, a good fire, and undeniable whiskey, were very much enhanced by the previous miseries of a wet night.

QUILL GNAT.

THE "FISHING GAZETTE" TOURNAMENT.

THE second FISHING GAZETTE Tournament in aid of the Anglers' Benevolent Society, will take place on Saturday, July 8, at Mr. Warner's Welsh Harp Fishery, Hendon, at 3 p.m. Arrangements have been made with a photographer for taking several views of the affair. It is to be hoped the weather will be better than on the first occasion, or else he will get very negative results indeed. We should like to hear of some more prizes being promised.

MR. W. OLDHAM CHAMBERS.

WE are very glad to be able to announce that the above gentleman has won no less than three of the prizes for essays on pisciculture, given by the Edinburgh Fisheries Exhibition.

NOTICE.

AT a meeting of anglers to be held at the Society of Arts, Adelphi, at eight o'clock on Monday evening, June 26, Mr. R. B. Marston will read a paper on the best means of propagating our coarse fish for re-stocking our waters. At the close of the discussion, which will follow the reading of the paper, a testimonial will be presented to Mr. Bonvoisin. Mr. Edward Birkbeck, M.P., will occupy the chair.

THE WATFORD PISCATORS.

WANT of space compels us to omit this week a most interesting account of the inaugural dinner of the above new society, which has been started under the able presidency of Mr. C. Fry, a member of the well-known firm of Elliot and Fry. We wish the club every success.

THE PRINCIPLES OF TRUE SPORT.

THERE always has been, and there ever will be, diversity of opinion and difference in thought; and, so long as good harmony is maintained, the interchange of opinions does no harm. Upon "The Principles of True Sport" there may be some who differ with me, and the suggestion a nicely written treatise on the subject, for circulation amongst bank anglers who are not club men, may be humorously opposed; but the experience of nearly a quarter of a century on the Thames side, and frequent chats amongst this class of anglers, should enable me to form an opinion as to the desirability of putting into the hands of bank fishers who know nothing about the sizes and seasons of fish, or what fair honest sport is, such information as would enable them to think about matters which, to my notion, in the largely increased popularity of angling, is not undesirable. Now, if my friend L. B , who says we are not "of one mind on several important subjects,"—which, I confess, I fail to realise—would, in his excellent style of writing, pen a paper or treatise on "The Principles of True Sport," I do not think we should altogether disagree in matters essential. And whether he thinks me right or wrong, I am satisfied in my own mind such a paper would have a salutary effect amonst anglers of all ages, and might in an especial manner teach the youthful anglers a lesson which they would remember all their lives. I am not inviting controversy on this subject, neither am I trying to distinguish or extinguish myself in the idea. I have only one thought—it is that of doing good, and of making my life as valuable and as useful as I can to my brother anglers, and to all men. A treatise or paper on "The Principles of True Sport" would embrace amongst others the following heads, each item being tersely and popularly treated.

(1) The proper sizes of fish to be taken.

(2) The seasons in which fish can be angled for.

(3) The illegal and cruel practice of foul-hooking fish, commonly called "snatching."

(4) The unsportsmanlike character of bank runners, trimmers, and such-like engines.

(5) The necessity of retaining only a fair quantity of good fish.

(6) The duty of encouraging and enforcing true sport amongst the brethren of the rod.

(7) The value of becoming a member of an angling club where good fellowship and true sport are promoted.

Some persons might accept such a treatise as so much waste paper, but all minds are not callous and indifferent to plain honest advice. The desire to inculcate good wholesome truth is right, and the number of assurances of support I have received, in reference to what I said in my remarks on "Angling on Whit Monday," abundantly encourages me in still supporting the idea of such a paper being written; indeed, one practical suggestion has been made, that of a Prize Competition for the best treatise on "The Principles of True Sport." The reading of papers, which is becoming so general in angling clubs, is only another way of diffusing useful information, and there is nothing apocryphal in the plan I have suggested amongst those outside the clubs.

B.

UNSEASONABLE FISHING.—Frederick Wright, John Gadd, William Bennett, John Davis, and Lawrence Davis were convicted by the Kingston Borough Bench, on Wednesday last, for unlawfully fishing in the river Thames on Monday, the 5th of June. The case was proved by Head River-keeper R. Relf, of the Thames Angling Preservation Society; four of the defendants pleading guilty, and John Gadd not guilty. Mr. Thomas Spreckley, who was present, recommended the Bench not to deal harshly with the defendants as the prosecution was made more as an example, much trouble having been given to the river keepers by these and other anglers. The Mayor, after giving the defendants a salutary caution, fined each of them in the sum of six shillings and sixpence, including costs. Mr. Alfred Nuthall, to whom great credit is due for conducting this case, and Mr. W. H. Brougham, were also present on behalf of the Thames Angling Preservation Society. The conviction appeared to give much satisfaction, the friends of the defendants expreesing their thankfulness for the leniency of the punishment. Head-keeper Relf received great help from the railway inspector at Kingston Station, and also from one of the porters who watched the defendants from the railway bridge and was able to identify them.

SOUTH LONDON ANGLING SOCIETY.

THIS society celebrated its eleventh anniversary on the 7th inst. at the club room, George and Dragon, Camberwell Road. A very excellent and substantial supper was provided for the occasion by "mine host" Morris, which reflected great credit on that gentleman's ability as a caterer. About twenty-five gentlemen sat down, the chair being occupied by Mr. Bock, while the vice-chair was taken by Mr. Patterson. After the removal of the cloth and the usual loyal and patriotic toasts had been given, the chairman, in proposing success to the South London Angling Society, remarked that its position was being enhanced by the number of new members enrolled. Since they last met the rules of the society had been revised, in which revision the vice-chairman (Mr. Patterson) had taken a deep interest, and he thought that the thanks of all in the room were due to that gentleman for the great pains he had taken in the work. The new rules were now printed, by which every member would have an opportunity of seeing that the measurement of the fish is to be taken in future instead of the weight, because by measuring the fish there could be no question of whether they turned the scale or not. During the past year they had participated in some very pleasurable excursions, and referring to the challenge to the Walworth Waltonian Society, which match was fished at Bourne End, he regretted that on that occasion the weather was not so favourable as they could have wished, while the water was as bad as it could be, and this inconvenience was equally felt by the two contesting societies, one fish only being caught that secured the prize. He trusted that the coming season would not pass over without their being again able to challenge the Walworth Waltonians, and that on the occasion of the match they (South London Angling Society) would come off victorious. He believed the Waltonians were willing to accept their challenge, and he himself would be happy to see the match take place this summer.

The Vice-Chairman then proposed the next toast, "The health of their worthy secretary, Mr. Palmer," whom, they all knew, discharged his duties with unflagging energy. The toast having been drunk with musical honours, Mr. Palmer, in responding, remarked that since his connection with the society he had always endeavoured to do the best he could for their interest, and he thought his efforts had met with success. The society was never in a better position than it was at that moment, and he had to thank many of the members for the kind assistance which they had rendered him during the past year, and he could only say this, that if they considered him worthy of the post (secretary) he should only be too happy to continue in office; but if they thought otherwise, and there was another candidate in the field who might feel disposed to accept the office, he would be very pleased to resign.

The Chairman, in proposing success to the West Central Association of the London Angling Society, drew attention to the efforts which were being made by that association with the different railway companies in order to afford greater advantages in the way of granting cheap tickets and other privileges to members of the various angling societies in London, and expressed it as his opinion that the concessions would be granted. He regretted the absence, through illness, of their esteemed friend, Mr. Field, their delegate at the West Central Association, as that gentleman could explain to them more fully than he could how the matter was progressing. If the concessions were granted it would enable anglers to visit more distant places than they had hitherto, and it would open up an amount of almost unexplored ground. For his part, he did not see why, if they wished to go 100 to 200 miles off, the reduced fares should not apply. It very frequently happened that railway companies had to run their carriages comparatively empty, and they might as well run a train of anglers at a reduced tariff. It would certainly yield them an enormous profit, which they would not otherwise reap. He therefore wished prosperity to the West Central Association, and hoped their efforts would be crowned with success.

The toast of the host and hostess, Mr. and Mrs. Morris, having been drunk with musical honours, and suitably responded to,

The Chairman then proposed the health of their esteemed friend, Mr. Field, whom he regretted to say was absent through illness, but which he trusted was not of a serious nature. Mr. Field had been connected with that society for a number of years, and had worked hard in connection with it. They all knew that an angling society could not flourish without a large amount of labour and attention, and Mr. Field had given it without reservation. The toast was drunk amid exclamations of approval.

The distribution of the prizes won by members of the society during the past year was then proceeded with. The number of prizes amounted in the aggregate to somewhere like £40, and in the course of the evening a subscription list was opened for prizes to be fished for during the coming season, when a like sum was collected. The remainder of the evening was devoted to harmony, and was passed in a very enjoyable manner, a number of the members, as well as some visitors, favouring the company with some capital songs.

The usual vote of thanks to the Chairman and Vice-Chairman terminated a very pleasant evening, which we trust will be repeated annually for many years to come.

SHEFFIELD ANGLERS' ASSOCIATION.

THE quarterly meeting of delegates of clubs connected with the above association was held, on June 7, at the Crown Inn, Scotland Street. Mr. Charles Styring, president of the association, occupied the chair, and most of the 242 clubs associated were represented. The minutes of previous meetings were read by the secretary, Mr. Thomas Walker, and were adopted. They contained a reference to the question of a proposed close time for eels and flounders, and the secretary read a correspondence which had taken place between himself and Mr. P. Geen, of the London Association, with respect to it. Mr. Geen presided over the meeting held at the Society of Arts room, on June 27, 1881; and in one of his letters he alluded to the proposed new Freshwater Fishery Bill, and expressed himself as being in favour of the appointment of an inspector to deal with the pollution of rivers, and to encourage the cultivation of fish, the empowering of Fish Protection Societies to appoint a sufficient number of water bailiffs; the abolition of netting, the improper employment of wires, gaffs, spears, and like instruments; the fixing of a close season for pike and roach, between the 1st of March and the 30th of June inclusive; and for other fish, from the 1st of April to the 30th of June; the prosecution of persons improperly offering fish for sale during the close season; the non-interference with fishing for eels and flounders with rod and line in tidal waters, and the fixing of a scale of sizes under which it should be illegal to capture or sell fish.—The Chairman explained that the London Association had the idea that eels and flounders should not be taken during the close season. When the last Bill was introduced in 1878 it was the wish of the Sheffield Association that those fish should be taken all the year round; but there had been so many convictions under the Act that they had thought it advisable to ask the people not to take such fish during the close time for fear they might get wrong. With respect to the new Bill, it was their intention that eels and flounders should be taken all the year round in tidal waters from sunrise to sunset, as they believed that such a course would conduce to the benefit of the association. They have informed Mr. Geen that they could not entertain his proposal respecting the sizes of fish that should be taken. The fish in most of their waters were only small in size, and the idea of the committee was that each place should decide on the size of fish below which they should not be taken. At all events they asked that Sheffield might be struck out of the proposal, and that they might be allowed to settle their own size of fish. The secretary stated that he wrote as suggested by the committee, and in reply Mr. Geen said he admitted the case made out as to the size clause of the proposed bill. He further expressed the hope that the members of the Sheffield Association would set themselves against the sale of under-sized fish, and thereby it was hoped a blow would struck at the practice of netting. The committee quite agreed with the proposal. The association had asked to be allowed to fish in the waters of the Boston Association for a proper remuneration, and the secretary reported that the request had been granted. The Sheffield Association rents 202 miles of water in various parts of Yorkshire, Derbyshire, and Lincolnshire. Some other routine business was afterwards disposed of.

A PLEASANT DAY'S OUTING WITH THE TONBRIDGE ANGLING CLUB.

LAST Tuesday the members of the Tonbridge Angling Club were invited by some gentlemen at Smarden to pay a visit to them for the purpose of dragging some ponds to obtain stock fish to improve the fishing of the Medway. We need hardly say that the call was responded to right heartily, and between thirty and forty members expressed their intention to be there. Through Mr. Dawes, the courteous station-master at Tonbridge, special cheap fares were obtained to Headcorn, the nearest station, and the major number went by the 10 o'clock train, a few who could not get away by that hour following later on. On arriving at their destination the party found Growns and Son with their nets, and everything in readiness, and a move was at once made for Swift's Green Farm, in the occupation of Mr. George Day, where two or three ponds were dragged with good results, and a large number of the finny tribe elected to choose fields afresh and pastures new. After some hard work, luncheon—and a thoroughly substantial meal, too—was provided by the host of the Bell Inn, on the ground. The viands were washed down by a glass of good nut-brown, and just a nipper of something short afterwards was highly appreciated. At the conclusion the word was given to move on, and we next essayed to try a pond at Mr. Jesse Stevens' Biddenden Green Farm. This, however, was so full of weeds that the scythes had to be put to work, and this upset the arrangements of some "wallopers," who skipped about like acrobats. It was decided to draw the net through without first removing the weeds, and this proved to be a good plan, as Mr. Carp was unable to escape by the skipping process, and several good fish were accounted for. After this pond was exhausted, a move was made for Mr. Thomas Offen's, at Monk's Farm, where, it was said, and said truly, that we should get quite as many tench and carp as we cared to carry away. The sport here was short, but very sweet. A nice open pond with a hard bottom does not require much drawing. Well through went the net, and although a few carp went over the corks, it was seen that, when the draw-in took place, there was an enormous haul of tench and carp—not little things, but good, respectable fish of from 3 to 4 lb. in weight. A good number were restored to their native water to increase and multiply, but a splendid consignment went with the carriers. This ending up the day, Mr. Offen kindly proffered the party some cyder—right good stingo—which was heartily appreciated. Before parting, hearty votes of thanks were tendered to the gentlemen whose waters were fished, for their kindness. The fish were placed on the rail, and Foster, our water-bailiff, with a large syringe, was as busy as a bee, and never left or forsook them till they were safely placed in the river at Barden Park. The following is the score:—450 tench, 400 perch, 308 roach, 270 carp, and 30 pike—all fish fit to take on the opening day. Thus ended one of the pleasantest and most profitable days we have ever spent.—YE MEDWAY WATER-RAT.

RIVER REPORTS.

MID-THAMES.

"How ofttimes with my rod in hand,
In wandering by the stream,
I've liken'd the anglers magic wand
To life's deceptive dream !

The sky, perchance, looks fair and bright,
The breeze curls on the brook,
The waters ting'd to please the sight,
Trout waiting for the hook !"

If ever the Thames was "tinged to please the sight" of an all-round angler, it was this morning when I paced leisurely along its historic banks between Temple and Medmenham, and saw here and there the rise of a lusty trout, and here and there the chase of a fairly handicapped plated perch, or heard the cluck-cluck of a loggerhead as it attempted to engulph a water-dazzled fly. The late rains have simply made the river perfection for roach work, and in my next note I anticipate having some big things to record. I am not a gentleman (I state this confidentially and with a little remorse), so would strongly advise anglers, with this water, to go in for a diet of worms; not to scruple about running up a pint or two and strewing in a well-selected swim, and stick to the same swim like grim death from "early morn to dewy," and success will not only be deserved, but commanded. At Maidenhead two or three pretty fish have fallen victims to the wily Wilder, and at Cookham two decent fish have not been able to deliver themselves from temptation, and have found a watery grave in the punts of local anglers. From Bourne End and Marlow I do not glean any news of success amid the trout, but the professional element seem very confident of success amongst the "coarse-uns" during the coming week, in consequence of the colour of Father Thames, and of having been able to amass a "dose of lobs," and bait a swim or two only known to themselves and, well, say, a hundred others. At Hambledon, on the 8th, Mr. Domville, with Parrott, got seven trout, and on the 11th, Mr. Patey, also with the "bird," had two trout and a monster chub. At Marsh Pool, near Henley on the 10 h, a camping out piscator nailed a pretty fish, of 3 lb., for breakfast, and I only regret I was not present to help cook and eat it. An angling preservation association, under the presidency of W. H. Smith, Esq., M.P., is being started at Henley to form a connecting link between the Reading and Marlow associations; an inaugural meeting taking place on Wednesday, at noon, in the Town Hall. Thursday evening.—Weather showery, wind west, water superb for all-round work.—MARLOW BUZZ.

Ancholme.

The prevailing weather during the last few days has been wet and cold, consequently but few green drakes have been on the wing, and the fishes have risen less freely at the fly. I had an evening on the Stallingborough Beck on Thursday last, but owing to the cutting of weeds and the discoloured state of the water, fly-fishing was out of the question. I was, therefore, very reluctantly obliged to take to the worm. I caught six very nice fish, scaling from ¼ lb. to 1 lb. each; and on Saturday evening I caught a few more nearer home. Next week I hope to send an account of the commencement of coarse fishing. When warm weather again prevails the dotterel flies will be all the go. Speaking of these, I have some splendid coats to dispose of at a reasonable rate, provided your readers require them. I have obtained them direct from Germany.—THOMAS FORD (Caistor).

Ballynahinch.

Since last report waters have been in prime order, but this last three days very stormy. Still Mr. G. Sutherland, on the 10th, got four salmon averaging 8½ lb ; same date, Captain G. Sutherland, four averaging 7½ lb. On the 12th, Mr G. Sutherland, two peal, 14 lb.; same date, Captain G. Sutherland, 1, 14 lb. On the 13th, Mr. G. Sutherland, 1, 5 lb. Both salmon and trout are running well, wind still west-nor-west.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

On the 8th and 9th the river was flooded, and the salmon returned for the first time this season. On the 10th the weather was unfavourable for fishing; cold winds from the north and showers of rain. Messrs. Dance, Gray, Armstrong and Dr. Boling made a start betwixt ten and eleven, and from two to six brace the best creel. On the 12th the wind still continued in the north and cold; sport anything but favourable, the only creel above six brace was Dr. Bowling, Newhampton, 7 lb On the 13th the weather colder than the month of February, with showers of sleet; sport very poor; from one to five brace was creeled. On the 14th, the wind in the west blowing strong, the flies very difficult to manage; Mr. Dance, six brace; Mr. Gray, two brace; Mr. Styles, two brace; Mr. G. Armstrong, three; E. Armstrong, two; Dr Bowling, two brace, all a good class of trout. Mr. Scott killed a salmon 8¾ lb.—A. GLASS.

Dove.

The sport experienced generally upon the whole river's length (as well as tributaries) this week has been above the usual ratio. We doubt if a single disciple of the rod has returned troutless during the present week. Enormous takes on several private lengths are reported. As many as 30, 40, and 60 brace are stated to have been killed in some instances. The greater part of these rumours, however, have but slender foundation. Live drake fishers for the most part. Takes on the Dovedale water are averaging 5 to 11 brace. On the lower parts of the river, there being a scarcity of drake, less is being effected. Above Dovedale to Milldale 6 to 9 brace are the average daily yield of each competently wielded rod.

Suir and its Tributaries, Clonmel.

We have at present most unnatural weather for the month of June, but, notwithstanding that drawback there has been some fishing. Dr Camphill, at Mathogaly, landed four splendid salmon yesterday, but through some accident one fish succeeded in falling into the river again and getting away. The hon. Hely Hutchinson got two salmon also in one day; Mr. Smith, of Cahir, two salmon and one peal of 2½ lb. The upper part of the river is crowded with fish. Mr. J. Leslie Morrall landed one splendid salmon at Newcastle, and met several others. The cot men are only meeting a few odd fish. The trout fishing in the evening is very good; at night large trout between 9 and 10 lb are caught. Messrs. Suther, Fitzsimon, M'Carthy, and Dr. M'Carthy had good fishing last night. Large rails are best flies for late fishing.—DORA.

Taw and Tributaries (N. Devon).

Water is first-rate, and could not in the past week be better; well up, and a good wind blowing, and the fisherman who could not catch fish should leave off, for the number of fish being caught convinces that the streams round this district are full of trout, and for some time good sport will be had. Should the wind go down and the water fall back it will take ten days to be down to the usual summer depth. The grass in the meadows is in good condition, and it is only right that sportsmen should do all in their power to preserve it rather than trample over the meadows more than necessary. I have heard of many heavy catches, Mr. Tarr and friends got 150 good fish in the Exe and Barle one day; Mr. Hangood four dozen, Mr. Dennis three dozen, Mr. Paine six dozen, Mr. King four dozen, Major Lovett two dozen, in the Yeo during the past week; Mr. Tamlyn and other gentlemen got good dishes from the Bray, and I heard of a good basket in the Mold. One gentleman told me he had twenty-five, weighing 11 lb. (good for these parts in Taw); others from two to three dozen. Mr. Connup got three salmon from 14 to 18 lb. in one day, and other gentlemen have also been successful, getting one or two salmon or peal. Wind, W.; rather cold, but warmer than it has been.—RUSTY GAME.

Thames (Goring).

Water in good order for all-round fishing. Fishing prosecutions: James Hicks, of 8, Hatton Garden, was summoned before the Henley bench on the 9th of June for taking two chub, and fined £3.—JOHN RUSH.

Trent (Alrewas).

Although a strong contingent of Birmingham anglers will wend their way to their respective streams on the opening day, I do not anticipate but meagre sport. The river is reported to-day (Thursday) as running bank full and the water much discoloured. The wind is as boisterous as at any time in March, the weather, taken altogether, is something awful for the time of the year. Another thing that will be sure to militate against large baskets, the roach in the Trent had not spawned fourteen days ago and consequently cannot be in anything like good condition. To leave off fishing for three months to commence again when the fish have only just spawned is one of the most perfect farces imaginable. Of course, I am writing of our Midland streams, and it seems only just "that in any bill that is brought before Parliament that a different close time should be made to suit such rivers as the Trent." Pike will be found lean and lank and not worth catching, and perch, dace, and grayling are about the only fish worth taking. While the river remains discoloured I should recommend for any of the fish I have mentioned worms for bait, with a few chopped up lobs for groundbait; as the water becomes clear the cad bait will be found the most killing, ground-baiting with gentles, which have become scarce on account of the extreme coldness of the weather.—JAMES GREGORY.

Trent (Newark)

Before this is in the hands of my readers, the glorious sixteenth of June will have dawned, and coarse-fish anglers can once more ply their avocation. We have had, up to this last week or so, a good breeding time for fish, and according to what I can see, a right good time it has been; bream, I believe, being the only fish that have not quite got over it. I would just remind the anglers that the majority of our fish would be all the better for another week or two's rest, dace, being the exception; the best bait for that fish will be cad bait. We have had very stormy weather, with a lot of rain this last week or two, and the water is rather thick and high; but one thing, it will sweep away the flannel weed. Worm fishing for a few eels and flounders will be the best sport to indulge in under the present circumstances. I believe the water is lower to day than it was yesterday, and not so much colour in it. A few dace with cad bait, and eels and flounders with worm will be about the extent of the fishing at present.—THE TRENT OTTER.

Tweed and Teviot.

During the past week salmon and trout angling have not been very productive of sport. Spring salmon-fishing may be said to be over for the season, the yield on the whole having been the best that has been experienced on these streams for some years back. Fishing in the Hendersyde water, on Thursday last week, Mr. James Kerss caught a nice salmon, and on the same part of the Tweed some very good baskets of trout have been obtained. We have not heard, strange to say, of a single salmon having been taken from the Teviot during the season. Floors Castle and Hendersyde waters have yielded the best sport of the season, with Sprouston and Makerstown next, while several fish have also been got on the Ednam House, Mertown, Rutherford, St. Boswells, Pavilion and Bemersyde waters. Cornhill and Birgham and other casts further down the stream have furnished some very good fishing. During the present week Mr. Archibald Steel and Mr. Thos. Murray have had very nice baskets of trout. as have other anglers also; but until a good flood occurs in the rivers trout-fishing even will not be very productive.—MAXWHEEL.

Wye and Derwent.

We had another porter-coloured water come down the Derwent yesterday morning (Wednesday), from the heavy rain which fell up in the woodlands, which has made it a first-class time for the bottom fishers; and some heavy baskets of fish have been killed all up and down the Derwent with worms, maggots, and ant eggs for baits. Sport during the week has been A 1 both on the Lathkill, Wye, and Derwent, chiefly with the artificial flies and the natural "green drakes" where it is allowed to be used, and baskets averaging fully from six to over eleven brace per angler have been made. The killing flies have been the dotteril, yellow duns and claret body bumbles; also the small Derbyshire green drakes. The wind has been very rough and boisterous at times, and very cold indeed for the middle of June. Weather still very unsettled, barometer very low indeed. Sport on the ponds has been very good during the past week, and baskets from six to eleven brace per angler have been made with both ground-bait fishing and fly-fishing, the killing flies being the claret bumble, golden spinner, and sand flies. The night-line party at Matlock Bath have taken some fair fish during the week on their lines with both lob worms and minnows for baits.—George James Eaton.

Yare (Buckenham).

Mr. Priest, of London, has been staying at Cantley. On the 2nd he caught 2 stone weight of roach and bream; on the 3rd, 2½ stone; on Wednesday, the 6th, another large catch; but I do not know the weight caught between Langley Dyke and the Engine house.—J. Hewett, Buckenham.

THE SOUTH OF IRELAND.

The races in Cork last week diverted the angler for the nonce from his legitimate line, and the river was forsaken for the turf. This week will fully compensate for any loss previously sustained. We have wind and rain sufficient for a mid-winter storm; in fact, the vagaries of the elements are so much out of the usual course that the agriculturist is beginning to take alarm at the prospect of the harvest, which has been retarded by the coldness and generally unseasonable character of the weather. Salmon, meanwhile, are taking advantage of flood and tide, and are forging their way to the upper waters. The peal are now running, but not in such large quantities as might be expected. The net men have been taking but few, and I have heard of none being taken with rod. However, when the weather moderates and the water becomes settled, the silver beauties will, we have no doubt, be to the fore. Mr. Haynes landed three salmon lately, and Mr. James Lambkin two on one day. Mr. Beamish, Captain Caulfield, Sir. Oriel Forster, Mr. Bowen, John Manning, and other gentlemen, have been among the successful anglers during the week.

CLUB REPORTS.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of £1 1s. donation from the Piscatorial Society and 12s. from the donation box of the Beresford Angling Society.—R. Ghurney, sec.

June 15.

BERMONDSEY BROTHERS ANGLING SOCIETY.

The fourth annual dinner of the Bermondsey Brothers Angling Club will be held at the Alscot Arms, Alscot Road, Bermondsey, on Tuesday, June 20.—Wm. Allen, sec.

CROWN PISCATORIAL SOCIETY.

A complimentary visit was paid to the Crown Piscatorials, Crown Tavern, Clerkenwell Green, on Tuesday last, and proved a great success, Mr. Bonvoisin occupying the chair, faced by Mr. Rust, pianist, Mr. W. Cox, violinist, Messrs. W. Gorsuch and L. Taylor, and some excellent singing was rendered by the following gentlemen:—Mr. Wilcoxson, Mr. Rust, Mr. W. Long, Mr. Obbard, Mr. Roberts, Mr. Sturte, Mr. Donald Smith, Mr. Brookes, Mr. White, Mr. Burkett, Mr. L. Gorsuch, and Mr. Bonvoisin in good style rendered "The Frenchman and the rats." Mr. Ghurney spoke at length of the good doings of the Douglas Benevolent Society. When the roll was called the following clubs were represented:—Acorn, Anchor and Hope, Barbican, Bostonian, Buckland, City of London, Clerkenwell Piscatorials, Convivials, Eustonians, Hoxton Brothers, Little Independent, North Western, Original Clerkenwell Piscatorials, Reform, Trafalgar, Waltonians, and West Central, after which a vote of thanks was passed to the Chairman and Vice-Chairman, which brought to a close a most enjoyable night.—W. H. Burwash, secretary.

June 14th, 1882.

DUKE OF CORNWALL ANGLING SOCIETY.

The annual supper of the above society took place on Monday, 12th inst., when about twenty-five sat down to an excellent repast, placed on the table in first-rate style by the host, Mr. McCluer, after which they were joined by a number of anglers and friends, and some capital harmony was enjoyed, between which the prizes were presented. A goodly number of prizes were promised for the coming season. Messrs. Hyde, Jennings, Thurgood, Roxbee, Constable, New, Hill, Barrs, Lealand, Heckford, and the worthy host, contributing to a most enjoyable evening.—J. Heckford, sec.

June 13.

GRESHAM ANGLING SOCIETY.

The meeting of the society held on Thursday evening proved of very exceptional interest, as is frequently the case when the attendance is smaller than sometimes happens. C. Bates, Esq., having been voted to the chair and the minutes duly confirmed, Mr. H. Brett was called upon, and gave a very detailed and interesting description of his angling expedition on the occasion when the fine sample of perch he had presented to the society was taken. His address, entirely impromptu, was not only well delievered but of such a character that much practical information was given; the applause and thanks which followed very plainly conveying the hearty appreciation his remarks had induced. The pleasure produced by the discourse of Mr. Brett was, if possible, increased by Mr. Callaghan's introduction of his friend, J. F. Macnamara, Esq., who gave an account of his fishing in the neigbourhood of Constantinople, which was listened to with the greatest interest and afforded an amount of interest seldom falling to the lot of even such a society as this. His description of fishing for pike with a spoon bait, of which he was there the pioneer, in those waters; the difficulty he had in getting the spoon manufactured, and the incredulity of the natives were all ably told, and the society's pleasure was increased when the weights of the pike taken were mentioned. In one day Mr. Macnamara took some 45 pike, none of them less than 8 or 9 lb. each, and many more returned to the water. The largest would go some 25 to 30 lb., and these fish, being seldom angled for, attain there a very large size. A most cordial vote of thanks was passed to Mr. Macnamara, who, in response, very kindly promised to have some specimens set up and present them to the society. The question of renting waters having been mooted, the secretary suggested that in any case the society was hardly likely to rent any water hitherto considered public to the detriment of the poorer anglers, and his remarks were thoroughly endorsed. Mr. Bates and the secretary were deputed by the committee to attend the West Central Association meeting on Friday evening, and convey the views of the society on the many important questions, especially in reference to the International Fisheries Exhibition then likely to come under discussion. A most cordial vote of thanks to Mr. Bates concluded the proceedings of the evening, which did not terminate until a late hour. The society has a special musical evening on Thursday next, when the attendance of anglers belonging to other clubs is invited.

JUNIOR PISCATORIAL SOCIETY.

The annual dinner of the above society took place on Wednesday evening last, at the Duke of Cornwall, South Island Place, Clapham Road, Mr. F. Palmer in the chair, Mr. Geo. Woodman, vice. After full justice had been done to the dinner, the distribution of prizes won by the members last season was then proceeded with; among the most fortunate members may be mentioned Messrs. A. Hubbard, Palmer, and Woodman, several other members taking one prize each. The list of private prizes for the ensuing season was then given in to the secretary by several members present, which altogether amounted to about £20 in value received and money. Some good harmony was then most ably given by the Brothers Pearce, Messrs. Woodman, Augur, and Mills; the Brothers Pearce pleasing the company with their performances on the piano and violin.—Alf. H. Bisley, hon. sec.

KINGFISHER ANGLING SOCIETY.

This society is now located at the Oliver Arms, Westbourne Terrace North, Harrow Road. Mr. W. Browning weighed one trout 3 lb. 12 oz. last week — G. A., hon. sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

The next return visit of angling clubs will take place at the club house on Tuesday, June 20, when we shall be happy to have the pleasure of as many brother anglers and friends as can make it convenient to attend.—H. Moore, sec.

June 15.

ORIGINAL ALEXANDRA ANGLING SOCIETY.

I have not had anything to report since the trout-fishing season has commenced. Several of our members have been trying; but without success. Our annual dinner will take place on Sunday, July 2nd, at Mr. Lindrell's, the Pied Bull, St. Margaret's, Herts. I might tell you that Mr. Brockett's van will start from the Bald-faced Stag, Worship Square, at 12 o'clock on Saturday next, June 17th, and will continue running all the summer season. From what I can hear the bream and perch are coming on.—W. High, Fishery Bailiff.

THAMES RIGHTS DEFENCE ASSOCIATION.

A meeting of the committee will be held at Simpson's Tavern, on Tuesday, 20th inst., at 4 o'clock.—For J. M. R. Francis, hon. sec., F. S.

June 13.

THE IZAAC WALTON ANGLING SOCIETY.

The annual dinner of the Sunday portion of the members of this society will take place at the Old Rye House on Sunday the 25th inst., those who intend being present will please inform the secretary not later than Wednesday the 21st inst. There will be three special prizes fished for on Sunday next (the 18th) at Sawbridgeworth, and two ditto at Waltham on Wednesday next (the 21st). Mr. John Edwards will give an eight-day clock for the heaviest weight of roach and perch taken on the first four Sundays in the season.

June 15.

THE STOKE NEWINGTON ANGLING SOCIETY.

The members of the above will open the season on June 18th, a competition for four prizes taking place in the river Stort, between Burnt Mill and Sawbridgeworth, to weigh in at the club house the same evening. The eastern district visit of angling clubs will also take place on Wednesday, June 21st, when we hope to have the pleasure of the company of as many anglers and friends as can make it convenient to attend on that evening at the Middleton Arms, Mansfield Street, Kingsland Road.—Thos. Gretton, secretary.

June 12th, 1882.

THE UNITED LONDON ANGLING ASSOCIATIONS FISHERY SOCIETY.

(Copy of circular which has been sent to all the clubs.)

Dear Sir,

I have much pleasure in informing you that the Council of the Society of Arts have lent us their large room for the evening of June 26th, when R. B. Marston, Esq., will read his promised paper on "Coarse Fish Propagation."

The great interest taken in this question by the London and provincial anglers will cause a very full attendance, and I would ask those who desire a seat to be early.

E. Birkeeck, Esq., M.P.,

Chairman of the Executive Committee of the International Fisheries Exhibition, has consented to preside, and he will take the chair at 8 prompt.

At the close of the discussion, which will follow the reading of the paper, a testimonial will be presented to

Mr. Bonvoisin,

Chairman of the West Central Association.

I feel sure every London angler will be anxious to participate in showing respect to one who has so long proved himself our true and earnest friend.—I am, &c., T. Hoole, hon. sec.

7, King's Road, Mortlake.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

TESTIMONIAL TO MR. GREVILLE FENNELL.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

HAIR *v.* GUT—SPROAT BENDS—SILK AND HAIR, ALL SILK, AND ALL HAIR LINES—WESTMORELAND FELL BECKS.

Sir,—You, Mr. Editor, speak out on the subject of gut *v.* hair casts, giving an opinion strongly in favour of the former. I differ with you entirely. I cannot recollect when I killed my first trout, probably I was not ten years old when that important event happened. Anyhow, I have for more than a quarter of a century been an ardent and earnest fly-fisher, always "dressing" my own flies, and generally making my own tackle. So my opinion ought to be worth something, and it is as follows. Always use single hair, as it is lighter, floats on the water, does not become soft when wet, and requires more skill in hooking and playing your fish than does even the finest gut. It casts much better in a wind, is not so apt to become entangled; when it is entangled the mess is easier straightened out, and it does not shine so much in the water as even does the best stained gut. The very finest drawn gut is not to be compared with hair for fly-fishing for trout, where the fish do not, as a rule, run much over a pound in weight. Of course hair is not sufficiently strong to be used with success on a place like Loch Leven or similar sheets of water. I believe, if I did not use hair, I should not in this river kill half the number of trout I do. There is a certain stream in the north of England on which all the natives used gut. A friend of mine went to reside in its neighbourhood, and being used to "hair" fishing continued it in the strange stream, with the result that he killed double the quantity of trout than any of the habitués of the river. They were equally good fishers, but used gut, hence the result. Try hair next time you go to Derbyshire, Mr. Editor, and your catch of trout will be increased.

Some one of your correspondents, in writing of hooks, mentioned "sprout" bends; surely he must have meant "sproat" bends.

You are having a controversy as to silk or silk and hair lines. I, for trout-fishing, very much prefer lines entirely made of hair—about from ten to twelve hairs in thickness, of course tapering down gradually to three—which I use at the top of my cast.

On fell-becks, in Westmoreland, you had an article a short time ago. I should like the writer to name the one where he caught trout of the size he mentions. I know our fell-becks well enough, and in the best of them the trout average not more than from eight or nine to the pound. You may fish a lifetime in them and never take a trout of half a pound. As to two or three of a pound each in one day's angling, it is preposterous. Borrow Beck, which joins the Lune at Low Borrow Bride, something less than two miles from Tebay, on the London and North-Western Railway, is one of our best waters of that description; but therein the trout run as I say in size. After the fresh last week a friend of mine took over eighty trout therefrom with worm, and they weighed 9 lb. To-day I was talking with an old fell-beck fisherman about this very subject, and he agrees with me. His best take was very many years ago—with worm, of course, during heavy rain—180 trout equal 16½ lb. These are the sort, and such are the size, of fell-beck trout. Even in our Westmoreland rivers, as a rule, the trout average but five to the pound the year throughout, taking, of course, the upper with the lower waters, and weighed in the scale and not by estimate, or fishermen's weights, as some folk say.

In answer to your correspondent last week as to the best place to stay in Westmoreland for fell-beck fishing, it is an uncertain kind of angling, as it must be followed either amid heavy rain when the water is rising—the best time of all—or the day following the fresh. On other occasions, as a rule, there is not sufficient water in them to afford successful angling; and those only who have seen these mountain brooks know how suddenly they rise and fall. Of course, a visitor might be in a good neighbourhood for a month at a time without having any fishing, merely because there was no rain, and the consequent fresh. Kendal would not be a bad centre, as, within ten miles more, are the higher waters of the Kent, Mint, and Sprint, which up in the hills become but fellbecks. Then there are Bannisdale and Borrow Becks; and in the absence of sufficient water in them the angler could turn to the lakes and mountain tarns. Shap, on the London and North-Western Railway, is another good station, from which Shap Beck and others are within easy reach, and Tebay, likewise on the London and North-Western Railway, would perhaps be as good a centre as any for such fishing as your correspondent seeks. But without flood sport would be almost nil.—I am, &c.,

Sprint.

HAIR AND GUT CASTS, &c.

Sir,—I have just read, with a certain degree of amusement, a letter from "Olim Trutta," and am induced to cast a fly for his special benefit, as he, like my friend "Trout," seems also to be on the rise. I will take his statements seriatim.

The first objection arises with expressions of detestation, and allegations of numerous demerits; but, unfortunately for the case of the plaintiff, not a single defect is named, not a single argument is brought forward in substantiation of "Olim Trutta's" opinion (?). The only point assailed when speaking of hair-casts is the statement made by "Trout," that open waters are required when employing collars of this material. From this solitary 'vantage ground I can at once dislodge "Olim Trutta," to that individual's complete discomfiture. I have myself taken a trout 16 inches long and nearly 1½ lb. in weight down a broken waterfall 6 feet in height with fine single hair, and then landed the fish in perfect safety. My father once, when fishing the Yore, in assailing a deep pool, with strong current running under the edge of a high bank completely covered with bushes, together 6 feet in height, and when fishing this water by the down-stream method of casting, has, to my knowledge, landed half-a-dozen trout ranging at about 8 oz. each, by means of a single-hair cast over both bank and bushes in quick succession; and this was done so that the water below each fish might not be disturbed. My diary—and I believe there is no such diary in the world—shows, beyond shadow of doubt, that far more fish can be killed by means of single hair than by the finest and most lustreless drawn gut. The hair I sometimes employ is absolutely finer than the finest drawn gut to be obtained; and the casts made of it are several times lighter than those of the other material; in fact, they are often so light that they will not sink through the surface of the water until they have been used for a very considerable time. My constant practice has shown me that at times drawn-gut may be used almost, if not quite, as effectively as hair; but with the water low and the sun bright I have constantly been obliged to change from gut to hair in order to get a fine dish of fish. My diary is simply a constant record of such facts. Let any angler watch the descent of gut, on the one hand, and hair stintings on the other, whilst noting the effect of each on the surface of the water, and one of the greatest causes of the superior deadliness of hair will at once be apparent; but another equally as potential in affecting the result is the way in which hair refuses to reflect light—the finest drawn gut, through apparently dull, glistening ar more brightly under the sun when submerged. For this reason alone it has been proved by Mr. Greville Fennell that hair is infinitely superior to gut in fishing for roach, and I have only lately had certain proof that this is the case in bottom fishing generally. If, then, hair be superior to gut in roach-fishing, where only one of its good qualities is brought distinctly into play, how can any rational angler deny that it is pre-eminent in every respect, except strength, above gut? Its qualities may be enumerated as follow:—Lightness, lack of lustre, capability of being cast with greater straightness and neatness than gut, much greater freedom from liability to ravelling, and the absence of the tendency to kink when soaked, and, by becoming cracked, part company with the angler, until that moment of separation unconscious of the hidden flaw. "Olim Trutta's" statements in relation to fly-casts and lines are so utterly at variance with the experience of all fly-fishers worthy of the name from our forefathers downwards—and so contrary to the proved facts of all northern anglers, to the extent at least of nine out of ten—that we may allow him to ventilate his opinions; as he cannot make fly-fishers believe what they know to be untrue. The same old fish is sadly aggravated at what he denominates, "Harping on buoyancy and lightness." Come, you old trout of the bygone days! I will point-blank deny in your very teeth that the braided or plaited dressed silk lines, with or without a wire, are nearly as buoyant or light as silk and hair tightly plaited or twisted and undressed. Put lines of each description, of the same length, thickness, and taper, into the scales and prove for yourself, and you will no longer speak of the lightness and buoyancy of the dressed silk line. Inspect the curves of the two varieties when the flies are being humoured and you will no longer make insinuations as to the dressed line not collapsing towards the fly-fisher after a long cast, when the rod is held at the angle which should be maintained, without the point being dropped towards the water. Please do not talk to me about not having tried both descriptions of line. Away with you! you are no trout of bygone times! only a logger-headed chub! For such leather-mouthed fellows, dressed silk may do; but not for the true Prince, the noble river trout; not for the getting of the heaviest creels, however it may be for lengthy casting—which leads one to the discussion of another matter. Speaking of length of casts we find the number of yards given by various authorities. If I remember rightly, Cotton, 8; Hawkins, 12; Ephemera, 15 from the point of a 12-foot rod; Francis practically 18, but extending up to 20 in extremely favourable and exceedingly rare cases, with the same length of rod, but measured from the reel. It appears, however, in the Fishing Gazette, that at a certain Tournament a cast is recorded 23 yards in length, as mentioned in one number of that paper. In the issue of the following week it is said that the rod employed was only 10½ feet long—that rod which has a length of lancewood, ho! ho! ho! in its top; and now it is practically stated that in the cast of 23 yards the measurement was taken from the point. Mr. Editor, are you prepared to state that you made such a cast, with 3 yards of gut-collar and with flyhooks attached seven times the length of a puny rod measured from the reel. Oh! ha! ha! ha! ho! ho! ho!—I am, &c.,

Herne the Hunter

THE RAILWAY PRIVILEGE TICKETS AND THOSE OF THE UNITED ASSOCIATION.

Sir,—Through the medium of your valuable paper I should like to ask the majority of the members of the London angling clubs if it is not their opinion that the different associations are going considerably too far when they give out and say: all those requiring a railway privilege ticket must also take a ticket to fish the waters of the United Associations, otherwise the former on no account will be issued.

Now this self-given authority is simply what I have expected would show itself sooner or later, and, if acknowledged and allowed, will be the first step to the whole of the London anglers being entirely at the mercy of a very small minority—to make what calls they think they will in the form of subscriptions, &c., and to place same to what purpose they choose; and all those who wish to be members of a club will have to conform to the above, otherwise the club will not be allowed to accept them as members.

My advice, therefore, to club anglers before accepting this tax, and it cannot be called by any other name, is to give it their very serious consideration, and, if not in favour of same, to oppose it in every possible manner.

From the many objections I have heard from all quarters in reference to the above, I was in hopes of some gentleman more able than myself taking the question up.—I am, &c.,

F. Hill.

103, Kentish Town Road, N.W.

SPECTACLES.

Sir,—As, happily, you have not yet experienced the necessity, and therefore the luxury, of a good pair of spectacles, and as I have for many years felt this necessity without as yet having been able to regard my spectacles as a luxury, although I have made many experiments, I most willingly embraced your suggestion that I, instead of you, should accept the challenge held out by Mr. Henry Laurance in his advertisement in your paper to pay him a visit, in the hope of his being able to afford me the much-needed comfort of a pair of spectacles really and exactly suited to my eyes. I am pleased to say that I now feel grateful for your suggestion, for Mr. Laurance has taken infinite pains, first to discover my exact needs, and then to furnish me with glasses fitted, as to the structure of the frame, exactly to my eyes and nose, and as to my sight, in such a way as to enable me to read the smallest print with as much ease as I could do forty years ago. This I feel to be a real luxury. My sight was naturally long and strong, for I could in my youthful days read the smallest writing ever penned, or descry the time of the day on a clock tower at as great a distance as any one with whom I ever came in contact. It is now, however, many years ago since I began to discover that I could not discern these very minute or very distant objects as clearly as I once could. I began by complaining to my churchwarden that the gas he gave us in church was not so good as it used to be, but I found that somehow no amount of stretching out the book, even to arm's length (I may say the length of a "churchwarden"), would enable me to make out the lines. The churchwarden assured me, and so did my younger friends, that the gas was precisely the same as it ever was. Then I began to find that by daylight it was necessary to hold my newspaper a long way off, in order to read it; and at last it dawned upon me that something must be wrong with my sight. I was advised (unwisely, as I now believe) to put off the evil day of taking to spectacles, which I was told would only injure my sight, and cause it to grow rapidly worse. My opinion now is that if I had taken proper advice a year or two before I bought my first *pince-nez*, somewhat haphazard, in Paris, and had worn properly constructed glasses, my sight would have been far better and stronger than it now is. My own experience has taught me that it is unwise not to take to spectacles when the natural sight shows signs of not being what it was; but I am convinced that it is even still more unwise to purchase and wear spectacles indiscriminately, and which are not in every respect exactly suited not only to the sight but to the nose, and especially do I dislike the wobbling and uncertain *pince-nez*, which tortures the nose, and although sometimes convenient, cannot fail in the long run to be injurious. Of course, I have never found difficulty in getting spectacles at any optician's, with which I could read easily; but I have now discovered for the first time that there is a vast difference between getting, almost by chance, glasses with which one can read easily, or see properly at a distance, and being fitted with glasses convex or concave, as the requirement may be, scientifically adapted to the exact sight, and which shall be neither just a little too strong nor a little too weak. I am glad to think that I have now found this happy medium. Mr. Laurance has made me one pair of spectacles which really make my old eyes feel young again; and, besides the comfort they give in reading, as they have done for several hours at a stretch by lamp light, they are so shaped that I can look *over* them instead of through them, and without the need of pulling them down to the tip of my nose when I wish to look away at some person or object beyond their proper reach. He has also made me a pair of walking spectacles, which renew my youth in seeing objects at a great distance.

I am not an angler, and I ought to apologise for occupying so much of your valuable space on a subject not directly connected with its special objects. Even anglers, however, are not exempt from growing old, and no doubt there are amongst your readers many who find they cannot follow their small flies when cast upon the waters nor see the glint of the watchful trout beneath with as keen a sight as once they could, and to such I would say, get yourselves fitted at once with glasses which will bring back to you this second sight; and judging from my own grateful experience, I shall be doing them a kindness by advising them to consult personally, or write to Mr. Henry Laurance, oculist and optician, 3, Endsleigh Gardens, W.C.—I am, &c., Sexagenarian.

PIKE FISHING IN NORFOLK, &c.

Sir,—I saw a letter in your paper this week, signed E. T. J. I beg most respectfully to advise that gentleman, if he does not want disappointment and to waste his time, not to go pike-fishing in July, as it is no use whatever so early in the season. From October to February is the best time for pike fishing in Norfolk or Suffolk.—I am, &c., A. E. Montague.

Ipswich. (Late member Alexandra Society of Anglers, London.)

MAY-FLIES.

Sir,—The member of the Herts Natural History Society who has shocked your correspondent by talking of the growth of the May fly, may not, perhaps, be so ignorant as is dogmatically assumed. The May fly is, without doubt, a perfect insect, and, as such, has left off growing—properly so-called; but it certainly increases daily in size and weight, especially the female, which, when full of eggs, will weigh a fourth more than she did when she first crept out of her case.—I am, &c.,

Another Member of the Herts Natural History Society.

A NIGHT'S LAKE-FISHING.

By Theodore A. Howard.

As it may possibly happen that, amongst the numerous readers of the Gazette, there are some to whom the experience of a summer's night passed upon the quiet bosom of a north-country lake is, in algebraical language, an unknown quantity, it may to such be not uninteresting if I give a little record of one amongst many nights spent, at different times and on different waters, in the fascinating toil so gladly undertaken by those who will undergo any labour in pursuit of their favourite sport, of search after "speckled spoil."

Suppose, then, an evening towards the end of leafy June. The trees and shrubs, which two hundred miles further south have put on their summer dress a full month back, have here but recently donned their fullest luxuriance of green, and the air is laden with the vague indescribable scent of foliage in its early maturity. The sun has long since left the surface of the small lake (environed on all sides but one by lofty mountains) over whose waters you are presently minded to wave piscatorial wand; although but a short half-hour since his dying rays were lingering fondly on the crests and pikes of the hills over against yon, and flooding with streams of golden light the more distant fells that can be seen across the low end of the lake, stretching far away into the distance, in shade after shade of those lovely blues and purples so dear to the artist's eye. But now the twilight, that wondrous shadow of night's coming veil, is descending rapidly, the shadows are lengthening and deepening, and evening is beginning to assume the transparent semi-darkness which for a few short hours will hold sway on all around, till Sol arises once more in his glory.

The solemn hush of summer twilight, always so much more solemn and full of mystery amidst mountains, and in connection with large sheets of deep water, is brooding over all with that curious pulseless stillness in the air which pre-eminently distinguishes evening from the waking hours of day. How much has been eloquently said and written about evening by poets and thinkers of all the centuries, right up their course to that time when, as we are told in a certain Book, one of the patriarchs "went out to meditate in the field at the eventide." Human nature was human nature then, as now; and nearly four thousand years ago man felt the influence of the "gloaming" to be conducive to, and in accordance with, those peaceful feelings which seem to be the sympathetic reflection of our own spirits to the stillness without and around. How quiet everything is, as you stand leaning over a gate just above the lake, and look up its length to where the clear space of sky-reflected water, mirroring Luna's tiny crescent, is just ruffled here and there by the breath of the night breeze—and note the imaged contour of the hills above outlined sharply and darkly in the still depths beneath, as though shaped out with a knife. For the moment you forget the object that you have in view and stand entranced, drinking in with delight all the peaceful loveliness of the scene; but presently a beetle drones by, close to your ear, and you catch sight of a "bustard" flitting over the sweet smelling young hay-grass at your feet. This rouses you to action, and after one long satiating gaze—to paint upon the retina of the mind a picture, the beauty of which will live so long as memory keeps green, and afford delight in far-distant days, and amid very different surroundings—you tread the path winding down by the water's edge, and reaching the little boat-house, prepare for the night's work. Not much in the way of preparation is necessary, beyond putting together your favourite rod, and stowing away in the small locker such impedimenta in the way of refreshment as your more or less fastidious taste may have prompted you to bring for consolation of the inner being during your night-worship at the shrine of your favourite goddess. This is not an unimportant matter to attend to, for it is apt to turn very cold before the dawn, and at such time you are glad to have at hand the cold mutton chop; or, what is, in my opinion, better by far, a goodly ham-rasher cut not from one of the dry and nauseous London-cured impostors of the name, but from a mighty flitch hanging in the peat-smoked kitchen of the hospitable farmstead over yonder, juicy and full-flavoured as the North-country curers alone seem to possess the secret of making them; this, with a couple of slices of *not* too thick bread, to my mind, far excels all the sandwiches and hard-boiled bullets of eggs in the world, and is even superior to the cold chop aforesaid. Fresh meat is apt to get dry and insipid rapidly, and becomes positively difficult to swallow; but a succulent rasher is delicious in the cold small hours before dawn—and, indeed, at any other time—washed down by a draught from the bottle of new milk, flavoured with a sufficient soupçon of whiskey to prevent its tasting mawkish, which your thoughtful care for that interesting individual yclept number one has provided amongst other little necessaries.

What a tendency there always is to linger by the way in describing anything relative to fishery—to play around and with it, as a cat does with a mouse—leading up only by degrees to the actual grist of an article, enhancing pleasure by delay; dwelling now upon this point and now on that; bringing in all sorts of apparently extraneous matter, termed, by the irreverent, "padding," before actually settling down to the more serious labour of saying what one has has to say about the matter in hand. But, I appeal to fisher-folk generally, is not the pleasure enjoyed by the devotee of the rod, compounded of many ingredients? And are not all things interesting to Piscator, from beautiful scenery, amongst which, for the time being, he finds himself, on the one hand—down to the more humble claims of the sandwich-box on the other?

But now to our boat again, a couple of minutes spent in the manner that tempted the above long digression, makes all clear for business, and you are presently gliding out towards mid-water before setting the bow of your craft up lake and pulling for the upper reach, some mile distant, where you purpose commencing operations. Arrived at the portion of water you fancy—at this point about half a mile in width—you draw gently in to within a hundred yards of the northern shore. The spot you have chosen is a largish bay, with a promontory running out towards the middle of the lake. In front of this promontory and round part of the bay, there is a shallowish foreshore, extending outwards some fifty feet before falling away to the unknown depths of the lake itself. This is always a likely place for trout; in the daytime the smaller ones, from quarter-pounders up to fish of thrice the size are generally to be found here, if anywhere; and at night, as you have proved by experience, some of the "older inhabitants" of this watery domain condescend to feed upon and about the margin where the shallows end and the deeps begin—recruiting their exhausted energies with the juicy and appetising bodies of many a luckless moth, whose evil genius has betrayed him into taking so long a flight over the water. Here then, with heart beating with expectation, you make ready for the fray.

(*To be continued.*)

A HISTORY OF FISHING TACKLE, WITH NOTES ON ITS AMATEUR MANUFACTURE.

(*Continued from page* 232.)

By J. Harrington Keene.

No. IV.—Floats.

FLOATS are indicated in the "Boke of St. Albans," as well as hooks; and though of course, it is possible, and indeed probable that they were made use of long prior to that date, little or no evidence exists that such was the case. In fact, an "Ancient History of Floats" would be as tedious as futile, even supposing it could be written. In the "Treatyse," however, they are figured, and seem to have consisted of an egg-shaped cork very like that in use at present in pike live-baiting.

Refinements have of course been developed as the tackle underwent modification and corresponding refinement; for of course it became evident that the sort of float suitable for the cable-like line and stout ashen pole of old could no longer be used on fine silk or gut and the fairy-like wand of the advancing angler. At the present day, therefore, the float suitable for each particular kind of fishing bears its distinctive character. I shall briefly enumerate those which suggest themselves after experiment as being the best; though, in good sooth, I am very much inclined to look upon one and all as, at the best, but necessary nuisances.

Roach-fishing floats are, in every case, best made of that material which indicates best the often almost imperceptible bite. In the selection of this it is important to bear in mind that the mouth of a roach is exquisitely sensitive of anything unusual in the bait; and hence, if a heavy float be used, the angler will fail to catch many fish, because, 'ere the float has indicated anything at all, the bait has been ejected, owing to the roach having found sufficient resistance to warn it of something abnormal. Moreover, it is advisable to use as few shots as can possibly be done with, for the suspicious character of the erroneously termed "water-sheep" renders him quite sharp enough to detect the unsusual appearance of a lot of lead near the line. The low specific gravity of cork seems therefore to militate against its employment, and I must record my opinion that this is not the best material; in consequence of this fact and the difficulty of reducing its dimensions to extreme slenderness. Quill is much preferable, because, although a well-made quill has possibly less specific gravity or weight in water, the natural toughness and slenderness does not make the effort to pull it under so great as in the case of the generality of cork floats. A porcupine quill makes perhaps as good a float as it is possible to get, though I have been quite satisfied with the performance of a float I have made out of a well dried and varnished slip of spruce deal finely sharpened at both ends. This is 6 inches long, and in no place is thicker than an ordinary penholder. It is tipped with red sealing-wax varnish (made of the best red sealing wax and spirits of wine), and, as some three-quarters of an inch is ordinarily above the water. the touch of a fish, however slight, is perfectly seen.

I greatly believe in the merits of a self-cocking float, because it obviates the necessity for using lead when fishing in clear and still water. I advocate such a float most distinctly for canal and pond angling—especially for carp and tench in the latter—and it is easily made by running a strip of lead up the centre of the lower end. Some time ago, Major Colbourn brought out a float of toughened glass, in the lower part of which a globule of quicksilver was sealed. If the glass had not been breakable this device would have been a capital one. Unfortunately, however, the toughening of the glass was not by any means sufficient to protect it against an incautious foot or even a fall on stone, and I fear the idea will hardly bear the fruit expected by its inventor.

Whilst on the subject of roach floats, there is a bite indicator which I have used with remarkably good results, and which is given by one of the old angling writers—Best, I think. It simply consists of a few hog-bristles whipped together longitudinally, and formed into a loop at one end, the other being in turn tied to the top of the rod. The arrangement now has the appearance of a short supplementary top. The line is passed through the ordinary ring of the rod, and finally through the loop at the end of the bristles. One shot to sink the bait, and no float, is used. The utility of this arrangement is obvious. You watch the top of the rod, and on the slightest bending of the bristles a strike is made. The sensitiveness of this "indicator" is extraordinary, and I invariably use it when I find the fish are biting shyly. Of course it is chiefly applicable to still water; I fancy it might be applied to legering for barbel if the number of bristles were increased.

The floats in use for other fishes, such as barbel, bream, and the rest of the ground-feeders need not be of such selected materials, though, of course, the arguments used above do, to a certain extent, apply to them as well as roach. Cork and large quills, such as those of the pelican, swan, albatross, and turkey, are the materials most in use for travelling floats, &c. The necessity for lead to sink the bait, owing to the generally rapid stream and considerable depth, obliges the employment of a float of some bulk and great buoyancy. Personally, however, in such fishing I prefer a quill before cork.

There are several devices for the dispensing with a ring and cap, and in the American floats, now largely to be seen in the shops of English tackle-makers, this is accomplished by means of a special ring at each end. The line is, of course, easily and fixedly fastened by this means, but the floats are large and unweildy, and by no means adapted for small fish. They make excellent pike floats, however. Another, and by far the simplest and most effective, device by which the float can be taken off or put on the line in an instant, is one shown me by Mr. R. B. Marston some time since. It consists of simply splitting the cork half way through, a plug of wood or cork is inserted in the centre, and the line, after reaching it by means of the split, is pulled round the plug out of the way of the split, and so remains fastened. The wonder is that this very simple device, applicable to cork floats of any size, was not thought of before.*

I have tried other materials besides these named, but have failed to discover any one more suitable. I once made a very startling and curious float out of a bladder of gutta percha filled with hydrogen gas; but I need not say that though it answered admirably as a weight carrier in a rough deep stream, it eventually "got busted" under foot. I also made some apparently very buoyant ones out of the white dry fungus growing on the birch, but this speedily sucked up water like a sponge. Reed floats are not bad, though I consider them much more ornamental than practically useful. They are apt to leak, and certainly to smash up.

In all cases let the maxim be, employ the lightest and most delicate bite-indicator possible. A large float has lost many a good fish, and spoiled many an otherwise good day's sport amongst roach, rudd, dace, chub, &c.

To be continued.

CLUB AND OTHER JOTTINGS.

By L. B.

THE West Central Association's new privilege ticket is generally admitted to be the best conceived and executed thing of its kind, and great credit is due to Mr. Harding, of 157, Piccadilly, who has produced both this and the new Fisheries Associations' ticket. As before these lines are in print several thousands of these cards will be in the anglers' hands, it is quite unnecessary to describe them.

Annual club dinners, distribution of prizes, and visits, continue the order of the day, and each week brings its little batch.

A complimentary visit was paid the Crown Piscatorial Angling Society, Clerkenwell Green, on Tuesday evening. The chair was occupied during the early part of the evening by Mr. Wilcockson, and afterwards by Mr. L. Bonvoisin, ably faced in the vice by Mr. Rust. Amongst the singers were Messrs. Wilcockson, Sturt, Birkett, Roberts, Brooks Obard, L. Gorsuch, D. Smith, Bonvoisin, Star, White, &c. Mr. Cox capitally accompanied on the piano, Messrs. Gorsuch and Taylor doing the same on the violin. Nineteen clubs were very numerously represented, viz.—the Acorn, Anchor and Hope, Barbican, Bostonian, Bolingbroke, Cumberland, Crown, Clerkenwell Piscatorials, Convivial, Eustonian, Hoxton Brothers, Little Independent, North-Western, Original Clerkenwell Piscatorial, Reform, Trafalgar, Waltonians, West Central, and City of London. After the hard-working secretary of this young society, Mr. Burwash, had called the roll, Mr. R. Ghurney spoke a few words about the Anglers' Benevolent, words which were listened to with great attention by the members present, and at their conclusion were loudly cheered, as they well deserved to be, for I am sure they sowed good seed by opening the eyes of many present to the great good this truly benevolent institution is doing. A hearty vote of thanks to the chairman and vice-chairman terminated a most successful and enjoyable evening.

On Tuesday evening also was paid a complimentary visit to the Convivial Angling Society, Bull and Bell, Ropemaker Street, Finsbury, at which Mr. T. Hoole presided. The attendance was very fair, twelve societies being fairly represented, viz.—Amicable Brothers, Amicable Waltonians, City of London, Convivial, Odds and Evens, St. John's, Sir Hugh Myddleton, Hammersmith United, Canonbury, Little Independent, Clerkenwell Piscatorial, and Stoke Newington. Among the singers, several of whom deserved and got an encore, were Messrs. Thorling, Adams, Clark, Kelsey, Barr, Hoole, Johnson, Crocket, and Thorling. Some rare fun was got up by Mr. Hoole and the worthy host, who filled two huge vessels of peculiar make and fashion with good liquor, and passed them round in the loving-cup fashion. A hearty vote of thanks to the chairman and vice-chairman brought a jolly evening to a close.

All true anglers will be pleased to hear that the dinner to Mr. Thomas Spreckley, the worthy president and treasurer of the Thames Angling Preservation Society was so great a success; none the less so because with our representative *par excellence*, Mr. P. Geen, originated the idea and devolved much of the labour—truly a labour of love—of carrying it to a successful issue.

---

* This float was invented by Dr. Emil Weeger, President of the Brünn Piscatorial Society.—Ed.

On Tuesday, the 20th inst., at 4 o'clock, a meeting of the committee of the Thames Right Defence Association will be held at Simpson's Tavern. Would-be-water-grabbers beware!

At the monthly meeting of the West Central Association, on Friday, matters of the gravest importance to the London anglers will be brought forward for consideration. Special notices have been issued not merely to the clubs enrolled with the association, but to every known club in London Two new societies, viz., The De Beauvoir, Islington, and the Three Pigeons Friendly, Richmond, will be proposed for enrolment.

Revisits to angling societies. Mr. Crumplen, the courteous hon. secretary of the Gresham Angling Society, writes:—"Our committee have decided to have a musical evening on Thursday, the 22nd inst., when we shall be glad to have the company of yourself and friends of other societies."

The No. 2 district West Central Association's visit was paid to the Good Intent Angling Society on Wednesday evening. Mr. Murphy, the hardworking secretary, occupied the chair, Mr. Snook facing him in the vice. The singing was throughout good. The following societies were represented:—Amicable Brothers, City of London, Good Intent, St. John's, Trafalgar, Peckham Brothers, Stoke Newington, Burdett, Hoxton Brothers (Mr. Ghurney), and the North-Western (Mr. Bonvoisin). A hearty vote of thanks to the chair and vice terminated the meeting.

THE ODOR OF THE FOREST
THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting

The FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

The Sportsman Tourist.	Natural History.
Sea and River Fishing.	Fishculture.
Game Bag and Gun.	The Kennel.
Yachting and Canoeing.	The Rifle

The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

ublished by the FOREST AND STREAM PUBLISHING COMPANY, 37, Par Row, New York, U.S.

Subscription agents for Great Britain:
Messrs. SAMPSON LOW, MARSTON, SEARLE, and RIVINGTON, Crown buildings, 188, Fleet Street, London, who can supply specimen copies.

SPECTACLES, versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted). 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Falmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season —Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

THE REGISTERED GLOUCESTERSHIRE SPINNER FOR SALMON, TROUT, AND PIKE.

Awarded the Government Silver Medal at Norwich, and Diploma of Merit at Edinburgh. It has received the patronage of royalty, the nobility, officers of both services, and many of the most distinguished anglers of the day. Its reflection in the water from its construction, spinning powers and durability cannot be surpassed. Numbers of most gratifying testimonials have been forwarded to the inventor from gentlemen using it in lake and river trouting. Price on application to W. Wigley, Cheltenham.

SALMON AND TROUT GREENHEART FLY RODS.

Why our rods are celebrated for their action, durability and finish is that, being makers on the premises, we have a large stock of well-seasoned, tough, straight-grained, springy wood.

No cross-grained, knotty, unseasoned timber is used, and all rods are hand-made.

Whippings are of the very best silk, and errules of the best sheet brass, thoroughly hammered.

Approval always allowed. Price lists gratis.

The Fishing Gazette.

SATURDAY, JUNE 24, 1882.

PROPAGATION OF OUR COARSE FISH.

THOSE of our readers who are interested in the increase of our sport-fish, are invited to attend the meeting at the Society of Arts, on Monday next, June 26. The chair will be taken at 8 o'clock by Mr. Edward Birkbeck, M.P., and Mr. R. B. Marston will read a paper on the above subject. Some discussion of the matter may follow, and then the meeting will terminate by the presentation of a testimonial to Mr. Leo Bonvoisin, chairman of the West Central Association of London Anglers. Delegates from provincial angling clubs are specially invited to attend, as Mr. Marston feels convinced that the very simple and inexpensive methods his papers will describe, need only to be known to be at once adopted by every club renting a water. We are informed by the secretary of the United Anglers' Fishery Association, who has called the meeting, that there will be a large atteudance, aud are, therefore, asked to state that those wanting seats should be in good time. It is a public meeting of anglers, and open to all. No tickets are required.

A PRACTICAL VISIT ON THE OPENING DAY.

THE sixteenth day of June opened, as far as the weather was concerned, in the most promising manner, and having arranged for a visit down the river from Staines, the prospect of an enjoyable day was apparent. It is now some time since I went down the river on "the opening day" of the general angling season, and I was very glad of the opportunity to do so. Our starting point was to be from the Pack Horse Hotel, where we found that Mr. Bright, the worthy proprietor, had made some extensive alterations and additions to his hostelry, in preparation for what he hopes and we did too, will be a successful season. We left the landing stage a little before eleven o'clock and went went up the river as far as the Swan Hotel, on the Surrey side, which, since last season has changed hands; and the house has been wonderfully improved by the new and enterprising proprietor, Mr. Currie Banfield, whose love of fishing may be gathered from the fact that we found him angling for barbel opposite to his hostelry and where he commenced operations at five o'clock in the morning, the place having been previously baited with some Nottingham worms. John Keene, senior was his attendant fisherman. It was now eleven o'clock. By this time Mr, Currie Banfield had in his well twelve barbel, the largest a nice clean fish of 6 lb., and with that number we left him, wishing him every prosperity both in his angling and in his new enterprise. There was another punt just moored above Staines Bridge, in charge of John Keene, jun., and as the anglers had not wetted their lines, a visit was deemed unnecessary. Just below the Staines Railway Bridge, William Canters was employed by a gentleman and a lady and a little boy trying for gudgeon, but those fish appeared conspicuous in their absence. On the banks there was a veteran angler fly-fishing, and, as was remarked by my companion, he was the very type of a fly-fisherman, but he was not doing much. We got to Penton Hock and on this side of the lock there was a punt containing two anglers, under the attendance of William Harris. They were trying for barbel, but, as they said, the place not having been baited they had not touched a fish, and they had not very long made a start. It was now half-past eleven, so after wishing them some good sport we rowed round the Hook, one of the most charming portions of the Lower Thames, and at the other end we found two anglers barbel fishing with Alfred Harris, but again, the place having not been baited, the fish were not forthcoming. It was one of these anglers that caught the large trout at the beginning of the season. The success of Mr. Banfield, who had previously baited his swim, and the non-success of the other boats who had not baited, strongly proves the necessity of anglers following Mr. Banfield's example. At Laleham a boat passed us going up the river, in which were two anglers practising trailing, a system which it is hoped will, ere long, be done away with. When we arrived at Chertsey Weir, it was literally alive with anglers. Haslett was under the Weir with a gentleman. Poulter was close by with two anglers. Mr. J. R. Dyer was trying for jack. There was two other punts and a number of bank fishers, but up to the time of our visit, scarcely anything had been done. We then rowed down to the landing stage of the "Chertsey Bridge Hotel" and on the lawn we were received by the popular proprietor of the hostelry, Mr. G. H. Thurston; who, I found, was also prepared for a good trade during the season, and there is no doubt he will be well supported. During the time the men were taking refreshment, we paid our respects to Mr. James Forbes, who has a charming residence near the bridge and where the process of fish-culture is being successfully carried on in the season. We left Chertsey soon after one o'clock and only met with one punt at Dockett, the anglers being attended by Herbert Curr and possessing only a few small fish, which Herbert said "they required for bait." In going through the lock at Shepperton we met with Mr. H. Little, the Thames Conservancy Inspector. On looking over the log-book in the lock-house, I found the water was eight inches higher than on the same day last year. On the other side of the lock, in the direction of the Lincoln Arms, there were two punts out, but the anglers were having little or no sport. We next visited the Lincoln Arms and inspected the new boat-house connected with the hostelry (which is nearly finished) and the enclosure which gives to Mr. Harris the only right of landing on the Surrey side of the river. Our next movement was to the "Ship Hotel" at Halliford, hoping to find, on our way there, some punts out fishing, but there was not a single boat to be seen. We soon found out the cause of this; that all the anglers, and fishermen too, had gone to Hampton Races, and we found it necessary to cut our visit short at this point, as it was no use proceeding to Kingston, where we intended to terminate the visit, through the very heart of the district where the races were going on. We called upon Mr. Stone, the proprietor of the hostelry referred to, who is an old supporter of Thames Preservation and he very kindly drove us up to Shepperton Station. It is worthy of remark here that since last season nearly all the Thames-side houses, from Egham downwards, have become subscribers to the Thames Angling Preservation Society; and this fact will afford some proof that the proprietors of such as are desirous of catering for the anglers, should certainly make a point to do so. I have never seen many fish taken on the first day; and I was not so much disappointed as my colleague, who expected to find plenty of boats out and plenty of fish. The take of Mr. Banfield, which must have been the champion take of the day, was quite exceptional and having prepared himself for it, he was deserving of the victory.

B.

THE SECOND "FISHING GAZETTE" TOURNAMENT AND THE LADIES.

IT is with much pleasure we assure some of our readers who have asked whether ladies will be admitted to view the tournament (at the Welsh Harp, on July 8, at 3 p.m.) that their presence will be welcomed; and, we believe, as a compliment to them, it is intended to charge them half price only for admission. We sincerely trust it is a bright day. Our readers will bring their "mothers and their sisters, their sweethearts and their aunts," in great force.

Mr. P. Geen, with his usual generosity, intimates that he will give a guinea winch with line; and it is pleasant to learn that Mrs. Geen offers a box (half-dozen) of ladies' French kid gloves (size to be named by winner). We understand there is some talk of a Ladies' Cup Prize. The deserving charity which it is hoped will benefit by this Tournament, deserves the support of all.

Mr. Jas. Gregory, of Birmingham, very kindly promises a selection of his various artificial baits and hopes to be present; we hope he will. Mr. Gregory gave us about 40s. worth of his baits last time. Mr. R. B. Marston will give one of Warner's capital seat-fishing baskets; then there is Mr. W. Bailey, jun.'s rod, and other things, over from last tournament. Mr. W. H. Wigley, of Cheltenham, also promises one of his large Gloucestershire pike-spinners as a prize.

Mr. Greville Fennell, in addition to the charming little oil-painting, has also sent a copy of a rare and valuable book, "The Field Book," a cyclopædia of sports and pastimes, as a prize.

MESSRS. LITTLE AND CO. AND THE "FISHING GAZETTE TOURNAMENT."

IN answer to our solicitation for prizes for the tournament in aid of the Anglers' Benevolent Society, we are glad to say that Messrs. Little and Co., of 15, Fetter Lane, have just called to say they will give a rod, winch, line, &c., &c., of the value of five pounds, as a first prize, and express their confidence in the great good which is being done in a quiet way by the Anglers' Benevolent Society.

Can not some of our other friends in the trade, who have not yet done so, help us by giving prizes?

TO COMPETITORS AT THE TOURNAMENT.

WE should be obliged if intending competitors, especially those who competed last time, would give us, at once, their views of what the best weights for the casting baits should be. There were complaints last time, that the bait thrown with was too light (it was just over one ounce), and we think it was too light for the Thames style of throwing.

As regards the fly-throwing casts on the last occasion, the measurements were taken by Messrs. Jardine and Wheeldon, and we can only accept them; but we certainly think no such casts will be made again, if they were actually 22 and 23 yards, with such short rods. We must throw over water this time.

GREGORY'S "GRESHAM" SPINNER.

Mr. James Gregory, of 57, Vyse Street, Birmingham, sent us, on Wednesday last, one of his new baits for jack, perch, trout, &c., which he has just brought out and which he calls the "Gresham" spinner. We tried it the same day, more to test its spinning qualities than with a view of catching fish. Even in perfectly dead water it spins splendidly and in half an hour it caught four perch, ran two others which got away, caught a jack of between six and seven pounds, which only got away through one of the hooks of the bottom triangle breaking; ran two other jack, and was then put away as having fairly earned a word or two of praise in the Gazette. Mr. Gregory has adopted the same kind of spinning fins as are used in the best Devon minnows and this fully accounts for the successful spinning of this bait, which is very nicely made and mounted.

FOSTER'S HONEY-DUN BUMBLE.

A SPLENDID GRAYLING FLY.

Messrs. D. and W. Foster, of Ashbourne, Derbyshire, have sent us some samples of their bumbles. The light bumble, the red bumble, the mulberry bumble, the furnace bumble, and the best of all the bumbles—the honey-dun bumble. This is without exception the very best grayling fly we have ever used, and will also kill trout well. We can most strongly recommend this fly to our grayling anglers and they will also find the mulberry, furnace, and red bumbles, first-rate killers. The honey-dun feathers are so rare, that Messrs. Foster have to keep two pens of honey-dun hens on their premises for the manufacture of the honey-dun fly.

GOOD TROUT AND GRAYLING FISHING.

Our fly-fishing friends should not overlook the advertisement of the Shobdon Fishing Club, which will be found in our columns this week. The fishing is on the famous Lugg and a tributary in Herefordshire, and extends to several miles of first-rate trout and grayling fishing. Having fished over the water some years ago, when it was not strictly preserved, we can speak most highly of it. Kingsland is the nearest railway station, three miles from the comfortable inn at Mortimer's Cross, on the water. The club is limited to forty members and the annual subscription is only £3 3s. It is a chance that does not often occur; the scenery is lovely and there is other good fishing in the neighbourhood. The water belongs to Lord Bateman.

THE DERBYSHIRE WYE AND THE TRENT BOARD OF CONSERVATORS.

Mr. Justice Field and Mr. Justice Grove, have decided that the Wye is a tributary of the River Trent, under the Freshwater Fisheries Act. They have thus overruled the decision of the Bakewell magistrates, who in a recent case decided against the Board, The Freshwater Fisheries Act requires altering in a good many directions.

MORE NETTING OF RESERVOIRS.

The permission which has been given to the committee of the Thames Angling Preservation Society to remove the fish from the reservoirs of some of the waterworks companies was substantially inaugurated on Monday last at the Chelsea Waterworks, the fish being so much larger and so much more numerous than those of the East London Waterworks, the netting of that reservoir having taken place some few weeks since. Under the direction of Mr. S. Lea, the Company's resident engineer, and at the request of the Board of Directors, the committee of the Thames Angling Preservation Society were not permitted to admit any visitors only the officials and those who took part in the work, being allowed to attend, and which was religiously carried out to the satisfaction of the board and engineer. All the arrangements made were satisfactory and complete, Mr. Thomas Spreckley, as usual, being director-general. The netting was performed by Mr. Lewis Gibson, of Putney, his assistants being Messrs. Alfred Nuthall, F. H. Lemann, H. E. Wood, C. P. Wheatstone, R. Knapp, Back, J. Kellow, A. Allison, and W. H. Brougham, together with the following riverkeepers:—John Milbourne, R. Relf, Alfred Thompson, and Palmer Scott. There were a couple of peter-boats in charge of two of Gibson's sons. The horses for conveying them up the river with the fish being provided by Messrs. T. and A. Stroud, of Sunbury. The netting commenced soon after nine o'clock, the entrance gates to the reservoirs being kept by the police, who had strict orders not to admit any one without tickets. Mr. S. Lea had everything satisfactory arranged, with platform communications to the water, and the water itself reduced to a depth of four feet, but the extent of water in size was far larger than anticipated and the nets provided were not large enough to do it effectively, and it had to be done in pieces. Mr. Hilliard, the resident superintendent, was most obliging and attentive, and rendered praiseworthy assistance. During the day Sir William Wyatt, the chairman of the directors, with other members of the board and visitors invited by them were present to witness the netting. After each haul came to the edge of the water the fish were placed in a mud boat, which was partly filled with water and then taken to the landing-stage; here they were conveyed in zinc pails to the large storage wells in the peter-boats, and as the peter-boats got filled they were sent up to the river to the places assigned for them. The first consignment, under the command of Mr. F. H. Lemann, was sent to Shepperton—one portion being placed in Halliday's Hole and the other in the famous chalk hole swim below the lock on the Surrey side. Halliford was not forgotten, where, in the presence of Mr. R. Stone, a nice cargo of fish was introduced. The reach at Walton had a famous quantity of the finny tribe, and the final deposit was made opposite Messrs. T. and A. Stroud's boat-building establishment in the presence of Captain and Mrs. Tucker and a number of spectators, who had the pleasure of seeing a large quantity of good fish put into the Thames—the sight of the perch especially causing great enthusiasm, a great number being considerably over 1 lb. each. And now as to the actual result of the day's operation. The fish as they were brought up in pails were counted and the total result was sixty-three pails full, the estimated weight of each pail containing 20 lb. weight of fish. There was not an unsizeable fish in the lot—on the contrary, as regards perch and dace, they were remarkably fine specimens, the perch going up to 2½ lb. each. There were some splendid examples of gudgeon and bleak. The roach and chub were also good, but the barbel were not more than 12 inches in length; there was only one jack, which weighed 2¼ lb. In the middle of the reservoir there is a channel of 7 feet in width, into which the fish got to escape the net; but the directors liberally gave orders to draw off all the water down to this channel, so that the large quantity of fish which they knew the reservoir possessed should be handed over to the Thames. There are three other reservoirs of ten acres each yet to be done, and out of each of these greater results are anticipated.

On the following morning, after the water had been reduced to the level of the channel, Mr. Thomas Spreckley and his assistants got out 2266 lb. weight of grand fish—jack up to 10 lb. and perch up to 2 lb. This will swell the total of the previous day to at least 3500 lb. weight of magnificent fish, all ready for the anglers. Some of the other reservoirs are reported to hold a greater body of fish.

[This is a most satisfactory result. Nearly two tons of fine live fish, worth probably in mere money value nearly £200.—Ed.]

CLUB AND OTHER JOTTINGS.

By L. B.

The general angling season appears this year to have opened far more auspiciously than it generally does, and some fair takes of well-conditioned fish are reported from several waters—Thames, Medway, Welsh Harp Reservoir, &c. I made my first attempt at Chertsey, with Haslett, on the 18th, and had not the rain persistently poured down all day, I think we should have secured a good take of fish. Haslett's report just to hand reads as follows:—"Three days with Mr. Allan: five barbel, four perch (very good), and two jack, both put back. One day with Mr. Bonvoisin: One barbel, some good roach, up to 1 lb. each, a few dace, a jack under 2 lb. (returned), and a nice little trout about 2½ lb." He then goes on to say:—"Mr. Allan got a nice barbel on the 19th, fishing the same swim you fished the previous day. It weighed 9 lb. 12 oz., and was as fat as a prize pig. He intends having it preserved." Who says there are no good fish in the city waters after that?

A special meeting of representatives of London angling societies was held at the Portman Arms, Great Quebec Street, Baker Street, on Friday last. Notices had been issued to every society in London and suburbs, and representatives from 49 clubs, besides several gentlemen from the East Central Committee, were present. The principal business of the evening was to elect two London anglers to represent the London anglers on a sub-committee of the Great International Fisheries Exhibition, 1883. Messrs. Crumplen and Sachs, of the Gresham and Piscatorial Society respectively, being chosen unanimously, and two better or fitter gentlemen could not be found. It may be mentioned incidentally that the president of the West Central Association, Mr. P. Geen, has been requested by our Sheffield friends to represent them on the same committee. During the evening the secretary read a long and interesting report of the steps taken to obtain the admission of a representative on the executive committee. Two new societies were enrolled, viz., the De Beauvoir and the Three Pigeons Angling Societies, Richmond. The election of two societies by the executive committee being also confirmed, some routine business was then transacted, the meeting terminating with a hearty vote of thanks to the chairman and vice-chairman, Messrs. Bonvoisin and Beckett.

A No. 3 West Central Association district visit was paid the Excelsior Angling Society on Wednesday evening, June 14th, The chair was taken by Mr. Hopkins. Some capital songs were well rendered by Messrs. Jones, Cudman, Page, Hopkins, Hendle, Dawes, Saunders, Roberts, and Tarpington. Mr. Hoole, who, it is needless to say, was well received, made a few remarks on the work being done by the association, and the Anglers' Benevolent Society. The societies represented were the South London, Peckham Perseverance, South Belgravia, Peckham Brothers, the St. Alban's, and the

Hammersmith United. A vote of thanks to the chair brought the meeting to a close. A special meeting of the committee of the Anglers' Benevolent Society will be held at the New Foresters' Hall, Clerkenwell Road, on Friday evening, 23rd, at nine p.m., when business of importance will be brought forward for discussion. It seems almost incredible that the secretary of such a club as the North Western should be so ill-informed on current piscatorial matters as affecting the metropolitan anglers in particular—as Mr. F. Hill makes it apparent he is by his letter in last weeks' Fishing Gazette. I will not trouble the readers of the Gazette with a repetition of the arguments which have so frequently appeared in its columns, urging upon the London anglers the necessity of uniting to a man for the purpose of renting, preserving, and, if necessary, stocking, waters within a reasonable distance of the metropolis. We may take it as a fact that the necessity for doing this is almost universally admitted—a necessity which our good friend the Editor of this paper was among the first to point out, and has since frequently and earnestly, by writing and word of mouth, urged upon us the advisability of taking early steps to meet. I may, however, briefly state, for the enlightenment of Mr. F. Hill, that the subject was simultaneously considered by the three London associations—which, be it remembered, consist without exception of duly accredited representatives from every enrolled society in the metropolis. suburbs, and provinces—secretaries having been previously circularised, advised of the proposed scheme, and requested to ask their brother members to instruct their representative. As most of the readers of the Gazette are aware, the scheme was unanimously adopted at a special meeting, and an executive was forthwith elected composed of twelve chosen men from each association to carry it into execution. If Mr. Hill can inform us of a better manner of successfully raising the necessary funds than by requiring the holders of every privilege ticket to pay the small additional sum of 1s., annually, he will earn our thanks, and we shall be much indebted to him. Of course, Mr. H. is utterly inconsistent, and his statements are at variance with facts when he informs us, ("Oh, my prophetic soul!")—"That this self-given authority is just what he expected would show itself sooner or later, and, if acknowledged and allowed, will be the first step to the London anglers being entirely placed at the mercy of a very small minority to make what calls they will in the form of subscriptions, &c., and to place same to what purpose they choose, &c., and all who wish to be members of a club will have to conform to the above, otherwise the club will not be allowed to accept them as members."

The associations, as I have stated above, are purely representative bodies, and no step that was contrary to the wishes of the anglers at large could possibly be carried. The clubs elect their representatives, and are free to change them as often as they think fit. At the East and, I believe, at the Central, the business is entirely transacted at the monthly general meetings. The West Central have a working committee, whose powers are, however, very limited, inasmuch as, though they can cut out the work and make recommendations, they cannot vote money away or take any important steps without referring to the general body.

It would puzzle a Philadelphia lawyer to see how bodies so constituted could possibly carry out the system of tyranny painted in such awful colours by our friend Hill.

I could well write at greater length upon this subject, but I am clearly convinced, and no London angler has a better opportunity of judging, that the attempt we are now making to rescue a few waters ere it is too late is enthusiastically hailed by an overwhelming majority of the London anglers, who, be it said to their credit, are prepared, if needed, to make far greater sacrifices than that of 1s. per annum should it be required of them; and this feeling is, if anything, strongest among the poorest and humblest, who, be it noted, have implicit confidence in their representatives, and well know that they will not ask them to contribute a single farthing more than the successful carrying out of a great and useful work requires, whatever Mr. Hill seems to imply to the contrary notwithstanding.

In conclusion, one word to Mr. J. Hill. Next time he is desirous of writing to this or any other paper on a subject affecting the association or the Fisheries Society, I can cordially promise him that Mr. Hoole or myself will be delighted, if he will drop us a line, to give him access to letters, circulars, rules, &c., or give him such verbal explanations on any point as will prevent him falling, from utter want of such, into a series of unintentional misstatements such as those contained in the letter from which I have quoted.

The eighth annual dinner of the Trafalgar Angling Society was held at the Mitre Tavern, St. Martin's Lane, on Thursday, June 15, and a capital dinner it was. Mr. Humphries occupied the chair, the vice being ably filled by Mr. Richardson. Mr. Secretary J. Gaze was indefatigable in looking after the members and guests. Among the latter were Messrs. Bonvoisin, Gee, White, Smith, Oliphant, &c. Some capital songs and recitations from Messrs. Humphries, Richardson, White, Smith, Morris, Bonvoisin, Lord Golosteine, Dewar, &c., together with some appropriate toasts briefly responded to, made the rest of the evening pass pleasantly away, some capital prizes being offered for competition during the present season, the usual vote of thanks to the chair and vice bringing the meeting to a termination. Mr. R. B. Marston will read his promised paper on "Coarse Fish Propagation," at a public meeting at the Society of Arts, John Street, Adelphi, on Monday, at 8 p.m.

Summer Dinner and Competition of the Richmond Piscatorial Society.—The above was held at Halliford-on-Thames last Wednesday evening. We hope to have a report next week.

CLUB REPORTS.

AMICABLE BROTHERS' ANGLING SOCIETY.

The members went out in great force after a three months' rest, and some went to a great distance, but it was with the same result, just a fish or so. The following members weighed-in fish:—Mr. Medcalf, bream, roach, and dace from Pulborough; Mr. Patrick, roach from the Lea; Mr. Arnold, roach and dace from the Thames; Mr. Hunt, roach; Mr. Howlett, roach and dace; Mr. Worledge, perch from the Lea; Mr. Brearley, acting as steward, went down to make the final arrangements for the 29th annual dinner, which will take place at Mr. T. Coomes, the Five Horse Shoes, Hoddesdon, Herts, on Sunday, July 2nd, at one o'clock precisely.—T. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on the 18th inst. with the following result:—Mr. A. Shakel, carp and roach from Woking; Mr. A. Glass, two roach scaling 2 lb. 8½ oz.; Mr. D. Davis, bream from Amberley; Mr. T. Bowling, bleak and gudgeon; Mr. C. Daniels, dace from the Thames; Mr. R. Smith, bream from Amberley.—D. Davis.

June 20.

BERMONDSEY BROTHERS ANGLING SOCIETY.

This society held their fourth annual supper at their club house, the Alscot Arms, Alscot Road. Forty sat down to dinner, but members and friends mustered about seventy afterwards. Mr. Herbert occupied the chair, Mr. Frost the vice. The numerous prizes won by the members during the season were distributed by the chairman, who congratulated the successful winners in suitable terms. The first prize for heaviest gross weight was won by Mr. Frost; second ditto, by Mr. William Allen; third by Mr. Conn. During the season Mr. Allen won five prizes, Mr. Mitchell four, Mr. Frost four, Mr. Herbert three, Mr. Beningfield three, Mr. Conn three, Mr. Smith one, Mr. Owles one, Mr. Ayton one, Mr. Gafney one. The rest of the evening was passed very pleasantly with toasts and harmony, Messrs. Mitchell, Beningfield, Allen and Miss Benson obliging with songs, also Messrs. Newhouse, Herbert, Frost, Mitchell, Conn, Herring and others. Mr. Beningfield presided at the piano.—W. Allen, sec.

June 21.

BOSTONIAN ANGLING SOCIETY.

Several of our members ventured out on the first Sunday of the season, and were well rewarded by bringing a handsome show of fish to our trays, Mr. W. Bastain weighing 14 lb. of jack; Mr. Jennings, 15 lb. of nice roach, the largest weighing 1 lb. 3 oz.; Mr. Marshall, bream and perch, the largest bream going nearly 4 lb.; Mr. Cubitt, roach; Mr. Taylor, jack: Mr. Leslie, a nice show of perch from the Thames.—J. Jennings, hon. sec.

June 20th.

BRIGHTON ANGLERS' ASSOCIATION.

The members of the above have now settled down to their amusement for the season. On Monday Mr. Anscombe had a very good show of roach, one scaling 15¾ oz. At a meeting on Monday the Association decided to give a prize valued £5 for the largest weight of fish from June 16 to November 31, and a first and second prize for the largest weight taken in all competitions during the same dates, no fish to be weighed less than 4 oz. The first competition takes place on Sunday, the 25th, in the Ouse, which will be roving. All members wishing to compete for the £5 prize must at once enroll their names. I have just been informed that Mr. Noah Clarke has taken some good roach, and Mr. Artis one perch 1½ lb. Weather cold and wind E.S.E.—Groundbait.

CITY OF LONDON ANGLING SOCIETY.

Our fifteenth annual distribution of prizes took place on Thursday, the 15th inst. Owing to the bad season many of our prizes for specimen fish were not taken, the fish weighed-in not coming up to the required standard. Mr. Mortimer was the most successful, winning no less than ten prizes; Messrs. Chambers, Castell, and Hales, three each; Mr. Perry, two; Messrs. Martin, Plumstead, sen., Hobbs, Payne, and Mark, one each; Mr. Castell taking the gross-weight prize, one guinea, and Mr. Mortimer the specimen prizes for roach and dace. The prizes were mostly in money. A few useful articles were given—a copper kettle, tea-service, tackle, &c. On Sunday, the 18th, nine of our members went to Amberley, eight weighing-in fish—Mr. J. Chambers, roach, dace, and bream; Mr. Perry, one roach, weighing 1 lb. 1¼ oz.; Messrs. Hobbs, Mortimer, Castell, Pratt, Mark, and Warden had roach and perch. Our ninth man came to grief, he losing a fine bream in the act of landing.—Cas.

CLERKENWELL PISCATORIAL SOCIETY.

The fourth annual supper of the above society took place on Monday, June 12th, at the Horse Shoe, Clerkenwell Close, presided over by Mr. J. Scott and Mr. Morgan. Great credit was due to the worthy host, Mr. Smith, who catered for the members. Over forty sat down to supper. After the cloth was cleared, the distribution of prizes took place, which were very numerous. Mr. Stebbings, the secretary, read over the annual balance sheet, which showed the society was still in a flourishing condition. Mr. Homer officiated on the piano. A general meeting will take place on Monday, July 3, to arrange the prizes for the coming season.—R. Stebbing, sec.

June 22.

DUKE OF YORK ANGLING SOCIETY.

The above society fished their first match on Sunday at Uxbridge, when the prizes were taken by the following members:—Mr. Hannabus, 1st, roach rod given by Mr. Barnett, our fishing-tackle maker, of Church Street, Lisson Grove; Mr. Allen, 2nd, a case of medallions and five shillings, given by Mr. Avon; Mr. Harris, 3rd, and aquariam, given by Mr. Stone; Mr. Avon, jun., 4th, 5s. given by Mr. Baxter; Mr. Pates, 2s. 6d., given by Mr. Butler; Messrs. Tucker and Lallam divided 2s. 6d., given by Mr. Kelly.—T. Avon, hon. sec.

June 21st.

GOLDEN BARBEL.

The members of this society held their annual dinner on the 13th at the headquarters, the York Minster, Foley Street, Portland Place, W. Members from all parts of London attended to partake of the good things provided. The gross weight of fish taken during the past season by the members amounted to 1845 lb. 15½ oz. Mr. Goudge the first gross weight prize with 304 lb. 8¼ oz.; Mr. Lee, second, with 136 lb. ¼ oz.; E. Harrisson, third, 134 lb. 4¼ oz.; E. Henries, fourth, with 102 lb. 1¼ oz. On the 18th, from Amberley, Messrs. Green, Whitehead, J. Jones, Rodgers, R. Fellows, and J. Roach, succeeded in getting among the bream, roach, and perch; while from Pulboro' Messrs. Hall and Chapman had a nice show of roach, jack, and bream. From the Wey Messrs. E. Harrisson, Lauford, Lumby, J. Day, and Hindersley, got bream, roach, perch, and dace—the largest fish turning the scale at 3 lb. 8½ oz. Several other members visited the Thames, but the sport was very indifferent, Mr. Perry being the only member that weighed-in fish from there, which consisted of roach, perch, dace, and chub. The gross weight all round amounted to 43 lb.—Pixie.

June 22.

GOOD INTENT SOCIETY.

The Edinburgh Exhibition awards were distributed to those entitled to receive them on Thursday, the 15th inst., by Mr. F. Clench, in the absence of Mr. R. B. Marston, who was unable to attend, being out of town, Mr. P. Geen supporting the chairman, who opened the business in an able speech which was well received. The first on the list being the Good Intent Society, the secretary receiving the gold medal on its behalf; Mr. Sachs, on behalf of the Piscatorials, gold medal; Mr. H. Brookwell, honorary member of the Good Intent, gold medal for private collection; Mr. E. Sanders, honorary member of the Good Intent, silver medal for private collection; Mr. Decosta, silver medal for private collection; Richmond Piscatorials, silver medal; Mr. John Cooper, silver medal for stuffed birds and fish; the Edmonton and Tottenham Society, diploma of honour; Mr. Phillips, the Reform Society, silver medal. The distribution over, each of the recipients return thanks. Mr. Sachs, in a very able speech, said it gave him great pleasure to be present that evening, and greater pleasure to know that the Good Intent Society received, in conjunction with the Piscatorials, the gold medal, it being the first time that so great an honour has been given to an East-end club. Mr. Sachs being repeatedly cheered. Mr. P. Geen, in responding to his health being drunk, made a capital speech, as he always does, and was loudly cheered. Mr. H. Tibbatts made an excellent vice-chairman, and a most entertaining and pleasant evening was spent, and, in conclusion, I may say the medals are greatly admired, and reflect the greatest credit on the committee, they being beautifully executed. A collection was made for the packer for the great care he took in taking and bringing home all safe the cases in his charge; amount, £2 5s. The members of this club fished for twelve valuable prizes on Sunday last, the 18th inst., at Ware roam of water, the first prize being portrait of the winner, valued £5 5s., won by Mr. J. Bell, followed by W. Agambar, G. Hughes, A. Sims, G. Huggett, J. Christie, G. Robinson, Guntrip, J. Robinson, Thos. Bates, R. Agambar, &c. There was a fair quantity of fish taken. They are going to fish a pegged-down match at Burnt Mill on Sunday, the 2nd July, for ten prizes; that will bring our year to a close.—R. Murphy.

GRESHAM ANGLING SOCIETY.

The special musical evening of this society, held on Thursday, the 22nd inst., was very largely attended, and was also highly successful, S. C. Harding, Esq., in the chair. Previous to the musical selections, Mr. Jardine gave an account of a little episode that recently happened to him relative to a royal sturgeon which he had lately taken, on behalf of a friend, to Marlborough House, and his description created much merriment. It should be stated that the perch, referred to by Mr. Brett in his address last week, were the joint take of himself and Mr. Jardine, and presented by those gentlemen to the society for preservation in their museum, which they now adorn. The musical selections were greatly appreciated, and embraced solos by Messrs. J. E. Harding, Marshall, Jardine, Cartwright, Brown, Aveling, Hoole, Young, Brown, Thorling Miller, and other gentlemen. The whole of these gentlemen exerted themselves greatly and were accordingly applauded, their efforts meeting with hearty recognition from a crowded room. We regret space compels us to defer a full report of this important gathering, at which visitors from no less than fifteen angling societies were present. In addition to the vocal talent displayed, the society was favoured by two solos on the flute by Mr. H. B. Reynolds, whose brilliant playing is so well known to the members. The recitations embraced "The Frenchman and the Rats," by Mr. Bonvoisin; "Daniel *v.* Dishclout," by Mr. S. C. Harding, and a splendid ventriloqual sketch by Mr. J. Elwin, R.A.M., "Alderman Box." The marvellous power of mimicry possessed by this talented gentleman was thoroughly brought out, and the deafening applause which greeted him as he resumed his seat testified to the pleasure his performance had evoked. Mr. Winterbottom ably assisted at the piano, and his last new song, "She would not wed a fameless name," was cleverly rendered by Mr. Aveling. Some very happy remarks were made by Messrs. Bonvoisin, Hoole, Murphy, and Beckett, and the society was congratulated on the success of the evening. On Mr. Bonvoisin reading the roll, this being the evening of the district visit, it was found that fifteen societies were represented, these included the Amicable Brothers, Good Intent, Highbury, St. John's, Trafalgar, United Society of Anglers, West Central Angling Society, Hoxton Brothers, South London, Hammersmith, North-Western, Brunswick Piscatorial, Burdett, Peckham Brothers, De Beauvoir. Among the visitors were Messrs. Ghurney, Hoole, Beckett, Bonvoisin, Murphy, Metcalfe, &c. The evening closed with a hearty vote of thanks to the chairman and the gentleman who had so kindly assisted in the work of the meeting.

HAMMERSMITH UNITED.

On Saturday Mr. Hobden weighed in a capital lot of roach and dace from Eynsham. On the 18th our club assumed quite a lively appearance, and several trays were well filled, the principal take being twenty-seven handsome roach taken from the canal near Uxbridge by Mr. Chick. Among others weighing-in fish may be mentioned Messrs. Elms, barbel from Egham; Lewis, Reynolds, and Burbidge, roach, dace and bleak from the Thames.—Vortex.

HIGHBURY ANGLING SOCIETY.

Several members of the above society commenced the opening season on the 18th inst. with great spirit, having to contend for several prizes from open waters, the most prominent being two oak-framed proof engravings, given by Mr. S. Sampson for heaviest weight of fish, one to be the property of the winner and the other to be presented to the club. The result was a capital show of roach, dace, bream and perch, by Messrs. Anthony, Cartwright, Temple, and Thomas, the principal honours falling to the two first-named gentlemen.—Jas. Edwd. Wheatley, sec.

June 19.

IZAAK WALTON ANGLING SOCIETY.

The members fished for three special prizes at Sawbridgeworth on Sunday last the 18th inst. Mr. H. Butt secured first honors, Mr. G. Bliss was second, Mr. W. H. Hawkes was third. The following members showed fish:—Mr. J. Barnes, Mr. W. H. Mecham, Mr. G. Haliday, Mr. G. Wood, Mr. T. Dennison, sen.; several others who competed did not weigh-in. The Sunday portion of the members will dine at the Rye House on Sunday next the 25th inst.

KING'S CROSS UNITED ANGLING SOCIETY.

The next district visit of the West Central Association (No. 1 list) goes to this society, and will take place on Wednesday next, 28th inst. Brother bobs will be heartily welcomed. Club house, Prince Albert, Wharfdale Road, King's Cross. A goodly number of members were out on Saturday and Sunday last, in search of the finny 'uns, but were not rewarded according to their merits, no capture of any importance being made.—Gabriel Treadwell, hon. sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

Most of our members were out on Sunday, and met with good sport for the first day of the season. There were four prizes for competition, Mr. J. Keene being fortunate in securing two of them, Mr. W. H. Evans one, and Mr. J. Evans one. Messrs. Pipe, Goodes, Scott, Mead, Gray, Humphreys, A. Evans, and F. Hurwood, also weighed-in some good fish. Our return visit on the Central Association took place on Tuesday, June 20, when a good muster of members from different clubs were present. The chair was well filled by Mr. Heckford, of the Duke of Cornwall Angling Society, and the vice-chair by Mr. E. Barr, of the Little Independents. The evening was thoroughly enjoyable, some capital songs and toasts being given, Messrs. Pearce, Titmus, Neale, Barr, Fitch, Jennings, Sutton, Howard, Albyne, Heckford, New, Skates, and G. Letch contributing to the same; and after a few words from Mr. Stebbings, the evening closed very satisfactorily.—H. Moore, sec.

LIVERPOOL ANGLING SOCIETY.

Sixteen of our members went to the river Vyrnwy at Llanymynech, on Monday last, the 19th, to compete for club prizes. Owing to the heavy rains of the previous fortnight the water was not in good order, but in spite of this some fair sport was obtained, the whole of the six prizes being won. The weather was delightful, and the wild flowers and vegetation in their prime, and everyone was well satisfied with their pleasant outing. The following were the winners:—Trout and grayling class, 1st, Mr. Boulding; 2nd, Mr. Leaman; 3rd, Mr. Chandler. Coarse fish class, 1st and 3rd, Mr. Till; 2nd, Mr. Bloomfield. After the weighing-in the members sat down to one of those excellent dinners served up in the style for which Mr. Baugh, of the Cross Keys, has made a reputation, and which the hungry anglers enjoyed with that appetite which seems to be their prerogative.—Rd. Woolfall, hon. sec.

P.S.—Can you oblige me by giving any easily distinguishable mark in which the younger chub differ from roach and dace.

LONDON AND SOUTH-WESTERN ANGLING CLUB.

The above club was opened on the 2nd inst. At the meeting on June 16, interest was infused by going into committee on the question of prizes for the ensuing year. H. B. Terrill, Esq., attended the meeting as a visitor, and he kindly occupied the chair on the occasion, and gave the club advice as to the best mode of procedure, which was listened to with great attention by the members. Prizes were announced as follows:—Three prizes from the club: one guinea prize, for the heaviest gross weight of fish taken during the season; half-guinea prize, for the best specimen roach; and half-guinea prize, for the best specimen perch. Mr. Terrill then offered a guinea prize for the heaviest gross weight of roach for the season. Several others were promised, which brought the meeting to a close, with a vote of thanks to the chairman.—J. Woodcock, sec.

[We wish the club every success, and are glad to see they have Sir Henry Peek, Bart., M.T., and Sir Henry Lawrence, Bart., as their vice-presidents.—Ed.]

NORTH-WESTERN ANGLING CLUB.

A few members of the above celebrated the first Sunday of the season by fishing for a series of prizes at their old waters (Welsh Harp), with great success, bringing away with them twenty-five jack, besides bream and perch; of the former, Mr. Weaver had six; Mr. Aldis, four; Messrs. Marshall and Grindley, three each; one shown by the latter gentleman being a very nice fish, weighing rather over 6 lb., and will be the cause of your humble servant being worse off by half a guinea at our next distribution of prizes. Mr. Grindley also had bream. Messrs. Packman, Roxbee, Plumpton, jun., Wynn, Harris, and North, having one or two each; Mr. Plumpton, sen., perch; and Mr. Smart, bream. I might mention, just to set some minds at rest, that the jack were all clean fish, and in splendid condition. The aggregate weight of fish shown being nearly 1 cwt. If the above is anything to go by, it only proves what that indefatigable and most obliging of keepers (Sawyer) told me about a month ago, and that was that he believed this season would be equal to some of those old-fashioned ones that we have experienced at these waters; and my advice to brother anglers, before going elsewhere, is, to give them a trial; and if unacquainted on account of not having fished same, have only to put the question to Sawyer, and I am sure he will take pleasure in putting them upon the right track.—H.

June 21.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The season opened well at this society on Sunday last, several members weighing-in. Mr. T. Longman, 10 lb. of roach, 3 lb. dace and chub; Mr. Crafford, 4¼ lb. roach and dace; Mr. Edwards, dace; Mr. Roberts, trout; Mr. G. Drew, bream; Dr. Lavender, bream; Mr. J. Drew, roach. On Sunday next, June 25, Mr. Drew's prize will be fished for, any water. No member to start before 5 o'clock a.m.—T. W. Lucy, sec.

June 21.

PECKHAM BROTHERS.

On the 18th, about fifteen of the members of the above society opened the season by visiting the river Wey to compete for three prizes given by Messrs. Stidolph, Sweet, and Page. Results:—Mr. Williams, 1st; Mr. Stidolph, 2nd; Mr. Becknell, 3rd. Messrs. Gendal, Duke, Brancher, Matthews, and Orjan also had fish, the gross weight of which was about 12 lb., and consisted of bream, roach, and perch. Considering the showery weather that prevailed it was considered that they came off very well. Some of the members put in their time collecting those jewels which nature has distributed so liberally in this part of the country, and I must say that on their return to the society's headquarters the sight of the bunches of wild flowers gave to some of the visitors as much pleasure as the sight of the bream and roach did to "Ye Ancient Knight of the Rod." Mr. Brodie has given a £5 5s. cup for competition, the condition of which can be obtained from Mr. Secretary Page any Tuesday or Sunday evening.—Pixie.

June 20, 1882.

QUEEN'S ANGLING SOCIETY.

Mr. Walford had 7 lb. 4 oz. of fine roach on Sunday; Mr. Chick, 3 lb. 3 oz.; Mr. Koopman, 2 lb. 2 oz.—T. Walford, secretary.

SIR HUGH MYDDLETON ANGLING SOCIETY.

The members of the above society went out for a number of prizes on the 18th inst. to different stations on the Thames, but met with very poor success. The great complaint of the members was the nuisance of the bad punts. No doubt it would have been still worse if the weather had been fine. The majority of the people who like to be called gentlemen appear to take a delight in annoying the angler, as bad as the weather and the boats were. The members managed to take all the prizes as follows:—(1) John Ragus, 10s. 6d.; (2) E. Smith, 10s. 6d.; (3) W. Duncan, gold scarf pin; (4) J. Billings, silver cup; (5) W. Sanders, silver-plated cruet stand: (6) W. Fowler, ladies' bag; (7) John Allard, jun., Dresden watch stand. I shall not mention the weights of fish taken on this occasion as it would create a smile.—G. COBORN, sec.

June 19th.

SOUTH BELGRAVIA ANGLING SOCIETY.

On the 18th inst, J. Smith, jun., began the season with a good show of bream and roach, weighing 33½ lb., landing one bream 4 lb. on a single hair. The following also weighed-in:—H. Lees, with 6 lb. 7 oz. roach and bream; H. Mandroy, some fine roach and dace, from the Thames; Mr. Butler, fine roach. —H. LEES.

June 19.

SOUTH LONDON ANGLING SOCIETY.

Some of our members went on Sunday to Pulboro and Amberley, with following results:—Mitchell, bream and roach, 13 lb. 3 oz.; Boorman, bream and roach, 6 lb. 10 oz.; Head, bream and roach, 6 lb. 9 oz; Brewood, bream and roach, 2 lb. 3 oz.; Buck, roach, 2 lb.; Gearing, roach, 2 lb. 8 oz. For first day a good beginning.—G. H. FIELD.

June 22,

ST. JOHN'S WOOD PISCATORIAL.

The members of the above club were out on Sunday last to fish for three prizes at the Welsh Harp Cut, but met with very bad sport. Two prizes were taken by the brother Blakemore.—J. EDWARDS, hon. sec.

STOKE NEWINGTON ANGLING SOCIETY.

On the 18th, we fished the pretty river Stort, with the usual result of late years. A variety of fish being taken, but all very small, with the exception of the gudgeon; some of them being very fine. Mr. C. F. Robinson proved the winner of the first prize, with a small trout; Mr. C. Martin, the second, with roach; Mr. A. Parrott, the third, with roach and gudgeon; and Mr. W. Webb, the fourth, with roach and gudgeon. I have not troubled to give the weight of fish obtained by each competitor, but I am sorry to say ounces instead of pounds decided the contest.—THOS. GRETTON, sec.

Jnne 19.

SURREY PISCATORIALS.

The members of this society had an open competition this day for four prizes, consisting of £3 3s., £2 2s., £1 1s., and a meerschaum pipe. Mr. Duck succeeded in getting the first with some very nice roach and perch; Mr. Beckett won the second, with roach from Rickmansworth; Mr. Linsted took third, and Mr. Watson won the meerschaum pipe.—PIXIE.

June 21.

THE RICHMOND PISCATORIAL SOCIETY.

The annual summer dinner of this popular society took place at the Ship Hotel, Halliford, the banquet provided by Mr. and Mrs. Stone being equal to the importance of the occasion. Mr. F. C. Clench occupied his position of chairman, and Mr. H. Dickinson that of vice-chairman, and amongst those present were Messrs. T. R. Sachs, John Munro, T. Houghton, H. Nattrass, Taman, W. H. Brougham, J. P. Wheeldon, Wilson, J. H. Gaunt, Powell, Crewe, W. Abbott, Giles, R. Rowe, H. E. Gaynor, Wort, Scrutton, Crowder, King, &c., &c., the guests altogether numbering about fifty. During the day several of the members competed for a number of prizes, and the following were the awards:—The first prize, given by Mr. Clench, of a valuable gold crystal pin, was won by Mr. Wilson. The handicap sweepstakes was decided as follows, it being for roach only:— First prize, 35s, won by Mr. Smith with 4 lb. 14 oz.; second prize of 21s. by Mr. East with 3 lb. 6 oz.; third prize of 17s. 6d. by Mr. Field with 3 lb. 4 oz.; fourth prize of 15s. by Mr. Terrill with 3 lb. 3 oz.; fifth prize of 10s, Mr. Wilson with 3 lb. 2½ oz.. The entrance fees were divided between Mr. Percival with 3 lb. 1½ oz., Mr. Giles with 2 lb. 9 oz., and Mr. R. Rowe with 2 lb. 1 oz. The Consolation Prize was won by Mr. W. Abbott with 16 oz. After the cloth had been removed at the dinner "Non Nobis Domini" was admirably sung by Messrs. Richer, Crew and Harvey, Mr. W. Abbott throughout the evening presiding at the pianoforte with his accustomed ability. The usual loyal toast having been given, the chairman gave that of "The Richmond Piscatorial Society," which he said would be most acceptable to them all, although they had to drink it fifty-two times in the year. The weekly meetings were always well attended, but he would be glad to see more. The society had made great strides, and was augmented both in number and funds. They had gained the silver medal at the Edinburgh Exhibition, and it was still capable of acquiring further honour and renown. In referring to the competitions that day he remarked, as a rule, selected days were never the best days for fishing. He called upon those present to respond most heartily to the toast, a request which was most enthusiastically obeyed. The next toast was that of "The Thames Angling Preservation Society," which was given from the vice chair in a few appropriate remarks. Mr. W. H. Brougham replied, and referred to the recent netting and the prospects of other nettings of reservoirs. The Chairman gave "Kindred Societies," to which Mr. T. R. Sachs responded, and in the course of an interesting speech offered a prize of a silver cup of the intrinsic value of five guineas, and was loudly applauded for his liberality. Mr. Taman, in a most able manner, proposed the toast of "the Chairman," which Mr. Clench acknowledged in graceful terms, and then gave "the Visitors," coupling with the toast the name of Mr. J. P. Wheeldon. On being replied to by Mr. Wheeldon it was succeeded by a few other toasts, which had to be done very briefly owing to the early hour the last train had to leave Shepperton Station. The arrangements were of a first-class character, and the evening was a very pleasant one.

TRAFALGAR ANGLING SOCIETY.

The member of the above society had their first day out on Sunday, but owing to the rough weather they did not succeed in taking many fish. The following members weighed-in:—Mr. Goldstine, three barbel, 5 lb.; Mr. Dewent, jack, 3 lb.; Messrs. Richardson, Lord, Morriss, Wilson, Humphries, J. Gaze, Goulding and White, roach and bream, from Amberley and the Wey. —J. GAZE, sec.

WALTONIANS.

The opening Sunday can scarcely be described as a great success. The prizes from the Thames were fished for; two only were taken with 1 lb. 9 oz. (Mr Giles) and 1 lb. 2 oz. (Mr. Horsford). Mr. Roland had a small bream and 5 lb. 13¼ oz. of roach from Amberley, one roach scaling 1 lb. 9¾ oz. Mr. Good, jun., also had 3 lb. 1¼ oz. of roach and bream for the same quarter, and small takes were weighed in by Messrs. Luxton, J. Moore, and J. Dodge. Mr. Phillips weighed in a bream 3 lb. 13½ oz. from the Thanes punt-fishing.—A. J. MARRIOTT.

June 21st.

WALWORTH WALTONIANS.

The members of this society were open to compete for three prizes on the 18th; eight or nine of them visited Rickmansworth, the result of which must have been bad, as in the evening only three gentlemen weighed-in fish—Mr. Bedford, 1st; Mr. Brown, 2nd; and Mr. R. Cain, 3rd. Where the other gentlemen were I must put to the account of the first outing of the season.—PIXIE.

WATFORD PISCATORS.

This society held their opening dinner at the Leathersellers' Arms. The society has been in existence about three months. The following notice is intended to be issued shortly:—"To the public and anglers of Watford and neighbourhood.—The Watford Piscators having rented the whole of the waters of the Colne and Colne ditch from the London and North-Western Railway Viaduct in Water Fields, better known as the Five Arches, to and including Messrs. M. A. and F. J. Sedgwick's property, notice is hereby given that the above-named club do not intend to prevent the public from fishing in the river Colne (from the footpaths), from Messrs. M. A. and F. J. Sedgwick's to the viaduct, so long as they keep to the said footpaths and strictly observe the following:—Undersized fish.—No fish under the following sizes can be retained:—Jack, 18 inches; trout, 12 inches; barbel, 12 inches; chub, 10 inches; bream, 9 inches; carp, 8 inches; tench, 8 inches; perch, 7 inches; roach, 7 inches; dace, 6 inches; rudd, 6 inches; gudgeon, 4 inches; all to measure extreme lengths. This is to give notice that all netting, night-lines, trimmers, snares, or any other mode of fishing or taking fish other than by fair rod and line angling, will be dealt with as the law directs. The close time (during which no fish can be taken), as laid down by the Freshwater Fisheries Act, 1878, 41 and 42 Vict., c. 39, sec. 11; and subsection 1 and 2; and observed on the river Thames, viz., from 15th March to 15th June, both days inclusive (trout from April 1st to September 31st, both days inclusive), will be strictly enforced. And notice is further given that any person or persons found trespassing on the opposite bank or land to the aforesaid footpaths, or on either bank or land adjoining the Colne ditch (better known as the gully or little river), will be prosecuted with the utmost rigour of the law. And any person fishing in the Colne or Colne ditch between the above-named points, except on the aforesaid footpaths, will be prosecuted as the law directs by the said club.—A reward of not less than £1 1s. will be paid to any person or persons giving such information as shall lead to the conviction of any person or persons for any offence of the above nature. All communications to be made to the Hon. Sec., at the Club House, the Leathersellers' Arms, Watford. N.B.—The club's authorised agents have directions to prohibit the fishery to any person or persons damaging the banks, using bad language, or otherwise misbehaving." There were present; Mr. C. E. Fry, the president, who acted as chairman; Mr. F. F. Horn who occupied the vice-chair until the arrival of Mr. W. T. Boydell, Mr. H. A. Vincent, the hon. secretary; Messrs. W. D. Bower, C. R. Lovejoy, Parker, Urlwin, Ross, E. Eden, Clegg, Sibley, Jeffery, H. James, A. Cutchee, Beech, Bigwood, P. Vincent, H. Haywood, A. Spicer, &c. Upon the conclusion of the dinner the following prizes offered were announced:—A prize offered by Mr. Fry for the largest trout taken in the season with a fly. A prize offered by Messrs. Horn and Beech A prize 10s. 6d., offered by Mr. Vincent, for the largest tench of the season. Mr. Boydell offered £1 1s. for the heaviest jack, snap tackle or spinning. Mr. C. R. Lovejoy, 10s. 6d., for the second largest jack. Mr. Eden, a prize for the second largest trout. Mr. Fry, a prize of £5 for a perch of 5 lb. weight, and £1 for every 1 lb. exceeding 5 lb. Messrs. Clegg, Griffiths, and Sibley, a prize of £2 for the heaviest chub over 2 lb. Some capital songs were sung during the evening, and the chairman gave a very taking recitation.

WEST CENTRAL ANGLING SOCIETY.

The annual supper of the above society took place on Friday last, and a most enjoyable evening was passed by everyone present, Messrs. Donald Smith, C. Ball, W. Wilcockson, W. White, G. Randall, R. Richards, J. Stanton, R. I. Beard, sen., and some visitors, contributing to the harmony of the evening. Between the songs the winners of last season's prizes was read over, and the following list of prizes announced for competition during the present season:— Mr. R. I. Beard, sen. gives £1 for the largest jack taken during the season; Mr. Payne, 10s. for the largest jack (October); Mr. Banks, pocket-book, value £1 1s., for the second largest jack (season); Mr. F. Beard, 10s. for third largest jack (season); Mr. Ball, ham, value 10s. for the fourth largest jack (season); Mr. Randall, 10s. for the gross weight of roach (season); Mr. Oliphant, 10s. for the second gross weight of roach (season); Mr. Summers, 10s. for gross weight of roach from Amberley (August); Mr. Richards, 10s. for the largest roach (season); Mr. White, 10s. for the gross weight of roach from the Thames (season); Mr. Smith, 10s. for the gross weight of chub (season); Mr. T. Wood, 10s. for the largest chub (season); Mr. Webster, 10s. for the largest perch (season); Mr. R. I. Beard, jun., 10s. for the gross weight of perch (season); Mr. Wright, 10s. for the second gross weight of perch (season); Mr. W. Wood, 10s. for the gross weight of dace (season); Mr. Mathie, 10s. for the second gross weight of dace (season); Mr. Stanton, 10s. for the gross weight of tench (season); Mr. Bradley, 10s. for the largest barbel (season); Mr. Wilcockson, 10s. for the gross weight of all fish bar jack (season). More prizes are promised and the club prizes to add. The members fished the quarterly match at Amberley on Sunday last, Mr. Manley taking the first prize with a splendid brace of roach and one bream, the roach weighing 1 lb. 9 oz. and 1 lb. 3½ oz. Mr. White took second prize with a roach 1 lb. 3¼ oz. Mr. Oliphant and Mr. Webster divided the third and fourth prizes, being a dead heat. June 19.—R. I. BEARD, jun., secretary.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

" A moral, too, your line may point
When tangl'd is the hair ;
Let patience with her oil anoint,
'Twill save you from despair.

" The same in life when ills assail,
Perplex'd with mischiefs rank,
Patience and skill will seldom fail
To unloose the knotted hank."

As anticipated in my last note, "patience and skill" has met with its due reward, the tangled knot of close time is buried for nine months amid the musty archives of Father Thames, and piscators can get to work without let of hindrance from the powers that be. The week's doings, at any rate on the water over which I cast my oblique vision and my straight line, reveals the fact that the Thames, not only in the protected but in the unprotected portions, is teeming with trout. This is a fact which has been gradually dawning upon me from occasional inspections and reports from the managers and proprietors of eelbucks, that the Thames is once more getting splendidly stocked with spotted beauties. At Boveney and Bray some five takeable trout have been had during the past week, and galore of roach, chub, and barbel. From Maidenhead I glean that Mr. R. Nicholson and Mr. H. Clancey, out on the opening day with young Wilder, got well amid the barbel, the vesper scale recording 32½ lb.; a trout was also had in the haul, but being a child not out of its long *close* was returned to its cradle. Captain Haynes and Mr. Rose, out with Harry Wilder, also on the opening day, had a take of barbel which weighed 45 lb. Mr. Mayman and Mr. Brooks, out with J. Andrews, took 50 lb. of barbel and one fine trout; and Mr. Haig, out with the same veteran and excellent fisherman on Monday, captured seven barbel going 20 lb., and one very decent trout. At Marlow, on Friday, the angling association inaugurated the opening day with a contest amid the members, and fair sport accrued to the various floats. The first prize was won by Messrs. Bedford and Dobell, fishing with T. White, by capturing three jack; the second honours being won by Mr. T. H. White for the heaviest barbel, 5½ lb.; the third prize, in George White's punt, going to Mr. A. K. Wright and Mr. G. H. Lovett, 15 lb. of fish. The best take by any of the competitors was by Messrs. A. and T. H. Wright, with Thorpe as fisherman, 32 lb., but as one of the gentlemen got the barbel prize, he was out of the third honours. Messrs. Kenealey and Davison, with Coster, got 9 lb. Dr. Bloxam and Mr. Jackson, with H. Lockwell, took four jack; Mr. C. Carter and Mr. Foottit caught two trout and one chub; and Mr. J. Rawson and Mr. Englefield captured a miscellaneous bag going 8½ lb., with Shaw as director. At Hurley, on Friday, Messrs. Birch and Brooksbank got some nice perch, the best fish scaling 2 lb. 2 oz.; and Dr. Brooks, with Townsend, took a trout and some chub from the weir. At Henley, Mr. Fred. Hoblyn, at the Millpool, on the 17th inst., twelve trout and five barbel. Mr. Spence, at Hambledon, eight trout on the 16th inst., five fish being returned; and Mr. Cook, at Hambledon, six trout, all being returned.

Thursday evening.—River in prime all-round order. Wind, S.E.—MARLOW BUZZ.

Ancholme.

The advent of coarse fishing in this neighbourhood was accompanied by most beautiful weather and a fine water, but though there was a large turning-out on Friday or Saturday there were but small puttings-in (the panniers). I was out on Saturday and took, with running worm and very fine tackle, without float, twenty-five very fine dace and roach, as well as one nice trout of 1 lb. which had run down to deep water. It was as pink as salmon, and of the finest flavour. The dace ran from ¼ to ½ lb. each, and were really quite passable when stewed in the oven. On another evening I had four very fine trout, weighing a total of 3 lb., all the result of recent stocking. Roach have not yet finished spawning, and the pike are too emaciated to catch for a couple of months, whilst the bream have scarcely begun to feed.—THOMAS FORD, Caistor.

Chichester.

The coarse fish season at Chichester and neighbourhood has opened fairly. The canal is in fine condition, the lower reaches especially showing the beneficial effect of the weed clearance. The weather, although changeable, has been fairly favourable, and takes in excess both in quantity and quality to some previous seasons. On Friday, the 16th, eight members of the Chichester Angling Society competed, Mr. E. Wood taking first prize with a fair sample of roach; Mr. Wickenden second; and Mr. G. C. Smith third. It is intended to hold a competition on each Thursday evening for prizes, entries to close on Wednesdays. Perch have been well on, but no bream worth recording have yet come to hand. At Selham fair sport has been had, but some few weeks must elapse ere fish get into condition, spawning being in some instances very late this season.—GEORGE F. WALTER.

Colne (Watford).

Several anglers have been hard at it this week, and some very good fish have been taken. Yesterday Mr. Grant, while fishing in the waters preserved by the Watford Piscators, took a perch 2½ lb., and late last evening a trout of 4 lb. was taken under one of the bridges, both fish, I believe, have been sent to Mr. Bowers, the skilful naturalist of this town, for preservation. Some splendid roach were taken near the bathing-place, one fish 1½ lb.—RED WORM.

Coquet (Northumberland).

On Monday last week the following extraordinary take of trout was caught with fly in the river Coquet between Byegate Hall Ford and Carshope:—Mr. James Davidson, Holystone, 16½ dozen; Mr. James Grey, Woodhall, 14½ dozen; Mr. Percival Davidson, Holystone, 6½ dozen—total 37½ dozen.

Coquet (Weldon Bridge).

On the 15th, I drove a party of my old friends to the Breamish, sixteen miles north—it is a beautiful little stream. We started at 6.30 a.m., arrived at Branton a little before 9, and, to our surprise, there was no inn within two miles of the river, but the party put on their waders, &c, at the river side, and a start was made above Branton, and fished up above Ingram. I met them at 3.30, and, considering all were strangers to the river, they had good sport. Dr. Bowling creeled 7 lb.; Mr. Dance, 1½ dozen; Mr. Gray, 5 brace; Mr. Styles, 4 brace. On the 16th, Messrs. Armstrong, Dance, Gray, Styles, and Dixon, and Dr. Bowling, from 3 to 10 brace. On the 17th, the sport, nothing in-coming. On the 19th, Mr. G. Armstrong, 2 dozen; Mr. Dance, 1½ dozen; Mr. Gray, 1 dozen; Mr. Styles, 2 brace; Mr. Dixon, 3 brace. On the 20th, Mr. Oliver, 2 dozen; Mr. Armstrong, 7 brace; Mr. Dixon, 3 brace.—A. GLASS.

Dove.

This has been a very busy week with us, for not only have we had the drake dying off the river, and an angler trying to make the most of the fly while it remained, but we have also had the first few days of the coarse-fishing season, and everybody knows how eager the long-pent-up rodster then is. Well, trout fishermen have again been doing well, almost as well as I was able to report in these columns last week. While the drake was fairly on (it may now be said to have departed), the baskets would reach some eight or nine brace of trout, the finest sport being enjoyed from Hartington downwards. The Turkey brown and the sand fly have now taken the place of the drake, and I am glad to state have so far proved no inefficient substitutes, though of course the trout have not been feeding so freely as before, owing to the fact that they are over-gorged with the drake. The minnow, Foster's excelsior, Gregory's universal killer, and the Derby killer, have been getting amongst the big fish. The followers of the coarser species have not been doing particularly well, the reason, I fancy, being that several sorts are not yet thoroughly over spawning. A few barbel have been caught with the cad bait near the Trent mouth; but these would have been all the better with another fortnight's freedom.—THE SPLODGER.

Exe (Tiverton).

The river is now in good order for fly-fishing, and very fair baskets of trout are being made. The flies killing best are the black gnat, red ant, iron blue and May dun. There are a fair number of salmon up, but they do not take the fly very freely, three only having been taken during the past week.—WM. MUDFORD.

Ilfracombe.

Sea-fishing last week I omitted to report, as during the early part of the week the wind blew strong from the nor'-west, with a heavy sea. On the Thursday one boat ventured out, and in a few hours succeeded in capturing over 40 lb. of bass—the first caught for the season. On Friday and Saturday the trawlers brought up some fine soles from the bay; some of the soles weighing from 2 to 3¼ lb. each. On Monday three splendid bass were caught; also several ling and whiting. Men have also been very successful with the lobster-pots, bringing in three or four lobsters at each haul and several fine crabs. One of our fishermen on Tuesday morning, while hauling his spiller, succeeded in capturing a large shark, which he brought into harbour and afterwards exhibited through the town. Wednesday and Thursday there was several fine catches of bream and whiting. Now, as I write my report, I observe a fisherman passing with a fine string of bream and conger eel. Of an evening there is fine sport to be had off the jetty with rod and hand-lines; expert hands often capturing fish weighing from 4 to 10 lbs.—E. COMER.

Ouse (Liverpool).

Water a very good colour, but owing to floating weeds not in good order for fishing at present. I do not think the fish will be tempted much with the angler's bait while the weeds are green and sweet; as they are having a perfect feast off them. We opened here on the 16th with a goodly number of anglers, and I believe all got fish; but there were no takes worth reporting. I thought the bream were coming on; for we got two almost at starting—one 2¼ lb. (Mr. Tee, Cambridge), and the other 1¾ lb. (Mr. J. Cole, London). Though we have tried very inducement since, and have caught some—I was going to say lots—of silver bream (but that would be hardly correct), no more of the black-backed ones have favoured us at present; though I hope to induce them shortly.—CHARLES SOUTH.

Taw and Tributaries (N. Devon).

Water still right, and likely to be so for eight or ten days, without rain; the weather is still getting warmer. I find last week in the Yeo one gent. got seven dozen, another four, another three, another two dozen. Last Monday two gentlemen got three dozen; Tuesday one got three dozen, another eight dozen; some fish in the basket like minnows, which is a disgrace to any fisherman. Yesterday one gent. got three dozen decent fish; one gent. fishing the lower Yeo got seventy fish in one day, all with the fly. I have heard of some fish being taken from all the small streams, and I saw a dish from the Mudiford Brook, twenty-six fish. Salmon are coming up, and peal; many are caught in the tidal river with the net. I am told £50 worth was sent away from Appeldore last week. Should a shower come, I shall have to record of many caught with the rod and line.—RUSTY GAME.

Thames (Goring).

Water in good order for all-round fishing. Prospects looks good for this week. Weather unsettled. Roach have been dead of this week, but this rain will make them come on again. Fishing with Mr. Hue, 231, Camden Road, Holloway: five days, best day five jack, and some good perch; largest jack 5 lb. —JOHN RUSH.

Thames (Halliford).

Owing to the bad state of the river the fishing has been very bad. Different gentlemen fishing with me their takes have been as follows:—Messrs. Innes and Withers, first day, one barbel, one chub, and an eel; second day, Mr. Armstrong, four dozen roach and dace, and three bream; third day, Messrs. Bennet and Plimpton, three dozen roach and dace, and one bream; fourth day, Mr. A.

Taylor, one dozen dace and three jack. After the rain we have had to-day, by the time this is in print the river will be in good order for all-round fishing. —George Rosewell.

The Thames (Twickenham).

Wind S. W. with light showers of rain at intervals. I have had fourteen punts out since the opening day, but of course we have not had any large takes yet, but each punt that goes out comes back with more success as each day passes over. The river is in splendid condition, and tide will suit for all-day fishing.—Alfred Perrin.

Thames (Windsor).

The opening of the present coarse fishing season shows a marked improvement on that of the past few seasons, especially in barbel, which I believe will come well to the fore this season, and the number of small trout taken with the worm (most of which have bean returned) is a good sign for the future; but I have had proof to-day of how useless it is to put trout in much under ½ lb. A jack was taken with a large roach on snap tackle, it weighed only 2½ lb., and when in the well of the punt vomited a trout, half digested, weighing about 7 oz. I have the trout now in spirits of wine, which can be seen here at any time. Perch and roach have not been feeding very well; it is much too early to expect them. Chub have been fairly on, and some very good specimens for the time of the year have come to bag. I hear that a London gentleman, who boasts of fishing a number of years for Thames trout, with fly in our weir stream tried to detain a small trout of some 10 oz., but the vigilance of our bailiff, James Gray secured the return of the innocents. If this is the first offence detected, how many has this worthy piscator taken out of our water undersize? I am greatly surprised, knowing who the gentleman is, but withholding his name, as the fish may have been badly hooked; but with the fly, the chances are it was not. The following is a list of the principal takes coming under my notice:—Mr. Hockley, of the Swan, 84, Old Kent Road, with Richard Gray, at Boveney, on the 16th inst., 16 barbel, 6 chub, 1 trout 1½ lb.; Mr. Lynes, a member of the Hammersmith club, fishing with Paice at Boveney, 16th inst., had 11 barbel, 2 chub and 3 trout (largest 1½ lb.); the latter, unfortunately, with worm fishing, as a rule, take it oyster fashion, consequently, gets badly hooked; though this gentleman take none under 2 lb., still these were useless if returned. On 18th inst. Paice in the evening had 2 barbel, 7 chub, and 1 trout 1¾ lb.; the chub were all under 2 lb. Howard, Esq., with James Gray, first day had 4 barbel, 4 chub, going 15 lb. Several jack have been had, though small—largest I know of being 6¼ lb. taken with others by Mr. Herbert, of Windsor. Lumsden, of Eton Wick, out of eight runs in one day, securing only one fish of 5 lb. In a run up to Maidenhead on the 20 inst. I passed two punts, young Plummer, of Monkey Island, with a gentleman had taken up to 12 o'clock mid-day, thirteen barbel; and Mr. Frost, with the same excellent fisherman on the first day, got a rare show of barbel, besides six trout, largest 3½ lb., the rest being returned. At Maidenhead Bridge, a gentleman informed me he had just taken a brace of trout with the worm, going about 6 lb. George Winn, fisherman at Maidenhead, on the first day, with two patrons, had forty-seven barbel; and Ned Andrews, with a patron, took a good trout of 8 lb. Calling on the new host of the Swan Hotel, Staines, Mr. Currie Banfield, who is an enthusiast at the gentle art, he informed me he had taken the first day sixteen barbel, largest 6 lb. Mr. Doulton, of Cherry Orchard, Staines, thirty barbel on first day, all good fish. Mr. Richardson, of Staines, a fine basket of roach, going 20 lb, and topped with a jack of about 3 lb. Messrs. Parsons and King, members of the Windsor Angling Club, have been getting chub, the heaviest fish being credited to Mr. Parsons, going 3¾ lb. Several other bags have been had consisting of chub, roach, &c., of minor importance. Water at time of writing in capital order, and, as rain is falling, will be good for barbel if worm is used and swims baited well with same. A good many heavy jack have been seen and seem very numerous—too much so to benifit our stock of trout.—B. R. Bamburge.

Trent (Alrewas).

Since the opening day the weather has been anything but favourable for anglers, and I cannot glean of much being done in the river. On the opening the weather was everything one could wish, but the water was so unsettled and cloudy that the fish could not see a bait. The few anglers who were out did the best by fishing the small streams and tributaries that face the river. Messrs. Seal and Lavatard brought away a fair sample of roach and dace; the former, by the way, are by no means in good order and could be well left alone for another month. Our crack angler, Mr. William Reynolds, made a good start with twenty good dace, a grayling, and a trout 2 lb. 2 oz.; all the fish were taken with gentles, cad bait and worm were of no use. I made a start yesterday. A dozen nice dace chronicles my day's sport.—James Gregory.

Trent (Newark).

The water is now in capital condition for general angling, and a whole host of anglers are out every day. Some very fair bags of fish have been had since the opening day—principally eels and flounders—worms being the bait. A few chub have been taken off the shallows with fly, and dace have also bit well at cad bait. One of our anglers had a very nice barbel within a shade of 6 lb. Eel and flounder fishing seems to be all the go at present, as these fish are now biting nicely; anglers having a good stock of lobs cannot fail in securing a bag of those luscious fish. Water in nice condition, and weather ditto.—The Trent Otter.

Trent (Nottingham)

The season opened auspiciously on this part of the Trent, the water at the time was high and discoloured, and there was quite a run on the slacks and other sheltered places. At Weston a few bream were killed with the cockspur worm but the fish were only of ordinary size. Still they were clean and bit freely. At Shardlow, Mr. A. West, of Radford, succeeded on Saturday in taking a very fine trout weighing upwards of 3 lb. The Sawley subscribers have got a few coarse fish, but not many. On Monday and Tuesday the river began slowly to recede, and in the lower reaches attempts were made to fish the barbel swims, but the fish, as yet, do not appear to have left the shallows; at all events none, to my knowledge, have been landed. The Holme Pierrepont reach has been let as a subscription fishery, and the subscribers may probably do well.—The Man at the Clubs.

Tweed and Teviot.

Little was done in the way of angling during the latter part of last week, although a few takes were got. On Friday evening, on the Carham water, Mr. J. O. Wilson, stationer, Kelso, killed 7 lb. of trout. On the Teviot, on the same evening, Mr. Robert Robertson killed fully 5 lb. of trout, all taken with fly. On the lower Ednam House water on Saturday afternoon, Mr. James Gibson, fisherman to Mr. Drummond, killed a clean salmon, which turned the beam at 10½ lb. A heavy rain in the west on Saturday night and part of Sunday brought the rivers down in flood to the extent of a couple of feet, thereby greatly improving the trout angling, and, as a consequence, many disciples of the rod and line were plying their vocation on Monday. On the Teviot on that day, Mr. Ferguson had 7 lb., and three anglers who were out all night killed a gross total of from 24 lb. to 26 lb. On the Tweed, Mr. J. Oliver killed 3 lb., and on the same day, Mr. J. M'Nab had 7 lb., while Mr. James Pringle, on the Teviot, had fully 4 lb. Another basket of 12 lb. was got between two anglers, and numerous other baskets of from 3 lb. up to 5 lb. have also been killed in the neighbourhood. At the cauld at the top of the Anna a large number of clean salmon have been seen making their way to the upper reaches, and this is regarded as a hopeful indication of a good back-end salmon angling season. On the Hendersyde water yesterday Mr. James Kerss, angling for trout with minnow, killed a splendid sea-trout of nearly 9 lb. weight, besides which he had also one dozen of good sized common trout. On the Bowmont yesterday, Mr. T. Pringle, fishmonger, Kelso, had nearly 6 lb. of trout. A very handsome specimen of the common trout was killed with fly on the Teviot, last Thursday evening, which turned the scale at 3½ lb., and on being landed a small trout of 4 inches in length was found in its gullet. On the same river a bull trout of between 5 lb. and 6 lb. has been got. Mr. Bell, Shotton, in the course of a few hours' angling on one of the rivers in his neighbourhood, killed 15 lb. of trout, and had then to stop owing to a thunderstorm coming on.

Upper Medway (Tonbridge).

The close season ended on Thursday, and by midnight a large number of devotees of the angle were by the water side, all anxious for the fray. The weighing-in club competed for three prizes, the gift of tradesmen and others, at the Powder Mill Loch. The sport at this point was not by any means furious, but some good fish were taken, and a large number of small pike which were caught were returned to the river. The first prize was secured by Mr. G. Payne, with chub and perch; the second by Mr. E. Holloway, with pike and chub; and the third by Mr. A. J. Snelling, with perch. Below the town, J. Wynne caught a pike of 9 lb. 7 oz., besides two of 2 lb. each, at the Turning Hole, and Mr. T. Pronger, at the same place, secured three weighing 13 lb. Messrs. Bartram have made very large baskets of roach from the Castle Swim, and have nobbled a very fine bream or two, as well as some good dace. The roach this year are unusually fine, some of them weighing over 1 lb. Mr. R. A. Dallas Beeching, on Saturday, off the Castle, had a nice basket of roach. J. Burton caught a pike of 8 lb., while Mr. Theobald had a chub of 2 lb. and some roach, and Mr. Leonard some excellent chub. On Thursday morning, Mr. W. Ede, fishing before breakfast, got well amongst the bream, and in an hour had a very pretty basket of the flat 'uns. The water is rather too clear, but a little rain will soon put that right. Roach and bream fishers should do well, and those who are fond of chubbing will find quite enough sport as soon as the grass is cut. The club have secured the Ballast Pit for members, and there is a whisper that the South-Eastern Railway will issue privilege tickets to members of the club resident in London. If this is done, we hope to have a good season and a great acquisition of members.—Ye Medway Water-Rat.

Welsh Harp.

Seldom, if ever, has a fishing season commenced under more favourable auspices than the present one at Mr. Warner's favourite resort, and should it continue as it has commenced will fairly eclipse all former seasons, the large number of 162 jack, from 3 lb. to 12 lb., in one week is almost unprecedented, and the takes of carp, bream, perch, &c, are also far in excess of former years. Mr. Hammond took two nice carp of 9 lb. each, and one of 8 lb., besides five bream of 3 lb. to 5 lb. Mr. Lovegrove shows nine fine jack, the largest being 9 lb. Mr. Parker (one of our oldest fisherman) has been well to the front with several fine takes of carp, jack, and bream; Mr. Plumpton, too, with his perch has taken honours. The Messrs. Roxbee have between them landed eighteen jack, and Messrs. Aldridge twenty-six jack, while Mr. Brown has added nine fine jack to the already long list. On Monday Mr. Smart had six jack and one carp of 8 lb., in addition to some fine bream. Messrs. Packman, Putnam, and Bishop were well to the front with some very fine jack and bream, Mr. Bishop especially landing three very fine jack. Sawyer, who has been at work early and late looking after his patrons, reports the fish well on the feed, and with a plentiful supply of water a brilliant season may be confidently anticipated. Resident.

Wye and Derwent.

We have had a very great deal of heavy thunder-rain fall to-day (Thursday), which has quite put a stop to fly-fishing for a few days, as both rivers are very muddy and rising. Sport during the past week with the artificial flies has been A 1, especially on the Wye, and large baskets of both trout and grayling have been killed; in fact, we have had a first-class May fly season this year, both on the Lathkill and Wye, and a great quantity of fish have been killed. We have not had a very great quantity of natural drakes on the Derwent up to the present time, especially on the lower lengths of the Derwent. The Yorkshire people are trying to introduce the May flies on to the Driffield water, as there has been a very many thousands of fine May flies gone there in baskets. I hope they will succeed, but I doubt it. They would have stood a much better chance if they had got the May flies or grubs in the stick or caddis, and to have turned these at the river in different places. The killing flies have been the small Derbyshire green drakes, yellow duns, dotteril, and little black gnat. Sport on the Derwent has also been very fair, especially the first feed in the morning from ten to twelve, and baskets from six to ten brace per angler have been made. Yellow dun and dotteril flies, proving the best killing flies. Trolling with the Derby trout killer, has been followed with good results on the Darley Dale Club waters. The bottom fishers have done fairly well, both amongst trout grayling, and coarse fish, and the most fish have been taken with cockspur worms and maggots; roach are well on the feed between Bromford and Ambergate. There are many anglers out.—G. J. Eaton.

A Boy's Angling Feat.—A boy of eleven years of age, Robert Shiell Laidlaw, started from Yetholm, Roxburghshire, on the 19th, at five o'clock in the morning, walked out to College water, killed 109 trout, weighing 12 lb., and returned at 9.30 p.m., having walked a distance of twenty miles.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

ANSWERS TO CORRESPONDENTS.

Aqua Pura.—Your roach have died from the attack of one of those minute parasites which so frequently attack fish. The fish in the Edinburgh Exhibition were killed in this way; the roach in the Westminster Aquarium are suffering in like manner. The great thing in keeping a freshwater aquarium in good order is to have plenty of vegetable life to keep a proper balance of gases. In the Berlin Aquaria the water is never changed, it is simply aerated, supplied with vegetable life, and added to to fill up what has evaporated. The water may be too hard for your fish, or try the addition of a drop or two of salicylic acid.

Redspinner,—Mr. Byram Littlewood lives at Huddersfield, and that is quite sufficient addess to find him.

W. W. Oakley.—The waters of the Feltham Powder Mills, near Hounslow, are preserved by Messrs. Curtis and Harvey. We are under the impression that they frequently net them; they may contain a few pike, some perch, roach, and chub. But you will get better fishing at the Black Dog Inn, near Feltham; it owns the right of fishing on the same stream, and has been frequently referred to in this paper.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE RAILWAY PRIVILEGE TICKETS AND THE QUESTION OF RENTING FISHERIES.

Sir,—I am very sorry, though not at all surprised, at the note of discord struck by your correspondent, Mr. F. Hill. He asks if the United Associations are not going too far when they give out: "All those requiring a privilege ticket must also take a ticket to fish the waters of the United Associations." Now, as the question of renting waters has for a long time agitated the London clubs, and they have been consulted in the above matter, and have by their delegates given consent, I don't think we can say they have gone too far; and, alas, I don't think we can say they have gone too fast. Had this question been grappled three years ago we should not have had to lament the loss of three good fisheries near London—viz., Dobb's Weir and King's Weir on the Lea, and the water at Rickmansworth, now rented by the Harefield Club.

I have no fault to find with Mr. Hill in bringing this subject forward and advising his brother anglers to give it their serious consideration, for a serious matter it is; for if we cannot manage by the comparatively trifling proposed tax, or even a trifle more, to rent a few fisheries within a reasonable distance of town, the poorer class of anglers will have little chance of sport at all, except when they can raise the money for Pangbourne, Goring, &c. There is a certain charm, no doubt, in travelling a distance when we have the time and money; but if by the outlay of 1s. or 1s. 6d., say 2s. 6d. altogether, with the railway privilege, we can get fishing, say within a distance like Rickmansworth, at a 2s. 6d. journey, instead of being 5s. out of pocket, besides a lot of time wasted in travelling, who has cause to grumble? Well, there is one class who have cause to grumble, that is those who belong to those clubs that rent water which they keep exclusively to themselves and whose only idea is to get the privilege ticket for nothing, or, if not, as near that amount as they can. These men have no sympathy with the great body of anglers. I always wish to refrain from blaming those clubs that have rented waters that have always been private; but in my opinion those who rent waters that have been public or subscription waters ought not to use the railway privilege tickets at all, as in my opinion such conduct is in the highest degree mean and contemptible. However, as men differ, so I suppose bodies of men differ, and we cannot expect all clubs to have the right and proper spirit prevailing which so admirably distinguishes the Gresham Society.

Shall it be said that Sheffield outdoes London in common sense and liberality in this matter? We read in your issue of this week, that 202 miles of water are rented in different parts of Yorkshire by the Sheffield Association. Although we have the Thames to go to, how much more necessary it is for London anglers to rent and preserve waters.

I do hope that there will be an absence of that foolish bickering over this question, that goes so far to mar the fortunes of all matters of importance among all conditions of men, and of which anglers have unfortunately had to suffer a full share. I have no doubt Mr. Hill does hear a great deal of grumbling on this subject, but I would ask him if this grumbling does not principally come from men who may be styled professional grumblers—men who have a mind something akin to the individual who, when congratulated on coming into an income of £6 a week, grumbled because they hadn't thought of Sunday. Grumbling and opposition are unfortunately so ingrained in some men that I have often observed that—entirely without reason or sense—as soon as one set of men in a club support any particular proposition so surely can those who know with whom they are dealing say, as Messrs. So-and-So have supported that measure certain other members, easily named, are sure to oppose it.

There is one thing I should like to say while on this subject, that is, I don't see why members of clubs should pay to preserve the rented waters for the benefit of outsiders. I trust that no one will be allowed to fish our waters who do not pay their shilling the same as we shall have to do ourselves. I have not the slightest wish to exclude any man, but if a man is too poor to pay a shilling for a year's fishing he is too poor to go fishing at all. I would be the first man to withdraw from this scheme if I thought any attempt would ever be made to keep these waters entirely a close borough for members of the three associations only. Admit all who are willing to pay the modest premium; and, as soon as a few pieces of water, reasonably suited to the convenience of my brother anglers. have been obtained if a guinea or two is wanted to stock and preserve them, mine shall not be wanting, even should I never go near the said waters to fish.—I am, &c.,

A. J. Marriott.

THE RAILWAY PRIVILEGE TICKETS AND THOSE OF THE UNITED ASSOCIATION.

Sir,—The letter signed F. Hill in your last issue has caused me much surprise. It plainly points to one of two things—either Mr. Hill is deplorably ignorant of the subject on which he is writing, or he wishes to cause dissent among the London anglers on a question which has been decided by each of the three associations to be for the benefit of the whole body.

Let me draw Mr. Hill's attention to the full rules of the United London Angling Associations' Fishery Society, as published in the Fishing Gazette of June 3. He will there find the specific objects for which the society was formed, and to which the "extra shilling" was intended to be devoted. He will, moreover, find that the committee consists of thirty-six members, twelve from each of the three associations, and three trustees, one from each association. Pray, what more representative body than this could be desired? Is this Mr. Hill's "very small minority"? And where does he find that this "very small minority" has the power to make what calls they think they will, in form of subscriptions, &c., and to place the same to what purpose they choose? No such thing has been contemplated, and I am perfectly convinced that the three associations (collectively or individually) would not give such power to any body.

I quite agree with Mr. Hill's advice to club anglers to give this matter their serious attention. That is exactly what is required. Let them give the matter every possible attention, and they will find that instead of being unjustly taxed as suggested, they are simply paying 1s. annually for the purpose of renting, preserving and stocking waters to which they will at all times have free access. Is that a very great sacrifice to make for what must be an enormous benefit to anglers, both now and in the future? I think not. It occurs to me that Mr. Hill should rather have written asking the objects of the society, instead of attacking it without sufficiently understanding its ends. And I very much fear that some gentlemen who have rendered so much assistance in this and other good works in the angler's interests will feel the disparaging remarks of your correspondent.—I am, &c.,

Justice.

THE "FISHING GAZETTE" TOURNAMENT.

Sir,—I can hardly send out a special notice to our members in reference to the tournament, but shall be very pleased to render any aid possible, the more so as the Anglers' Benevolent Society benefits by it. Our friend Ghurney, who is so deeply read in all that appertains to the Lea, with the additional qualification of being secretary to the fund in question, sent me twenty tickets, which were at once disposed of; but I have now received twenty more—making forty in all. Will those members of the Gresham who have not taken tickets forti-fy me by taking some, and kindly put me in the position of little Oliver asking for more.

I hope, sir, the tournament will not only prove financially successful, but be the means of bringing anglers together for mutual aid and friendship. My impression is that on this occasion we might have a very pleasant re-union, and that all anglers might safely bring their wives and children to witness an interesting exhibition of skill, and at the same time contribute their mite toward the relief of those who are united to them as kindred spirits, in the love of a common sport.—I am, &c.,

T. Crumplen.

PRIZES AT THE "FISHING GAZETTE" TOURNAMENT.

Sir,—I should be glad to know what the prizes consist of at the Anglers' Contest, Welsh Harp, and the conditions under which they are to be cast for, as I have not seen it published or announced at any of the clubs.—I am, &c.,

F. E. Comyns.

[Almost every week recently we have given particulars of fresh prizes. More are mentioned this week. They range in value from £5 to 5s. The conditions will be much the same as at our last tournament, but they will be published in the Gazette next week probably.—Ed.]

SILK AND HAIR LINES, &c.

Sir,—I have no inclination to carry on a discussion on this question, which must always, to some extent, be one of taste and fancy, possibly of prejudice; but my last week's statements have been so misunderstood that I feel sure that, if I say nothing now, my silence will also be misinterpreted.

In the first place, it is gratifying to feel that I have amused "Herne the Hunter;" actually brought him to life again apparently; and now that he leaves his "happy hunting grounds," to attack an ordinary mortal like myself, he must needs put me to great disadvantage. But he need not be so rude and personal (not to say diabolical), I think. Still, we must remember where he has been all these years. Yes, I am at a grievous disadvantage when a mysterious sportsman, centuries old, rises from the infernal regions to refute my opinions, backed up, too, by a diary—the first diary in the world, moreover—teeming with a constant record of facts in refutation of my notions. But let me remind him that I simply expressed an opinion based on my own experience; and I don't see that in advancing my views (for what they are worth) they must of necessity be wrong because they don't square with those of "Herne the Hunter." Nor do I see that one solitary instance of "a trout 16 inches long and nearly 1½ lb. in weight" is much to the point. It proves precious little, except that the fish should have weighed more than it did if it had been in prime condition. Back this up with a wonderful record of six 8 oz. fish, and "Olim Trutta's" complete discomforture is accomplished! Not a bit of it. I never for one moment expressed a doubt about these marvellous feats of skill, and, as I clearly stated last week, that I had no experience of hair *casts*, it appears that the redoubtable "Hunter" is setting me up for the express purpose of knocking me down again. Well, I daresay he has a slack time down there, and wants to keep his hand in. He's very welcome to any fun he can get out of me.

However, it is very plain that in this whole question we are at cross purposes. As "Herne" has put me out of the pale "of all fly-fishers worthy of the name," I must proceed with caution and diffidence. Still, I may point out that in my last letter I carefully avoided referring to my own exploits, but I mentioned "anglers second to none." I beg leave to repeat that there are anglers "worthy of the name" who have not the pleasure of "Herne the Hunter's" extensive and comprehensive acquaintance, and who are not fortunate enough to be enrolled in the blest company of "Northern anglers," and whose feats on southern streams would astonish some of "Herne's" acquaintances, not to say the great man himself. In judging a question of suitable tackle, there are many things to be taken into account, and what is best for one water and one style of fishing, is not necessarily the best for all. Yet "Herne the Hunter," in his ghostly omniscience of another world, would have us believe that the tackle he advocates must be the best, and that no angler who differs from him is "worthy of the name." He refers me to a wonderful diary, and picks out one instance of a trout, barely 1½ lb., as convincing and conclusive! Can anything be more absurd? There are seven different southern waters to which I have access. Some are club waters well preserved others are fished to death every day through the season. On none of these is a trout considered killable under ¾ lb. The waters are very weedy, and the average of trout killed is certainly over 1 lb., sometimes nearer 2 lb. The only successful mode is with a single dry fly, cast with the utmost nicety and precaution on very fine gut. When all is done to perfection on the angler's part, the big trout rise slowly, deliberately, and, after due circumspection, suck down the lure or reject it. This is the kind of fishing I chiefly delight in, and my last week's fishing was of this character —in a stream where the rules of the water only allow fish over 1¼ lb. to be killed. All my fish were taken on the smallest hooks, Nos. 0 and 00. What's the use of hair in a case like this? "But this kind of fishing is unique," perhaps "Herne" will say.

Perhaps it is; and therefore, as I haven't got a diary like our ghostly friend, I'll quote something else. Last year I fished for trout fifteen weeks, in all kinds of waters, in England, Wales and Scotland and the four biggest fish I killed with trout flies and gut weighed a few ounces over 19 lb. Three of these fish were taken on drawn gut, in places more than a hundred miles apart, and on waters quite unlike each other. But this was a fluke, I suppose "Herne" will tell you. At all events, it goes for nothing, as I am an angler not "worthy of the name." Perhaps a quotation from a letter I received a week ago may be more suitable by way of illustration. A friend, who is certainly considered "second to none" among his Hampshire acquaintance, writes, on June 10th, to say that in two successive days he killed with artificial fly, 11 trout, weighing 26½ lb., and was smashed five times by monsters.

If "Herne" feels inclined to "deny point blank" these statements, I must refer him to the pages of the *Field* (if they take it in where he comes from), where all these captures have been recorded as they occurred. The people who do these things don't use silk and hair reel lines, and don't think much of hair collars; they are not "Northern anglers," haven't the pleasure of "Herne the Hunter's" acquaintance, and are therefore great duffers, as a matter of course. But the tackle which is good enough for their captures (though they cannot be named in the same day with the record of six 8 oz. trout to one rod) was considered sufficiently good for all practical purposes by a person who signed himself "Olim Trutta," and who did not say all the things "Herne the Hunter" accuses him of saying; who advocated tackle which, taking one stream with another throughout the United Kingdom, would be found generally useful for fine fishing, among fish proverbially hard to catch and fit to test any man's skill and experience. Until "Herne the Hunter" proves (not merely by stating a solitary capture taken from an unparalleled diary) that his tackle will do the same, "Olim Trutta" respectfully begs to intimate that the question is one on which they are not likely to agree, and that further discussion is useless. He has said all he means to say on the question, and, in deference to the mighty hunter's opinion, he signs himself,

The Logger-headed Chub.

[We can endorse our "Logger-headed Chub's" statements entirely—we have the fullest reliance on his records of takes, which are not exceptional at all. We have a rod on a trout water not a hundred miles from London, and we put back all fish under 1½ lb.; our limit was 2 lb. last year, but that was a little too heavy. We would like to see "Herne the Hunter" tackle our big fish with his hair casts, which are thicker by one half or more than the drawn gut we use. However, we have no wish to alter any angler's views regarding his favourite tackle, and, from a selfish point of view, might wish that all anglers used hair lines—there would be more fish in the water then.—Ed.]

HAIR *v.* GUT.—FELL BECKS.

Sir,—I should like, with your permission, to add a word on the subject "hair *v.* gut." Several opinions have been elicited of a conflicting nature; you, Mr. Editor, giving yours decidedly in favour of drawn gut; whilst others as confidently pin their faith to single hair casts. Some few years since I was fishing with a cousin on the Teme, near Ludlow, during an early morning in May. We took stream and stream about and compared notes after an hour or so. I found that not only was my cousin ahead of me in respect of numbers, but also in the size of fish. I was using a gut collar; whilst he had on a single hair cast, an old friend that had done good service in the lake country, and to this he attributed the difference presented between contents of the two creels, as the river was somewhat low and fine. He lent me a spare hair cast, and I quickly found an alteration in my take. I was unfortunate enough to get fast in a bough overhanging a deep stream and lost this collar—much to my cousin's disgust, who to this day remembers and reminds me of the fact—but not until I had proved it sufficiently to make me resolve never to be without a hair line for fine water, where the fish were not likely to run very heavy; and this I have since adhered to with the greatest advantage. In the smaller streams of the north where, save during rain and fresh time the water runs fine and clear, the hair cast is invaluable, as your correspondent "Sprint" notes in connection with the river of that name. And this brings me to the remarks he makes as to the fell-becks, and the size of fish found therein. I fear that, unintentionally, in writing the little article referred to, I have conveyed the idea that a day's fell-beck fishing will usually result in the production of fish of the weight mentioned. This is by no means the case. Writing in the second portion, the article in question was based upon the experience of many fell-beck excursions, rather than a cut-and-dried narration of one particular day's fishing. I quite agree with "Sprint" when he says that two or three of a pound each would be preposterous. It would be so, but I think he has a little misread me. The *one* fish I mentioned was undoubtedly a *rara avis*; but there he was, a lank, peat-browned mystery. In some of the streams that have escaped being limed or otherwise treated, and where there are pools of sufficient depth to ensure plenty of water during drought, a solitary trout of considerable size is occasionally to be found. The one mentioned was the only one I ever came across, but I have heard local anglers speak to the same effect. The general run of fell-beck trout is of the size "Sprint" mentions, although in some of the becks, having direct communication with a lake, you often find them larger. The numbers your correspondent quotes will astonish some perhaps. I remember a party of three, two of them were cousins of mine, going out one rainy day to a little fell beck much thought of by the fishermen of the district. Two of them brought back each 160 and 159 and the third some 60 odd. That happened not very many years ago, but now I think it would be difficult to take so many, owing to the practice of liming, and also the increased number of rodsters everywhere to be found.—I am, &c.

Theodore Howard.

[We ought, perhaps, to have said that we refer to the very finest drawn gut (such as Mr Bulmer always supplies us with). Some tackle makers will show you "drawn" gut which is three times too thick for our use.—Ed.]

THE FELL BECKS.

Sir,—Having spent a good part of my life in the Lake district, I am quite able to reply to a brother angler who asks for information respecting the whereabouts of certain mountain becks.

I have fished the little beck which runs from Stickle Tarn down into Langdale, and if you fish up stream to the tarn you will get good fish, providing "Fisherman" follows the instructions given a week or two ago by Mr. Howard. Take up your quarters at the Dungeon Ghyll Hotel, which is close to the beck at the foot of the Langdale Pikes.

Then, again, you could fish from Windermere up the trout-beck valley, and after crossing to the left bank strike the road to Kirkstone Pass, where you can put up and fish next day down to Brother's Water, following the stream which rises just behind the Kirkstone Inn; and let me strongly recommend this little beck. I saw a splendid basket of trout caught, although I failed to make a good basket myself, as the beck was so low; but on another occasion I was more successful, and finished with a splendid lot from the boat on Brother's Water, At Grasmere there are several capital becks all running from the fells, but the pike take all trout from the lake. I'll conclude with a list of a few flies which I have found at this season to be first-rate when dressed as hackles and on very small hooks:—Stretcher, dotteril. drop, partridge, also grouse, black gnat, and last, but not least, the bracken clock dressed without wings.

I am of opinion that hair has many advantages, and still I now say that gut is so fine that where large fish are to be met with it is much preferable; a fish of a pound weight affording room for some skill to be brought into play in landing it on hair.

Apologising for taking so much space, I am, &c., Geo. P.

69, Meadow Street, Moss Side, Manchester.

RIVERSIDE INNKEEPERS.

Sir,—What does "The Boy Jones," alias "Marlow Buzz," mean by his sweeping charge against the riverside innkeepers. He tells his readers in the *Field* of last week that these men wink at the poaching delinquencies that are committed on the Thames in the vicinity of Temple and Hurley. If we, sir—for I am a licensed victualler not far from the banks of the Thames—are the unworthy people he would have you believe, let him tell us more (keeping within the pale of libel) that we of white wool may be able to spot the black sheep, and let those gentlemen, either anglers or oarsmen, who detest such craft, give their landing stage a wide berth. He may be assured of my assistance and that of others who wish to stand well with our visitors. While your correspondent buzzed about the landlady at Bourne End every week in print no great harm was done, although a good deal of partiality was displayed, and the same may be said of his continuous praises of "the snug little crib" at Hurley; for, doubtless, as a fisherman, he is glad to coax a kindred spirit occasionally on the same settle for pipe and pot. But not content with splashing us poor Bonifaces with his ink, he turns with inverted poll-axe fury on the navvies at work on the the locks hereabout. These fellows, he says, poach the river unmercifully. All I can say is that if they can get anything out of it now, it must be precious hard work, and more than the anglers can do, as the Henley birds have left little to reward their labours.

Sir, the poaching in this neighbourhood has been a parrot-cry for years, and we haven't far to look for the cause. Another attempt is to be made to establish a society strong enough to suppress all this, and, if possible, revive the attractions of the neighbourhood. But there exist strong reasons why certain men do not desire such a movement, and without their tacit or active co-operation the attempt will meet with the fate of the past.

Sometime ago there was much talk of the publication of "the Browne correspondence," which, according to the men on the bridge, was to enlighten the angling world in a manner equal to that of a modern electric luminary; then suddenly came an extinguisher in the shape of an apology, and left all in darkness again. Perhaps these documents are yet destined to come to the surface and diffuse a halo of truth for once over the affairs of Father Thames.—I am, &c, An Old Bung.

A SUGGESTION.

Sir,—It has often struck me a great want has been felt by working men anglers, that is, to know the condition of the water and fishing prospects later than it is possible to give them in either your excellent Fishing Gazette, *Field*, or other papers, which have to be printed early on Friday. This, of course, necessitates telegrams from distant stations to be sent off on Thursday. Now it frequently happens that by Saturday an entire change has set in, and the opinion there expressed is of no earthly use through sudden floods or otherwise.

Now I would suggest telegrams be sent, say, early Saturday morning, a quantity printed and sent to each tackle dealer, a small charge being made that would cover the expense of telegrams, printing, &c. I feel sure no angler would begrudge to pay, say, a penny for such information that in many instances would save him the expense of a long journey. I think Mr. Warner's idea during the skating season in sending up a telegram as to condition of the ice at the Welsh Harp was much appreciated by skaters who saw the telegram exposed at the *Sporting Life* and other places. Now this very week I am in doubt if it is advisable to try the upper Thames, and there is every probability of snow getting into the water from the upper country. This uncertainty will, in my instance, cause a loss to the G. W. R. Company, the people I generally put up at, and perhaps your obedient servant a day's sport.

A. J. Porter.

A COMPLAINT.

Sir,—Will you kindly allow a small space in your valuable paper, being a subscriber for a long time. I am sorry to have to complain of the way I have been treated by Mr. Wm. Bailey, senior, fishing-tacker maker, of Nottingham. On the 25th of February I sent for a silk line to Mr. Bailey and enclosed 2s. 6d. in stamps, and a stamped direct envelope for return. After waiting patiently till March 15th, I sent a postcard inquiring into the matter, but I got no reply. I waited till the 1st of this month (June), when I wrote a letter to him asking for an explanation, but have been treated with the same contempt. I may say that I have dealt with Mr. Bailey over twenty years, and have had no cause for complaint before. William Bayliss.

G. W. Terrace, Pontymoil, near Pontypool, Mon.

[We regret to be obliged to insert these complaints; but we have had many of them, and we must protect our readers.—Ed.]

In re THE FENCE MONTHS.

Sir,—A number of reports have been spread about, stating the condition of the bream and barbel taken since the opening of the season from the Thames (Weybridge, Shepperton, etc., to be in splendid condition.

I beg to inform you that the barbel are quite milky, and a bream weighed-in our club on the 18th had not even spawned, for a cupful of hard roe was taken from it. I think this fact clearly shows the mistake in opening the river as early as Mid-June, it would be far better to allow fishing a month longer, in the spring, keeping all the month of June fenced. The sooner the Mundella Act is altered the better. I wonder how much longer we shall have to wait for this?—I am, &c., F. Malcolm.

40, Ludgate Hill, June 22.

[The matter is in hand, but you cannot get a law passed and then alter it so easily as some people think.—Ed.]

BLACK SPOTS ON ROACH.

Sir,—Can you inform me as to the cause of black spots on the belly and back of some roach that were taken from the Thames last Saturday (June 18), which showed worse when kept over Sunday, as they were only just perceptible when caught.—I am, &c., W. Standley Woodhead.

Secretary Social Brothers Angling Society.

207, Cambridge Road, E.

[These black spots on roach are caused, we believe, by the fish having fed in water contaminated by sewage, and if the truth were known they have probably grown fat near the outlet of one of the up-river sewers. Roach marked in this way are very frequently caught in the sewage contaminated water of the Yare, just below Norwich.—Ed.]

LARGE KENNET TROUT TAKEN WITH FLY.

Sir,—Near Hungerford, in Berkshire, on Wednesday, 15th inst., Mr. E. S Gerrish took a trout with a May fly, weight 7 lb. 3 oz., length 26½ inches.—I am, &c., W. F. B.

Bedford Row, W.C.

STOCKING RESERVOIRS WITH FISH.

Sir,—Some gentlemen being desirous of stocking the reservoirs in the neighbourhood, with trout in some and coarse fish in others, will fishermen of experience in the matter kindly give some advice as to what fish would be likely to flourish; also any hints for procuring and stocking, coarse fish particularly?

The reservoirs are not fed by streams large enough for trout to spawn in.—I am, &c., J. J. Morgan.

Tredegar, June 13.

FISHING AT WHITSTABLE.

Sir,—Will any of your readers kindly inform me what kinds of fish are found in the dykes around Whitstable? and any information respecting the fishing would be acceptable.—I am, &c., Vortex.

Builders' Arms, Hammersmith, W., June 14.

[Small jack, small perch, roach, tench, and eels abound in the dykes between Margate and Whitstable, but they are so worried by the poachers that they get little time to grow. Here and there in the deeper places you may get good fish. Some years ago we had good sport near the Reculvers, but that is a good walk from Herne Bay Station. The high tides frequently kill the fish in these dykes.—Ed.]

FISHING AT HULL.

Sir,—Can you, or any of the numerous readers of the Fishing Gazette, kindly give me any information as to the coarse-fish fishing to be had in the neighbourhood of Hull?—I am, &c., Otja.

York Villa, 17, Terrace Road, South Hackney, N.E., June 14.

FISHING AT CORK.—IS THE EEL A FISH?

Sir,—May I ask through the columns of your widely spread paper, if any of its readers can oblige me with any particulars concerning fishing in the neighbourhood of Cork, trout and coarse fish; also as to suitable places for obtaining apartments, probably in commencement of August,—I am, &c.,

119, Old Ford Road, Victoria Park. Thomas George Dixon.

P.S.—Will you, Mr. Editor, kindly settle a question that has been matter of discussion for some time among my friends—Is the eel a fish? Your paper has been named as the only authority that will be taken in settlement of the said question.

[You will get capital salmon and trout fishing near Cork. We gave particulars of the fishing last year. The eel is one of our best fish.—Ed.]

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3. Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted). 10 to 4. Sir Julius Benedict writes :—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes :—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Falmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.

THE ODOR OF THE FOREST
THE SPARKLE OF THE STREAM!

FOREST AND STREAM

The American Journal of Angling and Shooting.

The Forest and Stream has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are :—
The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.
The angling department is in the charge of Mr. Fred. Mather, the well-known angler and fishculturist.
The weekly numbers of the Forest and Stream annually form two handsomely-printed volumes of over 500 pages each.
Terms, post free, 21s. per annum; 10s. 6d. for six months.
ublished by the Forest and Stream Publishing Company, 37, Par Row, New York, U.S.
Subscription agents for Great Britain:
Messrs. Sampson Low, Marston, Searle, and Rivington, Crown Buildings, 188, Fleet Street, London, who can supply specimen copies.

21s. A GENUINE CUCKOO CLOCK FOR 21s.
654 Sold in a few weeks. A true and guaranteed fact sworn.
MODEL SWISS CHALET.—We have imported a great quantity of really good Cuckoo Clocks, and, having purchased at a considerable advantage, we intend to offer the same to the readers of the Fishing Gazette at less than one half of the ordinary cost price. Every one is warranted and examined prior to leaving our warehouse. They cannot get out of order. We shall offer them for a short time only at 21s. each, and we honestly assure every reader that the ordinary retail price for the exact same clock is from 40s. to 50s. People who have seen them already express their great surprise. The mechanism and arrangement is admired by all, At Twelve o'clock the little door at the top flies open, when out pops the Cuckoo, who "cuckoos" twelve times, and at the last stroke returns to his parlour, politely closing the door after him. Each time the bird "cuckoos" he opens his mouth most naturally. At the same time the clock strikes. The clock not only strikes and "cuckoos" the hours, but even the half hours. To prevent any feeling arising as to the actual impossibility of obtaining a good Cuckoo Clock for the price, we agree to return the money in full if not found as advertised. Read the following testimonial: "Sheffield, October 25th, 1880.—Gentlemen,—Yours received, also box; the Cuckoo is safely to hand. We cannot make out how you can sell such a wonderful and splendid article for such a low price. Please send another per return. Enclosed is P. O. O. for 21s. Several of our friends say they shall write to you for one. Yours faithfully, Harold Bartleet." Orders must be accompanied by P. O. O. and Coupon as below. Enclose 6d. for packing case (half cost).
FISHING GAZETTE COUPON.
Entitles holder to ONE GENUINE CUCKOO CLOCK on receipt of 21s.

(Book for the Welsh Harp Station.)

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season:—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream, Perch, Rudd, &c.

Good boats, bait, &c., to be had at the Sportsman Arms, Ormesby Broad.—S. Richmond, Proprietor.

Five miles from Great Yarmouth, via North Norfolk Railway.

ANGLING.

DOVEY VALLEY HOTEL, CEMMES ROAD, MONTGOMERYSHIRE.

Excellent Salmon, Sewin, and Sea Trout Fishing in the river Dovey, within a few minutes' walk of the Hotel. Terms for boarding £2 10s. per week.

ANNE RAMSAY,
Proprietress.

OULTON BROAD FISHERY, Lowestoft (preserved under the Norfolk and Suffolk Fisheries Act). No fence time. Quarters, Wherry Hotel, Mutford Bridge; beautifully situated. G. MASON, Proprietor. Established nearly a century. Boats 2s., and full bait 1s. per day; men provided. Terms for stopping visitors on application. Gravel and sandy soil.

TROUT FISHING (lake and river,) about best in North Wales, FREE to VISITORS. Excellent sea fishing and bathing, boats on lake and sea Best places in Anglesea can also be fished from MAELOG LAKE HOTEL. Ty Croes Station, near Holyhead.

PULBOROUGH, SUSSEX.

"ARUN" FAMILY HOTEL, T. Pearce, proprietor.

EXCURSIONISTS ANGLERS AND BEAN FEAST PARTIES can have the best accommodation. There is a bowling green, skittle saloon, quoit ground and billiard room. The Fishing Gazette.

SATURDAY, JULY 1, 1882.

THE PROPAGATION OF COARSE FISH.

"LAST Monday evening at the Society of Arts Room, Adelphi, a paper was read by Mr. R. B. Marston on "The Propagation of our Coarse Fish." Mr. Edward Birkbeck, M.P., who occupied the chair, briefly introduced the lecturer, who proceeded to remark that the question of the cultivation of coarse fish was one of great and universal importance, and he regretted to find how far behind other nations we were in this subject. This had been exemplified at the Berlin Exhibition, but he hoped that the international exhibition, to be held in May next year at South Kensington, would give a great impetus to fish-culture. He strongly advocated the employment of the Swedish hatching boxes and also the French breeding hurdles so extensively used abroad by which millions of perch and other so-called coarse fish could be produced with the greatest facility, the method being simple and cheap. The lecturer said he had suggested to Irish farmers the adoption of fish-farming, which he believed could not fail to result in benefit to that country. He had felt much disappointment at receiving no response from that quarter, though letters from upwards of fifty English farmers had reached him inquiring as to the mode of procedure, thus illustrating the active interest taken in this country in the subject of pisciculture. In conclusion, he earnestly hoped that some practical steps would speedily be taken in the right direction, and that the result would be that the present deficiency of coarse fish would be supplied and an abundance of healthy food thus obtained for the million.—In the discussion which subsequently took place the opinion was generally expressed that no further delay should take place and the United London Angling Associations Fishery Society adopted the suggestions made in Mr. Marston's lecture. A resolution to that effect, and also one thanking the lecturer for his able paper, were unanimously carried.—Mr. Birkbeck, at the close of the paper, thanked Mr. Marston for its interesting character. Addressing himself to the subject of the preservation of fish, he said that net fishing of every description should be done away with most completely and entirely. America and Canada set a good example to England in the matter of fish breeding, the Canadian Government especially having last year voted no less than £4060 towards that purpose. However, he hoped that the approaching International Fisheries Exhibition would be the means of impressing upon the English Government the importance of giving more attention to our fisheries, both inland and sea. He also hoped that the Home Secretary might be persuaded to appoint an Inspector of Inland Fisheries.—The meeting concluded with a cordial vote of thanks to the chairman, and a presentation of a valuable testimonial to Mr. Bonvoisin, chairman of the West Central Association."—*Morning Post.*

Mr. Marston's paper will be reprinted with some illustrations, and judging from the universal and warm approval his suggestions received, there seems little doubt that coarse fish-culture will soon become general in this country. Amongst those present at the meeting were Mr. Geo. Shepherd Page, President of the American Fish Cultural Association, Dr. Brunton, and Messrs. W. H. Brougham, E. Marston, P. Geen, T. Hoole, Clench, Field, Alfred, Sachs, Crumplen, Bates, Faulkener, Wheatstone, Hatfield, Murphy, Beckett, Morgan, Yarde, Wilson, in fact nearly every well-known London angler was present. Mr. George S. Page, who was introduced by Mr. Marston delighted the meeting with a most amusing and interesting account of the black bass which he wished to introduce into this country. The presentation of the testimonial was made in a most effective and feeling manner by Mr. Geen; and Mr. Bonvoisin, who was visibly affected at the hearty reception he got, after receiving his illuminated address, his splendid gold watch, and his purse of forty sovereigns, made a suitable and graceful reply.

THE RICHMOND PISCATORIALS AND THE "FISHING GAZETTE" TOURNAMENT.

SPECIAL COMPETITION.

A SOLID silver cup, value £10 10s., given by the Richmond Piscatorial Society to the non-professional who makes the greatest number of points in casting, either Thames or Nottingham style. Three casts allowed each competitor. No entrance fee, and entries to be made on or before July 7th, to the editor of the FISHING GAZETTE.

[This speaks for itself, and shows how highly this first-class club appreciates these Tournaments.—ED.]

FLY-CASTING AT THE TOURNAMENT.

IT is to be hoped there will be a good many more competitors in this part of the tournament than there were last time. We must have it over water and have some bushes put up to send the flies under, if possible. With regard to the distance cast on the last occasion, which was about twenty-three yards, we see that, in the last American Fly-Casting Tournament, which took place in presence of a large company at Niagara Falls a fortnight ago, the longest cast (made by Mr. Rueben Wood) was twenty-seven yards, and of the six competitors who took prizes in the first and second contests, none are credited with less than twenty-three yards. The rods used being single-handed ones. The "American Angler" says:—"Just as we go to press we are in receipt of the following brief report from our special correspondent:—The fly-casting took place at Port Day, and the commenced at 11 a.m., with a high wind blowing from the south; the casting was across wind. Owing to the above condition the casting was not as satisfactory as it would have been under favourable circumstances. At the conclusion of the first contest a shower closed the field until 4 p.m. By this time the wind had lulled, notwithstanding the threatening of rain the attendance on the ground was fair.

"FIRST CONTEST.

"The first prize (a Conroy and Bissett German-silver mounted split bamboo rod, value £8 and cash £4) was won by T. Arrowsmith; cast 76 feet.

"The second prize (a Loomis and Plumb gold bronze automatic reel, value £10) was won by George H. Heir; cast 69 feet 8 inches.

"The third prize (cash £4 and two gun cleaners) was won by J. J. Mildram.

"SECOND CONTEST.

"The first prize (a Nichol's split bamboo salmon rod, value £8 8s.) was won by Rueben Wood, by a cast of seventy-nine feet.

"The second prize (a Nicol's split bamboo fly rod, value £4) was won by Mr. Leonard, by a cast of seventy-five feet.

"The third prize (a Nicol's split bamboo minnow or trolling rod, value £3 3s.) was won by Mr. G. H. Heir, by a cast of seventy-five feet.

"The result of the third contest did not reach us in time for this issue."

MORE PRIZES FOR THE "FISHING GAZETTE" TOURNAMENT.

(In aid of the Funds of the Angling Benevolent Society.)

THE Richmond Piscatorial Society will make the munificent donation of a Ten Guinea Silver Cup towards the Prize List at the Tournament. The Richmond Anglers won some of the best prizes at the last Tournament, and we sincerely hope they will show up equally well on Saturday next.

Mr. J. Bullock, of Firs Cottage, West Burton Road, Derby, has sent us six of his very capital "Derby-killers," for pike, trout, and perch, as prizes for the Tournament. This 'Derby-killer' as made by Mr. Bullock, is one of the best lures for trout we know. Only last week again, we notice that it was killing trout on the well-fished waters of the Derwent in Darley Dale.

Messrs. Watson and Sons, Fishing Tackle makers, 313, High Holborn, write as follows:—"Noticing in this week's GAZETTE your appeal for prizes for the approaching Tournament in aid of the Angler's Benevolent Society, we have much pleasure in sending herewith one of our angler's knives, price 25s., to be offered for competition in any way you may deem most desirable. Wishing all success to the Tournament, and that it may yield substantial help to the funds of the Society, we are, &c., W. Watson and Sons." The angler who gets this prize will be fortunate.

Mrs. E. Marston has promised one guinea, and Mrs. R. B. Marston a guinea, to be given as prizes at the discretion of the Committee. "Grasshopper," one of the Gresham members, also offers a prize in the shape of a 10s. tackle case; and Mr. Wigley of Cheltenham, has sent two of his Gloucestershire Spinners. By the way some splendid sport with these spinners last year in Slapton Lea amongst the jack, and also among the trout in Loch Leven. One angler getting heavy fish, 2lb. and 3½lb. with it. It is a capital bait and practically indestructible.

Messrs. Sampson Low, Marston and Co., will give a framed fish picture and some angling books.

A FINE COLNE TROUT.—"A.R.I.E.L." has just called to show us a splendid Colne trout caught by him last evening at Rickmansworth. It weighed when landed 6 lb. 7 oz. It was taken on his fly-fishing spinning tackle, on very fine gut and the smallest hooks, and killed in less than ten minues; the rod being a very light pliant fly rod. His six largest fish this season, all killed in the same style, have weighed 20 lb.

ANGLING CLUBS AND THE GREAT INTERNATIONAL FISHERIES EXHIBITION, LONDON, 1883.

SECRETARIES of provincial fishing clubs and associations are requested to send the names and addresses of their societies to the secretary of the Great International Fisheries Exhibition, London, 1883, 24, Haymarket, in order that prospectuses and papers connected with the forthcoming exhibition, may be forwarded at once for the information of their societies.

SWANS *v.* ANGLERS.

IT is high time that anglers took up the defence of the Thames against the increasing army of swans. During the last week or two these birds, which swarm on the river, have eaten nearly the whole of this season's roach spawn, so that the crop of roach must be enormously reduced. There are none too many favourable places for roach spawning, and these terrible swans know them all. At Bourne End, for instance, dozens of them were to be seen gorging themselves on the spawn from morning to night every day as long as they could find any. Cannot something be done to reduce the number, or entirely get rid of these beautiful wretches? What do the officers of the T.A.P.S. and the other "fish preservation" societies say?

"FISHING GAZETTE" TOURNAMENT.

AS stated last week, the Tournament will come off at Mr. Warner's, Welsh Harp, Hendon, on the Midland Railway, at three o'clock next Saturday, July 8. The price of admission is sixpence; ladies half price. Tickets can be taken for the Welsh Harp or Hendon Stations from St. Pancras and from the Metropolitan underground railway stations—King's Cross, Snow Hill, Aldgate, &c. We advise anglers to make sure of the train times, and also to note that more trains stop at Hendon than at the Welsh Harp Station, and Hendon is only a few minutes' longer walk. As there is a long programme to get through, competitors are requested to pay the entrance-fees and give in their names and addresses before the times mentioned below.

* * * * * * *

N.B.—Competitors can use their own rods, reels and lines, but will have to use weights, &c., provided by the management, in order that all may use a similar weight.

The Handicap for Fly Rods.

The handicap for fly rods will be five feet per foot of rod—*i.e.*, if one competitor uses a ten-foot rod and another an eleven-foot rod, the eleven-foot rod will have to give five feet to the ten-foot, and so on in proportion.

The Handicap for Bait Rods.

In the bait casting competition the handicap will be seven feet per foot of rod—*i.e.*, an eleven-foot rod will have to allow seven feet in the distance thrown to a ten-foot rod.

* * * * * * *

All the competitions except the fly-casting, float-casting, and cheese bait casting, will take place over the grass, and the competitors will stand on a large tarpaulin, to keep the lines from obstructions.

ORDER OF THE COMPETITIONS.

I.

Amateur Competition in Casting in the Thames Style.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the fee, before two o'clock, at the tent in the ground.)

Three prizes will be offered.

II.

Ambteur Competition in Casting from Reel in Nottingham Style.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the fee, before two o'clock, at the tent in the ground.)

Three prizes.

III.

Professional Competition in Casting in the Thames Style.

(No entrance fee. Competitors must give in their names and addresses by half-past two, at the tent in the ground.)

One prize.

IV.

Professional Competition in Casting from Reel in Nottingham Style.

(No entrance fee. Competitors must give in their names and addresses by half-past two, at the tent in the ground.)

One prize.

V.

Competition in Throwing the Bait with Forked Stick.

(Entrance fee, 1s. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, before half-past two.)

Three prizes.

VI.

Mr. Wm. Bailey, junr.'s, Prize for the Longest Cast, and with Quill Float in Nottingham Style.

(Entrance fee, 2s. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, by half-past two.)

Prize.—A Nottingham rod, reel and line.

VII.

Mr. Malcom's Prize for the Longest Cast with Triangle baited with Paste or Cheese.

(Entrance fee, 1s.)

Prize.—A "Freake" fishing bag, newest pattern.

VIII.

Amateur Fly-casting Competition with Single-handed Fly-rod.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, by half-past two.)

Three prizes.

IX.

Amateur Fly-casting Competition with Double-handed Fly-rod.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, by half-past two.)

Three prizes.

* * * * * * *

Other competitions may be arranged if there is time, but we fear there will hardly be sufficient time to get through the above properly.

* * * * * * *

The Prizes.

We have already some two dozen prizes, ranging in value from ten guineas down to a few shillings, and hope to announce more next week, when a complete list of the competitions and prizes will be given.

* * * * * * *

The Judges.

The Committee of the Anglers' Benevolent Society have selected Messrs. Geen and Bates to act as judges, and Mr. Crumplen as timekeeper.

* * * * * * *

The Dinner.

We have great pleasure in stating that the chair will be taken by Thomas Spreckley, Esq., President of the Thames Angling Preservation Society. Mr. Spreckley, with his usual generosity, has promised five guineas towards the expenses. Mr. Geo. S. Page, President of the American Fishcultural Association, and a large number of well-known anglers will be present.. It is with much regret we hear from Mr. Clench that an important business engagement will keep him away this time.

Tickets for the dinner, price 3s. 6d. each, must be obtained of Mr. Warner before three o'clock, and any anglers who may wish to dine with us will greatly oblige by getting their tickets as early as possible, in order that Mr. Warner may know how many to provide for. In order to prevent mistakes, all extras (wine, grog, cigars, &c.) must be paid for at once by the gentlemen ordering them.

* * * * * * *

In conclusion, we will only hope for a fine day, and remind our readers that the Tournament is to be held in aid of a most deserving society—the Anglers' Benevolent Society—the object of which is to give help to cases of real distress amongst its members and their families. The small payment of one shilling per year confers membership in this society on any club angler, and we confidently hope that a principal result of our second Fishing Gazette tournament will be a large accession of new members. If the affair is a success, it will be due to the very great assistance we have received on all sides.

THE TOURNAMENT.—AN ACROSTIC.

F ather Izaac himself never thought,
I n the days that were then yet to be,
S uch a contest would ever be fought,
H and to hand, by the sons of the sea!
I f the wide world with bloodshed be rife,
N o bloodshed results from our meet;
G ood alone can arise from our strife,

G lad tidings but follow our feet!
A ffliction appeals to the heart,
Z anies only refuse then their aid;
E ach angler will take a good part
T ill to rest with his fathers he's laid.
T hen help, here is work to be done,
E nd quibbles—be with us to-day;

T ackle trouble till victory's won,
O r the shades of distress pass away!
U nite, then, and so become strong,
R ight royal the road that we tread;
N one alone can ever stand long
A nd none of us live without bread!
M ay our lives like a river then flow,
E ach day bringing pleasure anew;
N o trouble may one of us know
T o the time of the last long adieu!

Grasshopper.

EXTRA-FINE DRAWN GUT LINE.

SO many of our readers have asked where they can get the gut-lines we have recently referred to as being, in our humble opinion, infinitely better in every way than hair, that we give Mr. Bullmer's address for their benefit. He lives at 62, Wandsworth Road, and his price for these extra-fine casting lines is only eight-pence each. He dyes them all kinds of water colours, but we prefer, as being most generally useful, the faint smoky blue tinge. All fly-fishers who use hair or extra-fine drawn lines should strike from the winch; in fact it is the best plan in all cases. If any of our readers would like a little description of this plan, we shall be happy to give it.

EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

The Prize Essay Awards.

AT a meeting of the executive committee of the International Fisheries Exhibition on Wednesday, Mr. Maxtone Graham, of Cultoquhey, in the chair, the awards of the jurors on the essays were finally considered, and the envelopes containing the competitors' mottoes opened with the following results:—

1. On the Various Methods of Fish Culture practised in the different Countries of the World. No Essays.

2. On the Various Methods of Oyster Culture—£15 presented by the Lord Provost, Magistrate, and Town Council of Edinburgh—"Thorough" (Mr. W. Anderson Smith, of Ledaig, Argyllshire).

3. On Harbour Accommodation for Fishing Boats on the East and North Coasts of Scotland, pointing out the localities where harbours are most required, and distinguishing between natural coves or bays which may be converted into good harbours by artificial assistance, and places where the harbours must be entirely artificial—£25 by the Merchant Company of Edinburgh. "Quotation from the Herring Fisheries Report, 1878"—(Mr. Archibald Young, commissioner of Scotch Salmon Fisheries, Edinburgh).

4. On Oyster Culture in Scotland, including Orkney and Shetland, specifying the localities and the species or varieties of oysters most suitable, and discussing the effects of the laws at present in force, £10—by George Hunter Thoms, Esq., Sheriff of Caithness, Orkney, and Zetland—"Pro Patria, &c." (W. Anderson Smith, Ledaig). Balance of prize withheld.

5. On the Legislation at present applicable to the Salmon Fisheries in Scotland, and the best means of improving it—£10, by James Duncan, Esq., of Benmore. "Fas est ab hoste doeerie" (J. L. Leitch, B.L., 34, St. Andrew Square, Edinburgh).

6. On the best means of increasing the Supply of Mussels for Bait, indicating the most suitable localities for Mussel-beds, and substitutes for Mussels as bait, £20—by William Gardner, Esq., Glasgow, £10; and the International Fisheries Exhibition, £10. "Purpureo murice tinctus" (J. C. Wilcocks, 4, Caer Badden Terrace, North Road, Plymouth).

7. On the Natural History of the Herring, with special reference to its migrations, £10, by George Waterston, Esq., Kirtle Lodge, Trinity; and £10 added by the committee. "Aquilla" (George Sim, 29, King Street, Aberdeen), £10; and "Nature's Laws Lie Hid in Night" (William Watt, 27, N. Albert Street, Aberdeen), £10.

8. On the various means of Curing and Preserving Fish at Home and Abroad, £15—by Dr. A. H. Malm, Gothenburg, £10; and the International Fisheries Exhibition, £5.—"Fins and Scales" (R. J. Munro, 63, South Bridge, Edinburgh); and "Nil Desperandum" (W. Anderson Smith, Ledaig)—prize divided equally (£7 10s. each).

9. For the best description of the means used for Curing and Preserving the various kinds of Fish caught on the Coasts of Scotland, the Hebrides, and the Orkney and Shetland Islands. £15—by the Highland Society of London, £10; and the International Fisheries Exhibition, £5.—"Persevere" (John Ross, jun., Muchalls, near Stonehaven).

10. On the Pollution of Rivers, indicating specially the kinds of pollution injurious to fish life, £20—by the Walton Angling Club, Edinburgh, £10; and the International Fisheries Exhibition, £10. Withheld for want of merit.

11. On the Salmon Disease—£10, by James Maxtone Graham, Esq., of Cultoquhey—"Tweedside" (Andrew Brotherston, Sheddon Park Road, Kelso), £10.

12. On the Migration of the Salmonidæ, as affected by Meteorological and other Influences—£10, by the Edinburgh Angling Club. No essays.

13. Should there be a mesh fixed by law for herring nets, and if so, of what size; or should fishermen be at liberty to use any size of mesh they please?—£10, by the British Fisheries Society, London—"Experientia docet" (C. W. Morris, Harbour View, Lowestoft).

14. On the best method of Preserving Fish Alive for Markets—£15, by the International Fisheries Exhibition. Withheld for want of merit.

15. On the artificial propagation of sea fishes suitable for food—£10 by the International Fisheries Exhibition—"Thorough" (W. O. Chambers, architect, Lowestoft).

16. On the breeding and rearing of freshwater fish—£10 by the Earl of Dalhousie—"Thorough" (W. O. Chambers, architect, Lowestoft).

17. On the species of foreign fish most suitable for introduction into British rivers and waters—£15 by the Highland and Agricultural Society of Scotland—"Thorough" (W. O. Chambers, architect, Lowestoft).

18. On the utilisation of fish offal—£10 by the Highland and Agricultural Society of Scotland—"Pomme de terre" (W. Anderson Smith, Ledaig).

19. On the fish supply of great cities, with special reference to the best methods of catching and packing, and of distribution, and other means calculated to facilitate the delivery of the fish in good condition for market—£20—by the Edinburgh Fish Trade Association, £10; and the International Fisheries Exhibition, £10—"Anomia" (W. Anderson Smith), and "Ventis Secundus," "Festus Grip" (care of Mr. Sinclair, 20, Rosehall Terrace, Dalkeith Road, Edinburgh)—divided equally, £10 each.

20. On the herring brand—£10 by the British Fisheries Society, London—"Pur et Simple" (W. Simpson Miln, bank accountant, 39, Victoria Street, Fraserburg).

21. On the food of fishes, both in fresh and salt water, accompanied by illustrations and preparations—£15 by Mr. John Murray, F.R.S.E. No essays.

22. On the natural history and habits of the fresh water trout, with special reference to the institution of an annual close-time in Scotland, and the expediency of adopting a rod license—£10 by the Waverley Angling Club, Edinburgh. No essays.

23. On the migrations and spawning of sea fish suitable for food—£10 by the International Fisheries Exhibition—"Lincoln" (J. Epton, 59, Duke Street, Great Grimsby).

24. On angling associations, with code of rules for their management—£10 by Professor Douglas Maclagan, divided equally between "Pro Bono Publico" (Mr. Alex. Low, 8, Alva Street, Edinburgh), and "March Brown" (H. Bradfield, Gaywood Road, King's Lynn, Norfolk).

25. On the relations existing between the annual migrations of sea birds and the migration of fishes—£10 by Mr. J. A. Harvie Brown, F.R.S.E. No essays.

26. On the best modes of preserving ice—£10 by Sir James Ramsay Gibson Maitland, Bart., of Barnton.—"Altera Merces" (Mr. M'Lean, of Pennycross, Pennyghael, by Oban); and special prize added by committee of £5 to "Persevere" (J. Ross, Muchalls).

27. On seine-trawling and beam-trawling in estuaries and sea lochs in Scotland, pointing out their advantages and disadvantages—£10 by the British Fisheries Society, London—"Nec rege nec populo, sed utroque," &c. (J. C. Wilcocks, Plymouth).

28. On the history and statistics of the herring and pilchard fisheries in England—£10 by the Lord Provost, Magistrates, and Town Council of Edinburgh—"C'est la sauce qui fait de le poisson" (J. C. Wilcocks, Plymouth).

29. On the history and statistics of the herring fishing in Norway and Sweden—£10 by the Lord Provost, Magistrates, and Town Council of Edinburgh—"Cast thy bread on the waters" (William Watt, 27, Albert Street, Aberdeen).

30. Fish in its relation to dietetics—£20 by the British Fisheries Society, London. Withdrawn for want of merit.

31. The causes of the deterioration of trout fishing in many of the lochs of Scotland, and the best means to be adopted for their improvement—£10 by David Carnegie, of Stronvar—"As a man soweth, so shall he reap" (J. Stirling, law clerk, Paterson Place, Haddington).

It was found necessary to delay to a future meeting the consideration of the mode in which the publication of the prize essays should take place, together with other necessary arrangements connected therewith.

DEFENCE OF ANGLING RIGHTS.—IMPORTANT CASE.

Sir Clement Wolseley's Claims to a "Several Fishery" in Ireland.

(From a Dublin Correspondent.)

IN the Queen's Bench Division here on Monday, before Judge Barry, in a cause "The Queen (M'Donnell and others) v. the Magistrates of Tullow, county Carlow," Mr. Hannigan applied for a conditional order for a *certiorari* to have the order of conviction of the magistrates of Tullow brought up and quashed. From the affidavit of the defendants at petty sessions it appeared that summonses were issued against them on the 17th of May last, at complaint of Sir Clement Wolseley, who claimed that he was the owner of a "several fishery," and that the defendants entered upon his lands for the purpose of fishing in the river Slaney. When the case came on for hearing before the magistrates, the defendants' solicitor called on the complainant to prove his title as owner of a "several fishery," but he failed to give any such proof.

Judge Barry: But is not the owner of the lands *prima facie* presumed to be the owner of the fishery up to the the middle of the river?

Mr. Hannigan: No doubt; but here the complainant is only the owner of the lands at one side of the river, and there is no evidence that he was the owner of a "several fishery" in the portion of the river in which the defendants were alleged to have fished. Moreover, evidence was produced showing that the public had never before been prevented from fishing in this river, but rather that they had been permitted to do so. He read the definition of a "several fishery" in the 13th and 14th Vic., c. 88, sec. 1, and said Sir Clement Wolseley had not complied with its terms. He also contended that the question of title having been bona fide raised, the magistrates jurisdiction was ousted.

Judge Barry granted a conditional order, on the ground that satisfactory legal evidence had not been produced that Sir Clement Wolseley was the owner of a "several fishery."

NARROW ESCAPE OF THE DUKE OF EDINBURGH WHILE ANGLING.

THE following telegram has been received from Mr. Walker, the British Consul at Corunna, dated June 27th:—"On June 20th, the Reserve Squadron anchored in Carril Bay, under the command of his Royal Highness the Duke of Edinburgh. On the next day the Duke, accompanied by the Duke of Connaught, proceeded by express train to Santiago. After inspecting the cathedral, the university, and the hospital, accompanied by the Alcalde and the Town Council, their Royal Highnesses were invited to lunch by the latter, and returned to Carril the following day. While the Duke of Edinburgh was fishing near the Bayona Budas, Carril, he hooked a large fish, and, in the excitement, lost his footing, and was dragged into the weir, sixteen feet deep. His Royal Highness was carried under four times, but fortunately got out, after being immersed nearly half an hour, and immediately went on board the flag ship. The squadron left for Gibraltar."

The *Court Circular* issued last Wednesday evening contains the subjoined:—"The Queen received yesterday with much thankfulness the assurance that the Duke of Edinburgh was not the worse for his narrow escape from drowning near the Bayona Bridge, Santiago. While fishing, his Royal Highness's foot slipped, and he was carried into the weir, where he was nearly drowned, being carried under four times in sixteen feet of water. The Duke was altogether half an hour in the water before he was brought to shore. The Queen had also received a telegram from his Royal Highness, stating that he had suffered no ill effects from the accident." All anglers will unite in most heartily congratulating his Royal Highness on his plucky escape—we were going to say lucky, but a man who can keep his life in him for half an hour in the boiling rush of a weir pool owes his life to pluck not luck.

The Duke is evidently a true angler to the backbone. As soon as he got ashore he went through the civilities as soon as possible, evidently, and was doubtless glad to feel himself by the river side. Every angler knows at this time of year the water in the weirs is usually lower than at any other time, and the woodwork and stonework, thus exposed, form a most slippery foothold. In the excitement of playing the big fish referred to—probably a salmon or heavy pike—the Duke doubtless slipped on some slippery weed-covered stone, and the next instant was fighting for his life in sixteen feet of raging water, which carried him about like a straw.

HENLEY (AND DISTRICT) ANGLING SOCIETY.

A VERY influential meeting took place on Wednesday, the 20th inst., in the Council Chamber of the Town Hall, Henley, to establish a society for the protection of the Henley waters, Mr. Brakspeare, presiding.

The Chairman stated that from a variety of causes the fishery of Henley had deteriorated to a most deplorable condition, and he could not but consider it a stigma and a reproach to the inhabitants that this state of things was permitted to exist and no effort made to redeem the character of the Thames in their district, which once was held in as high an estimation as any in the kingdom. They purposed getting all the money they could—(hear, hear)—without it they could do nothing, and their present intention was to limit the miminum of the subscription to half-a-guinea—not lower. They had already seventy-four names of subscribers, including the principal landowners and gentry in the neighbourhood, and two donors. The chairman concluded a telling speech by reading a resolution embodying the intentions of the preliminary committee.

The Mayor of Henley, a venerable medical gentleman, proposed the resolution, and recounted his piscatory achievements, which involved some startling figures, showing the utter neglect by the town of the fishery. He stated that in his recollection bags of 25 lb. to 30 lb. of white fish were common to a single rod; that he had taken 60 dozen of gudgeon before breakfast, and that although the district had its share of picturesque attractions in its hills and hanging woods, and the unrivalled beauty of the reaches of the Thames, visitors, when they saw their splendid stream, desired a little fishing, but were always surprised and disappointed at the catch of the few ounces which resulted.

Colonel Bradshaw seconded the resolution, and it was carried nem. con.

During the meeting the Mayor likewise stated that he had stood on Henley Bridge and seen trout, of which the stream was then well supplied, of 18 lb. and 19 lb.

Mr. Greville Fennell told our reporter that he could recall the time when the Henley waters were one of the best pike preserves in the whole of the Thames, and 60 lb. of jack was considered an ordinary capture for one rod, and 100 lb. excited but little remark.

Mr. Clarke, J.P., of the Maidenhead Angling Society, gave some valuable suggestions for the guidance of the committee.

Mr. Arthur Butler, the hon. sec. of the Reading District Angling Association, likewise contributed facts which may prove of service in the working of the new society. He spoke strongly of introducing trout of too large or too small a size, and gave reasons for his convictions.

Mr. Cooke, the hon, sec., read out the names ef the patrons and the proposed provisional committee; the resolution embodying the latter was put to the meeting and carried unanimously.

It may be considered that therefore the new association is floated, but whether it will be wrecked upon the many shoals which are hidden in the shallow waters of the above Thames localities, time must show. If the men at the helm are of experience and do more than give their names for publication, we may have hopes at last that the grand reach may yet be wrestled from the hands of the open and secret poacher, and restored to its fair and legitimate owners.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

We have opened the season's fishing with very poor shows of fish; in the late competition only one of the four prizes being taken by Mr. Evans, a new member, the others standing over until the second week in July, when they can be fished for in any part of the Thames. A hearty vote of thanks from this society has been forwarded by our hon. secretary to the Chelsea Waterworks Company for the handsome present of fish recently netted from their reservoirs and presented to the Thames Angling Preservation Society, who seem to consider no trouble or expense too great when there is such an opportunity offered them of stocking the Thames with such splendid fish as they have lately put into that water. Let us hope such work will bring to that body increased subscriptions from the various angling societies, to enable them to continue to do still more for us in future.—BLACK BAG.

June 29.

ANCHOR AND HOPE.

Nineteen members competed for three prizes at Weybridge, on Sunday, the 25th inst. Mr. J. Somers, sen, first; Mr. W. Streeton, second; Mr. A. Glass, third. A peg down match will take place at Amberley, on Sunday, July 9, for three valuable prizes.—D. DAVIS.

June 28.

AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Say, roach and bream from Pulborough; Mr. Howlett, dace; Mr. Carrington, perch from the Lea. The next retern visit on the general list of the United London Anglers will take place on Monday, July 10th, when we hope to see a good attendance of anglers and friends. Don't forget the annual dinner at Hoddeson, July 2nd.—J. WORLEDGE.

ANGLERS BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of £1 1s. from Mr. C. Bates, Esq. (Gresham); £1 1s. from J. H. Edwards, Esq. (United Essex); 10s. 6d., J. Crump, Esq. (Piscatorial), annual subscriptions; and 12s. 6d. from donation box of Trafalgar Angling Society.—R. GHURNEY, sec.

June 28.

ANGLER'S PRIDE ANGLING SOCIETY.

The trays of the above club were well filled with bream on Sunday, the following members weighing in:—Mr. Gafney, 8½ lb.; Mr. Haines, 7 lb.; Mr. Soar, 5½ lb. one fish 2 lb. 10½ oz.; Mr. Nash, 5 lb., one fish 4 lb. 5 oz.; Mr. Dodson, 5½ lb., one fish 3 lb.; Mr. H. Scutt, 1½ lb.; Mr. Wharman of the Dalston Brothers weighed in 7 lb. 6½ oz.—F. MARSHALL, sec.

BATTERSEA FRIENDLY.

The members of this club were out in full force on Sunday last. The long rest they have had increased their ardour for the fray. The following members weighed-in their fish: Mr A. Ansty, total weight 14 lb. 4 oz., roach, jack, bream, and tench; Mr. T. Pott, 11 lb. 4 oz., jack and bream; Mr. Thomas, 6 lb. 7 oz., roach and bream; Mr. H. W. Payne, 6 lb. 4½ oz., perch and roach, also a nice chub weighing 3 lb. 2½ oz.; Mr. E. F. Sampson also had 6 bream from Amberley. The first match will take place on Sunday next (July 2), at Staines, for Mr. Sampson's prizes, value two guineas.—H. W. PAYNE, President.

BERMONDSEY BROTHERS.

The Bermondsey Brothers had some fish on Sunday last, Messrs. Ayton, Gafney, and Beningfield having the best shows. Mr. Ayton had amongst his one roach 1 lb. 5½ oz.; Mr. Gafney, one bream 1 lb. 7 oz.—WM. ALLEN, sec.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed-in on the 25th:—Mr. T. Payne, 4 lb. 10 oz. roach and bream, one roach 1 lb. 1¼ oz., from Amberley; Mr. Mortimer, 3 lb. 9 oz. bream, from Pulborough; Mr. Chambers, roach and bream; and Messrs. Hobbs, Warden, and Mark, roach from Amberley; Mr. Castell, roach from the Wey; and Mr. Silk, dace and perch from the Thames. We fish a pegged-down match on Sunday next at Amberley for five prizes.

CLERKENWELL PISCATORIAL SOCIETY.

On Sunday last the members had a very good show of fish in the clubroom The following gentlemen weighed-in fish: Mr. Jelliman, roach, chub, and. gudgeon; Mr. F. Jones, chub, roach, and gudgeon; Mr. Dochree, roach, perch, and gudgeon; Casey Widmer, roach, rudd, and tench; Mr. Couling, senr., roach and bleak. On Monday Mr. Tomkins weighed-in some nice roach, several fish weighing 1 lb. each. A general meeting will take place on Monday next to arrange the prizes for the season and other business of the society. —R. STEBBING.

COBDEN ANGLING SOCIETY.

The first match of the above society will take place on Sunday next, July 2, at Uxbridge. There will be seven prizes, viz., two new rods, nickel silver winch, landing net, jack line, and two reels fitted up with lines.—C. REEVES, sec.

June 28.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

Our nineteenth annual supper took place on Tuesday, June 13. Nearly seventy members and friends sat down to an excellent supper provided by the worthy host. After the removal of the cloth, Mr. Phillips was voted to the chair, and Mr. J. Page the vice. The following toasts were proposed:—"The Great Northern Brothers," "The Angling Associations," "The Visitors," "The Press," "The Prize Givers," "The Secretary," "The Host," and the "Chairman and Vice-Chairman." The following gentlemen gave some excellent songs and recitations:—Messrs. John Bedford Leno, Marcus Wilkinson, Mr. Lacy, Mr. Broach, C. Watling, W. Phillips, J. Page, and Barr. The secretary gave a brief report of the doings of the society during the season, and the balance-sheet shows a handsome balance. A large number of prizes were promised during the evening, amounting to about £40, the company breaking up at 2.30. We had a fair show of fish on the first Sunday (June 18) from Amberley, Mr. J. Fitch having 2 lb. 10 oz., 1 roach, 1 lb.; Mr. Cowper, 7 lb. 4 oz., 2 roach, weighing respectively 1 lb. 9½ oz. and 1 lb. 1½ oz.; Mr. Hewitt, 1 lb. 1 oz.; Mr. J. K. Fitch, 7 lb. 5 oz., 1 roach, 1 lb. From the Welsh Harp

Mr. Watley, jack, 3 lb. 4 oz.; Mr. Stammer, jack, 5 lb. 13 oz.; Mr. Mayes, jack, 3 lb. 14 oz. Messrs. Kirk, Dingley, Parkin, Theobald, Young, Wright, R. Watling, Warne, and Hutchings, had small shows of roach and dace. Sunday, June 25: From Amberley Mr. J. Fitch had 10 lb. 11 oz., 3 roach, weighing respectively 1 lb. 5½ oz., 1 lb. 1 oz., and 1 lb.; Mr. Parkin, 5 lb. 5 oz., 2 roach, 1 lb. 5½ oz. and 1 lb. 1 oz.; Mr. Hewitt, 4 lb. 7 oz., 1 fine roach, 1 lb. 12 oz.; Mr. Scott, 12 oz.; Mr. Butler, 1 lb. 12 oz.; Mr. Burness, 1 lb. 4 oz.: Mr. Page, 4 lb. 3 oz.; Mr. Young, 2 lb. 12 oz., 1 roach, 1 lb. 1 oz.; Mr. Hayes jack from Welsh Harp, 1 lb. 13 oz.; Mr. Ames, jack, 2 lb. 11 oz. The two roach taken by Messrs. Cowper and Hewitt will be preserved by Mr. Gibson, of Richmond Grove, Barnsbury.—J. FITCH, jun., sec.

GRESHAM ANGLING SOCIETY.

The Gresham anglers met as usual on Thursday, the 29th inst., Dr. Lloyd occupying the chair. After the confirmation of the minutes, Dr. Lloyd read a letter from Lord George Hamilton, M.P., president of the society, expressing his gratification that Mr. Crumpien had been selected by the London anglers as one of their representatives on the sub-committee of the Great International Fisheries Exhibition, 1883, relative to the collections of specimens of fresh-water fish, preserved or otherwise—an honour which he thought very deserved. Reports from several places as to state of the river were read. Mr. King, of Windsor, weighed in a chub of 3 lb. 8 oz., and Mr. Brett, who so frequently weighs in specimen fish, was again to the front with some very fine samples. Mr. Brett's take included 4 pike, weighing 27 lb.; 25 roach, 16½ lb.; 28 perch, 29 lb.; and some 10½ lb. of eels. The two largest perch went some 5¼ lb. (3 lb. and 2¼ lb.), and these Mr. Brett has generously undertaken to have preserved, and presents them to the society, for which he was very heartily thanked. The society will be well represented at the tournament, to be held at the Welsh Harp on Saturday, July 8, and the secretary will be happy to forward ticket on receipt of half a dozen stamps to any member who may desire it. The meeting terminated with a hearty vote of thanks to Dr. Lloyd.

HAMMERSMITH UNITED.

On Thursday, 22nd, Mr. P. Geen was successful among the perch and roach at Eynsham. Mr. Hobden on the 24th gave the new association water a trial with satisfactory results, returning with chub, roach, and bream. On Sunday Messrs. Pitts and Penney were well rewarded for a journey to Henley, they having two fine trays of roach. Messrs. Reynolds and Lewis again played sad havoc among the bleak and gudgeon at Shepperton. On paying a visit to Kew Bridge on Sunday morning, I was sorry to find snatching going on in full force, some of the parties having flights of a dozen hooks. I trust our good friend B. will make an example of the first one who is caught.—VORTEX.

HEARTS OF OAK ANGLING SOCIETY.

The above club have removed their quarters from the Jacob's Well, New Inn Yard, to the Dolphin, Church Street, Shoreditch. Have had some nice shows of fish, Messrs. A. Fish and R. Ford being to the fore with bream and roach.—C. J. MILLIE, sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

The majority of our members that were out yesterday met with fair sport, being able to well fill some of our trays with all kinds of fish, consisting of perch, roach, dace, gudgeon, tench, jack, and rudd, bagged by Messrs. Pipe, Harwood, Atkins, A. Evans, H. Moore, Scott, Goodes, Keene, Petrie, and E. Barr.—H. MOORE, secretary.

NORTH-WESTERN ANGLING CLUB.

Good shows by our members from the Welsh Harp continue. On the 19th inst., Mr. Smart, one carp, 6 lb. 15 oz., and one bream, 3 lb. 5 oz.; on the 23rd, bream, 17 lb., and one tench, 2 lb. 5 oz. Mr. Marshall, on the 24th, in about four hours, seven jack, 16 lb. 10 oz.; on the 25th, two jack, 5 lb. 13 oz. Same day—Mr. Steed, one perch, 1 lb. 9 oz., and one bream, 3 lb. Mr. North, three jack, 10 lb.; also Messrs. Plumpton, sen., Weaver, W. Roxbee, and Smith, had jack.—H.

June 27.

OXFORD THAMES ANGLING PROTECTION ASSOCIATION.

President, Alderman Galpin; vice-president, F. Ryman Hall, Esq.; hon. treasurer, James Embling, Esq., 23, High Street; hon. secretary, Mr. W. T. Mayo, 13, Corn Market Street. The object of this society is to protect the public rights of angling in the Oxford district; and, as the extent of its action will depend upon public support, the promoters make an urgent appeal to all anglers to contribute an annual subscription, and favour with any information that will assist. Subscribers of 5s. per annum have the privilege of attending and voting at all general meetings.

PECKHAM BROTHERS.

On July 2nd the members will compete for two prizes given by Mr. Bucknell and Mr. Williams. That portion of the river Wey between Cox's mill and the railway bridge is the place appointed for the competition. On Tuesday, July 4th, a return visit will be paid to this society, on which occasion all members will be very happy to see any brother anglers that can make it convenient to attend.—PIXIE.

PISCATORIAL SOCIETY.

The annual publication of the list of prizes to be competed for by the members has just been issued and strikingly evidences the increased success and prosperity of one of the oldest angling clubs in London. The value of private prizes amount to £117 12s., and includes first of all, and which is an important addition, a first prize of £3 9s. 6d. for the largest salmon not under 12 lb., and a second prize of £2 1s. for the second largest salmon not under 10 lb. The institution of these prizes is due to the praiseworthy exertions of Mr. Thomas Huggett. Then follows two silver cups of the value of ten guineas each, one for specimen fish and the other for the greatest weight. These are followed by the various competitions, representing in each case two and three prizes of the following amounts:—The Shentonian Competition, six guineas; the Pike Competition, six guineas; the Perch Competition, six guineas; the the Barbel Competition, six guineas; the Chub Competition, six guineas; the Bream Competition, four guineas; the Roach Competition for the Thames, five guineas. A second Roach Competition from any public water, six guineas. No member to take more than two private prizes. There is a prize of two guineas given by Mr. W. A. Crump for the largest gudgeon by measurement shown on a Monday evening. The club prizes amount to £14. The little book, which is nicely got up, also contains the list of officers and members, the contents of the museum, the subjects of the pictures, a catalogue of the library and miscellaneous property. The half-yearly general meeting of the members takes place on Monday evening next in the club room, Ashley's Hotel, Covent Garden, to receive the financial statement, appoint a place and time for the summer dinner, and to elect a chairman and vice-chairman to preside over the same.

ROYAL GEORGE ANGLING SOCIETY.

Some members of this society have opened the season well, having taken several roach of nearly 2 lb. each, the largest of which are being set up by Mr. Cooper. Weights for 18th inst.:—Mr. Palmer, roach, 9 lb. 4 oz.; Mr. Chart, roach, 6 lb.; Mr. Holden, roach, 3 lb.; Mr. Jordan, roach, 2¾ lb.; Mr. Guynan, roach, 2 lb.; Mr. Wrather, chub, 2 lb.; and Mr. Hollands, bream. 25th inst.—Mr. Holden, bream, 10½ lb.; W. Chart, roach and bream, 7 lb. 10 oz.; Mr. Palmer, roach, 4 lb. 9 oz.; Mr. Hughes, roach and bream, 3½ lb.; Mr. Parsons, roach, 1½ lb.; Mr. Barraclough, a show of perch and one chub, 3 lb. 8 oz.; Mr. Palmer, roach, 4 lb. 6 oz.—F. MILLARD, sec.

STANLEY ANGLERS' SOCIETY.

Since my last report many of our members have been out for the opening of the season, meeting with very varied sport, not any of the catches being of exceptional weight. Mr. Wrightson at the Harp on the opening day was unsuccessful; Mr. Sciell had 14 lb. 13 oz. of good roach from Norfolk; Mr. Wheatstone, from the Thames on the 17th, pike, 8 lb. 7½ oz.; twelve perch, 6 lb. 9½ oz.; four chub. 6 lb. 15 oz.; and two trout, 5 lb. 11 oz. Mr. Walker, from Thames on 19th, 12 lb. 6 oz., including twelve perch weighing 7 lb. 8 oz. Mr. N. Rix, from the Harp, a nice bream 3 lb. 5 oz.; Mr. Wheatstone, on the 24th, a nice show of fish, including a chub of 3 lb. 7 oz.; Mr. Baldry, on the 27th, showed in dace from Thames.

June 28st.

STOKE NEWINGTON ANGLING SOCIETY.

The district visit of Angling Clubs took place on the 21st inst., when a good muster of members and friends assembled, and passed a pleasant evening. Mr. R. Ghurney made an eloquent appeal on behalf of the Anglers Benevolent Society, and also explained the objects of the United Fisheries Association. Upon the roll being called, thirteen clubs were represented, and special thanks are due to the Burdett Angling Society for their strong muster on this occasion.—THOS. GRETTON, sec.

SOUTH BELGRAVIA ANGLING SOCIETY.

On the 25th J. Smith, junr., showed some fine bream and roach. Mr. Usher some roach, also H. Eccarius roach, bream, dace, and gudgeon.—H. LEES.

TRAFALGAR ANGLING SOCIETY.

Several members of the above society who fished Amberley on Sunday were lucky enough to get among the bream, who were on feed, the consequence was there were some good trays of fish on the table at night. The following members weighed-in first:—Messrs. Humphries, Morris, R. Gaze, J. Gaze, Goldstine, Lord, Abington. Several members who fished the Mole and Wey fared badly. Wednesday next being quarterly night, all members are requested to attend. Competition for Mr. Lake's prize will commence on Sun- the largest roach taken in the month of July to win.—J. GAZE, sec.

WALTONIANS.

On the 21st, a jack by Mr. Brady, 7 lb. 10 oz.; on the 25th, Mr. Malcom, roach, 4 lb. 4½ oz., one fish 1 lb. 11¼, one bream, 3 lbs. 11¾ oz.; Mr. J. Moore, roach and dace, 5 lb. ¾ oz.; Mr. Togwell, roach, 4 lb. 14¼ oz.; Mr. Starr, roach, 3 lb. 13¾ oz.; Mr. Roland. roach and bream, 2 lb. 11½ oz.; Mr. J. Dodge, roach, 3 lb. 6 oz.; Mr. Brand, bream, one fish 2 lb. 11 oz.; and Mr. Packman, jack, 2 lb. 1½ oz.—A. J. MARRIOTT.

WALWORTH WALTONIANS.

Happy moments again once more among the members of this society. The first outing was not of very great success, although a good muster of the members were down with the usual amount of eagerness after so long an absence from the water, and many were boasting of their ability. The weather and weeds were quite disappointing and only a midping show was got; but to-day, the 29th, the competition for Mr. Sutcliffe's £2 2s., Mr. Morris's £1 1s. and Mr. Iron's 10s. 6d., I am pleased to say that a very good show was made. Mr. J. Collins came first with 14 lb. 10 oz. of bream, perch and roach; Mr. La Fuillade second, 11 lb. 12 oz. bream and perch; Mr. Russell third, 7 lb. 11½ oz. of bream; Mr. Delehaye, jun., bream and chub; F. Grigg, jack and roach; J. S. Weatherhead, bream and perch; J. Boalch, roach and dace; gross weight, 43 lb. 3½ oz. The Ouse, Wey, Brent and the Thames were the waters that supplied these gentlemen with sport. Messrs. Delehaye, sen., and Newport were elected members of this society this evening. There are several prizes to compete for during July, one of which is a side of bacon given by Mr. F. Grigg.—PIXIE.

June 29.

A NEW ANGLING SOCIETY.

A new angling club is just formed in Clerkenwell, to be called the Patriotic Angling Society, held at the Patriotic Society, Clerkenwell Green. Meeting nights, Sunday and Wednesday. Secretary, Mr. Fuller. The above society will be enrolled on the central association at their next meeting. Mr. Stebbings has supplied them with all the information required, also rules to be laid down. Mr. Bradlaugh has kindly consented to be president of the society, and has promised a splendid prize to be fished for. Several other prizes were promised. A vote of thanks to Mr. Stebbings concluded the business of the evening.—R. STEBBINGS.

PRESIDENT ARTHUR is renowned among anglers as the best salmon fisher in the country—the man who has caught the biggest salmon ever captured with the fly in the United States.

AN IMMENSE EEL (*Anguilla vulgaris*).—An immense specimen of the sharp nosed eel, the weight of which when caught was 30¼ lb., and measuring 6 feet 1 inch in length, may now be seen at Mrr W. Horslett, High Street, which we believe to be the largest ever found. Yarrell mentions one which weighed 27 lb. caught at Cambridge, and Lord Falmouth once had one dug out of a drain weighing nearly 20 lb., while others of 10, 12, and 15 lb. have been captured, but that now to be seen at Mr. Howlett's is certainly a marvel in its way. On hearing about this enormous eel we telegraphed to Mr. Howlett asking him if he would sell it, and he replied as follows:—"I am in no hurry to sell the big eel, you can see it when you come near here." If it dies we trust Mr. Howlett will have plaster casts made, and let us have one for the Buckland Museum. This is a most extraordinary size for our common river eel to attain.—R. G. F.

RIVER REPORTS.

MID-THAMES.

If any gentle reader be sceptical of the "rich and fair, and green and wild, of Mid-Thames just now, let him come down and undeceive himself. The river and its surroundings just now is simply—can I find a word—well, "scrumptious" is as significant as I can get at. The Thames now, as far as fishing is concerned, is in magnificent trim, and any fish may be had with a very little coaxing. At Marshpool, Henley, a Cambridge gentleman in his off hours has trained three dozen trout into listing, and at Hambledon some pretty hauls have been had. From Marlow I glean that R. Jackson, Esq., has had a nice trout of 4 lb., and White, a fish similar dimensions. The reports from Bourne End, Cookham, Bray, and Surly, all speak of good hauls of roach and chub—indeed the river is now in prime trim and piscators cannot do better than take advantage of the opportunity before the "madding" crowd scare the fish into ungetable holes and corners.—MARLOW BUZZ.

Ancholme.

During the latter part of last week two or three angling contests took place. One by a society from Hull, but owing to unfavourable water and weather the catches were comparatively light. A lady visitor had a bream of 2 lb. No pike of note have yet been taken. My sons had a day Saturday last and caught about a score. The Rev. A. M. Platt and some juveniles from Caistor also had a run over to Brandy Wharf, but the day was unfavourable and the takes small. Bream run up to 5 or 6 lb., and they are on certain occasions to be had in large numbers. One the trout streams the sport has been good the freshes operating in favour of the angler. The green drake is over, and gauzy like midges are all the go in the evenings.—THOMAS FORD.

Ballynahinch.

Since last report waters have been getting low and fish not rising well these last four or five days. A great many thunder clouds passing over. On the 15th Mr. G. Sutherland caught one salmon $10\frac{1}{2}$ lb.; same date Captain G. Sutherland one, 6 lb.; one the 16th Mr. G. Sutherland two, 6 and $9\frac{1}{2}$ lb.; on the 17th Mr. G. Sutherland one, 13 lb.; same date Captain G. Sutherland one, 7 lb.; on the 19th Captain G. Sutherland two, 6 and 7 lb., and one white trout; on the 20th Mr. G. Sunderland two salmon, 4 and 6 lb.; one the 22nd Mr. G. Sutherland one, 7 lb., and two trout same date Mr. Woodford, three trout; on the 24th Mr. Eades one salmon, 5 lb.; on the 26th Mr. G. Sutherland two salmon, 6 and 7 lb; on the 27th Mr. G. Sutherland one salmon, $5\frac{1}{2}$ lb.; same date Messrs. Eades and Haulgrave six trout.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

On the 22nd, Dixon, Armstrong, Styles, and Dance had good sport, from five to ten brace. On the 23rd Mr. Truwick killed a good basket, 5 lb.; Mr. Wood killed a salmon $3\frac{1}{2}$ lb. On the 24th Mr. Dance killed $6\frac{3}{4}$ lb., Mr. G. W. Armstrong 4 lb., Mr. Styles $2\frac{1}{2}$ lb., Mr. E Armstrong 2 lb. On the 26th the river was very small and bright, and requires early start in the morning, with worm and minnow in the shade and fly in the evening.—A. GLASS.

Dove.

We have again had a large number of anglers out this week, the weather and water having been right in every way. Trout, however, have hardly been rising so well as last week. The fact is, the May fly, or green drake, season is now over, and the specks have retired to the deep to get rid of some of the effects of gluttonous feeding upon the fly in question. They will be all right again in a few days, when they will return to their customary summer haunts. What trout have been killed this last few days have fallen victims to the coachman and March brown. The minnow and worm have also been responsible for some large fish. At the time of writing (Thursday noon) the Dove is in really beautiful order, and the coarse fishers might do well on Saturday. The cadbait and maggot are fetching the roach, dace, bream, and barbel best.—THE SPLODGER.

Dovey.

Since the late rains excellent sport has been afforded to the angler. some salmon of about 14 lb. weight have been taken with the fly, and many smaller ones have been basketed. I am thinking of spending a few weeks at the Dove Valley Hotel, Cemmes Road, where I learn by an advertisement in your paper of 24th June, excellent accommodation can be had. I have tried the river Dysnni Tawyn, Merioneth. There was very fair sport.—DIOGENES.

The water is in good order and some fine catches have been made during the past week. Several salmon, running from 9 to $18\frac{1}{2}$ lb., have fallen to the lot of both visitors and residents, whilst a goodly number of sewin and larger quantities of trout, all in fine condition, have rewarded the zeal of fishermen. One gentleman had two salmon on Monday last from the upper waters.—PETER PEDAGOGUE.

Exe (Exeter).

Our opening day, the long-looked-for 16th, was a great success as far as regards the number of rods. Seen in close proximity to the city and mill leats, they were as thick as they could actually get together, and sport was anything but indifferent. Roach and dace plentiful, and a few trout came to bank; but alas! on the following Monday, when everybody thought of having additional sport, the annual time had arrived for cleansing out the mill leats, and the usual slaughtering of the "daisies with the dorsal fins," which was a sad drawback to all bona fide anglers; but the weather for a few days previous having been so cold the majority of "daisies" had sought deeper waters, consequently not half the usual quantities were secured, although some scores were taken, and but very few over one pound in weight. (Trout) salmon are very plentiful; price at boat side 1s. 2d. per pound. Salmon Pool and Cowley bridge waters are yielding well for the rodsters. Lampreys are in abundance, the largest I have seen as yet weighing nearly three pounds. Bass, mullet (grey), mackeral, lobsters, and crabs plentiful; also launce and sand eels. Fishing on Saturday last with a friend, through thick and pelting rain, after having travelled some considerable distance, and having assisted in saving a tow-path horse from drowning, and being threatened by an onlooker to be drowned ourselves, but who in return was all but so himself, put me in mind of poor old "Tickler's" words: "Grateful, very grateful, did we feel to find a humble hostelry, where we duly regaled ourselves, a fare most welcome to all disciples of the gentle craft; but we did not see a Moorman with his hat fastened to his head by whisks of hay, feeding with great gusto in this canal-side inn. Neither did we hear his sayings or toast, but here it is: 'Here's your onner's elth and appyniss,' he said, as he drank the beer that was presented to him. 'Ees zir,' he continued, ''tis a turribul place es the moor for to make he ait. My gor, I nawd a man who went with a gennelman a fishing where you've a been. Beel Braddon, vor that was es nam, had tookt with en a gert piece of raw bacon. Presently the gennelman begun to confess hunger, and then Ben pulled out es bacon. 'Wot's that you've a got?' said the gennelman. 'Bacon, zir,' said Beel. 'Give us a bit, do ee,' said the gennelman. 'I weel, zir,' says Beel, and the gennelman ait a gert lump of the raw bacon, with a crist of bread, ana zed he'd nivver ait anything so sweet avaur." Now is the time for the Exe and Dartmoor fishing, &c., &c.—FRANK GOSDEN.

Exe (Tiverton).

The river is in excellent condition for fly fishing, the recent rains having considerably improved it, and very fair sport is being obtained. The flies that have been killing best are the yellow May dun, red spinner black gnat, and red ant, no salmon having been taken during the past week.—WM. MUDFORD.

Findhorn.

For a week back the air has been so charged with electricity, and thunder storms so prevalent in the district, that anglers were not so successful as on previous weeks. Salmon are still reported to be plentiful in all the pools and grilse are beginning to pass up. At present the river is in flood, and this will be in favour of the passage of grilse. Some anglers were fortunate in selecting suitable bait, and made fair baskets of trout at the mouth of the river lately. When the water subsides excellent results are anticipated.—J. B.

Ilfracombe.

Any gentleman wanting good sport among the bass now is their time to come to Ilfracombe. Friday and Saturday whiting and bream were more plentiful than any other fish. On Monday about forty pollack and a few mackerel were caught. Tuesday morning at 2 o'clock a few boats started from Ilfracombe for Baggy, which is about eight miles down Channel, returning between 8 and 9 o'clock with twenty-five bass 83 lb. S. Leg, eight bass, 30 lb., and six mackerel; P. Redmore, four bass, three mackerel, one gurnet; G. Comer, two cod, 15 lb. each, one ling, 12 lb., pollack 12 lb.; T. Lovering, Wednesday morning, twenty-nine bass weighing 104 lb; S. Leg, bass 51 lb, pollack 4 lb.; W. Ashford, bass 40 lb.; W. Barbeary, C. A. Teape, Esq., five bass with ground lines, all the others were caught with spinners. Several other boats were out, but I have not been able to get at the quantity of fish they caught. Thursday morning: Each boat has again had excellent sport, some whiting and pollack were among the fish brought in to-day. The trawlers have brought up some fine soles from the bay, and several lobsters have been brought in this week from the pots. There is good fishing from the Capstone Rocks and jetty with rod and hand lines, early morning and late evening tides. Weather very fine, and prospects good for the present,—E. COMER.

Nairn.

There has not been anything like the usual catch on this river since the season opened up to this time, but matters may improve with a change of weather. Last week both weather and water were unsuitable, and the only yield was trout, small baskets of which were caught by local gentlemen. Salmon are unusually scarce this year, but it is believed that with the commencement of the grilse fishing prospects may become brighter.—J. B.

Ouse (Littleport).

Water very clear and in good order for fishing, if the floating weeds would only have the kindness to get out of the way. It looks well for bream-fishing shortly. There are a few being taken for about three or four miles up the river. I have been holiday-making, so of course have done nothing till this morning. When I went out to try I took six bream between three and five a.m., not large, but the right sort; carp, bream, the lot went $10\frac{1}{2}$ lb. If this weather continues I hope to have something good to report in my next.—C. SOUTH.

Rother and Canal (Chichester).

The water at Chichester has been faultless the past week, yet from atmospheric causes fish have not been well on. At Selham on a recent visit the water was much too clouded to be satisfactory. After a steady warm rain the weather is looking much brighter; prospects, like weather, brighter. Some good perch have been taken with worm in the home districts, Mr. Summers informing me he had good sport at an early hour on Tuesday, one fish weighing within an ounce of 3 lb., which unfortunately was consigned to the fry pan in place of a specimen for the clubroom. Some fair takes are registered from the Rother, all fish being in fair condition.—GEORGE F. SALTER.

Swale and Yore.

Fly-fishing on these rivers of late has been much retarded by the constant freshes, but the worm-fishing and daping on the becks with the blow-fly have secured many a fine basket of beautiful fish. On the former stream there is but little seen of the green drake, one the latter it is fairly plentiful. Small dotterel flies kill well now.—THOMAS FORD.

Taw and Tributaries (N. Devon).

Water in the small streams running down low and very clear, and very little day fishing must be expected whilst so low and sun so powerful. Night fishing must be resorted to if any fish are wanted. The Taw, which has so many small streams running into it from different directions, keeps the river up, and is in good order. Many salmon and peal have been hooked, but I have only heard of three to one rod and three to another. The trout catches have not been so many, but the Bratton stream, which runs into the Yeo, gave three dishes on different evenings last week. I made my first attempt last Saturday, leaving after seven to go three miles. When I arrived I found my flies left at home, but I hunted up a collar with two flies (rusty blue and coachman), and soon got 15 fish, and then being dark I lost my fly, and was obliged to return home.—Rusty Game.

Thames (Goring).

Water here now a nasty brown colour; nothing will bite well. Prospect better; a few fine days will soon get the water in good order again. Nothing to report much this week; water has been so bad there has been only one boat out this week, the best day, three dozen roach.—John Rush.

Thames (Walton).

June 23rd, Mr. Ryball, with G. Rogerson, six bream (largest 4 lb.), one perch, 1 lb., and one dozen dace: from bank, three bream, 4½ lb., 3½ lb., and 2 lb.; three bream, 7 lb. (largest 3 lb.). Mr. Bryning, from bank, one bream, 4 lb. Mr. Annett, from bank, six bream (largest 3½ lb.). Mr. Abbott, with G. Hone, seven perch (largest 1 lb.), in one hour. 24th, Mr. Bryning, from bank, one bream, 4 lb. 25th, Mr. Reede, with G. Hone, one jack, 2 lb., one bream, 1½ lb., one perch, 1 lb., and three dozen roach and dace. 26th, Mr. Protheroe, with G. Rogerson, two dozen roach and dace; and 27th, six dozen roach and dace, and one perch, 1 lb. 27th, Mr. Cobabi, with G. Hone, two dozen fine roach and dace. 28th, Mr. Abbott, with G. Hone, three dozen roach. 29th, Mr. Cobabi, with G. Hone, two dozen roach. Weather: warm, with light winds and showers. Water: falling, and in first-rate condition for fishing of all descriptions.—Henry E. Wood.

Trent (Newark).

Within a few hours of sending off my last report the water came down very high and thick, so nothing much was done for a day or two; but the water soon cleared down, and it is now in capital condition for all kinds of fishing that can now be practised. Eels and flounders have been biting at worms very fairly, chub have also been taken on the shallows with fly; dace have bitten fairly well at cadbait and gentles, and I also noticed a fair bag of bream that was taken by one of our local anglers. If the present fine weather continues all classes of fish should get into fairish condition in a week or two, and good sport may be anticipated. In the meantime anglers will find worms and cadbaits to be the best baits at present.—The Trent Otter.

Trent (Nottingham)

The river here is still tinged with colour, and the fish have scarcely fed so well as might have been anticipated. On Saturday, the water then being very high, a barbel of 3 lb. was taken with the worm in the Rolleston length, which, this season, is in the hands of Mr. J. Crowder, of the Crown Inn, Rolleston. Eels have been running in great quantities, and at Sawley on Tuesday the subscribers were most successful. Sport has been quiet at Shardlow, but in the Swarkestone reach a rare lot of dace and chub fell to the skill of two Nottingham anglers on Tuesday. The fish were killed with the cadbait, maggots being employed for ground bait. On Wednesday considerable activity prevailed, and some moderate lots of eels, roach and dace were brought up from the lower waters. The angling associations are now in full swing, and upwards of 2700 members are availing themselves of the cheap travelling cards issued by the Midland and Great Northern Railway Companies.—The Man at the Club.

Tweed and Teviot.

Since our last issue some excellent takes of trout have again been got, the rivers having occasionally been flooded by freshets of about a couple of feet. On Thursday last Mr. John Thompson, of the firm of Redpath and Co., Kelso, had 12 lb. with worm in the Teviot, and on the following day, a similar basket was got, while Mr. J. Olive had 16½ lb.; Thomas Lindsay one of 10½ lb. and many others from 8 lb. down to 4 lb. have been of frequent occurrence. To-day the rivers have fallen to their normal size. As the weather is bright and warm again, anglers will have to do all they know to wile the "speckled beauties" from their sheltered nooks. On the Yair water on Tweed, Mr. W. Shortreed, gamekeeper on that estate, killed a salmon of 9 lb, and this is the only species of the salmon tribe that has been got for a fortnight past.—Max-Wheel.

Upper Medway (Tonbridge).

The water is just the thing for angling of all kinds, particularly after the rain of to-day (Thursday). Since last week a large number pike have been taken and the small ones are a regular nuisance. Chub have been captured in good numbers; dibbling with a fly or May bug proving the most killing way. The roach and bream have been biting in the most erratic manner, and do not yet appear to be thoroughly on the feed. One day they are fairly on and seem to bite at almost anything, and the next not at any price. I should think that with the rain things will be well on in a day or two.—Ye Medway Water Rat.

Wye and Derwent.

Both rivers are now in first-class condition for fly-fishing, especially the higher lengths of both streams; but I am very sorry to say sport with the artificial fly in the middle of the day has been very poor. The best times have been early in the morning and the last thing at night. Dibbing with the natural flies in the middle of the day, while the bright hot sun is out, has been followed with good success, and some handsome baskets of trout have been killed chiefly with the downlooker and small bluebottle flies. The bottom fishers on last Saturday killed some very large baskets of both trout and grayling, chiefly with maggot and cockspur worms. On the Derwent, we have had a very many Sheffield anglers on the Derwent during the week, but their takes, as a rule, have been but middling. I am very sorry to say that Twodales brook, near Darley Dale, has been poisoned, and every fish in the stream killed. There is a reward of £20 offered. I am pleased to say that we have at last got one of the Trent Board keepers come to visit us both on the Wye and Derwent. Thunder clouds are now hanging about, and its very hot indeed. Fishing prospects are looking gloomy.—George James Eaton.

Trout Poisoning on the Tweed.—On Monday in the Thornilee district, trout were lying on both sides of the river. This was the state of matters from the railway viaduct downwards past the Rough Haugh; how far up the river is not known. The fatality was confined to small trout and parr measuring from three to six inches; larger trout were unaffected, as they were rising freely to the fly. An enormous quantity of trout must have been washed down, the river being in full volume.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE "FISHING GAZETTE" TOURNAMENT.

Sir,—As I understand, all the prizes at the Tournament are to be given for the longest casts. Now, no doubt under certain conditions a long cast is essential to success, but I have always understood that precision was what the angler strove to attain. I am sure many novices like myself would be delighted at seeing a master of the rod cast his bait a dozen times into a hoop moored thirty or forty yards from the shore of Mr. Warner's lake, or his fly under a bush which could be easily fixed into a pole driven into the bed of the lake. I should very much like to see the augmented cast and several other wonders which we read about but very seldom see. If I could afford it I would give a prize for some such trial of skill, but as I cannot I can only make a suggestion which you invited some short time ago.—I am, &c., A. W. C.

[Deductions were made by the judges for wide throwing last time, and this time special arrangements will be made for measuring wide throws, &c. We must also have the fly throwing over water, and get some bushes put up as A. W. C. suggests. We, too, should like to see that "augmented cast" which are friend Mr. Chatterton writes about.—Ed.]

PROFESSIONALS AT THE TOURNAMENT.

Sir,—I have had several inquiries as to whether I shall be at the Tournament on the 8th. That being so, will you kindly send me word per return whether the arrangements for professionals this year are the same as last in respect to expenses. If so, I shall have much pleasure in taking part in above. This being a busy time, the above question is rather important. Trusting the tournament will be a great success, I remain, &c., W. Bailey, jun.

1, Sabina Street, Nottingham, June 27.

P.S.—You will no doubt remember I took the first prize last year in my class.

[The matter of incurring expense in regard to this second Tournament, we have been obliged to decline, inasmuch as the frightful weather on the last occasion caused us to be pretty heavily out of pocket by the affair. We willingly risked this, as the Tournament then was a novelty in this country, and no one could say how it would succeed. The officers of the Anglers' Benevolent Society were so convinced that in fine weather the thing would pay that they asked us to get up another. We have done so, but the Committee of the Anglers' Benevolent Society take all risk as regards expenses, and consequently have the question of inviting professionals, and appointing judges, &c., entirely in their own hands. They do not see their way to pay any expenses beyond those for printing bills, &c., and absolutely unavoidable expenses. We should much like to see the professionals, and have advised some money prizes being offered to attract them. All money prizes not won or competed for will be handed over to the funds of the society, which we all want to benefit.—Ed].

THE TOURNAMENT.

Sir,—In reply to your invitation in last Saturday's Gazette, I beg to offer an opinion on the Tournament; and also, while on the subject, to make, with your permission, a few other suggestions.

The bait used at the last Tournament was unanimously selected by the competitors, to the rejection of a heavier one, as being a fair representation of an average spinning bait; it might have seemed rather small to those accustomed to a large pike bait, while to the trout spinner it appeared equally large, but as time did not admit of two competitions, one light and one heavy, the bait chosen (weighing 1½ oz. lead and bait together) was of a fair medium size; and I, for one, would advocate the use of one of the same weight on the 8th inst. The object in these contests being, I presume, to elicit a display of skill in casting a bait, not a feat of strength in "putting the weight."

The time allowed each competitor at the last Tournament was not sufficient, especially for the Thames men, who require more time to recover and arrange their lines than the Trent spinners. If five minutes could not be spared to all, that time should at least be given to the former, but the best plan would be to give each man three throws.

The method of measuring last time was very good and 50 yards an excellent distance for the flag; but I would suggest, as an improvement, that two lines be drawn from the throwing point, as marked on the enclosed sketch, which at the 50 yards' point might be about 10 yards from the flag, then all baits falling outside that line should not score.

Lastly, I think that the interest in the match to the spectators would be much enhanced if the judge or his assistant at the flag were to call out the distance of each cast directly it was measured. Also, if convenient, the prizes should be displayed during the contest.—I am, &c., V.

P.S.—I should add that the above has the full concurrence of another winner at the last Tournament.

SOME QUERIES.

Sir—I should be much obliged if you would let me know if Mr. Marston's interesting letters on trout fishing on the Dove have been concluded; if so, in which number; and, if not, when they will be, as I am sure they are as interesting to every other trout-fisher as to myself?

Could you give me the publishers of the following:—"Cutcliffe's Trout Fishing in Rapid Streams," "Captain Williamson's Anglers' Vade Mecum," and "Taylor's Art of Angling. Also would you consider the Charles Cotton, of Hartington, or the Izaak Walton, of Thorpe (or Ashbourne), the better place to stop at for July, August, or September's trout and grayling fishing.—I am, &c., A Well-wishing Subscriber.

[It is certainly time Mr. Marston finished his articles; he intends to complete them as soon as he can find time. Cutcliffe's book is supplied by the managers of this paper, 12, Fetter Lane, post free for 3s. 6d. "Taylor's Art of Angling" is quite out of print, and so is Captain Williamson's book.—Ed.]

THE NORTH NORFOLK RAILWAY AND THE LONDON PRIVILEGE TICKETS.

Sir,—As most London anglers are just now asking where they shall go to get some good sport, perhaps the information in the following letter, which I have just received from Mr. J. S. Buck, S.L., might be of use to them:—

"Being fairly tired of the length of the fence months and not liking to wet a line till after their expiration, it struck me I would visit Norfolk and have a look at the beautiful Broads. I accordingly repaired to Yarmouth and made myself quickly at home at the 'Garibaldi' Tavern, St. Nicolas Road, where I found several friends connected with the angling fraternity. This house is a great boon to anglers. The host, being an angler himself, is always ready to oblige those who use his house, with information as where to go to get good takes of fish. I accordingly, by his advice, repaired to Heigham Sounds, near Potter Heigham—a station on the North Norfolk Railway, the terminus of of which railway is within one minute's walk from the 'Garibaldi.' The fares by this railway are extremely reasonable to anglers. The company will, on the production of the London privilege ticket, grant ticket at half price to all stations on their line. I should strongly advise all anglers visiting Yarmouth to try Heigham Sounds, they seem to be teeming with fish. The natives think nothing of getting a couple of pailfuls of bream, roach, and other fish in a single day, and from my inquiries the most favourable reports are given me from the other broads in Norfolk.—I am, &c., PIXIE.

A WARNING TO OUR RIVER REPORTERS.

SIR,—I am much annoyod to see in your Saturday's issue a statement of my take of fish on the 16th inst., which was made without my authority, and is altogether incorrect.

I am not aware if this unauthorised giving of names is usual in your paper, but at any rate I must request that before publishing mine again you will take the trouble to satisfy yourself of the accuracy of the information, as I have no wish to be a laughing stock for the neighbourhood.—I am, &c.,

ALFRED L. H. RICHARDSON.

[Mr. Bambridge reported that Mr. Richardson had taken 20 lb. of roach and a jack of 3 lb. What there is to laugh in this, we cannot see? Sorry we cannot possibly undertake to verify all reports sent us, but will always publish complaints of inaccuracy.—ED.]

TO DISTINGUISH YOUNG CHUB FROM ROACH AND DACE.

SIR,—I notice that your correspondent, Mr. Richard Woolfall, hon. sec. Liverpool Angling Society, would like to know of some easily distinguishable mark by which he can tell the difference between roach, dace, and young chub. "The bodies of both dace and chub are more cylindrical or elongated than those of the roach. The prevailing colour of the roach is silver. The dorsal or back fin commences or originates as nearly as possible over the ventral fins. The ventral (or belly) fins of the dace are always greenish, with a slight tinge of red; whilst the anal fin has no red about it whatever. In the chub, both these fins are of a brilliant pink color. As the chub grows larger, the chocolate brown—almost black—of its tail fin becomes more marked, and the whole fish rapidly assumes a bronzed or golden appearance, in place of the prevailing silvery tint which the dace retains in its original brilliancy to the last."

The above is an extract from Mr. H. C. Pennell's "Bottom or Float Fishing."—I am, &c., JOHN J. HARRIS.

52, Andover Road, Hornsey Road, N.

[The difference in the shape of the anal fin in chub, roach, and dace (in the nne case it is convex, in the other concave), is an easy way of distinguishing the fish.—ED.]

SINGLE HAIR v. DRAWN GUT.

SIR,—Having devoted a good deal of time to the observation of the respective merits of these two materials for fly casts, I have come to the conclusion that on streams where the fish do not run much over a pound in weight hair is undoubtedly the superior. I was not at all surprised myself to notice that in your editoral note to "Trout's" letter, in your issue of June 3, you declared in favour of drawn gut, for I supposed that your reason for doing so was owing to the size of the fish that you meet with on the southern rivers, and my supposition was confirmed by your note in to-day's issue. I prefer hair, not so much on account of its fineness (for I am well aware that drawn gut may be obtained much finer), but because it is more elastic, falls straighter and more lightly on the water, floats better, and, what is most important of all in my opinion, does not fray and ravel like gut does when employed for grayling fishing. As you, and most of your readers are aware, this is a branch of angling to which I have devoted considerable attention, and I have found that nothing tries gut so severely as the "wobbling," twisting play of grayling; now hair neither twists nor ravels, so that for this purpose I do not consider that there is any comparison between the two. The great difficulty lies in not being able always to procure really good, round, sound hair, for that which is flat or opaque is worse than useless, and, for an obvious reason, the same remark applies to that obtained from the tail of a mare. The last really good hair that I was fortunate enough to meet with was obtained through the kindness of Mr. J. G. Eaton, who referred me to a veteran Yorkshire angler; this gentleman most generously gave me half of what he had, and better hair I never used. Ample proof of the quality may be found in the fact that with a cast made from it, I one day on the Yore killed a sea trout weighing 2¼ lb. I am sorry to say, however, that my stock is now almost exhausted, and I shall have to look around for a fresh supply. If an angler uses a hair cast, his flies should also be dressed on hair, and it is as well also to confine yourself either to hair or gut, for if you at any time change from the latter to the former you are liable to forget the difference in strength, and perhaps strike sharply at a good fish, when a breakage, followed up by a string of anglers' anathemas, will be the almost certain result. Not wishing to encroach further on your valuable space.—I am, &c., FRANCIS M. WALBRAN.

[We willingly admit hair will last longer than drawn gut, but while the latter is so cheap, this is no great advantage in our eyes. We have frequently fished north country streams where most of the local anglers used hair, and whereas we have gone out time after time in hot bright weather with the water low and clear as crystal and killed fair baskets (from ten to fifteen brace, perhaps, and all over eight inches) the "locals" have simply laughed at the idea of fishing at all. But they opened their eyes when they saw our fine drawn gut! They were wise in using hair when all the gut they had was almost salmon gut. We maintain, and challenge proof to the contrary, that the more invisible the line, the more deadly the lure. Take a fly dressed on hair and one dressed on proper drawn gut, place them in a glass of clear water and hold them up to the light. This test will prove which is the finer and least visible. Now attach weights to each hook and see which line will bear the most weight. The gut will be found to bear from five to ten times the strain. Hair is more elastic than gut, but we do not attach much importance to this quality in the line, the rod provides all that is required; and if our good friend Mr. Walbran will only strike from the winch which should have a silent check, he will rarely lose a fish and still more rarely break a line.—ED.]

THE HENLEY WATERS.

SIR,—I think "An Old Bung," in his natural eagerness to remove the stigma of being "an abetter of poachers" and establish the innocence of himself and brethren, has neglected altogether to allude to what may be considered the gravamen of the charge embodied in the paragraph in question, and which so materially concerns the patrons of the Henley waters and the residents of the town. It is, now that the lamentable state of the river is acknowledged, seriously asked whether the "unmerciful netting" could possibly go on in this far-from unfrequented neighbourhood without some of the fishermen being aware of it? Where, it is asked, was the incomparable Ted Vaughan? Where were the pair of Parrots? Where the shrewd Harry Allam? Where the active George Garram, and the ubiquitous Ted Wooley; not to forget the astute "Boy Jones," who avows himself a professional fisherman and "no gentleman"? Now the greater part of my fellow townspeople admit that if any one of these men knew what was going on, and neither gave information to the authorities or interfered themselves, the suspicion is—well, I will say almost—justified that they were compensated for the gradual loss of their industry in some way; or personally benefited for the negative condonement, if not the actual abetting of the practices of the poachers. Let us take the best view of it, and ask, as do my brother anglers here, whether it is not perfectly incomprehensible that anyone having every and all opportunities of knowing what must be the night-doings on the river, and which was gradually, while destroying the fishery, wearing away the sources of living of these men; that they, the most intimately concerned, should not have raised a voice or hand to stay these suicidal and unlawful ravages, and we—I speak in the plural—claim a right to have our opinion upon the subject. Now that the Henley waters have become a bye-word, a scandal, and a reproach, and it does not "yield ounces where it used to yield pounds" as confidently told us by our venerable and much-respected mayor at the recent meeting at the Town Hall, and that this low state of depreciation could be clearly traced to the neglect of its natural protectors, who, having now "no work to do" after slaying their golden goose, throw up their caps and hail any movement which has a prospect of restocking our district with fish. But what—this is asked by men ready, if they saw their way, to put their hands deep into their pockets—What guarantee have those who are paying their guineas that as soon as it is worth the while the nets will not be as active as ever, or that some check will be put upon the Hambledon party and others who encourage these practices?

Born and bred on the Thames, I have watched the decadence of the fisheries with sincere sorrow. My suggestion, long since, that the gentlemen anglers should form themselves into a vigilance committee, as has been done with success on many other rivers, was met by a characteristic opposition, which took this plausible shape: "If you do this you will throw suspicion without proof upon the local fishermen; and you all know to what an organised personal annoyance, without positive provable substantial offence, that may grow." I am but now a middle-aged man, and I can recall the time when our prolific waters were the glory of Henley, and it was a pardonable boast—when we used to go down to the bridge and see the punts of the visitors come in with their freights of fish to be weighed at the Lion, the Angel, Bear, Carpenters' Arms, or that scene of many a concocted aquatic foray, the Little White Hart. Let us hope, however, that the self-immolation these time-serving, misguided men, either by their positive or negative conduct, have brought upon themselves, will be a lasting warning to them and posterity, that there exists little wisdom and less profit in killing the golden goose; and that, moreover, they will, in future, find that in properly cherishing their best resources, they are consulting the interest of others, to whom they look for patronage and support. The fishery hereabout, as is generally admitted, cannot be in a worse state, and an old adage gives us encouragement to hope that when such is the case, improvement may be expected. Upon no section of the community of Henley does this consummation more entirely rest than upon its fishermen, who at an hour's notice—so say some of them—could lay their hands on every net in the district. *Ver sap.* This I add advisedly; for let it once be known that the fishermen of the Thames are the baneful enemies of its resources, and we may call, not only upon the magistrates, but upon the legislature, to look after what a morning paper hesitates not to designate aquatic burglaries.—THE HENLEY BULL'S EYE.

RIVER POLLUTION.—THE YORKSHIRE WHARFE.

THE following is a letter received by me in reply to a few questions put to a famous veteran fly-fisher on the Yorkshire Wharfe.

"For the sake of perspicuity, I will divide the time into past, present, and future.

"In the past, the river Wharfe under my experience swarmed with salmon, pike, trout, grayling, and coarse fish of every description.

"In the present, the river is nearly denuded of all.

"In the future, the river must be blank.

"Then, as to the causes:—In the past, there was a regular and ample supply of water and no pollutions.

"In the present, Leeds and Bradford intercept some of the main tributaries, and the towns in the valley of the Wharfe send down all their filth undiluted for want of water; the consequence is that after a short period of dry weather the water has a clouded appearance and a palpably offensive scum rises on the surface, while what fish there are become sick and refuse all baits.

"Besides these causes, the improved drainage of the land provides for the rainfall at once passing superficially over the soil, instead of sinking into the ground and supplying the springs, many of which now no longer exist.

"In the future, a salmon will be a curiosity in many parts of the Humber, the thousands of tons of fine ashes, dirt, and filth poured into it from the river Aire, the drainage of the whole of the West Riding, even now killing them at times by hundreds. I have no faith in any measure being passed to prevent the pollution of rivers, it will be looked upon as a landowners' question, and most probably will be opposed by those who, for political purposes, will listen to no act of justice as long as they can get the support of the towns. Some persons may differ with me in their opinions (but after having fished in the Wharfe between sixty and seventy years, which few can say), I simply state my own observations. While walking the Wharfe some three years ago I took some of its water from the main river between Ilkley and Leeds, and used it simply as ink, with which I indited a letter to the Home Office; the colouring matter was from the washings of a dyeing mill, which, upon showing to Mr. J. P. Simmons, he declared the whole might be retained and rendered profitable."

CREEL.

THE BLACK BASS IN THE SCOTCH LOCHS.

[We are indebted to Mr. G. S. Page for the following interesting account of a most important experiment. We hope to see the black bass well naturalised over here before long.—ED.]

ANGLERS and fish-culturists may be interested to be informed of the successful transportation of the coming American game fish (the large-mouthed black bass, *Micropterus Salmoides, Lac.*, Henshall) and the small-mouthed black bass, *Micropterus Dolomieu* (Lacepede), from New York to Liverpool.

During the visit of His Grace the Duke of Sutherland to America last year, he for the first time became aware of the unequalled game characteristics of the fish, and its well-known edible qualities. He requested his friend, S. L. M. Barlow, Esq., of New York, to send him some alive at the earliest opportunity. This request Mr. Barlow communicated to our mutual friend Eugene G. Blackford, Esq., of Fulton Market, the well-known ichthyologist and treasurer of the American Fish Cultural Association, and the famous Icthyophagus Club.

No one experienced in the transportation for long distances of living fish offered, until the date of my annual trip, and I gladly consented to assume the responsibility. My experience of 1867 in transporting alive a pair of brook trout (*Salvelinus fontenalis*) weighing, respectively, the male 12 lb., and the female 8¼ lb., from the Rangeley Lakes in Maine to my pond at Stanley, N.J., and later (1869) black bass (*M. Dolomieu*), thirty-one in number, from the private pond of Walter Brown, Esq., of Newburgh, N.Y., to Lake Maranacook, Winthrop, Kennebec County, Maine—the earliest introduction into that State—enabled me to feel some confidence in my ability to perform this far greater task.

Mr. Blackford supplied six bass, weighing from 1½ lb. to 1 lb., being all left from the large number, fully fifty, exhibited at his annual trout show. I addressed a letter to my friend, Professor Spencer F. Baird, U.S. Commissioner of Fish and Fisheries, requesting a donation from the U.S. fish ponds, Druid Hill Park, Baltimore, April 11th. At noon, 15th, three cans, containing twelve small black bass and five large one were delivered on board s.s. *Spain*.

Mr. Blackford's were in two cans. The five cans were alike made of strong tin, encased in wood, having handles, and contained ten gallons of water. The tops were provided with perforated covers. They are of the form now generally used by fish culturists.

Through the courtesy of F. W. J. Hurst, Esq., the efficient agent of the "National Line," instructions were given to grant every needed facility on shipboard.

The cans were placed side by side along the partition adjacent to the main saloon, and securely fastened. Arrangements were made for attendance of day and night men, whose duties were to aerate the water every hour. This was effected by the simplest and best way known at present, viz,, by dipping out of the cans and pouring back again from a height of 2 feet. A long-handled quart dipper was used. I prescribed a sufficient number of dips to completely change the water in the cans hourly. This necessitated the handling by the quart measure of 50 gallons hourly, 1200 daily, and 12,000 gallons, 300 barrels during the trip, representing over 4 tons per day and 40 tons in ten days.

The actual time occupied in this service by the assistants was twelve hours daily. In addition to this, I frequently aerated the water, when upon examination I found one or more of the large bass near the top, indicating exhaustion of oxygen. Six times daily I took the temperature. It was forty-seven in each can when leaving New York. So carefully was the temperature regulated, either by aeration or the addition of ice, that it only varied three degrees from 47°—*i.e.*, from 44° to 50°—never remaining at the higher point for more than an hour. This may be considered a remarkable achievement, in view of the fact that the temperature of the atmosphere was frequently over 60°.

At Queenstown, I telegraphed to the Duke of Sutherland the safe arrival of the fish, one only having died, also addressing him a letter requesting him to send by his messenger to Liverpool twenty-two platina tags, inscribed with the weight of each bass and date of depositing in his waters.

I also suggested that a portion be placed in the ponds on his estate at Trentham, between Liverpool and London, and that the balance be exhibited at the Edinburgh Fishery Exhibition, which opened the 12th inst.

Mr. Blackford also put in my care a box containing four fine Hudson River shad (*Alosa sapidissimus*); two red snappers (*Lutjanus Blackfordii*); and one striped bass (*Roccus lineatus*).

Two of the former were for the Prince of Wales, and the balance for the Edinburgh Exhibition. I expressed the shad from Liverpool to the Prince of Wales, care of the Duke of Sutherland, London, and the balance to Edinburgh.

As they were well packed in ice by Mr. Blackford in New York, and were constantly covered in the centre of the great ice-room of the *Spain*, they were in fine condition.

So far as I am informed this is the third lot of black bass to cross the Atlantic. The preceding ones were taken in 1878 and 1879 by Mr. Silk, fish-culturist for the Marquis of Exeter, and placed in a lake at Stamford. They were all very small, however, and he lost a large number in transportation. The last lot, singularly enough, were taken over in the *Spain*.

To the best of my knowledge this is the first time that *fresh water* fish as large as these have been transported alive over this vast distance—over three thousand miles.

And now a few words as to the value of the black bass for stocking inland lakes, ponds, and rivers. The past ten years have demonstrated that this fish will thrive in a greater variety of surroundings than any other, indeed, there is no limit to its production and increase in suitable waters. It seems utterly impossible to deplete water stocked with them after five years' time.

It will multiply in waters where the salmon and trout cannot live. The old fish sedulously guard the nest where the spawn is deposited, and when hatched, the young are cared for as jealously as a hen protects her chickens. They are guided to the shoals where, among the rushes, the growing young are secure from predatory fish. They have multiplied to an enormous extent all through the middle and eastern United States. Hundreds of black bass fishing clubs exist between Maine, Minnesota, and Florida. Tons of fish are now sold in the markets at prices enabling the working man to purchase. Tens of thousands of dollars are annually expended in their capture by the angler and market fisherman. Rods and tackle are made for the special sport.

A volume of four hundred and sixty pages, written by Dr. J. A. Henshall, of Cincinnati, Ohio, has been published within a year, solely devoted to the black bass.

Moreover, this game fish is unsurpassed as a food fish, being quite free from bones, its flesh firm, white, and flaky, and when cooked, tender, and of delightful flavour.

As a game fish, pound for pound, it excels even the lordly salmon. It will fight to the last, leaping defiantly time and again from the water when hooked, shaking itself in mid-air savagely, opening and shuttingits mouth in the endeavour to be freed from the hook. It fights to the last. It takes the artificial fly, and a large variety of bait.

I said it was the "coming game fish of America." It has come, and to-day takes the first rank, leading even the royal salmon or the dainty trout.

It is still more needed in the United Kingdom, where but two really game fish now exist. It will rapidly increase and speedily gain the same universal favour bestowed on it in America.

I predict that it will soon be acclimatised on the Continent, and e'er another generation arrives, be as abundant in Europe as in America.

In conclusion, I take great pleasure in expressing my deep sense of obligation to the officers and servants of the grand s.s. *Spain*, for their unfailing efforts to aid me in this important mission. I would also acknowledge the efficient aid and wise counsel of my friends Messrs. Henry Draper, C. Frederic Wetmore, F. Pelham Marshall, S. W. Johnson and John Carter, jun., of New York City; Dr. R. A. C. Dillon, of Rio de Janeiro; Rev. J. P. Smith and C. Grange, of Baltimore; Rev. P. D. De Lom, of London, Ontario; W. J. Penley and Romeo Sebastian, of London, England; John M. Mugford, of Brooklyn, and E. Hicks, Granville, Ohio; W. H. Jayne, Newport, England; Harry Minshall, Stockport, England; and others.

GEO. SHEPARD PAGE.

On board s.s. *Spain*, St. George's Channel,
April 24, 1882.

P.S.—A second bass died before reaching Liverpool. The balance in charge of Donald McKay, the Duke of Sutherland's fish culturist, were safely transported to Golspie, Sutherland, and deposited in a Loch. *En route*, the fish were entered at the Edinburgh Fishery Exhibition, where they received much attention.

As the guest of His Grace the Duke of Sutherland, I spent a delightful week at Dunrobin Castle.

The two black bass which died, a male and female, have been elegantly mounted by Rowland Ward and Son, and will be on exhibition at the offices of the London International Fishery Exhibition of 1883, 24, Haymarket, where they can be inspected by any persons interested until the 1st September, 1882.

One has been excepted by Dr. Gunther for final deposit in the British Museum, the other will be sent to the National Museum, Washington, U.S.A.

Should any gentleman desire further information respecting the black bass, I shall be most happy to furnish the same.

GEO. SHEPARD PAGE.
President of the American Fish-Cultural Association; Representative in Europe of the United States Fish Commission; Smithsonian Institution, Washington, D.C.; and National Museum, Washington, D.C.
American Exchange in Europe, 449, Strand, London.
May 26, 1882.

[Mr. Page gave a most interesting description of the Black Bass at the Coarse Fish Propagation Meeting last Monday night. He is going to be present at our Tournament, and at the dinner afterwards, we are glad to say.—ED.]

A LARGE THAMES TROUT AT THE ROYAL AQUARIUM.—Mr. C. Hatfield has presented to the Royal Aquarium a 7 lb. Thames trout, caught by himself in the Thames at Dachet. It is now to be seen in the front tank, and all who are interested in Thames trouting will probably go to see this Royal captive, who seems to be getting on as comfortably as King Cetywayo, and doubtless grumbles as much to himself.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxfod," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

A NIGHT'S LAKE-FISHING.

By THEODORE A. HOWARD.

(*Continued from page* 286.)

AS the twilight still lingers, you are minded to try a cast of smallish flies with a white moth as leader, supporting a black gnat, and with the rear brought up by the lightest of duns. You can hear fish rising although it is a difficult matter to see where they are. The first half-dozen casts are fruitless, but you are rewarded after that by noticing a slight check given to the line as you are preparing for another throw, and on striking are encouraged by a turmoil near the surface, some thirty feet distant, which is suggestive of a fish that was certainly not spawned this season. Down he goes and out to sea, also, so to speak, as he makes towards the deep water, pulling like a Trojan.

He is now evidently getting disheartened and more inclined to submit himself to the inevitable, however that may be understood by his troutship's mind, and therefore comes quietly along, too much worn out and disgusted with things in general to do more than make a feeble protest before the net rises from beneath and his lake life has come to an end. It is not too dark to see that he is a smaller fish than you had anticipated from his fighting powers, and will not probably weigh more than three quarters of a pound, although, were he a trifle broader across his somewhat thin shoulders, he might achieve the pound. Anyhow it is first blood, and you may be supposed to feel something like the tiger who has enjoyed his first taste of that fluid. So, look out, ye trout! there is danger afloat above your innocent heads, and deadly perils are flitting around simulating the innocent fly and luscious moth!

A few feet farther up the bay and you are at work again, but for the next ten minutes all your artifice is vain; so a touch of the scull secured to the stern sends you into fresh water, and you quickly have the satisfaction of rising a fish to your first throw, and the misery of feeling him ineffectually; another cast to the right, however, is rewarded by the solid consolation that you are fast in a good fish. This fellow, unlike No. 1, prefers to seek his chances of escape in the shallow, and makes towards a spot you recollect seeing, when last on the water, to be liberally provided with weeds. On no account can you allow him to have his own way here, and therefore put such strong persuasion upon him that he feels compelled to yield the point to you, and retreats, although somewhat sulkily, in the way you would have him to go, which is just opposite to the one of his own choosing. You don't parley much with this gentleman, and he is therefore soon reposing by the side of his comrade; a better fish by far as to condition, although perhaps an ounce or two less in weight.

Whilst this is going on it has been getting as dark as it will probably be to-night, and as you fancy the bigger fish will soon be on the move, you are minded to substitute a solitary "bustard" for the cast of flies, and to try a little farther up the bay, where the shallows do not run so far out. As this, the real business of the night, is now to commence as you hope, the boat is quietly and cautiously propelled along until you reach the required position, and the bustard takes his first flight. No response! Again the white-bodied deception flits through the air and alights—somewhere. Immediately, the fact that the fly has touched the water, is communicated to your nerves by a sensation as though you were fast to a stump or round a stone; only for the least portion of time does that impression remain however, for the next instant a mighty swosh responds to your strike, and he is off across the lake, reeling off thirty yards of line in almost as short a time as it has taken to write this. You begin to wish you had provided yourself with a longer line, as there is no telling how far he may run on, and it is with a nervous sort of feeling that you become sensible of the fact that the drum of your reel is being rapidly uncovered. Fortunately, he pulls up before getting to the end of his, or rather your, tether, and on a little pressure being applied makes a rush backwards again, and somewhat towards you; by this movement you are enabled to reel in, and get a surer grasp of your fish; the sense of power that the shorter line gives to your wrist has the effect of making him anxious for another spurt up lake. This you graciously permit; indeed, you can't do otherwise. But this time he does not go so far, neither does your reel produce such shrill music; so when he has about got to the end of his start, and you feel him begin to lag, then commences the steady home-coming pressure that is generally the prelude to the end. Not in this case, however, is it such; for, after describing a complete circle round your boat, and being thence persuaded to take a radial line towards the centre, and to come so far as to be within reach of that long-handled net, whether through nervousness (and who is without nervousness at such a moment?), or owing to the darkness, you strike instead of cradling him, and down he goes straight for the bottom, apparently as fresh as when he first started. Woe be to you, then, if there be weed below and he manages to reach it. Fortunately, hereabouts the water is of great depth and he does not find cover, so in a little time you have the satisfaction to feel him obeying the command from above and returning again to the surface.

This is the last effort, and in three minutes more you put strain upon your biceps to lift him over the bow. Something like a trout, you think, after giving him the coup-de-grace—which, poor wretch, he hardly needs, being fairly drowned—and sure to be nearer five than four pounds. After this excitement you take refreshment from that innocent-looking milk bottle, and begin to feel as though you had passed through something; for, let me say, there are many less eerie experiences than being alone on a lake at night fast to a large something that is dashing about beneath the surface of the black water, which something, imagination suggests, in connection with the darkness, might be anything else than fish, flesh, fowl, or good red herring.

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3. Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted). 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Falmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.

DAY, SON AND HEWITT'S

STOCKBREEDERS'

MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP, AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition :—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.
"RED DRENCH," for Cleansing Cows and Ewes, &c.
"RED PASTE BALLS," for Conditioning Horses.
"BRONCHOLINE," for Husk, Hoose, or Cough.
'GASEODYNE," for Heaving or Paining.
"ALCOHOLIC ETHER," for Colds and Chills.
"CARMINATIVE CHALK," for Diarrhœa in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

21s. A GENUINE CUCKOO CLOCK FOR 21s.

654 Sold in a few weeks. A true and guaranteed fact sworn.

MODEL SWISS CHALET.—We have imported a great quantity of really good Cuckoo Clocks, and, having purchased at a considerable advantage, we intend to offer the same to the readers of the Fishing Gazette at less than one half of the ordinary cost price. Every one is warranted and examined prior to leaving our warehouse. They cannot get out of order. We shall offer them for a short time only at 21s. each, and we honestly assure every reader that the ordinary retail price for the exact same clock is from 40s. to 50s. People who have seen them already express their great surprise. The mechanism and arrangement is admired by all, At Twelve o'clock the little door at the top flies open, when out pops the Cuckoo, who "cuckoos" twelve times, and at the last stroke returns to his parlour, politely closing the door after him. Each time the bird "cuckoos" he opens his mouth most naturally. At the same time the clock strikes. The clock not only strikes and "cuckoos" the hours, but even the half hours. To prevent any feeling arising as to the actual impossibility of obtaining a good Cuckoo Clock for the price, we agree to return the money in full if not found as advertised. Read the following testimonial: "Sheffield, October 25th, 1880.—Gentlemen,—Yours received, also box: the Cuckoo is safely to hand. We cannot make out how you can sell such a wonderful and splendid article for such a low price. Please send another per return. Enclosed is P. O. O. for 21s. Several of our friends say they shall write to you for one. Yours faithfully, Harold Bartleet." Orders must be accompanied by P. O. O. and Coupon as below. Enclose 6d. for packing case (half cost).

FISHING GAZETTE COUPON.
Entitles holder to ONE GENUINE CUCKOO CLOCK on receipt of 21s.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,
CAMBRIAN HOTEL,
Towyn, Merionethshire.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.
SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

BEDDGELERT.
The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

The Fishing Gazette.

SATURDAY, JULY 8, 1882.

VALUE OF THE TOURNAMENT PRIZES.

THERE ought to be plenty of competitors if prizes are any inducement, as those promised already amount to about £50. Mr. James Ogden of Winchcombe Street, Cheltenham, has very kindly sent six dozen of his best trout flies, which we spoke so highly of in the spring. Mr. Ogden makes a splendid fly.

ANOTHER PRIZE FOR THE TOURNAMENT FROM THE RICHMOND PISCATORIALS.

AT a meeting of the above society last Wednesday it was decided :—

"That a second prize of £3 3s. be offered by the members of the Richmond Piscatorial Society, open only to competitors who pay an entrance fee of 2s. 6d. each. Such entrance fees to be given to the Anglers' Benevolent Society."

In the name of the Anglers' Benevolent Society, we heartily thank the Richmond Piscatorials for their liberality, and for aiding the Tournament in this substantial way; it is often a thankless task to endeavour to introduce anything new into this country, but the help we have received on all sides with regard to these tournaments has been most encouraging.

STRIKE FROM THE WINCH.

MANY of our readers having written to ask for a description of this style of striking, we will briefly describe its advantages. The winch used must be one with a gentle check action—we much prefer the silent check action, being unable to see anything but disadvantage in a winch which makes a noise like an alarum every time you turn it. We will suppose the angler is fishing with extremely fine casting line in a trout stream, on the banks of which there are many bushes; in the course of a day's fishing, he will have to calculate on getting fast pretty frequently, both in attempting to get at fish under bushes, and in recovering the line from behind for a fresh cast. If the line is grasped, as it usually is, between the butt and the hand, the sharp strain which takes place when the line is fast and the angler attempts to make a fresh throw, will probably smash something—either the rod or the gut line; but if the angler does not hold the line in his hand, but simply holds the rod, it does not matter how fast he may be in a bush, the line simply gives a little by running a foot or so off the reel, and can then be unfastened from the snag, or weed, or tree in which it is caught. The advantages in striking fish from the winch are very great. The instant you see the rise you strike, and the slight check on the winch is amply sufficient to send the hook home. If you strike a little too hard no harm is done; the line cannot break, and the tender lip of a grayling is not struck off, as so often happens when striking too hard on a tight line. If the fish is a big one and makes a rush instantly, the line is not held fast, but gives to his struggle. You can, of course, check him at any moment after he is hooked by simply grasping the line.

ALFRED AND SON'S TROUT CASTS.

MESSRS. Alfred and Son, of 20, Moorgate Street, send us samples of their three yard fly-casting lines, which they sell at sixpence each. They are capital lines, fine enough for nine anglers out of ten, and we can recommend them to those who want a little more strength than an extra fine drawn gut affords.

BARBEL IN THE THAMES.

I HAVE had no proof yet that these fish are in a condition not to be taken, but on the contrary I have had occular evidence they are clean, and big fish are in abundance. When I went down the river on the opening-day, and saw the fish in Mr. Banfield's punt, the barbel looked clean and in good condition. I should not for a moment suppose that Staines was in advance of any other portion of the river as regards the condition of the barbel—there they were, and responding in a satisfactory manner to the rods of Mr. Banfield and Mr. Dalton, both of whom made creditable takes amongst them. Most of the barbel taken lower down have been fish of a good size, and there has been no complaint of their being out of order. It has been proved to a demonstration that barbel-fishing is no good unless the swim has been previously well baited. Now it is my opinion that we are likely to have a good barbel season. There is no fish in the river, except the gudgeon, that varies so much as the barbel. I have known in my lengthened experience, the barbel have been, comparatively speaking, off for the entire season, and statements have been made they had altogether left the river. I am sorry to say some anglers get wofully dispirited if the fish do not bite when they want them, and they grumble like anything if they cannot get hold of the fish. They make assertions which they cannot prove, that the river has been poached, and so and-so has seen the netters at work. I sometimes think that the anglers are not half grateful enough for what is done for them. The river may be thoroughly protected and preserved—ponds and reservoirs may be netted, and fish by the tons put into the Thames—but alas, how many who derive the benefit contribute towards the cost? I wish I could speak otherwise, but there are plenty with similar experiences who can thoroughly endorse what I say. I like reciprocity, and a successful angler should recognise the efforts that have been made, and being made to give him sport. When I take up the angling papers on a Saturday, and read the good takes of successful anglers, I seldom find their names amongst those who subscribe to the protection of the fishery. As I have said before, in fishing for barbel the swim should be previously well baited; and just on the same principle if the anglers want the maintenance of good fishing let them drop something into the treasury of the various Preservation Societies. It may be that many of them would contribute when they are personally invited to do so, but they are not so easily approached at the time of their success. I should like to stimulate a feeling amongst them that would cause them to think it was their duty without invitation to help in supplying the means for preserving the fishery of old Father Thames. There is no one more pleased than myself to record a good take of barbel or any other fish—whether the successful capor is a subscriber to Thames preservation or not, I unhesitatingly give him all the credit he deserves; at the same time I should be more pleased in finding his name in the "Blue Book." I have run a little away from my notes of barbel in the Thames, but if it will be the means, as I hope it will, of unloosing a few pockets, I do not think the Fishing Gazette will regret the space, and I am certain it will afford me pleasure. I have heard of anglers making arrangements for great campaigns amongst the barbel—one of four days running—and large orders have been sent to Nottingham for worms. I could wish in these cases that all the anglers would put back into the river the greater portion of their fish, having satisfied themselves as to what they have done; and now some of the clubs are allowing fish to be weighed and certified on the spot, it will do away with that great slaughter which is promoted and encouraged in "gross weight competitions." Amongst the the barbel, especially, I would encourage the return of fish, as they are not generally liked as an article of food—indeed one of the clubs used to send them to the hospitals, but they were afterwards declined, on the ground that the patients would not eat them. The certificate of one of the proprietors of a river-side hostelry, as to weight, should satisfy an angling club; and the return of a great bulk of barbel opposite the hostelry ought to please an angler and give delight to the host.

B.

[As our readers are aware, we sometimes take the liberty of differing with our good friend B. when, in the fulness of his generous heart, he now and then comes forward with proposals which would have more chance of acceptance in Utopia than in this rough work-day world. But we do most sincerly endorse all he says in the above article, and especially his appeal to barbel-anglers to retain only such fish as they want for preserving, and to return the rest to the river. Barbel are like sheep—if one leads the way, almost the whole of the swim may be induced to follow, and some anglers retain scores of fish, just to show to their friends, and then throw them away, for, as B says, even paupers will not eat Barbel!—Ed.]

A NIGHT IN AN EEL-WEIR SHANTY.

"IT is a splendid night," said my friend K——, gleefully rubbing his hands, as we sat on opposite sides of the fire, one evening, listening to the rain dashing against the windows and the wind howling in the chimney; while the smoke coming down with every blast bid fair to render our pipes superfluous. "Yes," I said, "it is a splendid night." Now I made this remark in no jocular spirit, but from a principle of mine which has long guided me, namely, never to disagree with a specialist on his specialty. One is sure to be wrong if one does, and to make an unpleasant companion into the bargain. So I looked wise, thoughtfully rubbed my hands also, and sagely repeated, "Yes, it is a splendid night." Wherein the splendour consisted was not, I confess, particularly clear to me; but I took it for granted that my friend would accept my declaration as arising from conviction, and not dream of inquisitively demanding whence came my knowledge of eel-fishing and the weather suitable therefor. Certes, how much nonsense the world would be spared, if all would be content to agree when they really know of no sufficient reason to differ; and if the picture of the amiable man who never contradicts any one is somewhat weak, wanting in tone, is it not preferable to that of the captious noodle who criticises what he is absolutely ignorant of, and who faults everything and everyone that comes his way? [But *a nos moutons*. Eel-fishing is my text, and eel-fishing, by all means, let us have.

The satisfactory, if limited, dialogue narrated, took place in a small hotel in the West of Ireland, about five o'clock on a November afternoon. K——, who owns a salmon fishery and an eel-weir, had invited me to spend a night in his fishing shanty and see how eels were caught. As I had not before seen that industry prosecuted, I had gladly accepted the invitation, and we were just finishing our pipes, preparatory to making a start for the weir in question. This weir, by the way, was three long miles from the town, and as the road, for the most part, was rough and hilly, we decided to walk; so, wrapping ourselves in various great coats with many and curious devices to keep out the rain, we got under weigh. Samuel Glen, yclept Sammy, had started an hour before, with tea, bread and butter, and other good things, for our entertainment during the night; and having ourselves something like a pound of tobacco, we were not so badly provided for.

On the tramp out I learnt that eels are, like the salmon, migratory, but adopt precisely different tactics; inasmuch as they spend the early summer in the lakes and head waters, coming down towards the sea to spawn just as the salmon leaves the sea and ascends the rivers for that purpose. It is, therefore, on their downward run that eels are caught, and by the following contrivance, which I had an opportunity of inspecting for the first time on this occasion.

At a bend of the river where the main body of water is by the swirl driven against the opposite side, and on that side, is erected a solid stone wall, with apertures, or eyes, four feet or so wide,—one, two, or more, if the size of the river will permit—and through which as much as possible of the stream is diverted. To each of the eyes is attached a long net, something of the shape of a stocking, which floats down stream to the distance of five or six yards, terminating in a narrow tail, where the eels, once they enter, are held. At intervals during the night this tail is fished up with a grapple, the end unloosed, and the produce emptied into a large tank, which stands between each pair of eyes. If I add that the law provides that eel-fishing shall only be carried on between sunset and sunrise, and that the wilder, darker, and wetter the night, the more successful will be the fishing, I shall have given all the information I possess on the subject; and which, perhaps, I should apologize for introducing at all save for the benefit of those whose experience of the fish is confined to that gained in the Criterion, or other similar establishment.

On arriving at the shanty—a wooden box eight feet square—we divested ourselves of our waterproofs, and after poking the fire which was burning in a cosy little American stove, and trimming the lamp, we found the place much more comfortable than its exterior promised; for, indeed, the outside was suggestive of anything but comfort. The men were two—Sammy, already mentioned, and John McAnd. The latter was a local peasant, who had never seen an eel-weir until this one had been erected, and in whose training K—— had found much trouble; he had, moreover, no small dread of the uncanny creatures, and frequently expressed his horror of the barbarians in London who could eat such beasts. It was now about seven o'clock, and as the moon would go down about eight we had an hour to spend without the possibility of any considerable sport; we consequently endeavoured to make the best of it, sang a few songs, smoked a great many pipes, and chatted by the fire, inquiring anxiously each time the men came in from proving the nets, "What luck?" To this query we always got the same monosyllabic reply, "Noan;" but at length, about half past eight o'clock, Sammy appeared at the door, with a look of complacent satisfaction. "Well, Sammy, what luck?" "Ten eels, sir," replied that worthy, as he shook the rain off his clothes, and sat down to steam by the fire. Good man, they are coming at last. An impatient pause of ten minutes, then K—— could stand it no longer, and he sings out, "Prove the nets, Sammy, Come on McAnd," and out they go. "Here! Hi! Hoy!" "What is it all about," I inquire, as K—— peered out at the door of the shanty. "The run is on," he cried, delighted; and jumping up we turned up our great-coat collars, and dashed out to the nets. Here the men were hauling the outside one, and a right good haul it required, with its couple of dozen of good eels in the tail. The scene was strange enough; we were standing on the top, or deck—let me be technical—of the tank very nearly in mid-stream, the wind was blowing a hurricane, and the rain momentarily increasing while the flood had risen to within a foot of the top of the tank, and was boiling and surging fast with extreme violence and noise. I expected every instant that the tank, with the whole party of us, would be carried away, but neither K—— nor the men seemed to mind, as the run had actually come, and they were too busy to have any time for meditation on the possible dangers of their occupation. In the general excitement, I was fain to have lent a hand also; but finding the deck of the tank such very insecure footing, and having received several shoves from the men in their hurry, painfully near heaving me over, I decided that it would be bad taste to be importunate for work, and consequently did not insist. I therefore withdrew to a secure place on the wall, where I had a view of the tank, and let K—— and his men fire away. From this place of comparative safety I think I could have lent some slight assistance at the shouting, but my previous efforts having received such scant attention, I contented myself with looking on. Just now an incident—or, more properly, an accident—occurred which might have terminated seriously, but which, happily, ended without any harm. McAnd, who was working and shouting like a a demon, having apparently forgotten all dread of the uncanny creatures (when a good run is on it requires the men to look alive to keep the nets clear), was observed to thrust out the the grapple fiercely to seize the tail of the outside net. He was at this time standing about a foot from the trap door in the tank, which was open for the reception of the eels, and immediately on throwing out the grapple, he made a great pull, without waiting to feel if he had hooked the net. As it happened he had *not* hooked the net, and in his drag with nothing to resist him, went staggering backwards. K —— at this moment looked up, and not understanding the business, called out, "Where are you going to, you fool? You'll be into the tank? The words were not spoken till poor John amply verified them by flopping in headlong. From where I stood the lantern just shone on him as he disappeared into the water, literally living with eels; and if ever human face expressed mortal agony, that face belonged to John McAnd. Fortunately the man had kept a firm hold of the grapple, and clung to it with the frenzy of despair; this handle dropped right across the hole through which he had fallen, and formed an effectual support for him till we got him pulled out.

The run soon after slackened, and McAnd having procured a change of clothes from his house hard by, we retired into the shanty once more, and had some tea, after which we again lit our pipes (I really never consumed so much tobacco in twenty-four hours before), and I must admit I did not stir out again till we started for home at 5 o'clock in the morning. The rain had not yet ceased, but we did not mind that much, as we were anxious to get to bed at any cost, so we stepped out sharply, and made a good journey until within a mile of the town. Here the road passed through a deep glen, which was very like a lake by the time we arrived at it, and there was at least three feet of water to wade, and that for some distance too. Through it we went, however, and got home at last; tired and wet, no doubt; but still, for eel-fishing at any rate, we had a splendid night.

R. Cromie.

ARRANGEMENTS FOR THE SECOND "FISHING GAZETTE" TOURNAMENT.

(In aid of the Anglers' Benevolent Society.)

THE Tournament will come off at Mr. Warner's, Welsh Harp Fishery, Hendon, on the Midland Railway, at four o'clock to-day. The price of admission is sixpence; ladies half price. All money thus obtained goes to the funds of the Anglers' Benevolent Society. Tickets can be taken for the Welsh Harp or Hendon Stations from St. Pancras and from the Metropolitan underground railway stations—King's Cross, Snow Hill, Aldgate, &c. We advise anglers to make sure of the train times, and also to note that more trains stop at Hendon than at the Welsh Harp Station, and Hendon is only a few minutes' longer walk. As there is a long programme to get through, competitors are requested to pay the entrance-fees and give in their names and addresses before the times mentioned below.

* * * * * * *

N.B.—Competitors can use their own rods, reels and lines, but will have to use weights, &c., provided by the management, in order that all may use a similar weight; the baits to be cast will be artificial dace of about 1¼ oz.

The Handicap for Fly Rods.

The handicap for fly rods will be five feet per foot of rod—*i.e.*, if one competitor uses a ten-foot rod and another an eleven-foot rod, the eleven-foot rod will have to give five feet to the ten-foot, and so on in proportion.

The Handicap for Bait Rods.

In the bait casting competition the handicap will be seven feet per foot of rod—*i.e.*, an eleven-foot rod will have to allow seven feet in the distance thrown to a ten-foot rod.

* * * * * * *

All the competitions except the fly-casting, float-casting, and cheese bait casting, will take place over the grass, and the competitors will stand on a large tarpaulin, to keep the lines from obstructions.

Value of the Prizes.

The value of the prizes offered amounts to over £50.

ORDER OF THE COMPETITIONS AND PRIZES FOR THE SAME.

Special Competition.

First Prize: A solid silver cup, value £10 10s., given by the Richmond Piscatorial Society to the non-professional who makes the greatest number of points in casting, either Thames or Nottingham style. Three casts allowed each competitor. No entrance fee. Possibly this competition will be postponed until after Nos. 2 and 3 have been finished.

Second Prize: £3 3s., open only to competitors who pay an entrance fee of 2s. 6d., each; such entrance fee to be given to the Anglers' Benevolent Society.

Note.—It will be seen from the conditions which the Richmond Club have attached to their prizes, that although a competitor who has paid no entrance fee can take the first prize, he cannot take the second; so it would be advisable for ALL competitors to pay the entrance fee.—Ed.

* * * * * * *

SECOND COMPETITION.

Amateur Competition in Casting in the Thames Style.

Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the fee, before two o'clock, at the tent in the ground.)

First Prize: A best double-brazed jack rod, value £2 2s., given by Mr. G. Yarde; and five shillingsworth of spinning baits given by Mr. Gregory, of Birmingham.

Second Prize: Best winch and line, value £1 5s., given by Mr. P. Geen; and half-dozen of ladies' kid gloves, given by Mrs. P. Geen.

Third Prize: Fishing-tackle case, value 10s. 6d., given by Mr. Crumplen; and five shillingsworth of spinning baits given by Mr. Gregory.

* * * * * * *

THIRD COMPETITION.

Amateur Competition in Casting from Reel in Nottingham Style.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the fee, before two o'clock, at the tent in the ground.)

First Prize: A best centre-spring ebonite Nottingham winch and line value £1 5s., given by Messrs. F. T. Williams and Co.; and ten shillingsworth of spinning baits given by Mr. Gregory.

Second Prize: The "Angler's Knife," value £1 5s., given by Messrs. W. Watson and Son.

Third Prize: Three books, value 10s., given by Mr. Marriott; and five shillingsworth of spinning baits given by Mr. Gregory.

* * * * * * *

FOURTH COMPETITION.

Amateur Competition (open to Thames and Nottingham style) in casting towards a fixed mark placed thirty-five yards from the competitors. The angler casting the bait nearest to the mark to take first prize; the next best cast made by another angler the second; and the third best cast by another angler to get the third prize.

First Prize: Framed oil painting, by Mr. Greville Fennell, value £3 3s; and a Black-Forest spirit-bottle, given by Mr. T. R. Sachs.

Second Prize: A Thames spinning-rod, given by Mr. Bambridge, of Windsor; £1 worth of Welsh Harp fishing tickets given by Mr. Warner; and two Derby Killers given by Mr. W. J. Bullock.

Third Prize: Ten shillingsworth of Welsh Harp fishing tickets given by Mr. Warner; and five shillingsworth of spinning baits given by Mr, Gregory.

* * * * * * *

FIFTH COMPETITION.

Professional Competition in Casting in the Thames Style.

(No entrance fee. Competitors must give in their names and addresses by half-past two, at the tent in the ground)

One prize: £2 2s. in cash, given by the Gresham Angling Society.

* * * * * * *

SIXTH COMPETITION.

Professional Competition in Casting from Reel in Nottingham Style.

(No entrance fee. Competitors must give in their names and addresses by half-past two, at the tent in the ground.)

One prize: £2 2s. in cash, given by Mrs. E. and Mrs. R. B. Marston.

(If the money prizes are not competed for they will be given to the Anglers' Benevolent Society as from the above donors.)

* * * * * * *

SEVENTH COMPETITION.

Competition in Throwing the Bait with Forked Stick in the Welsh Harp style. (Entrance fee, 1s. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, before half-past two.)

First Prize: Thirty shillingsworth of Welsh Harp fishing tickets, given by Mr. Warner; five shillingsworth of spinning baits given by Mr. Gregory; and "Manley's Notes on Fish and Fishing," given by Messrs. Sampson Low, Marston and Co.

Second Prize: Twenty shillingsworth of Welsh Harp fishing tickets, given by Mr. Warner; and "The Field Book," value 10s., given by Mr. Greville Fennell.

Third Prize: Fifteen shillingsworth of Welsh Harp fishing tickets, given by Mr. Warner, of the Welsh Harp; and one of Mr. Warner's (of Birmingham) registered seat fishing baskets, given by Mr. R. B. Marston.

Fourth Prize: Five shillingsworth of Welsh Harp fishing tickets, given by Mr. Warner; and "Angling Literature," given by Messrs. Sampson Low, Marston and Co.

EIGHTH COMPETITION.

Mr. Wm. Bailey, junr.'s, Prize for the Longest Cast, with Quill Float in Nottingham Style.

(Entrance fee, 2s. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, by half-past two.)
First Prize: A Nottingham rod, reel and line.
Second Prize: Rod, value 15s., given by Messrs. Carter and Sons, St. John Street Road.

* * * * * * *

NINTH COMPETITION.

Mr. Malcom's Prize for the Longest Cast with Triangle Hook baited with Paste or Cheese.

(Entrance fee, 1s.)
First Prize: A "Freake" fishing bag, newest pattern.
Second Prize: A plated cup, given by Mr. Parker, of the Good Intent Angling Society.

N.B.—The fly casting will take place over water.

* * * * * * *

TENTH COMPETITION.

Amateur Fly-casting Competition with Single-handed Fly-rod.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, by half-past two.)
First Prize: (For longest cast.) Best fly-rod, winch, line, and fly-book, value £5 5s., given by Messrs. G. Little and Co.; and three copies of "A Dictionary of Flies," given by Mr. Sang.
Second Prize: Best solid cane fly-rod, value £1 1s., given by Messrs. J. Gillett and Co.; 3 dozen trout flies, given by Mr. James Ogden, of Cheltenham; and two copies of Mr. Sang's "Dictionary of Flies," given by him.
Third Prize: Two "Gloucestershire Spinners," given by Mr. Wigley, of Cheltenham; three dozen trout flies, given by Mr. James Ogden, of Cheltenham; one "Derby Killer," given by Mr. J. Bullock, of Derby; and one of Mr. Sang's "Dictionaries of Flies," given by him.

* * * * * * *

ELEVENTH COMPETITION.

Amateur Competition, with Single-handed Fly-rod, in Throwing Fly with Greatest Accuracy and Lightness under Bushes.

First Prize: A copy of "The British Sportsman," given by Mr. Wm. Day; seven shillingsworth of spinning baits, given by Mr. Gregory; and two of Mr. Bullock's "Derby Killers," given by him.
Second Prize: Three of Mr. Bullock's "Derby Killers," given by him.

* * * * * * *

TWELTH COMPETITION.

Amateur Fly-casting Competition with Double-handed Fly-rod.

(Entrance fee, 2s. 6d. Competitors must give in their names and addresses, and pay the entrance fee, at the tent in the ground, by half-past two.)
First Prize: A best fly-rod and winch, with Hardy's winch fitting, given by Messrs. S. Allcock and Co., of Redditch.
Second Prize: An oleograph entitled "An Evening's Fishing," after Targett, in best gilt frame, value twenty shillings, given by Messrs. Sampson Low, Marston and Co.

* * * * * * *

Other Competitions.

As doubtless some of the above prizes will not be won, if there is time other competitions will be arranged, but will probably only be open to those who have not already won prizes. All prizes not won will be handed over to the Anglers' Benevolent Society for use another time.

* * * * * * *

The Judges.

The Committee of the Anglers' Benevolent Society have selected Messrs. Geen and Bates to act as judges, Mr. Crumplen as time-keeper, and Mr. Field as gate-money collector.

The Dinner.

We have great pleasure in stating that the chair will be taken by Thomas Spreckley, Esq., President of the Thames Angling Preservation Society. Mr. Spreckley, with his usual generosity, has promised five guineas towards the expenses. Mr. Geo. S. Page, President of the American Fishcultural Association, and a large number of well-known anglers will be present..

Tickets for the dinner, price 3s. 6d. each, must be obtained of Mr. Warner or Mr. R. B. Marston before three o'clock, and any anglers who may wish to dine with us will greatly oblige by getting their tickets as early as possible, in order that Mr. Warner may know how many to provide for. In order to prevent mistakes, all extras (wine, spirits, cigars, &c.) must be paid for at once by the gentlemen ordering them. The dinner is open to all anglers who would like to attend, and Mr. Warner has promised to give us cold chicken, duck, ham, lamb, and other joints, with hot vegetables. As it is uncertain when the Tournament will be over, a good cold dinner will be better than a, possibly, spoiled hot one.

* * * * * * *

In conclusion, we again remind our readers that the Tournament is to be held in aid of a most deserving society—the Anglers' Benevolent Society—the object of which is to give help to cases of real distress amongst its members and their families. The small payment of one shilling per year confers membership in this society on any club angler, and we confidently hope that a principal result of our second Fishing Gazette Tournament will be a large accession of new members. If the affair is a success, it will be due to the very great assistance we have received on all sides.

THAMES-SIDE RECOLLECTIONS.

By Chub-Chavender.

Is there one of my angler readers who, during the recess of the close season, or by the ruddy crackling fire on a howling winter's night when outside the elements are in fierce and angry war, or, perchance, when on the bed of lingering sickness has not turned in memory to the scenes of his childhood's days of happiness, his favourite sports, his fresh keen appreciation of the pleasures of existence? The question is almost superfluous; all have recalled these scenes with exquisite delight, yet perhaps with a vague longing that can never be satisfied. Perhaps—personally I do not doubt it—the recollection of the early angling days of one who has been initiated into the mysteries of our craft in extreme youth are, however, the most pleasant of all. Well do I remember my first rod and tackle—aye, and my first fish, in the shape of a very small barbel, which my father, unknown to me, had taken from the well and placed on my hook, showing afterwards how to play and land it. I have caught fish differently since, good angler-reader; this occurred when I was of the mature age of four.

Chertsey Bridge and its neighbourhood was the scene of the first ten years of my piscatorial apprenticeship, which terminated at that place some fifteen or sixteen years since. As it was then I can recollect with the greatest ease and minuteness; as it is now perhaps your eloquent correspondent, "A Thames Fisherman," can tell us better than I, for during the last few years my visits have been but few to this the scene of my early experience. Perhaps it may not be uninteresting if I give the readers of the "F. G." some idea of the angling worth of this particular part of the Thames as it was fifteen years ago. Let us commence from the weir, going down stream.

The weir used to be an old wooden structure, with the ordinary massive wooden piles, and the "aprons," as they are termed, were composed of irregular and often huge masses of granite, backing up a gradient of perhaps 1 in 8. At the higher part of the declivity a sufficient number of piles were driven to form a breakwater, and in former time the water trickled between them, so that we—my schoolfellows and myself—often unearthed these blocks and caught small eels, stone loach and millers' thumbs. The stones were also clothed in summer and winter time with the *conferva*, which is mud in such situations—it is properly, I believe, termed *conferva rivalis*. I caught many roach and dace with it simply wound round the bend of the hook, and employed in the semi-rough water (at the side) of the weir.

The old "apron" occupied its position for about thirty yards on eiter side of the weir, and was a source of constant amusement to me, albeit not a little instruction did it add. In my very earliest days, once, and once only, did I venture along the broad (about 15 inches) crossbeam of the weir piles themselves; and then I felt so giddy with the noise and quick-rushing water that I, with providential forethought, sat down and hid my eyes for some seconds. The giddiness certainly passed off eventually, but no one except those who have experienced the sensation can even dream of the horrible nightmare which accompanied this exclusion of vision. A fierce desire to tumble off into the raging "billows of the main" possessed me, and I with the greatest difficulty repressed it. At last, the vertigo passed off with the same rapidity with which it assailed me, and I was free to look up. My old real fearlessness revived, and I almost laughed at my fears of a weir on which I had seen my father standing for many hours plying the rod for Thames trout. "What," thought I, "when I could swim with the best of my schoolfellows (I swam from Chertsey Bridge to Shepperton Ait, above the lock, one evening, against a schoolfellow just before) what, am I to be daunted?" No; a thousand times, and so I crossed with but one or two shivers and repentings into the "Borough," as we then called it, and by which term it is still known, I believe.

This freak has nothing to do with angling, I am aware, but as I am but the chronicler of my angling recollections, you must forgive me, dear reader. Well, as I said, Chertsey weir was a decade and a half ago as I have described. an ancient—eighty years old at least—structure, at the foot of whose "fall," and for some thirty or more yards to the opposite bank there existed as good a piece of barbel, bream, and trout water as ever delighted the soul of the enthusiastic fisherman. The trout which have been taken from there during the last twenty years would astonish all but the collectors of such items of angling interest. At the period of which I am now principally speaking (fifteen years ago), I believe that on any season thereabouts, as many as fifty large sized fish could be counted as feeding between the weir and the hill, which is about half a mile below Chertsey Bridge on the left hand side—I don't mean feeding all at once, of course.

But to return to the weir. I have stated the worth of the actual "weir stream," which turns chiefly from its course down stream, as it meets the bank by where Mr. Forbes's summer house stood or stands; let us, therefore, speak of a right hand view, which includes a so-called backwater entering the Thames, by the late Mr. La Corte's flour mill. At the time of which I am speaking, an island of some considerable dimensions stood about twenty yards below the weir, to the right hand of the weir from the lock gates. This island was sustained by a willow-pollard, the extended roots of which, as they were laid bare by the stream, afforded covert for many a trout, and in the late season for many a perch and chub. Breaking the stream as it did, the latter naturally diverged to both left and right, and formed a complete lagoon at the right—always bearing in mind we are speaking of the position of the weir as up stream—in conjunction with the mill tail before referred to. This lagoon contained many jack in late season, and the customary number of perch; and I know I am right in asserting that Mr. Keene (now H.M. fisherman), achieved a remarkable capture from this neighbourhood as close to the time as possible as that of which I speak. J. Keene, Haslett, J. Poulter, W. (old as he was termed) Galloway, his son Tom, and T. Taylor, were the professional fishermen, I recollect, at this time. I believe that both Haslett and Poulter had been initiated in their work by Keene. The former of the three is now a remarkably successful man, and well deserves the success he has achieved, being both civil and clever.

Again, pardon my wanderings, reader, and I will resume the stream from the weir, begging your careful attention to my indications of locality. Now, a little below the weir stands the lock-house; and opposite, on the other side of the way—the osiers grow thick and umbrageous, hiding a stream running at about three miles an hour—lies as good a chub harbour as ever gladdened the foolish heart of an enthusiastic slide-cork Nottingham fisher. And so does this continue till one reaches down stream to the back stream, which—going down stream, remember—turns to the right into what is called the dock. This dock was occupied at the time to which I refer by a Mr. Dover; and subsequently the hotel was erected by a Mr. Gale, whose subsequent collapse was of an extraordinary character in consequence of a lawsuit won by Mr. Forbes.

Now with the exception of a certain reach I wot of in Old Windsor Fleet, I believe this two hundred yards of chub water to have been *the* best throughout the whole length of the Thames. I have seen four and five pounders come in with the boats of Keene; he I know to have been the only fisherman understanding the "fine and far off tackle" at that time.

Now opposite to that chub water, which was really formed by the inert forceful current of the weir, lies a still—or comparatively still—piece of water, termed the "Stank." It was of muddy bottom and holds occasional weeds, but not of a dangerous character; and in early season the larger pike would lie in its quiet solitude, only to be aroused when the obtrusive bait was thrown almost across its saturnine face. Oh! the glorious sport that I, as a boy—endowed with a bamboo-cane rod which I fitted myself—enjoyed; and my father, did he not take nineteen and other glorious "pounders" which were recorded in the *Field* and other papers? Perch also (almost always present where the water and general habitat is "piky,") were to be taken; and my boyish reminiscense is of a splendid bag of forty taken with a worm, when I was within a day of my ninth birthday, at the extreme end of the bank abutting on the so-called "Stank," in water not four feet deep, but clogged with boulders of ancient weir materials, concrete blocks, *et hoc*, &c.

(*To be continued*).

CLUB AND OTHER JOTTINGS.

By L. B.

THE monthly meeting of the United London Anglers' Central Committee was held on Monday evening last at the "Bald Faced Stag," Worship-square, Finsbury, Mr. T. Morgan presiding. There was a very full attendance of delegates, several London Lea bailiffs and representatives of the West Central Association of London and of Provincial Angling Societies, including Messrs. Bonvoisin, Beckett, Osman, Welch, and Field.

After reading and confirming the minutes of the previous meeting, the secretary, Mr. R. Ghurney, gave a lengthy and most careful report of certain inquiries respecting the public rights of fishery in a favourite stretch of Walton's "sedgy Lea." The report was so strongly in favour of public as against proprietary rights, that it was decided to test the question by a friendly suit; Mr. Murphy cheerfully accepting the duty of angling in the said water for an appointed day, refusing to pay for so doing when called upon, and, as a matter of course, being summoned. In evidence, title-deeds, leases, &c., will have to be produced, and whichever way the question is decided, it will be a great satisfaction to have so important a question satisfactorily settled.

A case which will be shortly gone into of a person taking unseasonable fish with a legal cast net, was also referred to by the secretary, who made some very practical remarks anent certain necessary alterations in the present River Lea bye-laws to which he stated the Conservancy had cordially acceded.

Messrs. Field and Kidd made some remarks about the endeavours now being made to obtain concessions on the South Eastern Railway, which it is hoped will be favourably reported upon shortly. Concerning the "London Angling Association Fishery Society," Mr. Ghurney remarked that the good work undertaken by that Society had so far progressed, that though it was only just formed, and as yet had not received a single penny, four miles of good water had been rented on the river Wey, extending from Purford Lock to Weybridge. Also the right for every member to angle free of charge in that portion of the main River Lea navigation, and the ½ mile of back water at Ponder's End, known as the "Pike and Anchor Fishery," while endeavours were now being made to obtain proprietary rights in a portion of the Colne at Rickmansworth, the river Mole, and also in some very good water on the Cambridge line, to which the railway concessions now extend. He really hoped these substantial advantages, which were only forerunners of what the Society purposed carrying out—when taken in conjunction with the important experiment of coarse fish culture now undertaken by this Society, would be sufficient to satisfy even the professional grumbler who had been called upon to pay the sum of 1s. per annum extra, that the many might be benefited.

A few earnest remarks were made about the Anglers' Benevolent Tournament, and the necessity for supporting both. Some routine business was transacted, and the roll called, a vote of thanks to the chairman bringing the meeting to a close.

On Sunday last I took a walk all round Mr. Warner's big lake at Hendon, and saw several good fish which had been taken; one a jack of 10 lbs, some spinning, others live baiting. Spinning at the Welsh Harp, however, is of the most primitive description, as far as tackle and manipulation are concerned. Very thick prepared line, the same short thick heavy rod used for live baiting, biggish baits, ditto flights, leads heavy enough for spinning a deep river with a fairish flow, and rarely more than one swivel on the trace. Such is the outrig of a large majority of those who go in for spinning the Harp. At the risk of being told I don't know anything about it, I would venture to suggest that the use of a longer, lighter, and less stiff rod, a very much finer unprepared line, and for fishing those flats which the jack at this time of the year so much prefer to the deeper water smaller baits and flights, salmon gut or fine gimp traces with at least a couple of swivels and very small leads—if they did not insure in every case certain success, would be going a long way towards deserving it. While talking of spinning, I might mention that Mr. J. H. Stead, of the North Western Anglers, exhibited at that Society a bream of about 2½ lbs. taken at the Welsh Harp. Well down in the fish's mouth was a fair sized spinning flight, from which depended a leaded trace and a small portion of line—all bearing evidence of having been some time in the water. The fish was, for the time of year, in very fair condition.

Some fair takes of fish are, I hear from a trustworthy source, being had in the neighbourhood of Maldon, in Essex, and some good baskets of roach from the Medway, in the neighbourhood of Maidstone.

A complimentary visit will be paid the Canonbury Angling Society at their new head quarters the Monmouth Arms, Haberdasher-street, East-road, Hoxton, on Thursday evening, July 13th, when a goodly muster of piscators is expected.

When you want to touch up a favourite rod, do it before the shades of evening begin to fall, or you may make the same mistake as Mr. R. Marshall did the other day—next morning find you have anointed your favourite sticks with "molis-corum" in lieu of varnish.

THE PISCATORIAL SOCIETY.

THE half-yearly general meeting of the members took place in the clubroom, Ashley's Hotel, Henrietta Street, Covent Garden, on Monday evening last. Mr. F. H. Lemann was voted into the chair, and amongst those present were Messrs. H. J. Inderwick, J. Pattisson, T. Gillatt, W. H. Brougham, T. R. Sachs, T. Spreckley, H. Gray, J. Lander, T. Crumplen, D. Goodgers, C. P. Wheatstone, W. B. Adlington, T. Huggett, F. Lecluse, J. C. Murray, John Feron, G. H. Thurston, H. J. Alfred, T. N. Harrison, G. H. Thrupp, Dr. Brunton, T. Goulston Back, Walter Back, Harry Back, H. J. Wilkes, C. Cook, E. Vaux Huggett, &c., &c. After the reading of minutes by Mr. Lander (hon. sec.), the auditors, Messrs. T. Gillatt and James Pattisson, presented the financial statement, from which it appears the receipts of the last year with the previous balance amounted to £115 9s. 4d., and the expenses, which had been unusually heavy, including a new bookcase, were £99 1s., leaving an available balance in the hands of the treasurer of £16 8s. 4d. In addition to this balance, the society possesses a good reserve fund in the Savings Bank. The auditors congratulated the members on the satisfactory state of the funds, as well as on the general prosperity of the society. During the indisposition of Mr. F. G. Pearce, the treasurer, and who is as yet unable to resume his duties, Mr. T. R. Sachs acts as deputy treasurer in the most able and courteous manner. The next business was to appoint a date and place for the summer dinner. The time fixed upon was Wednesday, the 19th of July. In reference to the place, Mr. C. P. Wheatstone remarked that as Mr. G. H. Thurston was an old member of the society and also of the Stanley Anglers, as well as being a supporter of Thames preservation, proposed that the dinner take place at the Chertsey Bridge Hotel, and he was sure from his experience of the house Mr. and Mrs. Thurston would give them every satisfaction. Although another hostelry was proposed, the feeling towards Mr. Thurston was so unanimous that the other house was withdrawn, and it was unanimously resolved, amidst general acclamation, that the Chertsey Bridge Hotel be selected. Mr. Thurston, who was present, expressed his best thanks for the kind expressions which had been used, and promised to give them the best of dinners and the best of wines. He also liberally undertook to provide conveyances from and to the station for the guests on the occasion. It was then agreed that Mr. Norman F. Harrison, who was in the vice-chair last year, should occupy the position of chairman, and Mr. F. H. Lemann the vice-chair. After some highly-complimentary observations on the value of Mr. James Forbes' services in connection with the Thames, and the cost and trouble he has been at in fish propagation, it was most unanimously resolved that that gentleman be invited as the society's guest at the dinner. Mr. Spreckley and others bore testimony to the fruitful results of Mr. Forbes' operations in fish culture, as great numbers of trout of about one pound each that were not Thames trout were being caught, and they were quite satisfied they were those that had been hatched in the fish-house at Chertsey Bridge. The sum of £50 was voted towards the guarantee fund of the Grand International Fisheries Exhibition of 1882. The business portion of the meeting ended in the usual vote of thanks.

RIVER REPORTS.

MID-THAMES.

"Glide gently, thus for ever glide,
O Thames! that anglers all may see."

The surroundings of Father Thames just now are grand in the extreme, as regards colour, foliage, &c., but the "gliding" business is on a scale a little too fast for successful angling Rain has fallen very heavily all up the Thames Valley within the last three or four days, so what with this and the commotion made by the passage of hundreds of boats, great and small, bound for the human race at Henley, it is a poor look-out. At Medmenham, Mr. Troupe, with a fly, has had two or three takeable fish, and Mr. Harrison one of about 2½ lb. At Maidenhead, Messrs. Allen and Gardener, fishing together, caught between them a nice trout of 4 lb., and lost a "nummer"—whatever that may mean. I have some fifteen reports of roach takes, but as the biggest is only 8 lb. in the day, the details of the other fourteen would hardly interest anyone besides the captors.

Thursday evening.—As I write the rain is coming down in blankets (sheets being out of it), and I fear by the time this is in print the Thames will have become much coloured and unfishable, except for roach.—MARLOW BUZZ.

Ancholme.

A week of continuously fine weather has proved as great a boon to the coarse fisherman as to the farmer. Whilst the latter has been hauling-in stacks of prime clover and hay, the fisherman has also been hauling-in prime baskets full of fish. The best catch during the past week has been one at Brandy Wharf, in a match. Mr. Wray, of Hull, took the first prize, with 24 lb. 13 oz. A trout, doubtless one of my runaways, was also taken, weighing 1½ lb. Dr. Bowstead had a good miscellaneous catch one day, consisting of two small pike, several eels and coarse fish, with two beautiful trout, together about 2 lb, to top the basket. I had a similar catch on Saturday last, consisting of eels, coarse fish, and trout; and my little boys had a nice basket of eels on Tuesday. In the evening of Tuesday, a party of five of us rode over to the Ancholme, but, unfortunately, it began to rain just as we arrived. I, however, got one small pike, whilst my friend stuck to bottom-fishing, and secured a nice lot of eels and coarse fish. A splendid trout was caught in the Mill Pit, at Horncastle, by Mr. Bryant, last week. It weighed 4 lb. The pupils at the Grammar School had a day at Croxby Lake, and caught some nice perch and eels; but, as usual, the carp were too wide awake for them.—THOS. FORD.

Ballynahinch.

These last two days angling has improved well, as we had a fair spate on Monday, which was greatly needed, as will be seen by the undermentioned report. Messrs. Eades and Haulgrave for the week have only succeeded in killing three dozen trout, largest take was yesterday, being fourteen. Mr. G. Sutherland has had very poor sport, his bag for the four days before the spate only amounting to twenty-seven trout, but on the 3rd he caught one salmon, 7 lb., ten white trout, and 7 lb. yellow trout; on the 4th two salmon, 8 and 6 lb., and seven trout. Captain G. Sutherland's take was also poor, twenty-six trout being his total until yesterday, when he succeeded in killing three salmon, 6, 5½, and 5 lb. weight, also fourteen trout. There is a good show of both salmon and trout on the lakes, but would not rise until we had this spate. WALTER BLACKADDER.

Chichester.

The water at Chichester is in capital condition, the effect of the weed clearance in the lower reaches being most satisfactory. Prospects are better than for some seasons past, although fish are no, well on, owing, doubtless, to the variable temperature. There is sufficient incentive to tempt many rodsters to the waterside. Some fair takes have been brought to bank, as usual some good fish breaking away. Mr. Young has had some fair baskets of bream, and some fine eels have been accounted for. We hear of nothing noteworthy from the Rother, which is in good trim. Fish are rapidly improving in condition, the small fry showing in myriads. With warmer weather good results may be anticipated.—GEORGE F. SALTER.

Coquet (Weldon Bridge).

Since the last report there has been little sport for the angler. The weather is very unsettled, thundering almost every day, and showery. Worm for this month is very difficult, and the creels are very small, from two to six brace is the average.—A. GLASS.

Dove.

We have had changeable weather all the week, sunny by turns and rainy ditto The river has been in a coloured condition and in rattling order for bottom fishers with the worm and maggot. Excellent dishes of roach and dace have been filled, and I also hear of a few barbel having been captured with the cad bait. Trout are now rising better than when I last wrote. They seem to be recovering from their gorge upon the drake, and some nice baskets have been caught with the pale evening dun and the honey dun bumble. Foster's universal has also accounted for some big fish, both in the brooks and the main river. There have been hundreds of rodsters out on all our public lengths during the week, and I verily believe that the number of piscators every day appears to increase. The weather at the time of writing (Thursday morning) seems to be clearing up, and I think we shall have some great doings on Saturday, as the water is in grand order.—THE SPLODGER.

Exe (Tiverton).

Owing to the heavy rains we have had and are having, the river is coming down thick, and should it rise to any extent, it will, in all probability, bring up some fresh fish. Four salmon have been filled since my last report, in the Tiverton water; one in the upper, by the Rev. J. Jellicoe, and three in the lower, by W. Wratislaw, Esq. Some very fair baskets of trout have been taken. Flies killing best being—red spinner, Yellow May dun, red, and black palmer.—WM. MUDFORD.

Ilfracombe.

Sea-fishing still continues very good when the weather is fine enough for the boats to venture down. Friday and Saturday very good sport. W. Ashford brought in 85 lb. bass, other boats less. Saturday, best boat 77 lb. bass 12 lb. pollock. Monday, wind blowing strong; a few boats dropped anchor off the harbour, and had fair catches of whiting pout, Tamlin cod, and pollock. On Tuesday, two boats tried Baggy again for bass, but they were obliged to return after getting half a dozen, the sea being too rough for them to fish out in these tides. On Wednesday and Thursday they tried it, but they found the wind and sea too much for them. The tides suit well now for rock-fishing. Some fine prawns have been taken from the ponds, also several lobsters and crabs from holes in the rocks between Larkstone and Rillage. On Thursday some crabs weighing from 4 to 5 lb. each were brought in from the pots. Weather at present squally.—E. COMER.

Lea (Ware, Herts).

There is excellent roach-fishing obtainable at present, and I believe no better general fishing can be obtained nearer to or more conveniently reached from London it being readily got at from Liverpool Street and other stations of the Great Eastern line, Ware being about twenty miles out. The river is plentifully stocked with roach, dace, chub, trout and jack, also eels. There are some fine trout and jack lays hereabouts. One fine fellow (jack) was hooked a few days ago while trout fishing, and after over an hour's play was lost, he was estimated at quite 26 lb. I may mention that the water is rather bright, but the roach are taking paste now very freely, and several good takes were made by London anglers last Sunday.—JAMES H. FEARN, Lion and Wheatsheaf, Ware, Herts.

Medway (Tonbridge).

Water in capital condition for all round angling, and sport very good. There have been some good bags made, particularly above the town, where on Monday Mr. Birley captured a splendid bag of chub. The bream are beginning to bite nicely at a worm and carp are coming on. On Tuesday, Mr. G. West, at the Powder Mill Point, grassed one weighing 3 lb, and on the following morning an angler lost a considerably larger one by reason of his hook breaking. At the Ballast Pit a few nice pike have been taken. Roach, too, are very plentiful.—YE MEDWAY WATER-RAT.

Ouse (Littleport).

Water brighter than I have seen it for a long time past; floating weeds still troublesome. The weed cutting engine went up again yesterday, so I expect we shall have them thicker than ever again now; so the prospect looks anything but promising for some time to come. Roach will not look at a bait, and bream fishing is very uncertain. Last Friday Messrs W. Purchas and R. Hills, Cambridge, had a good morning's bream fishing spoilt by the weeds. They had them on and had caught some when they came down so thick it was quite impossible to get a line in, and they had to give up. Yesterday morning Mr. Headley, Cambridge, and myself got nine good bream, five largest going 15 lb. I tried again this morning, but only got two of about 1½ lb. each.—C. SOUTH.

Rother (Sellham).

The fishing in this locality has been very good during the past week; Mr. Saunders, of Lodsworth, caught a fine jack, 8½ lb., also some salmon trout; Messrs. Tinney and Godden landed three pike and two brace of perch, spinning with minnow. The roach are well on the feed, and some good takes have been made. London anglers would do well to note that there is capital all-round angling in the Rother, near Sellham station. There is also good angling near Petworth.—J. PIKE.

Thames (Goring).

Water in good condition for all round fishing. Prospects good for this week There has been three days' sport, the best day's catch being: eight jack, largest 3 lb.; some good perch, and 6 chub, largest 2 lb.—JOHN RUSH.

Thames (Halliford)

The river is now in good order for all-round fishing. Different gentlemen fishing with me since my last report, a fortnight back; their takes have been as follows.—First day -Mr. Holt, one barbel, 3½ lb.; two chub, one jack, and some roach and dace. Second day—Mr. Smith, one trout, 2 lb.; one eel, 3 lb.; one bream, 1½ lb.; and two chub. Third day—Mr. Nickenson, one trout, 1¾ lb; two chub; and one perch. Fourth day—Mr. Ralph and friend, seven dozen roach and dace, most of which we returned to the river again. Fifth day—Mr. Nickenson, one trout, 2 lb. 9 oz. Sixth day—Mr. Hutchinson, one bream, 3 lb.; and one chub, 1 lb. Seventh day—Mr. Nickenson, three nice bream, largest weighing 3 lb. 14 oz.; three chub and one perch; altogether weighing 15 lb. Eighth day—Mr. Rogers, four perch; three chub; one jack; and some roach and dace. Ninth day—Mr. Nickenson, four nice perch; two chub; two good roach; and some dace.—GEORGE ROSEWELL.

Thames (Windsor).

Since my last very little has been done in this neighbourhood, though there is a good show of fish, especially barbel, which have been jumping about in all directions, but at present are not feeding much; next month ought to see them well on if properly baited previously. The few that have been had were good fish as regards condition and one of our local anglers, fishing with James Gray, got a good specimen of 8¼ lb. out of the Windsor Weir stream; it is now in the hands of Mr. Cooper. Mr. Hockley, with Richard Cray, has had some nice barbel and chub, but my memo having got mislaid, am not sure of the weights. Paice, of Etonwick, has had twenty barbel, largest 5 lb., three chub and a perch going 3 lb. within an ounce. Bank anglers have been getting some good roach, many bags being graced with fish considerably over 1 lb.; these, of course, were had by the use of extremely fine tackle and judicious groundbaiting. A few chub have been had long corking up to 3¾ lb, and now is the time to get some good ones by whipping from a boat with skin of black slug, gentles, skin of beef, piece of kid glove, or either of the following flies—coachman. alder, red or black palmer, Windsor bee, &c., dressed largish. Some good jack have been seen in the neighbourhood, but up to the present few have been taken; and I am glad to see it, as it is much too early for them, next month being quite soon enough.—B. R. Bainbridge.

P.S.—Godden, of Cookham, tells me he is getting quantities of roach daily, and last week got a nice jack of 9 lb. out with Mr. Jones.

Trent (Alrewas).

Little worth reporting has been done the past week in the way of sport. Heavy rain has fallen at intervals every day, which has kept the river in a state of flood and mud. I had a day on the river with a few friends last Friday, but we only succeeded in taking a few roach and dace with gentles, cadbait again proving of no use. The water is reported to-day in little better order, but still discoloured and scarcely fishable.—I have just returned from a couple of days fishing on the Teme, near Tenbury, with Messrs. John Allday, Sam Busnett, and the "Novice." That river, like the Trent, was thick, and to make matters worse the rain descended at intervals nearly the whole time we were fishing. Had the elements and the water been a little more favourable I have little doubt I should have been enabled to report of some good sport. The dace in that river run remarkably fine, and I nobbled a nice lot with gentles my friends taking some fine roach, perch, and small eels, while the "Novice" took first honours by basketing a nice brace of trout as well as other fish. Saturday next will find me at the Welsh Harp, endeavouring to do a little good for my less fortunate disciples of the gentle art. May fine weather and a good attendance reward our efforts.—J. Gregory.

Trent (Newark).

The water is now in fairish condition for angling; and some pretty good sport has been had; weather rather unsettled, and some pretty good bags of eels and flounders are still being made down the lower reaches of the river; roach and dace have been taken with caddis and gentles; but the roach are as yet very lumpy, and would do with another week or two's rest. A few chub have been taken off the shallows with fly; and a nice barbel or two have been had by various anglers. I noticed a lot of barbel pitching last Sunday, but another week or two will be plenty soon enough to begin to bait for this fish. Cad baits and gentles will be found the best baits under the present circumstances; but the angler must not forget his worm bag: prospects pretty fair, sport certain.—The Trent Otter.

Trent (Nottingham).

The river here came on a few inches on Tuesday, but on Wednesday the water ran off again and a large number of anglers were out. In the upper waters a few eels, some roach and bream were taken with the worm, and a chub of 4¼ lb. was landed in the Shardlow fishery. Last Saturday I took a very nice lot of chub with the cad bait, using maggots for ground-bait, and on Tuesday I was fortunate enough to take, amongst other fish, a trout of 2 lb. Several of these fish have also been caught of late at Shardlow. Reports are not numerous from the lower districts, but large quantities of roach and dace have been taken from the punts off what is known as Sneinton meadow. Attempts have been made with the artificial fly on the shallows, and one of our adepts Mr. W. Dann, is credited with an excellent creel of dace and roach. —The Man at the Clubs.

Tweed and Teviot.

The mild and warm weather we have experienced during the past week has made the takes in these rivers very small, both streams being now down to their summer level. We have had a few freshets, but these have only discoloured the rivers, without raising them to any extent, and we now sadly want a flood. Salmon fishing is now practically over for the season, until the back end or autumn season opens. On Wednesday some few baskets of from 4 lb. to 7 lb. were got, but beyond this nothing has been done in this district. In the neighbourhood of Coldstream, where netting goes on, several salmon have been got, and the net fishing at Berwick also shows some improvement.—Maxwheel, Kelso.

Welsh Harp.

To the casual observer who, unacquainted with the character of these waters, may have chanced to be present at the "Harp" on any evening during the past week the bar of the old roadside hostelry must have presented a strange scene. In rapid succession have fishermen, with baskets almost bursting with contents, entered the bar and to admiring crowds displayed the result of their day's labour while closely scrutinising each individual fish as it is produced from its grassy bed, and commenting thereon with pardonable pride. "Sawyer," the veteran keeper of the reservoir—who knows every blade of grass and tree around his favourite waters, and knows, moreover, where to direct his patrons so as to ensure them sport when "fish are on the feed," with the almost unprecedented number of 321 jack of from 3 lb. to 18 lb., shows a bold return from June 16th to July 5th. These, with very few exceptions, have been taken spinning. Bream and carp, in almost countless number, have been taken this week, and Messrs. Hall and Twigden's show of bream was truly a grand one, the fish being laid out in the large hall, where hundreds of persons inspected them. Appended is a list of those taken during the past week by yearly subscribers:—Mr. Smart, 89 lb. of bream and carp; Mr. Twigden, 96 lb. of bream and carp; Mr. Thomas, 40 lb. of bream; Mr. Hall, 23 bream weighing 75 lb.; Mr. Lovegrove, 6 jack, 28 lb. (largest 10½ lb.); Mr. Nye, 10 bream, 32 lb.; Mr. Plumpton, sen., 4 jack and 1 carp; Mr. Plumpton, jun., 3 jack; Mr. Brown, 4 jack and 5 bream; Mr. Geo. Sotham, 5 perch, 6 bream, and 2 jack; Mr. Slade, 3 jack, 12 lb.; Mr. Marshall, 10 jack (3 lb. to 7 lb); Mr. Packman, jun., 5 jack; Mr. Wharton, 2 jack; Mr. Liddington, 1 carp, 9 lb.; Mr. Nevill, 1 carp, 7 lb., and some nice bream; Mr. Turner, 1 carp, 8 lb., and some fine perch; Mr. Blenkiron, 9 jack, from 3 lb., to 8 lb.; Mr. Fredericks, several nice perch; Mr. Stead, several perch and bream; Mr. Stannard, 6 jack; Mr. Pearce, large basket of jack, perch, and bream; Messrs. Roxbee, 6 large jack; Mr. Cox, 1 carp and 5 bream; Mr. North, 8 jack; Mr. Crew, 2 bream and 4 eels; Mr. Clark, 6 Jack; and Mr. Staines, 26 lb. bream.—Resident.

Poisoning Fish.—At the Worcester Sessions before Mr. H. Hawkes and Mr. J. W. Willis-Bund, George Clarke (42), labourer, and Henry Hill (23), boilermaker, were each sentenced to six months' hard labour, for putting a quantity of lime into water at Welland and Hales Owen, for the purpose of poisoning fish.

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

The show of fish was very small, on account of the dinner, which took place at Mr. T. Coomes, Five Horseshoes, Hoddesdon. Thirty-eight of the members and friends sat down to a very excellent dinner, and also there was a private dinner provided for the ladies and their families, who sat down to the number of twenty-one. Mr. Powers, of the Amicable, and Mr. Henwood, of the North-Eastern, took the chair and vice-chair, Mr. W. Brearley acting as steward. Everything passed off very well, and the weather everything that could be desired. Mr. C. A. Metcalf, the trustee, took the chair for the members, assisted by Mr. Powers and Mr. Henwood, who did duty the second time, also supported by Mr. Moore. The general visit of the United London Anglers will take place at the clubhouse on July 10, when we hope to have a good visit.—J. Worledge.

July 2.

ANCHOR AND HOPE ANGLING SOCIETY.

Our trays were well filled on Sunday, the 2nd inst. The following members weighing-in:—Mr. A. Shakel, bream, 1 lb. 7 oz.; Mr. Coles, bream, 1 lb. 3¼ oz.; Mr. R. Smith, bream, 10 lb. 13¼ oz.; Mr. D. Davis, roach, 1 lb. 8¼ oz.; Mr. H. Scott, bream, 1 lb. 2½ oz.; Mr. T. Bowling, bream and roach, 4 lb. 8¾ oz.; Mr. Powell, bream, 1 lb. 10¼ oz.; Mr. C. Daniels, bream, 2 lb. 2¼ oz.—D. Davis.

July 5.

ANGLERS' PRIDE.

The members of the above club fished for a series of prizes at Pulborough on Sunday. Everything being in our favour, a very excellent show of fish was the result. The first prize was taken by Mr. Dawe with 16 lb. of bream, the second by Mr. Gafney with 12 lb. 10½ oz., the third by Mr. Beeley, jun., with 6 lb. 13 oz.; Mr. Haines, 6 lb. 2½ oz.; Mr. Mallett, 5 lb. 8½ oz.; Mr. Watkins, 5 lb. 8 oz.; T. Fiddes, 2 lb. 10 oz.; Mr. Hayes, 1 lb. 15 oz.; Mr. Soar, 1 lb. 9 oz.; Mr. Dodson, 1 lb. 9 oz.; Mr. Phipps, 1 lb. 1 oz.; and Mr. Nash, 11 oz.—F. Marshall.

July 4, 1882.

BATTERSEA FRIENDLY.

The first match of the season took place on Sunday last at Staines for three valuable and useful prizes, presented by Sampson Beautiful weather and the river in splendid condition, but small takes were, unfortunately, the order of the day, many of the competitors only just escaping a blank. The winners were as follows:—Mr. Ansty, 1st, 1 lb. 14 oz., roach; Mr. Thomas and Mr. Martin had a dead heat for second and third with 1 lb. 2 oz. each.—H. W. Payne, President.

BOSTONIAN ANGLING SOCIETY.

Our show of fish was not quite up to the mark. The best takes have been had by Mr. W. Bastain, with some nice perch from the Welsh Harp, the three largest weighing 3½ lb., and one bream, over 3 lb.; Mr. Jennings, four roach, weighing over 3 lb.; Mr. Marshall, roach; Mr. Goodge, perch.—J. Jennings, hon. sec.

July 5.

CITY OF LONDON ANGLING SOCIETY.

The following is the result of our peg-down competition at Amberley on the 2nd July:—Mr. Plumstead, first prize, with roach and bream, one of the latter weighing 1 lb. 8½ oz.; Mr. Mortimer, second, with roach, one of them weighing 1 lb. 1¾ oz.; Mr. Nitz, third, with roach, one of them 1 lb.; Mr. Payne, fourth, with bream; Mr. Pratt, fifth, with bream; and Mr. Mark, sixth, with dace. —Cas.

CROWN PISCATORIAL SOCIETY.

The members of this flourishing society will fish a pegged-down match in the forty guinea water, Rye House, on Sunday, July 16th, for a series of valuable prizes, and on Monday following, the 17th, at their club house, the "Crown" Tavern, Clerkenwell Green, will be paid their first return visit on the central list of angling clubs, when they hope to have the company of all those who can make it convenient to attend.—W. H. Burwash, jun., sec.

July 5th.

DUKE OF CORNWALL ANGLING SOCIETY.

Our members were out in force on Sunday and had pretty good luck. We had a fine show of roach from Boxmoor, headed by Mr. Kettle, sen., in fine condition. Our other specimens looked well for our young society.—J. Heckford, secretary.

GALASHIELS ANGLING ASSOCIATION.

The third and last competition for the season of the Gala Angling Association was held on Saturday. Twenty-four competitors entered, and of these twelve baskets were shown, reaching a total weight of 83 lb. 5½ oz. The hours were from two a.m. to two p.m. The early morning, however, was extremely unsuitable, and until the sun broke out little was done. In the most of cases bait was used, and taking into account the state of the rivers—the Tweed and its tributaries—and the period of the season, the takes may be held as above the ordinary. The following is a list of the successful competitors:—1, Robert Robertson, scratch, 9 lb. 7 oz. (Gala); 2, Henry M'Gill, 1 lb. added, 8 lb. 2 oz. (Tweed); 3, Robert Grant, 1 lb. added, 8 lb. 2 oz. (Tweed); 4, W. Buchan, scratch, 8 lb. 1½ oz; 5, Alexander Clapperton, scratch, 8 lb. ½ oz; 6, Alexander Stodart, 1½ lb. added, 7 lb. 14 oz.; 7, John Cass, 1 lb. added, 7 lb. 13 oz.; 8, William Romanes, scratch, 7 lb. 7 oz. Heaviest half-dozen, Robert Grant, 4 lb.

GOOD INTENT ANGLING SOCIETY.

The members of this club to the number of fifty-four fished a pegged-down match at Burnt Mill last Sunday for eleven valuable prizes, that being the wind-up for the year. They were won in the following order: Mr. Philpott, 1st; Chas. Bates, 2nd; W. Wheeler, 3rd; J. Bell, 4th; Guntrip, 5th; Maybury, 6th; Rodgers, 7th; Tavener, 8th; Ormes, 9th; Raynor, 10th; Barrington, 11th. The fish small in quantity and quality.—R. Murphy.

GREAT NORTHERN BROTHERS.

Our show of fish on Sunday last was not very large. Mr. Parkin, one bream, from Amberley, 2 lb. 6 oz.; Mr. Burness, one bream, from the same place, 3 lb. 4½ oz.; Mr. Page, bream and roach, 4 lb. 8 oz; Mr. Watling, 1 lb. 6 oz.; Mr. Young, one roach, 1 lb. 5½ oz.; Mr. Hewitt, 1 lb. 11 oz.; Mr. Hutchings, 2 lb. 2 oz.; Mr. Dingley, 1 lb. 3 oz.; Mr. Theobald, 2 lb. 8 oz. roach, from the Medway; Mr. Major, 3 lb. roach, from the Grand Junction Canal.—J. Fitch, jun., sec.

July 6.

GRESHAM ANGLING SOCIETY.

The usual meeting of this society took place on Thursday, the 6th inst., A. W. Parker, Esq., in the chair. After the reading of river reports, correspondence, &c., Mr. Crumplen stated that he had received an official letter from the authorities of the Great International Fisheries Exhibition, endorsing the nomination of the angling societies of London, by which he became one of their two representatives on the committee relative to the collections of fresh-water fish, preserved or otherwise. Mr. Crumplen said he intended to take a broad view of his duties, but should always consider the wishes of the great mass of anglers, by whose unanimous vote he had been placed in this honourable position. The fish taken by members during the week included one pike 5½ lb., by Mr. Cotton, and a number of perch from the society's water at Waltham. The secretary stated that he had recently visited this stream, and was glad to report that it appeared well stocked, and, given ordinary condition, he fully anticipated members having good sport there. Mr. E. Bennett, a respected member who weighed in some sample roach early in the society's year, has again been fortunate in the Norfolk Broads, taking some 40 lb. of roach, rudd and bream, while fishing with George White, of Yarmouth, at Heigham Sounds, on Tuesday last. Mr. G. S. Page will give the society an account of coarse fish culture as carried out by the United States Government, with special reference to black bass, on Wednesday, the 19th inst., when several well-known pisciculturists will attend. The meeting will probably be held in a larger room than the society now possesses, and of which special notices will doubtless be issued. Captain Alfred presented the society with the superb specimen of bleak taken from Sunbury Reservoir, the finest possessed by any angling society. The evening concluded with a very enjoyable selection of music, Messrs. Jardine, Neville, Young, Callaghan, and others taking part.

HAMMERSMITH UNITED.

Since my last report Messrs. Geen and Hoole have shown some nice chub from Eynsham; Messrs. Pitts and Peachey had 18 lb. roach from much-despised Henley; whilst Messrs. Green, Hitchcock, Lewis, Chick, and Burbidge had a few fish, principally taken with the fly in tidal waters. Mr. Mackness had bream, &c., from Shepperton—heaviest fish, 2 lb. 4½ oz. Mr. Walters had a tray of dace and trout from private waters.—VORTEX.

HIGHBURY ANGLING SOCIETY.

The trays of the above society were exceedingly well filled on the 2nd inst. with capital roach and bream, particularly the latter, contributed by Messrs. Anthony, McDermott, Howell, Thomas, and others. Mr. Thomas had six bream from the Welsh Harp scaling nearly 17 lb., the heaviest single one being between 3 and 4 lb.—JAS. EDWARD WHEATLEY, sec.

3rd July.

IZAAC WALTON ANGLING SOCIETY.

The members will dine at the Pied Bull, St. Margaret's, on Wednesday next, the 12th inst. Members who intend being present must give notice to the secretary not later than Sunday, the 9th inst. There was a fair show of fish on Sunday last, the 2nd inst. Mr. B. Crook had some nice roach, Mr. W. Mecham had bream, Mr. G. Wood had roach and bream, Mr. T. Dennison, sen., perch, Mr. E. W. Turner had roach and bream. Two special prizes will be fished for on Wednesday next, members to choose their own fishing water; two ditto on Sunday, the 16th, same conditions.

LITTLE INDEPENDENT ANGLING SOCIETY.

A few of our members were out on Sunday, and managed to get some fish, but our show was rather small, Mr. E. Barr heading the list with three jack; Mr. Raine, one jack and two chub; Messrs. H. Moore, Petrie, and Welch also weighed-in.—H. MOORE, sec.

July 6.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

We had full trays of fish again on Sunday last, Mr. T. Longman weighing in 12 lb. roach and 3 lb. dace; Mr. Crafford, 6¼ lb. roach and dace; Mr. J. Drew, sen., perch and dace; Mr. Roberts, perch; Mr. J. Drew, roach and dace; and Dr. Lavender, roach, perch, chub, and bream. The prize on Sunday, June 25th, was won by Mr. Crafford.—THOS. WM. LUCY, sec.

ROYAL GEORGE ANGLING SOCIETY.

Only a few out last week, and weights as follows:—Mr. Holden, roach and bream, 5 lb.; Mr. Trotter, roach, 4½ lb.; Mr. Palmer, roach, 3 lb. 7 oz.; Mr. Chart, roach, 2½ lb.; Mr. Guynan, roach, 2¼ lb.; and Mr. Mahoney, roach, 2 lb. Our hostess has kindly given a handsome prize to be fished for at Bourne End on the 23rd inst., and it is hoped all the members will turn up on that occasion.—F. MILLARD, sec.

July 5.

SOUTH LONDON ANGLING SOCIETY.

On the 1st Mr. Brown weighed in from Reading: 12 lb. roach, some dace, and chub. On Sunday Mr. Head weighed in 11 lb. bream, and Mr. Mitchell 12 lb. bream from the Mole. Messrs. Brewood and Kirwan went to Amberley, but got very little. Self and Mr. Patenson were out with Mr. Godden at Cookham, but sport very poor—about 3-lb. roach and a few perch. The members are to fish a match at Amberley on Sunday; I wish them fine weather.—G. H. FIELD.

July 6th.

UNITED BROTHERS.

Several of our members were out on Sunday, the 2nd, and the following were successful in taking fish:—G. Belton, roach; F. Belton, roach; H. Tyler, roach: W. Tyler, roach; and E. Currans, bream, from the Medway and Wey. I am pleased to say that not one fish under sized was brought into the club-house, notwithstanding our sizes, viz.:—Trout, 14 inches; pike, 20; barbel, 13; carp, 10; perch, 8; chub, 10; roach, 8; tench, 8; bream, 9; dace, 6; rudd, 6; gudgeon, 4 inches—over all. Some older clubs that I know would do well to copy the example of an amateur club.—W. BELTON.

July 6th.

WALTONIANS

July 2nd, Mr. Phillips had 13 lb. 4½ oz. roach, one fish 1 lb. 10¾ oz; Mr. Malcom had roach and bream, 10 lb. 8¼ oz.; Mr. Morris, roach and dace, 8 lb. 1 oz.; Mr. Good, jun., bream, &c., 3 lb 6 oz.; Messrs. Packman, T. Watkins, Crabb, Togwell, and Marriott also weighed in fish. Mr. Crabb had the misfortune to leave his mackintosh in the train on the return journey from Amberly; if any one has dropped across it, a line to the club-house, "Jews Harp," Red Hill Street, Regents' Park, would oblige.—A. J. MARRIOTT.

July 4th.

WESTBOURNE PARK PISCATORIAL SOCIETY.

You will see by the enclosed list of prizes we have no gross weight this year; our members are therefore giving their attention to specimen fish, so that the large catches of small fish are conspicuous only by their absence, except on a match day, when gross weights are allowed. Our opening match, on the 18th, anywhere was fairly good—Mr. Yarham, 1st, with 9½ lb. roach and dace from Harefield; Mr. Oatley, 2nd, 8 lb. of barbel, Thames; Mr. Buttery, 3rd, 7 lb. bream, &c., Ouse. On the 30th Mr. Walker took a nice brace of tench from private water near Hatfield weighing 4 lb. 8½ oz. and 3 lb. 8 oz., which are left with Mr. Lancaster, and will in due time help to adorn our club room. Mr. Bowen has been among the bream at the Welsh Harp, and has just weighed-in a 5 lb. carp. On the 2nd Mr. Young had three nice trout, weighing 9 lb., the heaviest 3 lb. 8 oz., from the Kennet.—H. ADEANE.

P.S.—Members of the club please notice Rule 17 will be adhered to. Specimen fish must be seen by a member who can determine the species of fish.

July 4.

ANSWERS TO CORRESPONDENTS.

P. F. DAVIS.—To obtain the caddis or cad-bait you must get a mud-scraper and pull some mud up on to the bank of the stream, and then pick out the caddis bait; the muddy bottom of a mill dam is usually a good place for finding the bait. A principal reason why angling is not permitted in the New River is that anglers used to pull the banks about so much getting this bait, which is a sure killer for dace and roach.—ED.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE RAILWAY PRIVILEGE TICKETS AND THOSE OF THE UNITED ASSOCIATIONS.

SIR,—Replying to the remarks of L. B. and "Justice," in reference to my letter of the 17th ult., in the first place, I must certainly congratulate these two upon the manner in which they try to shelve the main point at issue, viz., the compulsory extra subscription by those requiring a railway privilege ticket. Now, so far as the amount is concerned, it is so trivial that it is not worth the time, &c., used in discussing; but what I wish to impress upon the minds of the London club anglers is the precedent that it will establish of acknowledging compulsory payments, and that I, and the many on whose behalf I write, most strongly object to a precedent of this kind being established, and are determined to oppose such in every possible manner in our power, until altered and made optional. Speaking for myself, had I been a delegate upon that committee, I should have considered it my duty, before acceding to a tax being made upon the gentleman that sent me, to have laid the matter before them, no matter what power was placed with me, or the opinions of my fellow committee men upon the point, hence my mentioning "self-given authority."

I must acknowledge the cause for which the extra subscription is required is good and very necessary, although at the same time I am afraid that the poorer class of anglers from whom this subscription is required will derive very little benefit from it; however, I sincerely hope at the next meeting of the committee of this particular association they will see their way to withdraw this compulsory call and make it open and optional.

Now, as to the individual remarks of these respective gentlemen, I think I had better take them singly; and I will commence with the infallible L. B., and his prophetic soul, and I am sure he will not be offended when I say it is almost time it had departed, as it has been mourned over in the columns of the FISHING GAZETTE often enough. Now, I must certainly remark on the ridiculousness of this gentleman in mixing J. F. Hill, of 103, Kentish Town Road, up with F. Hill, the secretary of the North-Western Angling Club, and remind him that the former claims the right of enjoying his own opinion, and as far as L. B. remarks, in reference to my ignorance of the doings, &c., of the United Associations, I beg to assure him he never made a greater mistake in his life. But I had fully made up my mind to support same, until the privilege ticket forms were issued, when, I must confess, I was completely thunderstruck at the manner in which the subscriptions were to be raised, and had I not been fully versed in same (excepted the part objected too), I should not have taken upon myself to bring the matter forward. L. B. asks me what other way the money could be raised to carry the object in hand out? To this I have pleasure in replying and say, do as I state above, make it open and optional, and I feel positive the amount subscribed would not be lessened; and I know for certain there would be considerably more railway privilege tickets taken up, simply because it is the compulsory part of the business that is objected to. If altered and left in the hands of those interested in the cause, more especially the better-off class of anglers, I should then be in hopes of the individual subscriptions not stopping at the small sum of 1s., but often extending to 2s., or even 5s. and upwards, more especially after hearing that most valuable paper read by the editor (Mr. Marston) of this paper at the Society of Arts on Monday evening; and I only hope that that gentleman has decided to publish the same, so that it can be read by each and every individual at all interested in fish or fishing. In reference to "Justice," I think he will find I touch upon most of the points mentioned by him in my reply to L. B., and if he will accept same I shall be obliged. There is just one thing, "Justice" refers me to, the rules of the United Association, published in the FISHING GAZETTE of the 3rd ult. I have pleasure in informing "Justice" that I was perfectly aware of those rules, and there is nothing mentioned in same to the effect that every club angler requiring a railway privilege ticket must also take one of this particular association, otherwise the former will not be issued. I cannot help thinking that "Justice" must have been ignorant of this, and would advise him, before taking upon himself to give advice, to first make sure that the advice he is about to give is correct. If it is Rule 4 that he refers me to, and that is the only one that touches upon my question, part reads thus:—"The tickets of membership of the society to be issued by each of the associations with the privilege card, and that one shilling per annum, &c., be charged for same." Now, I defy "Justice" to say there is anything in that that would lead one who had nothing to do with the forming of the rule to understand that a railway privilege ticket would not be issued unless one of the United Association tickets was also taken.

In conclusion, I doubt very much if the different associations are justified in withholding the railway privilege tickets from those willing to pay the necessary expense attached to same; it is a grant by the different railway companies to club anglers through the associations, and they are simply the representatives of the clubs, and if a deputation of those gentlemen that object to this compulsory call were to wait upon the respective railway companies and explain matters, I query very much the result.

Apologising for taking up so much of your valuable space.—I am, &c ,

June 28, 1882. F. Hill.

[We sincerely hope that whatever complaints anglers may have they will not trouble the railway companies with them ; because we can pretty safely prophesy that if the companies, who have nothing to do with the disputes of anglers, are worried in this way, we shall wake up some fine morning and find they have completely withdrawn the splendid privileges they have given us ; and that will affect the poor angler most.—Ed.]

THE WHARFE SEWER-FED FISH.

Sir,—"Creel" tells us, on the authority of a veteran angler on the Yorkshire Wharfe, that (in the present) the above stream is nearly denuded of trout grayling, coarse fish, etc. Now, I know the river rather well from about Ilkley, for most of twenty miles up stream, through Bolton, Baden, Burnsall, Kilnsey, etc., and can speak to the fact that in many parts of the above length trout are plentiful; also grayling, up to about Grassington. The trout, near Ilkley, I never saw better as to condition in my life, and having fished it for over twenty-five years, and killed thousands within two miles of the above place, I ought to know. We have some pollution from lead mines, but nothing very bad as yet. As to town sewerage at the mouths of certain becks below Ilkley Bridge in 1876, I one day caught, with the worm, fifteen trout, weight 11 lb., and eight grayling, weight 6 lb. On another occasion, the year before, I caught twenty grayling, weight 18½ lb , but now all the good stuff is carried lower down and purified, so, of course, the fish do not congregate at the above mouths as of old. No doubt land drainage causes the water to run down fast, also large reservoirs for Leeds and Bradford, but the reservoirs reserved for compensation seldom let the river run dead low, except from Saturday to Monday.—I am, &c., Watchet.

[What will "Creel" say to this ? Not only are there plenty of fish, but here is a veteran angler lamenting the good old time when the sewers were allowed to empty into the river, and he could go and catch as many as he liked. How anyone can write and tell all the world that they catch fish which are attracted by the foul contents of a sewer we cannot understand. Come, "Watchet," let us hear how you can justify your taste (to say nothing of your other senses) for catching sewer-fed fish. Do you eat 'em ? If you give 'em away you ought to be ducked—unless you label them "sewer-fed."—Ed.]

THE YORKSHIRE WHARFE.

Sir,—In your last issue of the Fishing Gazette I noticed with deep regret the ridiculous and false description of the famous trout-stream "Yorkshire Wharfe," by a veteran correspondent of "Creel's." He may be a veteran, but not a veteran fisher of the river Wharfe, or surely he would never give vent to such unfounded and misguiding remarks. The river in the past certainly had more fish in it than it has now. Where is the river to be found where the fish have not decreased in number of late years ? He sets forth "the river is nearly denuded of all fish." I give an emphatic denial to the invention of such a statement, for it is nothing more or less. I will endeavour to prove to you, Mr. Editor, and your numerous readers, that there is, and will continue to be, plenty of fish in the Wharfe, that the water never was in such a state that it could be written with and used as ink. The part of river taken by "Creel's correspondent" is between Ilkley and Leeds, so I shall confine myself to that particular part of the river.

There exists at Otley and district, between Ilkley and Leeds, thirty gentlemen who are members of the Otley Angling Club, it being limited to thirty, and I am informed that fifteen of them are chosen by the owner of the broad acres through which the river Wharfe flows. They are strict preservers, employing river-keepers and watchers, pile-driving, &c., &c., for the safety of the fish. In the year 1880 they reared and put in the Wharfe between Ilkley and Leeds 15,000 trout, 1881, 20,000, 1882 25,000. There is plenty of chub, dace, and fine grayling. One Otley gentleman caught fifty trout last April in a few hours, in a distance of two fields' length, all with fly, some of them going ¾lb. and 1lb. I myself, caught in the same month sixteen trout and thirteen dace in eight hours in the length of forty yards, which length is fished by some angler every day. I have seen as many as fifteen fishing from the bank on one side of the river, so if that numbers can be caught in a place which (to use an angler's phrase), "is fished to death." It does not look like being almost denuded of all fish.

There is a regular and ample supply of water now as in the past, and I may inform "Veteran" and "Creel" (for seemingly they do not know) that the Leeds Corporation spent £180,000 in purchasing land and making a reservoir for no other purpose than storing water to supply wharves in case of drought. That reservoir has tons of fish in it, and the ratepayers of Leeds are denied the right of angling on their own ground and in their own waters simply because one pompous individual has possession of the sporting right, and keeps it for no purpose but to prevent any one from angling; and an angler may as well try to get to the North Pole by underground railway as gain permission to fish. So you see, Mr. Editor, we Yorkshire anglers are troubled, as well as Thames anglers, with riparian owners and river grubbers.

There never is any filth comes down the river Wharfe that poisons fish or makes them sickly, nor has it a cloudy appearance and a palpably offensive scum on the surface of the water. Any one who knows Wharfe knows that it is too quick a river for any scum to gather on its surface. When the water is low it is as clear as gin, and not like ink, as represented, and so requires all the art and skill man can devise to capture fish.

I think "Creel's" veteran angler of Wharfe must have been walking on the banks of the river Aire, and imagined himself a veteran angler of Wharfe, for I defy him to substantiate what he term "his general observations," which I convert into impulsive imagination.—I am, &c., F. P. H.

[We fully expected the Wharfe would be defended by some one better acquainted with it than "Creel's" friend.—Ed.]

FISHING NEAR KESWICK.

Sir,—Intending to visit Keswick some time during the summer, I should be very much obliged if you could inform me through the medium of your valuable paper, whether the fishing in Lake Derwentwater is free to anglers, or, if not, whether tickets can be obtained for fishing, and also their price.—I am, &c.,

Parkside, Higher Broughton, Manchester, H. L. L.
July 1.

[The following particulars are from the "Anglers' Diary":—"Keswick-on-the-Greta. Preserved by a club. Season ticket, 5s. There is also good trout-fishing in the Derwent and in Thirlmere. There is good trolling for trout in Derwentwater. Bassenthwaite Lake contains large trout and pike, also large perch. Derwentwater and all streams within five miles are preserved by the society. At the foot of Lake Bassenthwaite is the Pheasant Inn, which gives leave to fish. Overwater, three miles from Bassenthwaite, swarms with pike. Leave must be obtained." Keswick must be an angling paradise.—Ed.]

FISHING NEAR CORK—STATE OF IRELAND.

Sir,—In answer to your correspondent, Mr. T. G. Dixon, who makes enquiries about the fishing in the neighbourhood of Cork, I will answer his last question first. He will have no difficulty in procuring suitable apartments in the suburbs, either in Sunday's Well or the Western Road. If a stranger to the locality it would be better to spend a night at the Imperial or the Victoria, or if a more moderate tariff be desired, the Italian Hotel will offer every accomodation until private apartments could be procured, in obtaining which Mr. Dixon will have no difficulty. Referring to the fishing, it ought to be most excellent, from the innumerable rivers that intersect the country ; but unfortunately there is no preservation of trout and no restriction to size, and consequently anyone who has been accustomed to make good baskets with weighty fish on English rivers would be disappointed, for, as a rule, on most of the rivers the trout run about herring size or rather less, and it requires a deal of perseverance to get a couple of dozen at this season of the year, and the angler must be no bungler in the art.

The fact is, a place that should be a perfect paradise for anglers, from the want of preservation and the establishment of angling clubs, is every year getting worse, poisoning, netting and poaching being rife on most of the streams when the waters are low.

Still, at the same time, there are places where, by watching the weather and opportunity, an angler may have capital sport and enjoy himself to the utmost. I would advise your correspondent to try the Bandon river as affording him both salmon and trout fishing ; there are three open days in the week on three different parts of the river for salmon, at Innishannon, below Bandon town, where there is also good white trout fishing in the evening. He can also get permission from Mr. Connor, of Manch, a place near Dunmanway on the same river, where in high water the salmon take freely, and a good basket of trout can be had if there be a breeze. There is also a lake about a mile from Manch station, called Ballinacarriga, where one can have fine sport from a boat on a windy day ; in truth, from the source down to Innishannon, the Bandon river is about the best in the neighbourhood of Cork, as it is not overthrashed or sulky, like the Lee. In the warm evenings both white and brown trout running up to 2 and 3 lb. are taken by skilled anglers, who fish from canoes on the reaches of the Lee below the waterworks ; but it is loss of time to be whipping the upper waters, excepting on an exceptional day, which occurs about once or twice in the season. The tributaries are far better either with fly or worm, which latter, being peculiar to the limestone formation, any urchin who has any idea of fishing will procure for a few pence from the road sweepings. They are called "white worms" here.

The North Bride at Glenville, thirteen miles from Cork, is also a celebrated trout stream in high water, as also the Awbeg, from Butterant down to Castletownroche, where the fish are from ½ lb. to 2 lb., and on a favourable day will repay for going such a distance.

I have forgotten to mention the Lee is preserved for salmon the entire distance from Macroom, with the exception of a reach above Inniscarra Bridge on Sundays only.

Any further information I will gladly give should your correspondent come to Cork, or by applying to Mr. Haynes, Patrick Street, Cork, or any of the tackle houses here he will get all that he wants to know.

Trusting these few lines will be of service,—I am, &c., Cicestrian.

P.S.—With the exception of pike, coarse fishing is thought of little importance. I ought to advise Mr. Dixon to be careful what part he goes to, as the country is very disturbed. A few days since I was attacked on the bank of a river in the neighbourhood by a couple of roughs and most wantonly insulted, so much so that I had to knock one down twice and protect myself with the rod, which was smashed in the struggle. If you like, I will write an account ; but as I do not court notoriety, I have kept it quiet, as my wife and friends would be frightened out of their lives if I went out again. Of course it might never occur again to anyone, but such is the state of affairs here, that no one can be certain of being unmolested, for a respectable person in some districts appears a fair mark for these village tyrants. Trusting you are well and hearty, —I am, &c., C.

[Quite well, thanks, and we all are obliged for the information, though your postscript lends a romance to fishing in your country which ought to draw our veterans over in crowds.—Ed.]

LARGE BREAM.

Sir,—Yesterday, at Tempsford, fishing with Mr. F. W. Titmas, of Clophill, I succeeded in landing a bream weighing 7 lb., extreme length 2 feet, depth 8¾ inches ; and very shortly after my companion landed another, the fac-simile of the other. They were both—as also were the others we caught—in good condition. They are evidently coming on feed now. I have this morning sent mine to Cooper.—Yours, &c., Thos. Poole.

FISHING CLUB FOR JUNIORS.

Sir,—Can you or any of your readers kindly inform me if there is a fishing club for juniors ? My age is 17, and I wish to join some club where meetings are not held on Sundays, nor prizes fished for on Sundays. Should like to meet with a club about Highbury, Islington, Hoxton or Finsbury.—I am, &c.,

City Road, E.C. A. E. Smith.

[We regret we do not know any such club.—Ed.]

A MACINTOSH LOST.

Sir,—Last Sunday a macintosh belonging to a member of the Waltonians was left in the train. Any one bringing it to the Waltonians' club, Jew's Harp, Redhill Street, Regent's Park, will be rewarded.—I am, &c.,

Waltonian.

Errata.—Line four of the acrostic on the tournament should terminate with Lea, not Sea, as printed.

NOTES FROM YARMOUTH.

I CAN cordially endorse Pixie's statement in your last number. I have been staying in Yarmouth the last three weeks, and have been to Heigham Sounds.

If London anglers only knew the sport there is to be obtained here they would make a point of coming. These waters have only been accessible to the public for the last two years, as there was no railway communication.

Mr. Jack Rourke, of Yarmouth, will show strangers likely spots, as he is an old resident and an angler to boot. Mr. Laws, of the Waterman's Arms, Potter Heigham, will provide for anglers at a very reasonable figure.

You will see from the inclosed report from the *Yarmouth Independent* that I had a good day last week, the Editor passing me in the evening in his sailing boat.

I am pleased to say I was present at the first meeting of the Yarmouth Piscatorial Society on Monday evening. At Mr. Larks, St. George's Vaults, King Street, Yarmouth, the society made a good start both in members and shows of fish, the landlord weighing-in about two stone; others showed some fine rudd and roach. I hope the society will be useful, as there is a deal of illegal fishing carried on here.

J. H. White,
Hon. Sec. Brentford Piscatorial Society.

Horning.—After a fortnight's unfavourable weather, angling prospects have once more revived, and those patronising Mr. Thompson's hostelry at the Ferry have had abundant cause for congratulation. On Monday there were some good takes, ranging from 1 to 1½ stones per boat, among them being some fine bream and roach, also a grand specimen of the golden tench, which scaled 4 lb. 2 oz. During the week the water has been in very fair condition, and there is evidently no lack of fish.—*Yarmouth Independent.*

Potter Heigham.—The fishing at this pleasant little station on the Yarmouth and North Norfolk line continues very good, as more than one skilful votary of the rod and line can testify. The favourite spots are at the mouth of the Thirne, or higher up the stream beyond the bridge, and extending eastwards as far as the entrance to Kendal Dyke. In the Dyke, as also on the far-famed Heigham Sounds, some excellent takes have been made, notably some splendid rudd, which are just now in excellent condition, affording fine sport to the angler. On Wednesday a gentleman, who fills the position of secretary to one of the metropolitan angling clubs, started from the Waterman's Arms, a comfortable little wayside inn at the foot of Potter Heigham bridge, and before his return did some fine execution among the roach and rudd on the Sounds. Piloted by Mr. Jack Rourke, who is rapidly founding a reputation as a guide to these waters, our piscatorial friend was soon moored at a favourite spot, and so good was the sport that, after throwing over the smaller fry, he had put six stones' weight to the credit of his day's pleasure The finest of the specimens have been forwarded to London for exhibition in the club room, thus affording ocular demonstration of the attractions these waters offer to the London angler. The gentleman to whom we refer contemplates bringing the fishing at Potter Heigham prominently before the angling community on his return to town, and the report of his success should tempt others to visit the scene of his exploits.—*Yarmouth Independent.*

ONE-EYED PERCH.

When I wrote the account of the River Aire, in Yorkshire, I remarked that it was said that the perch in Malham Tarn, from whence that river derives its source, had but one eye, but at the time I could not quote my authority, although I was certain I had derived the fact from some acceptedly reliable writer. Some friends in Yorkshire very kindly wrote to anglers living on the spot, and to Col. Morrison, who had courteously given me an unrestricted permission, to fish the Tarn; and the replies altogether repudiate the idea. However, going through Blain's last edition of the "Encyclopædia of Sports," under the article, Perch, page 1069, I lit upon the following:—"A variety of this fish is found in Llyn Raithlyn in Merionethshire, in which the back is curiously distorted, but in other respects it resembles the common perch, which are likewise numerous in the same lake; consequently the variety is fixed, and is not accidental, or the members of it would breed with the others. Mr. Pennant was informed that the same kind was to be met with in the Thames, near Marlow, and *Fauna Suecica* of Linnæus; we are told also it is found in the small lakes near Fahlan." According to Sir Humphry Davy, the river perch branches out into several other species; for he regrets, in the interesting pages of Salmonia, that we have not naturalised the four kinds of them which are natives to the Danube. A still more singular perch anomaly is brought forward by Daniel, having been taken by him in the Docks at Blackwall; these had each a solid mass of fat placed on the ribs, but not adherent to them. The most remarkable circumstance, however, was, that the stomach, according to Mr. D.'s opinion, was wholly impervious, and had not been distended with food for some time. It is our opinion, however, that the fish made their way into the stomach of sombody, and we are equally convinced that a close examination would have discovered a way into the stomachs of the perch also. Another singular kind of perch to which we are indebted to Mr. Daniel, is found in Malham Water, not far from Settle, in Yorkshire; these grow to five pounds and upwards in weight, yet are all blind of one or both eyes, and therefore might have been advantageously seized on by the punster, who observed of his friend's monocular dog, that he needs must prove an excellent guard because he would have an eye out on all occasions. The *Perca scandens*, or climbing variety of perch, is now no longer a myth. I am not disposed to relinquish my one-eyed perch so easily, for the following reasons:—The water which supplies the Barnes reservoirs of the West Middlesex Water Works comes down through underground pipes from Hampton. Many fish from the latter get sucked in to the ducts, and if they are small are carried unresistingly onward, and suffer but little. But the jack, while the roach and smaller fish exhibit little opposition to the flow, makes a determined stand against the force of the stream, and has to succumb only by sheer exhaustion from time to time, and can never recover its lost ground. From Hampton to Barnes it is, say, eight or ten miles, but it is impossible to know how long these jack had been struggling against adverse circumstances, made greater as the natural fall of the land increases the force of the current. But this fact is known to the resident watchers and equally to me; that many of the jack were so thoroughly exhausted when they were thrown forth from the main into the broad daylight that they could be easily secured, and then were found to be partially blind, manifested by the sickly creamy colour of the eye. If this was the case under such a comparatively short deprivation from the light, no wonder that the fish found in the Mammoth cave in Edmondson county a little to the west and south of the centre of Kentucky, should be perfectly deprived of vision. See the "Mammoth Cave and its Inhabitants: Fishes, Insects and Crustaceans." By A. S. Packard, jun. and F. W. Putnam, editors of the *American Naturalist*. Published by the Peabody Academy of Science, Salem, Mass." Add to this, the Blind Fish "Stygiocola dentatus," from the caves of Cuba, give additional evidence of the vitiating effect upon the retina from the absence of light. Indeed we have but to go up to Milbank or Clerkenwell or Reading prisons and see the dazed released prisoners as they come forth into the full blaze of the glorious sunbeams, to witness the direful mischief solitary and gloomy confinement has worked upon the orbits of these incarcerated wretches; their eyes are the hue of gooseberries, and all "speculation" has departed from them.

Well now, Malham Tarn, as I have said, is the basin or source of the Aire, like the heads of most of the Welsh rivers that spring from lakes or Llyns, with this difference,—the Aire runs for full a mile and a half underground from the tarn before it springs to light. This subterranean channel or dislocation of the limestone is called by geologists a "fault," and herein, according to the nature of the limestone itself, there are dips, bays and lagoons, amidst which the fish, when washed in and not capable of stemming the main current, find a sanctuary in such places; but they are nevertheless prisoners confined in absolute darkness, to which they are destined to submit until exceptionally dry weather reduced the volume of the current, and their emancipation becomes itself. Taking the analogous cases I have cited, there is nothing unreasonable to infer that like consequence would follow, and that the loss of sight, either partial or complete, would result in the subterranean channel of the Malham Lake.

Creel.

NOVEL BAIT FOR PIKE.

I received a letter the other day from a valued friend in Dorset, who, knowing I had some influence with the noble owner of a remarkably fine piece of water of a very exclusive character, asked me to get him a single day's fishing. To me such an expression of a desire for an enjoyment within my means to gratify, was no little compliment, and the London post the next day carried a permission from the proprietors to my friend. Here is his reply, after the day's visit to the lake:—

"Dear —, I got yours by the noon post. Delighted! Started to Joe Bratt's for baits. Joe had gone to bury a rich aunt. Tried to throw the casting net with the assistance of Mrs. Bratt; we both wore buttons, and got caught up together in an extraordinary manner. Tried long, handled landing net round Dr. S.'s marble basin, but missed all the gold and silver fish. Went to clay pit, near Gibbett Hill, and got pestered with efts, which took the worm most greedily; nasty things to take off hook, whether crushed under foot or smashed with a stone. Happy thought, I will try efts! I did, and you will receive a third of the proceeds, 7 pike of 11 lb., 9 lb., 8¾ lb., 6 lb., 5 lb., and 2 of 4 lb. I was shaking hands with myself and going to get Cousin Tom to pat me on the back, when I thought I would make sure of my discovery, and turned to Blain's 'Encyclopædia of Rural Sports,' where, at pages 1021-2, my pride was cooled by finding nearly a page of close type upon this subject.' After a long dissertation on efts, it concludes by saying: 'As angling baits—it is not difficult to get the newts firm, the bottom of some stagnant pools by a sudden trawl of a fine rake, which gathering the mud, weeds, &c., brings those Lacerta with them; or they may be taken by a landing net. When used as living baits they should be hooked by the fleshy dorsal ridge, and in this way being occasionally allowed to come to the surface to respire, they will live a considerable time as a float bait; or they may be used as roving baits; they might also be trolled with as dead bait with a small gorge hook in which way they are frequently taken by jack in ponds.'

"I had a great aversion to these creatures at one period, but now that I know they will lure pike, my prejudice has dissolved. I recollect I had a similar antipathy to black beetles, but when I found that they were an irresistible temptation for chub, all my disgust both as to smell and handling them has departed."

Creel.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

NOTICES OF BOOKS, &c.

FISHING AT CONNEMARA. A paper read before the Gresham Angling Society by Mr James Callaghan:

THIS is a very pleasant account of a fishing excursion in the West of Ireland. Mr. Callaghan gives all those useful hints and details which will enable an angler to follow easily in his footsteps, and which the majority of angling writers so carefully avoid giving. Our author tried his hand at Salmon-fishing for the first time, and caught many good fish. This paper will prove by no means the least interesting of those which will appear in the first volume of the "Transactions" of the Gresham Angling Society, which we hope to see shortly.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S

21S. A GENUINE CUCKOO CLOCK FOR 21S.

654 Sold in a few weeks. A true and guaranteed fact sworn.

MODEL SWISS CHALET.—We have imported a great quantity of really good Cuckoo Clocks, and, having purchased at a considerable advantage, we intend to offer the same to the readers of the FISHING GAZETTE at less than one half of the ordinary cost price. Every one is warranted and examined prior to leaving our warehouse. They cannot get out of order. We shall offer them for a short time only at 21s. each, and we honestly assure every reader that the ordinary retail price for the exact same clock is from 4?s. to 50s. People who have seen them already express their great surprise. The mechanism and arrangement is admired by all. At Twelve o'clock the little door at the top flies open, when out pops the Cuckoo, who "cuckoos" twelve times, and at the last stroke returns to his parlour, politely closing the door after him. Each time the bird "cuckoos" he opens his mouth most naturally. At the same time the clock strikes. The clock not only strikes and "cuckoos" the hours, but even the half hours. To prevent any feeling arising as to the actual impossibility of obtaining a good Cuckoo Clock for the price, we agree to return the money in full if not found as advertised. Read the following testimonial: "Sheffield, October 25th, 1880.—Gentlemen,—Yours received, also box: the Cuckoo is safely to hand. We cannot make out how you can sell such a wonderful and splendid article for such a low price. Please send another per return. Enclosed is P. O. O. for 21s. Several of our friends say they shall write to you for one. Yours faithfully, HAROLD BARTLEET." Orders must be accompanied by P. O. O. and Coupon as below. Enclose 6d. for packing case (half cost).

FISHING GAZETTE COUPON.
Entitles holder to ONE GENUINE CUCKOO CLOCK on receipt of 21s.
(Signed)

HILL, BARTON and CO.,
Manufacturers and Importers, 16, PARADE, BIRMINGHAM.
ESTABLISHED 18?2.

76 A WATCH FOR 7,6

HILL, BARTON and CO., have purchased under special circumstances over 100 DOZENS of good cheap WATCHES, and now offer the same to the readers of the FISHING GAZETTE at the RIDICULOUSLY LOW PRICE of 7s. 6d. EACH. Every Watch will be sent out carefully timed and warranted per return of post. They have good strong silver-plated German silver cases, strong glass, hard, with enamelled dial, best steel hands, and a well finished leverised movement. They are guaranteed splendid timekeepers. Sixpence extra must be sent for postage. Superior keys fitted and enclosed in box 3d. extra. Leather bags, 2d. extra. ENGINE TURNED CASES 1s. EXTRA, well recommended. We will send three for 20s., but cannot make any further reduction. Catalogues of more expensive watches, profusely illustrated, post free, two stamps. HILL, BARTON and CO., Factors and Importers, 6, PARADE, BIRMINGHAM. Established 1862.

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted), 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

LYNMOUTH, NORTH DEVON.

SEVEN MILES OF TROUT FISHING

in the River LYN.—Anglers visiting N. Devon can have all particulars respecting the above from the Committee of the Lyn Fishing Association, on application to the Treasurer, Mr. HEYWOOD, BATH HOTEL, LYNMOUTH.

(Salmon fishing in the season).

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

Pearce, Essex Tavern, 41, High Street, Aldgate, E.C., or at the hotel.

SALMON AND TROUT

GREENHEART FLY RODS.

Why our rods are celebrated for their action, durability and finish is that, being makers on the premises, we have a large stock of well-seasoned, tough, straight-grained, springy wood.

No cross-grained, knotty, unseasoned timber is used, and all rods are hand-made.

Whippings are of the very best silk, and ferrules of the best sheet brass, thoroughly hammered.

Approval always allowed. Price lists gratis.

Address—

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. Sampson Low, Marston and Co., the Proprietors.

The Fishing Gazette.

SATURDAY, JULY 22, 1882.

BLACK BASS IN ENGLAND.

The Gresham Angling Society, named after the worthy Norfolk knight who, saved in infancy by grasshoppers, lived to erect the Royal Exchange in London, had a pleasant meeting on Wednesday evening. Their own quarters in Bishopsgate were not conveniently large, and a move was therefore made to the Masons' Hall Tavern, Basinghall Street, where a large number of gentlemen put in an appearance to hear a paper read by Mr. G. S. Page, President of the American Fish-cultural Association, entitled "Fish Culture as Carried on under the Auspices of the United States Government, with Special Reference to the Introduction of Black Bass into English Waters." Unfortunately Mr. Page was taken seriously ill in Paris and could not attend, and the promised chairman of the night (Mr. R. B. Marston, Editor of the Fishing Gazette) had to read himself up at the eleventh hour, and act as a substitute. Mr. Charles Bates was called on to preside, and among others present we noticed Mr. T. Crumplen, the indefatigable secretary; Mr. W. Oldham Chambers, Lowestoft; Mr. P. Soman, Norwich; Dr. Theodore Cash, son-in-law to Mr. Bright, M.P.; Mr. C. Hatfield, St.Martin's Lane; Mr. R. Ghurney, secretary to the Anglers' Benevolent Society; Captain Alfred, Moorgate Street, Mr. C. C. Capel, Foots Cray; Mr. S. C. Harding, the Grove, Ealing; Messrs. C. Murphy, Winkworth, T. Jowett, R. C. Clark, Watson, Cartwright, Archer, Ayres, and representatives of the chief angling societies of London.

In the centre of the room was one of Kessell's self-acting fountains, a handsome ornament for table, drawing-room or conservatory, combining also an aquarium and flower-stand, playing for hours without attention. In this were placed four bass taken by Mr. Marston on Monday from the waters in Burghley Park, by permission of the Marquis of Exeter, and which later on were sent to the Westminster Aquarium by Mr. Marston.

The Chairman (who had only just returned from a fishing excursion in Norfolk, whither he was returning next day) having briefly introduced the lecturer,

Mr. Marston commenced by regretting the unavoidable absence of Mr. Page, and said that he felt sure that Mr. Page had never recovered the serious illness induced by his unceasing attention to the black bass which he had this spring brought over for the Duke of Sutherland. He hoped before Mr. Page left England he would address them on the subject. Mr. Marston then stated that until within an hour or two of the meeting he had hoped to get Mr. Page's paper to read to them, but Mr. Page was too ill to prepare it. He had for some years past taken great interest in the black bass, and with their permission he would give them such information about it as his knowledge and the very short notice he had had allowed. (Hear, hear.) He then gave the history of black bass acclimatisation in this country, including Mr. Begg's importation in 1878, Mr. Silk's in 1878 and 1879, and Mr. Page's in 1882 and announced that for some time past he had been in communication with the Marquis of Exeter and one or two other gentlemen with a view to sending Mr. Silk over again for another lot of black bass. He was sure they would be glad to hear that the funds necessary had already been subscribed, and that Mr. Silk would sail in September—(hear, hear)—and hoped to bring back at least 2000 mature black bass. (Cheers.) Mr. Marston then drew the attention of the company to the four fish in the aquarium. These fish he had caught in Whitewater, a lake in the Marquis of Exeter's grounds, and he said that they made a very plucky resistance. With the exception of the two which Mr. Silk caught last year, these were the first black bass ever caught by an angler in this country; but he looked forward confidently to the day when they would be plentiful in our rivers. The only objection he had ever heard urged against the fish by English anglers was that it would exterminate other fish. He did not for a moment believe that, and read letters from American authorities proving that black bass had existed since the country was discovered side by side with the various coarse fish and minnows, &c., and no diminution of the latter had ever taken place. If the black blass could get plenty of its natural food—freshwater shrimps, crayfish, caddis, &c., it would not trouble the other fish at all. Of course no one intended to put the fish into trout and grayling streams. The lecturer then described the spawning, hatching, growth and distribution and habits of the black bass, and also its sporting and food qualities, giving the American angling writers—Professor Ellzey, Dr. Henshall, and Messrs. C. Hallock, "Frank Forester" and Mr. Seth Green—as his authorities, and quoting the late Mr. Frank Buckland's opinion in favour of the introduction of this fine fish. He referred with regret to the absence of his friend Mr. W. Senior, "Red Spinner," who was also an enthusiast for the introduction of black bass into this country. In conclusion, Mr. Marston invited discussion, and offered to do his best to answer any questions relating to the fish which might occur to the gentlemen present.

Mr. Crumplen advised caution in introducing bass, which he feared might depopulate our waters.

Mr. Marston quoted American authorities, and said they would not prey on our coarse fish while they could get freshwater shrimps, crustacea, worms, &c.

Mr. Crumplen said he only threw out this in order to raise discussion, and get information. For his part he should like to see Mr. Bass tackle Mr. Jack. (Laughter.) He then moved "That this meeting considers it advisable that the black bass should be introduced into this country, and that the Gresham use its best endeavours for that purpose."

Mr. Clark, in an amusing speech, seconded the resolution, which was carried unanimously.

The Chairman called upon Mr. Chambers to make a few remarks, and complimented that gentleman on the success of his exertions as hon. sec. of the pioneer exhibition at Norwich last year, which led the way to the great international gathering now in preparation for next May in London.

Mr. Chambers, on rising, was received with cheers. He described in an interesting way his experience with the bass given him by the late Frank Buckland, and said the Norfolk and Suffolk Fish Acclimatisation Society were ready to contribute £10 10s. towards the object of the resolution, Mr. Lewis Buxton would also give £10 10s., and he had no doubt Colonel Barne, M.P. (who had seen much sport with the bass in Canada), would materially aid the fund. Mr. Chambers gave a cordial invitation to the Gresham Club to visit the Norfolk and Suffolk waters and fish for bass—when they arrived. His society were willing to send out by Mr. Silk a quantity of live soles and turbot—unknown fish in America—in exchange for black blass. His expenses would be necessarily heavy, about £150, and he would bring back 2000 fish, very different this to the 10s. each they now cost here. In his (Mr. Chambers) opinion the scheme should be encouraged in every way. He then, by request of the chairman, detailed the success he had had in cod-hatching at Lowestoft, usually deemed an impossibility. By the aid of filtered sea-water kindly supplied by the G.E.R. Company, he had since last January hatched off several thousand cod, as an experiment, which was perfectly successful. His practice of fecundating the eggs of live and dead fish—of course after they had left the hook only a short time—was also exceedingly interesting. Some of the spermatozoa which he had sent a long distance was very lively at its journey's end. He believed those experiments would lead to industries of a novel and successful kind in this country. (Cheers.)

Mr. Jowett, an American gentleman, next told his experience with bass at Trenton, U.S. It was an excellent article of food, its flavour being preferable to salmon, selling readily at 20 cents per lb. Why it was called black bass, when its flesh was so purely white, he could not tell. Mr. Jowett answered several questions put by the members.

Mr. Chambers proposed, and Dr. Cash seconded, a cordial vote of thanks to Mr. Marston for coming forward at the eleventh hour and giving them such valuable information, the chairman adding that Mr. Marston was ever ready to help anglers. Carried by acclamation. Dr. Cash believed bass would be as successful in English streams as in Burton bottles. (Laughter.)

Mr. Marston heartily thanked the members, and hoped they would soon have sport with the bass. He moved a vote of condolence with Mr. Page in his sickness, which was seconded by Mr. Ghurney and carried. Mr. Marston then described the interest taken by the American Government in fish culture, and trusted the coming exhibition would lead to the establishment of regular nurseries for stocking our home streams. He concluded by reading a lengthy paper on the subject by Mr. Seth Green from the *American Field*.

A general piscatorial discussion now ensued, and Mr. Marston displayed a number of beautiful large chromos of American fish—from the snapper to the shad—each of which he briefly described and Mr. Jowett supplemented.

Captain Alfred then offered some interesting remarks on the sport afforded by the Thames. He also described the result of another day's netting at Sunbury, an account of which will be found elsewhere.

Mr. Hatfield deplored the fact of the Thames not being sufficiently protected. What, he asked, was the use of stocking the river when it was netted to such an extent. The steam-launch, too, was very destructive of barbel fishing; they ought to be better protected, especially during spawning time. His association—the West Central—would be glad to aid in propagating the black bass, which would find the pike a ticklish customer to deal with.

"Kingfisher" advised that in any Act they might get, a minimum penalty of £10 should be inflicted on these launches. The magistrate should have no discretion in the matter. A fine of 40s. was a farce.

Mr. Crumplen urged that the speed of launches should be regulated at certain seasons; it was one of the most serious questions the law or angler had to deal with.

Mr. Winkworth feared the action of the Thames Conservancy in granting licenses to net the river here and there. They sought for very arbitrary powers, against which he hoped the members would protest.

Captain Alfred showed how harshly the riparian owners behaved towards anglers on the Thames, and believed the Conservancy Board would behave reasonably if properly approached.

Mr. Ghurney thought so too.

Several other members having denounced what they called the "infamous" bye-laws sought for by the Conservancy,

Mr. Harding moved and Mr. P. Soman seconded a cordial vote of thanks to the chairman, who briefly acknowledged. Their thanks, he thought, were eminently due to Mr. Marston for his very able paper—got up, too, at the last moment; to Mr. Chambers for the interest he took in fish propagation generally; and also to the Press for its great assistance on all occasions. The proprietor of the *Norwich Argus* had come a long journey that evening in order to be present at their meeting, and (glasses having now made their appearance) he begged to propose that gentleman's health.

Mr. Soman expressed his thanks and the pleasure he felt at being amongst so many friends, some of whom he had met at the Norwich Exhibition. The discussion initiated by Mr. Marston had afforded him much instruction, and he believed considerable good would result from it by the introduction of a fine sporting fish into our rivers and broads. He should be pleased to welcome any of the members down into Norfolk, where they would find the waters in splendid condition and well preserved, with comfortable quarters and easy of access by rail.

The piscatorials shortly afterwards floated homewards, well satisfied with their successful meeting.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

NETTING OF RESERVOIRS.

4400 lb. weight of perch, barbel, bream, roach, dace, gudgeon, and bleak, all sizeable fish—18 jack up to 8 lb.—and a Thames trout of 8¾ lb. This was the result of netting a second reservoir of the Chelsea Water Works, below Sunbury Lock, on Monday last, by the Thames Angling Preservation Society. The work commenced soon after nine o'clock, under the direction of Mr. Thomas Spreckley, president of the society. There were present as assistants, in addition to an organised staff of keepers, and men engaged for the occasion—Mr. John Knechtli, Mr. Samuel White, Mr. W. A. Crump, Mr. F. H. Lemann, Captain Alfred, Mr. Alfred Nuthall, Mr. C. P. Wheatstone, Mr. W. H. Brougham, Mr. John Graham, Mr. T. Hiscock, Mr. W. Senior, Mr. Back, Mr. W. A. Abbots, Mr. Simpson, Mr. Russell Knapp, &c., all of whom worked admirably under the orders of the general. The nets were supplied by Mr. Lewis Gibson, of Putney, and also two large peter boats for the removal of the fish; the steam-launch belonging to the Thames Conservators was liberally granted for the towing of the boats attended by Mr. Henry Little, the Conservancy superintendent of the Lower Thames, who rendered effective and useful help. Mr. Simpson, the engineer, Mr. L. Lea, the resident engineer, and Mr. Hilliard the resident manager, afforded every facility for securing the fish, the water being drawn down to a very limited space. It was expected the work would be completed in a few hours, but it occupied until six o'clock, and there was not a single bad haul. The fish were taken in zinc pails into the punts, partly filled with water which were placed on the adjoining reservoir, under the charge of Captain Alfred, and then towed down to the nearest point bordering the Thames. The first distribution was made at the back of Tagg's Island, at Hampton Court—the second in Sunbury Race, and the third at Walton Reach, under the charge of Mr. W. H. Brougham, who was ably assisted by Mr. S. White, Mr. John Graham, Mr. Thomas Hiscock, and Mr. Henry Little, the extraordinary sight of fish being witnessed by numerous bystanders, some of whom were invited to place some of the nets full into the river. The two final distributions were made above Shepperton Lock, and at Chertsey, under the charge of Mr. Alfred Nuthall, whose assistance on these occasions is always very great and untiring. The head river keeper for this portion of the Thames, Alfred Thompson, was appointed to check the pails as they were removed from the net, each pail having been estimated to contain 22 lb. weight of fish, and his report at the close was 195 pails full, exclusive of the jack and trout previously referred to, altogether representing a total of 4500 lb. weight of fish. It is not intended to net the other reservoirs until the end of September, and some idea, may be formed of the quantity of perch in the next reservoir to be netted by one of the officials in a day's angling last week, getting ten dozen of fine perch up to 1 lb. each, and each of these reservoirs occupies an area of ten acres The sight of the last haul of the nets, on Monday last, baffles description—in addition to a net laden with fish, hundreds upon hundreds were literally dancing about in the mud, and nearly a punt load were caught by the hands in their dirty condition. Very few fish throughout the day came to grief, and they were principally bleak which were not counted. The arrangements were thoroughly perfect, and the splendid gift of fish by the directors a most valuable addition to the river. It is the duty now of the anglers and angling clubs specially to contribute to the heavy expenses attending these netting expeditions. B.

THE ARUN AND TRIBUTARY (WESTERN ROTHER) SUSSEX

Rises in St. Leonard Forest, about one mile from the Hammer and Hawkin's ponds and takes a lively course past the town of Horsham, holding trout, roach, &c., the whole of the way. Station, London Brighton and South Coast Railway, Inns, Anchor, Kings Head. It takes in the channel brook, which has a fishy reputation. After passing Slinford it turns southward to the east of Loxwood and between the church villages of Wisborough Green and Billinghurst. Thence the river flows by Pallingham to Stopham, close to which it is joined by the Rother from the west.

The Rother which contains its fair share of trout, has its rise between Emshold and Hawkley, turns southward and nearly touching Liss, on the direct Portsmouth Railway, gains volume on the right from a large pond to the east of Petersfield (Direct Portsmouth Railway). Inns. A mile further is Sheet Mill, which is worked by a brook from Steep Mill. There is a good-sized pond on Petersfield Heath. Then after about a ten mile run, it enters Sussex and after passing several church villages, it skirts Cowdry Park and its fine ruins, the grand old house having been destroyed by an accidental fire in 1793, the Rother flowing along its entire west front. About this the effluent water of a lake from Down

Park enters. Next we come to Rogate (Station, London and South Western Railway) and afterwards to Elstead (same rail). Here are a triplicate of lakes, close to the lakes which contribute their supplies to the Rother. Our next place is Chilhurst, where a brook enters from the basins of Cook's Pond, Harling's Cambs, and several other pieces of water, nearly close together on Newick Common. Below this is Liphook, suggestive of pike fishing (Direct Portsmouth Railway). Inn, Anchor. The Hammer Ponds and others, are half an hour's walk from this. In another hour's ramble we fetch Midhurst (London and South-Western Railway) (Inn, Eagle), where we follow a brook up to a likely lake on the Common, but not before we have visited a piece of water near New House Farm, nor should that on Ambersham Common be passed nor Cook's Mill Pool, near Fernhurst, Luggershall Mill and Collinghurst Park Ponds, or River Park, with its store of trout. Some of the finest scenery on the South Downs, surrounds us on every side, but accommodation is very scant at the primitive village inns. But the plentitude of trout in almost every brook will make up for this and railway stations are within reach. Indeed the smallest rills and running waters, even by the public road sides are alive with fish of not insignificant proportions. We now reach Petworth (London Brighton and South Coast Railway), and the magnificent demesne of Lord Leconfield. Hotels, Swan, Half Moon. In the vicinity is Bartan Park Lake, in which are pike, perch, carp, and of course, tench. Indeed, the latter fish are met with in great abundance and fine size in almost all the ponds, whether open or private, throughout Sussex. There is another attractive piece of water at Egdean before the Rother mixes its flow with the Arun at Pullborough.

Within a mile of Pullborough Station (London, Brighton, and South Coast) (Inns, Swan, Five Bells, Red Lion, White Hart), is West Chiltington, and on the common are two ponds which we can recommend, as they are too full of tench, which may be seen by their keeping an element which would be otherwise perfectly clear, more of the character of diluted mud. Bignor Mill, with its pool and a lake yet nearer on the same contributary, will be found on the right. We now approach Amberley, London, Brighton, and South Coast Railway. Inns, Black Horse, Fighting Cock. Our next stage is Barpham and its pretty inn the Black Rabbit, from the garden of which, reaching to the stream, Arundel stately castle looms upon us, and from its richly wooded heights dominates the valley.

Arundel, London, Brighton, and South Coast Railway. Inns, Norfolk Arms, Crown, Bridge). On the bridge there formerly, (and may still) resided one Slaughter, an excellent fisherman, who went out with anglers bass fishing, of which many come up with the tide as far as Barpham.

Mr. Constable, the brewer of Arundell, has for years been attempting to stock the brooks of the lower Arun with trout; but yet, as with the Thames, such laudable endeavours have only been attended with partial success. Leaving Arundell the river proceeds toward Angemring, where four lakes pay tribute to the main river, on the right, at New Place. Ford is the next station, and at length we reach the sea at the small town and port—but a most remarkable healthy place is Little Hampton, off the old jetty of which grey mullet and bass are frequently taken by rod and line.

With the aid of a short canal near Hardham, the Arun is navigable from its mouth to Palingham Quay, a distance of twenty-two miles, and here commences the Arun and Wey navigation, which running parallel with the river as far as Loxwood, leaves the county in that vicinity, and joins the river Wey between Godalming and Guildford in Surrey. We allude to this canal as if it still existed, but from the little traffic and consequent tolls, the locks have suffered great neglect, and leakage has been the consequence; in fact it has been permitted to go to ruin, and now even small boats of little draught cannot traverse it. There are, however, some portions of the old river, which this canal was intended to improve which would well repay a visit from the angler.

It should be noted that the term "brook" is generally used in Sussex to signify a marsh as well as a streamlet, a circumstance which has led many writers of guide books astray. Sussex is still famous as in Fuller's time, for six good things: the Amberley trout, a Chichester lobster, a Selsey cockle, a Pullborough eel, and a Rye herring." The Amberley trout, however, turn out to be salmon peel.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

CHUB-FISHING IN SUMMER-TIME.

By J. P. Wheeldon.

DO you know "Pangbourne Pollards"? No! Bless me, why where can you have been brought up man, not to know the best bit of chub-water on the Thames. However, it's your loss not mine; so, that being fairly good-natured towards my fellow men, I'll try, in my own fashion, to make up for the deficiency. Know then—although, mind you, the rose by any other name would smell as sweet—that Pangbourne Pollards is simply, may be, a local name for a succession of irregular crinkly cranky, warped, snarling looking and generally cross-grained set of decayed withy stumps, which line perhaps, in company with sundry noble old willows, for half a mile or more, a succession of meadows—of which "Bulsby's Piece," directly facing the church and the Swan's Ait, a little island overgrown with withies, and always gay with meadow sweet, loosestrife, and creamy blossomed arrowhead, is the first you come to, just after shooting through the arches of that old wooden horse bridge. Now you know it? Ah, I thought so, so that all the rest becomes quite plain sailing.

The banks, you'll remember are literally honey-combed with rat's holes, many of which are masked with a quantity of weeds, wild trailing-plants and flowers, hanging down from the edge, where the short daisied turf ends and the wilder growth begins. Very old are these pollards, so old that the roots have worked down through the clayey soil and form a perfectly impenetrable network of security below, Then weeds, and a curious mossy growth of brownish silky-looking fibre, have grown upon the roots, and at dead low water you may see this stuff swaying backwards and forwards in the sharp run of the stream, and forming quite a little fringe before the front, side, and back doors, of many a subaqueous haunt of shoals of great pink-lipped chub, which here love to lie, revelling in the cool shade.

Oh, ah, the shade, I've told you nothing about that. Well, you can, if you like, feeling in an especially lazy mood, let your boat drift down under one of the willows, and letting her swing with the sharp stream, you may lie down in the bottom, with your head on a cushion, and there moon moonily. The blue sky above looks terribly far away, as seen through the waving boughs. The ripple at the bows, sounds dreamily sleepy and seductive; a drowsy feeling which is even heightened by the roft rasping whisper of the reeds and water-flags, as their rough stems creak gently, when moved by the sighing wind There is not a sound else, save, may be the sharp twitter of the swallows, dashing swiftly up and down stream, the scream of a swift high overhead, the croak of a moorhen in the reeds, or the dulled, far off crack of the scarlet-capped bargeman's whip, as he lazily lounges down the towing-path, side by side with his old flea-bitten grey mare, now singing a snatch of rude melody, now idly kicking pebbles into the sharp stream, and watching the rings which are no sooner formed than gone, as the river hurries along, singing it's own sweet dirge as it goes.

Flop! Ah, what was that? Well it was a big chub, I fancy, and ten to one that is the exact place where he lies; see there, just where that old rotting stump rears its moss-grown head out from the swift, clear water, and the eddy curls fretfully chafing round the obstruction. Let us fancy that it is an August morning at an hour long before the busy world is stirring, when mists lie yet heavily on the meadows, when the shapes of fat sleepy cattle loom gigantic through the wreathing clouds, and when that curse of the river, the steam-launch, is yet at her moorings. Believe me, this is the time, and the only one, if you are intent upon killing some of these big chub; so that we'll just follow old Bill down to the boat and drop quietly down stream.

At early morning, or in a place, if such a one can be found nowadays, where the fish are not harried to death by the infernal wash of launches and boats the live-long day through, there is no need for delicate tackle. For rod, give me a light handy grilse rod with plenty of swing and play in it, a fairly heavy line, with which one can throw straight and clean, and a cast of medium salmon gut. An artificial cockchafer in June and July, or at all times a big corpulent humblebee, are invariably good lures. So also is a large roughly dressed black palmer, the body wrapped with silver tinsel; but, for a certainty, commend me to a big showy fly with black hackle and emerald peacock's harl mixed, for body, wrapped with silver tinsel. The wings to be made large, and of dark turkey with an underwing of emerald peacock's herl, and an atom of jungle fowl. Then "tip" this gentleman's tail with half-a-dozen live gentles—these beat the kid glove and washleather theory into fits—and try it, thrown clean under the boughs, the farther in the better, and tell me at the end of the day what you think of it.

Keep the boat as far away from the boughs and the hollow banks as is possible. Always try well those bits which are sharp and very streamy. If there is any cover at all, it is just there that the big fish would be certain to be. Throw the fly bang in bodily, it is wonderful how easily this difficult matter comes to hand after a little practice, and if the line falls upon the water with a sounding plash, so much the better; for doubtless these great corpulent chub are lying under those cool greeneries in a half sleepy condition, waiting and hungering after what the fates may choose to send them; the lucky fellow who gets it perhaps thinking at the "flop" of the insect overhead what a remarkably fat and oozy-looking chafer has fallen to his special share. Then he "goes for it" at once and bolts it without the smallest ceremony. Now for one final word of advice. Bang the hook well into him, and that being done, instantly drag him out, neck and crop from the hidden danger of those old roots and masses of tangled rubbish. If he once gets under or round a root, the game is up at once and you might just as well break the tackle and have done with it. It is as well to remember that at the instant the fish takes the fly, he must, of necessity, be in clear and open water. A vigorous backward sweep of the rod—vigorous of course, aided by such strong tackle, but even then properly tempered by wrist and arm—will often so astonish him, even if a very big fish, that he gives instantly, only thinking apparently of real fight, until it is too late, and he is vainly floundering about in deep water.

Another very excellent plan is to cast with a lump of fat tough greaves, or a large bunch of gentles, on a triangle. Let it sink a little, if it is not taken directly it touches the surface, and then, pulling a yard or two of line, turn the winch, let the current take the bait just where it sets itself. A lob worm also, or rather the tail of a lob, bright and well scoured, will often kill in a clear, low water, when other and larger baits have been rejected. With this bait don't strike so hard when you feel a touch, because it is just on the cards that a trout may be lying in the place affected by chub, and where the latter's tough, leathery mouth holds good, the former's tender jaw may be torn, and mangled no purpose.

Dibbling for chub is pecliarly exciting, and glorious fun where the fish run large, and the ground to be operated upon difficult. Having found out the particular holes where the fish lie—this in itself is half the battle—it is a good plan to prospect the place the day before, and then and there decide upon a plan of the campaign. No good was ever done yet, save by the very rarest good luck, by haphazard fishing. It might have succeeded, and doubtless did, in those rare old days, when Dame Juliana Berners, the Prioress of St. Albans, practised her "Fyshhynge with ye angle," but it will hardly do in ours. Every fish that swims is remarkably wideawake, nowadays, and chub in particular; so that let me advise an absolute excess of caution, when approaching any known haunt of the loggerheaded gentlemen.

Supposing that the water is fairly well protected by trees and old stumps, I would advise the use of a moderately long and stiff rod, with small standing rings. Use a Nottingham winch, with forty to fifty yards of fine, yet strong, waterproofed running line, and a gut link attached, of, say, a couple of feet in length. Before attaching this length of gut, which should be armed with a stout perch hook, run on to the winch-line a small perforated bullet, the smaller the better, or a large swan shot. The little bow formed in fastening the running line will be amply sufficient to prevent the bullet from slipping down, and on to, the gut length. The apparatus is now complete, and the next thing to be considered is the question of bait.

One of the best of all is a nasty one, to wit, blackbeetles. If the intending operator be unhappily an indweller in London, he may probably have no difficulty in obtaining these repulsive-looking tit-bits for the genus chub from the shades of his own kitchen. I say shades, because it is necessary to start on a black-beetle hunt—a very exciting process, by-the-bye—when the place has been for some little time silent and deserted, even by those ministering angels whose mission it is to bake and brew, dust and stew, and sneak all the cold scraps and unconsidered trifles in the way of baked meats or pies for the policeman. It is a nasty hunt, doubtless, but it has this advantage, that it can be prosecuted without the aid of either a southerly wind or a cloudy sky, and with no other adjuncts save a tallow candle and nimble fingers. "Scent" as a rule is good, particularly so; and I would strongly advise the free use of soap and water after the operation, otherwise, if supper follows, one may be unpleasantly reminded of the chase.

A little perforated zinc can, with a small sliding door, is as good a vehicle for carrying "the beadles" in, as anything. Having crept up to the water side as stealthily as may be, and gained shelter and safety from the keen eyes of your anticipated prey extract a beetle from the box, and very kindly, and in charitable fashion "nick" the point of the hook in through the skin of the back. Then wind up the running line, until the bullet touches the eye of the top ring; gently, very gently, poke the rod between the trunks of trees, or openings in the foliage, and after getting it fairly through and over the hole, keep it still for a few moments so that in the event of the suspicious fish below, always awake to even a suspicion of danger, having caught sight of the moving rod, its perfectly still position may once more lull them into a feeling of security.

Holding my left hand well up, and steadying the rod, the dexter finger of the right may now be placed upon the outer edge of the winch, and putting only so much pressure on as will be sufficient to prevent any overlapping, let the baited hook drop quietly down until the belly of the beetle touches the water. The weight of the little bullet will be sufficient to effect this, and the instant it touches, that instant check the winch. The insect, very little hurt by the baiting process, begins to kick about vigorously, making little rings on the surface, and opening his wing cases. It is wonderful to see the great chub come up and sail slowly round and round the tempting morsel. First one makes a sidelong dash at it, yet stops short, eyeing it gravely and suspiciously. Then another comes up to it boldly but stopping in the very nick of time, sinks slowly down again into the safer depths of the hole. If they show the white feather in this fashion, keep still as a mouse and out of sight, but quietly reel up a few inches of line, lifting the beetle at the same time, and then just as quietly drop him down again, a little distance away from the orignal spot. So sure as they mean business at all, they'll have it then, and if they don't, try somewhere else.

It is difficult to advise upon the conduct of operations, supposing a fish takes the bait boldly, and turns down again. Strike him of course, at once, yet rather let it be a steady sweep backwards, in lieu of a sharp strike, and then get him out of the hole as quickly as possible. Upon the result of the first moment's battle will very probably depend the other chances which the angler may have, of getting other fish from the same hole. If everything is effected swiftly, and with little noise and splashing, well and good. If, however, the hooked fish once gets to the top, and begins floundering about, or flies up and down with fear-hastened speed, my advice would be to leave the place at once for an hour or so and try another.

A small frog, used in precisely the same manner, is a splendid bait for a big chub, and so also is a humble bee, one of those big orange banded fellows which one sees hovering over the clover blossoms, or buried deep in the sweet unstained cup of blossoms of the white convolvelus. Towards nightfall, and whereever there are high hillocks of bent and grass, a quick eye will not fail to notice the presence of those great white "ghost moths," which would seem to specially love wheeling backwards and forwards round such places, or dancing with strangely curious and erratic flight up and down, up and down, over the tops of the tallest branches of grass. These fellows, put cautiously on the hook, and dibbled over the surface of the hole are certain to command attention; and, if you will hook a five-pounder, just as the last rays of daylight are giving place to the advance of the gloomy night, it will be a little circumstance not easily forgotten. May you do it, and may I be there to land him.

AN UNWELCOMED VISITOR.

By Charles Mackie.

We are upon the brow of the hill overlooking the populous suburban hamlet of Heigham, which forms the western boundary of Norwich; a hamlet that, of itself, would make a goodly sized town, with its long and painfully regular thoroughfares of red tiled, stucco-fronted, unsubstantial houses, which of late have sprung up like mushrooms—houses with partitions so thin that one powerfully-striking old-fashioned clock situated in the centre residence, would be capable of recording the hours for the benefit of the entire row—its street corner-taverns, and shops, and its three churches. Beyond lies the more solidly built city, the prominent objects of the far-stretching expanse of brick and mortar being the spire of the Cathedral—elevating its gilded chanticleer three hundred and thirteen feet above surrounding buildings—and the mighty keep of the Castle, whose gray embattled walls frown upon the comparatively insignificant commercial structures standing at the base of the huge mound upon which it is located; while the towers that elsewhere meet the eye in all directions indicate that Norwich is a veritable city of churches, and that its inhabitants are—or rather, ought to be —an exceedingly pious community. In the distance the eastern extremities are seen; to the left front the sandy hills leading up to Mousehold Heath; to the right stretch the wooded heights of Thorpe; and, by the bye, were we upon the Castle hill, we would get a glimpse of the broad and peaceful river which flows at the foot of these hills from the city away into the solitary marsh land, the stream upon which hundreds of anglers of the eastern metropolis find sport, and which has justly been described in these columns as the El Dorado of the fisherman. Such is the scene from which we now turn. A dip in the broad turnpike road in a few seconds hides the city from view, and we are in the country pure and simple, trudging along in the warm rays of a springtide sun, with creel at back, rod at shoulder, and the indispensable pipe sending forth clouds of incense of the fragrant weed into the morning air, bent upon an excursion in which we intend trying our luck with the roach of that prettiest of local rivers—the Wensum. Five minutes later we see the sparkling stream taking its serpentine course through the verdant meadows on our right, its banks here and there studded with willows, which, in the hot summer months, throw a delightful shade over the water, and provide a grateful shelter for numerous boating parties, who are the curse of the river from a fisherman's point of view; for their conduct, as a rule, is by no means agreeable, and the continual passing and re-passing of craft does away with all chances of sport. Leaving the highway, we take a narrow lane that brings us to Hellesdon Common, a breezy piece of upland, watered at its base by the Blackwater stream—a swift running, impetuous stream it is—and we cross it by the temporary bridge of the railway now encroaching upon this rural district. The strip of ground between the Blackwater and the Wensum, is narrow and not suited to pedestrian exercise. Very intricate is our pathway, if pathway we may call it, considering the absence of any beaten track; for wide ditches, filled with black mud, intersect the meadows, and are crossed only by narrow, smooth planks, which form a treacherous footing for the slippery soles of our boots, and are the means of conjuring up vague fears of immersion in the unsavoury depths below. Knee deep in the thick rank grass we carefully pick our way, startling an occasional partridge, which flies off with a whirr and a buzz that startles the unexpected trespasser on his domain. The country is beautiful, gently undulating ground on one side, cultivated land on the other, and thick plantations ahead. At this particular spot, through a break in the trees, we are enabled to get a slight view of Cossey Hall, the seat of Lord Stafford. The fine park stretching around contains some splendid forest trees—the finest in the county, it is said—and within the hall itself are stored and treasured valuable works of art, the handiwork of some of the greatest masters. We are just becoming better accustomed to the boggy nature of our path, when we strike harder and more solid ground—the herbage is finer the spongy morass is left behind—and now the bank of the river is gained, and a comfortable foothold afforded. But a glance at the stream shows that we must not commence operations here; the water is barely three feet deep, and the thick masses of weeds would speedily place our tackle in jeopardy. Therefore we continue our walk a few hundred yards till we came to a sudden bend of the river. Here the rush of water from the promontory formed by the bank has scooped out a large deep hole, and the *débris* on the surface shows that the eddies are constantly kept in motion from the pressure of the water above, and it is here we contemplate making a try. Drawing our rod from its case, we soon affix the slight single horsehair line, and place the joints in their ferrules, and then on to the hook goes the patent spring plummet, which in turn finds its way to the bottom of the river, marking the depth of water as seven feet. The quill being duly adjusted we bait the hook with a dainty morsel of white paste. To the end of the hole it floats undisturbed; we try another swim; it terminates uneventfully; a third time we send the float on its voyage. An almost imperceptible agitation of quill is the result, and then, quick as lightning, it goes below the surface; with a slight movement of the wrist, we hook our fish, play him for a minute, and then bring him gently towards the side, the landing net slides quietly under him, and a second later a fine roach of nearly a pound lies gasping on the grass for dear life. "We shall have sport to-day," we remark, as we charge our pipe with a fresh plug of Cavendish, and rebait the hook with the luring paste. The wind is blowing lightly from the south-west, and a faint ripple disturbs the water as we kneel well out of sight, and once more dip the horsehair. Once, twice, three times, we fish the swim and not a nibble rewards our pains. Has the float shifted? We plumb the depth; no, everything is perfectly right; splash! a roach has leaped from the water, almost opposite; another splash, and the rush of a larger fish is observed the next second, further off; and the disagreeable fact is forced upon us, that an unwelcomed visitor, in the shape of a pike, is playing havoc with the fish in our swim. How we inwardly rage, and lament the absence of our pike tackle, and how dejected our feelings we won't say; let it suffice to remark that sport is at an end for the day, in this spot, at least. Sadly we leave our favourite place, well knowing untoward events will happen, even in the life of an angler, and, crossing a ditch, we endeavour to gain a higher reach of the river. A large bed of tall dead reeds appears to be our only obstacle. We enter these and make easy head way through the dry and yielding wilderness, but only for a short distance, for up to our knees we sink in a half concealed bog. Now with difficulty we try to force our way, and the next step we are deeper in the mud, and then, and not till then, we decide to turn back and fish the lower reaches. A single glance, however, on arriving there suffices to show that this will be impossible, for the weeds are growing luxuriantly at all points and as we have a very great respect for our line we decline entrusting it to their embrace. As a last resource, we make up our mind to suspend hostilities for an hour, and accordingly pass the next sixty minutes in a day-dream while seated on a gate—rather an unpoetical place and decidedly an ungraceful attitude in which to indulge in aerial architecture. But the time slips quickly away, and again we make for the river. First we offer the killing white paste, and this is persistently refused. Then we go in for vermilion, in the hope that the bright colour will attract the fish; and this proving worthless, a small red worm, lively as a kitten, and concealing the deadly steel, forms the next course of the varied dainties offered the finny ones. Not a nibble no we get, notwithstanding the use of all the approved methods of roach fishermen, absolute silence, perfect concealment, and a sharp and steady lookout for bites, and thus the time wearily drags. We hope against hope; and then, as the shadows lengthen, and the sun sinks behind the distant woodland, and the winding course of the river is marked by the overhanging cloud of mist, we unjoint our rod, wind our line, and making everything portable—except the fish, and our single one is portable enough—we make tracks for home. The evening is cold now, but our blood is kept in circulation by the difficult walking over the bog. The railway bridge gained, we cross the Blackwater, which is surging violently among the piles below, and running away at a big pace towards the lock above Hellesdon Mills. From the metal road we branch off to the common, and from thence to the lane leading to the turnpike. Coming upon good hard soil, we do the remaining halfmile in fine style; mounting the hill we see the long row gas lamps marking the straight broad street leading to the city; and an hour later, over a blazing fire with pipe and grog, we wonder what would have been the weight of our catch had it not been for the intrusion of an "unwelcomed visitor."

THE PISCATORIAL SOCIETY.

Summer Dinners, in connection with the London angling clubs, possess more than an ordinary meaning. The dinner itself is but one item in the programme on these expeditions. It is mainly the enjoyment of a day in the country—perfectly isolated from town life, and where those who attend can enjoy aquatic excursions, fishing matches, and even field sports. This society selected, for the summer dinner this year, the charmingly situated hostelry of the Chertsey Bridge Hotel, kept by one of its members, Mr. G. H. Thurston; who must have felt, with the unanimous choice, that he possessed great respect amongst his brother piscators. One thing was strikingly evident that he intended to do his best for them, and in order to make all things comfortable he had conveyances at the railway station to bring the guests to his hostelry. There was another very great attraction in Chertsey—the residence of Mr. James Forbes, directly opposite to the hotel; whose name as a pisciculturalist will never be forgotten, and whose liberality in cultivating trout at his fish farm entirely for the Thames, at his own cost, demands the deepest gratitude. With his usual kindness and courtesy on this occasion he allowed the members to inspect his fish-house and apparatus, together with a splendid stock of salmonidæ of his own raising, which was highly appreciated. The Chertsey Bridge Hotel on Wednesday last betokened more than an ordinary day. The preparations made by Mr. and Mrs. Thurston had more the appearance of a royal visit. It was a visit of importance, and it was rendered important because the Piscatorial Society is the oldest angling club in London; and amongst those present were some of the oldest Thames anglers living, whose achievements in fish catching in their day made them distinguished piscators, and whose exploits are substantially evidenced by the records in the weighing-in book of the club. The names of members who have gone to their final resting place still live in the remembrance of their old colleagues as anglers whose true sport and piscatorial fame will always be attached to the history of the society, and of these may be gloriously mentioned Messrs. T. Murray, J. Johnson, J. Shenton, H. L. Rolfe, and others.

The dinner on this occasion, supplied by Mr. and Mrs. Thurston, was of a satisfactory character. Mr. Norman F. Harrison occupied the chair, and Mr. F. H. Lemann, the vice-chair. There were, amongst others, present, Mr. F. G. Pearce, the father of the society, his first appearance after his lengthened indisposition; Dr. Startin, Dr. Coates, Messrs. T. R. Sachs, H. B. Eyre, T. Gillatt, C. P. Wheatstone, J. P. Wheeldon, R. E. Green, B. Perelli-Rocco, W. H. Brougham, H. J. Inderwick, E. Pratt, James Lander, H. Gray, Thomas Huggett, W. A. Crump, D. Goodger, Woodford, M. H. Blarney, E. Foreman, Hill, &c. After the banquet was over, the chairman observed there would be but few toasts and very limited speeches, as it was the custom of summer dinners to get out of doors as early as possible. He would therefore have to put the high pressure on those who would be called upon to speak. After proposing the loyal toast, Mr. Harrison, in a humourous speech, proposed "Success to the Piscatorial Society," which was replied to by Mr. F. G. Pearce, who received quite an ovation. Mr. Thomas Huggett gave "The Thames Angling Preservation Society," which was acknowledged by Mr. W. H. Brougham, whose remarks in reference to the netting of the reservoirs were warmly applauded. Mr. T. R. Sachs proposed "The Press," to which Mr. J. P. Wheeldon responded. "The Chairman," "The Vice-Chairman," and "The Officers of the Society," were the remaining toasts. The company broke up about eight o'clock, and enjoyed the remainder of the pleasant evening on the lawn, the weather being all that could be desired.

SPECIAL NOTICE.

THE TOURIST AND HOLIDAY DOUBLE NUMBER

OF THE

"FISHING GAZETTE"

WILL BE PUBLISHED ON JULY 29. IT WILL CONTAIN

Articles of Special Interest and Several Illustrations.

Mr. R. B. MARSTON'S Paper on the "PROPAGATION OF COARSE FISH" will appear in this Number with Illustrations. As this Number will be widely advertised and distributed beyond the large ordinary sale, it will be a most valuable medium for all

ADVERTISEMENTS

addressed to a well-to-do and sport-loving section of the community.
APPLICATIONS FOR SPACE should be sent in to

THE MANAGER, "THE FISHING GAZETTE,"
12, FETTER LANE, LONDON.

RIVER REPORTS.

MID-THAMES.

> "The ladies angling in the crystal lake,
> Feast on the waters with the prey they take;
> At once victorious with their lines and eyes,
> They make the fishes and the men their prize."
> —WALLER:

Henley regatta has brought an immensity of "youth and pleasure at prow and helm" about, and the ladies have cast their lines in pleasant places, and certainly hooked more men—bless their little *arts!*—than fishes. The main stream during the past fortnight has been all but unfishable, in consequence of the passage to and fro of pleasure boats, steam launches, and hundreds of fearfully and wonderfully made house boats; the river is, however, assuming once more the even tenour of its way, and punts may be seen doing "a quiet bit of fishing" undisturbed for an hour or more by steaming coffee-pots and shrieking Noah's arks. The river is now in prime order for all-round fishing, and roach, chub, dace, and barbel are well on. Barbel require stiffish baiting, but when once got together, bite like gentlemen—campers-out: Roach and chub are as clean as smelts (whatever that may mean), and are taking the usual piscine luxuries, such as snails, frogs, greaves, lob-worms, gentles, &c., &c. At Maidenhead a friend of "The Sun, Jun.," has taken a pretty trout of 2½ lb., and a Mr. Lanyon a nice haul of barbel and a trout of 3 lb. At Marlow, Mr. Roberts, 1 jack and some decent roach. Hurley, Mr. Brooksbank, 2 tench, 5 lb. together, and some fair roach. River hourly improving. Weather glorious; wind due west.—MARLOW BURR.

Ancholme.

On Saturday last I paid a visit of exploration to Bishop's Bridge, which stands at the junction of the main river with the Rase. The waters were too low for much execution, and below the village they are too much encumbered with weeds to permit of good pike-fishing. There are doubtless many small pike, but by way of change, and to please the young ones, we fished very largely for the gudgeon, which were swimming about in shoals in the Rase. We caught some dozens in a very short time. Then I threw the fly and hauled out some roach and dace from a pool below the bridge. Visitors, would do well, however, to stick to the middle and lower parts of the stream. For a mile or two each side of Brandy-wath is probably the best locality. Not much has been done on the trout streams owing to lowness of water.—THOMAS FORD.

BRIGG AND DISTRICT.—The weekly trip from Sheffield to Brigg on Monday brought about thirty rodsters, and on the same day a large number of Hull anglers took part in a club match near Saxby Bridge. During the week the water has been in fairly good condition, of a good colour, and free from weeds in the neighbourhood of Brigg, and it is becoming clearer higher up the stream. There is also a great improvement in the bottom up stream, the bottom weeds having been mown, and the surface weeds are being gradually drawn down stream, leaving good swims perfectly clear upwards. On Tuesday Mr. A. C. Finney, Mr. G. Smith, and the Rev. G. Whaite, well known lovers of the gentle art, had a day at Brandy Wharfe, and met with some fine sport, as jack, perch, and eels were feeding voraciously. Their takes included 15 jack, 5 of which were returned to the water, but the rest were fairly fed. Ten perch were caught with artificial minnow, but these were only small. The water proved too fine for bottom fishing, and nothing was done excepting with eels, which, though somewhat small, were rather lively. Roach are not yet on the feed, but bream are inclined to take worm and maggot off the bottom; but are not feeding well. Large numbers of bream may be seen, but owing to the amount of natural feed in the water through recent rains and rubbish from the drains, these will not bite. With favourable weather, however, good sport is anticipated by local anglers, who have recently formed an association which promises to be a success.—GLANFORD, Brigg.

Bovey.

It is now some time since that I have been able to report to the columns of the FISHING GAZETTE the sport partaken of in this beautiful stream, the Bovey, at Bovey Tracey, where I hope to arrive to-morrow, and place myself under the same hospitable hostelry roof, viz., the Union Hotel, which is still presided over by Mr. and Mrs. Wolfenden, whose kindness, &c., &c., I have spoken of in my previous notes. Having received an invite from some kind friends to whom I directed attention to the above stream, I shall embrace the opportunity, and endeavour to keep you posted up with the doings for the remainder of the season. The reports I have received up to the present state that the weather is very unpropitious, fish inclined to be scarce, but the hotel and inmates unexceptionable, exceedingly kind, fare A 1. Tuesdays sport: fourteen trout, largest 6½ ounces. Wednesday: Began at 10 30, fished until 1.30, nine trout and one peal, 1¼ lb., also four trout varying from 6½ to 8 ounces each, and on Saturday, from 2 to 5 o'clock, ten trout, and a nice little salmon of about 4 or 5 lb. was lost through being lightly hooked. These were all taken with the fly, and no doubt the most taking is the cochybondhu, Granham, and Palmers. This I consider splendid sport, considering there are so many trees along this stream that it is really difficult to throw a fly, and with the wind dead against you, almost impossible, and, as my friend states, is apt to make one impatient and also use flippant language. The streams now are all very full, and fine weather is greatly desired, but, unfortunately for all outdoor sports, it still continues very threatening. To-day (Tuesday) it looks better, but as I am scribbling it has commenced to rain again.—FRANK GOSDEN, Exeter.

Camel and Inny.

Mr. John Ford, of London, is having a fortnight's holiday on these Cornish rivers, and is meeting with fair sport. The weather is, however, of the usual nature so far west—one day wet, the next fine. On the 10th inst. he had a few hours on the little beck, which runs in the sea at Trebarwith, and caught sixteen nice fish, losing about as many more, being out of practice. On the 12th he went to Davidstow, and caught in the afternoon only thirty-four nice trout; on the 15th, in the Camel, above Slaughter Bridge, he had forty-four, some good fish amongst them. Mr. J. Davidson, of Davidstow, has also recently had some nice takes. Owing to the heavy floods which have recently prevailed, the salmon and peal have this year run up the Camel in advance of the ordinary time. A salmon was caught a few days ago which weighed 10 lb., and Mr. Teague, of St. Teath, caught a nice peal last week which weighed 3½ lb.—THOMAS FORD, Caistor.

Chichester.

The water the past week has been in capital condition, but the weather has not been satisfactory to rodsters. Angling is gradually improving, and with more seasonable weather good sport may be anticipated. Some fair takes of roach and bream have come to hand during the week. those taken being principally small. An eel of 3½ lb. was taken by Mr. W. L. Coombes recently. Fish are not yet in condition.—GEORGE F. SALTER.

Coquet (Northumberland).

On the 15th the river was flooded, and the salmon run freely. The river is in good condition for fishing; the wind from the west, and good ripple. In the trout fishing, Mr. Short 7 brace, Mr. Armstrong 5 brace.—A. GLASS.

Dove.

This river is now in very good condition for either the fly or worm. Some excellent dishes of roach have been secured during the week. Chub and dace are also biting well, and we have daily had large numbers of rodsters out after them. Trout have not been rising particularly freely at the fly, and the heaviest fish have been killed with the spinning baits, Gregory's Gresham, the Derby killer and Foster's well-known contrivances having proved the most paying, both in the main river and the brooks. Somehow or other, and I cannot explain why, barbel have not yet begun to bite with any degree of freedom, and I can only hear of a few solitary ones being captured. The baskets of trout have run to an average of about six brace this week, not more. There are myriads of naturals on the water, and the fish seem about surfeited with them. —THE SPLODGER.

Exe (Exeter).

In spite of the storms and unsettled weather, numerous anglers have been out, but, as a rule, sport has been very indifferent, even for coarse fish. The river has been very much coloured from the land waters coming down, and the fish have been so glutted with the food brought down that even eels have been difficult to get hold of. A few trout have been grassed in the upper waters, but there has been nothing doing in the lower portion. Salmon are as plentiful as ever, and grilse are running up in splendid condition and numbers. I saw seven (this morning) pretty fish, weighing on average 4½ lb. each. Salmon bass have just taken us almost by surprise. Although they have been looked for for weeks past very few have been taken. On Saturday last some hundreds were taken in the Bight, and over the bar towards Budleigh, also Dawlish and Teignmouth, the latter place, in my opinion, being the better starting point for them, as you are quicker upon the fishing ground upon the turn of the tide. Mackerel seem quite gone, but whiting are coming along in good earnest, but small as yet. We want fair weather and plenty of sun. Teignmouth is also a good starting point for this fishing. After mentioning salmon bass, or sea perch (*Perca marina*), the river perch (*Perca fluviatilis*) follows, but they are very shy at present. A few have been taken over 1 lb. each, and I have heard of one turning the scale at 2 lb., but did not see it. Fishing with two young gentlemen, who were successful in taking a few eels where others could not get a nibble, I secured a very pretty perch, rather over ½ lb., but have not had one since. Roach are fine and plentiful. Dace plentiful, but shy. Around the Ballast Quay and Quaybridge, the influx of visitors has been, as usual, great, but very poor creels have been the rule. To fish these parts free from molestation, you must be there on the spot by daylight, fish until, say, six or at latest seven o'clock. You may do something before the regular army arrive. A friend of mine doing so last week secured some six dozen roach, many weighing over 1 lb. each. This reminds me of the following lines:

> "I will get my rod, go forth and seek delight,
> These pleasant summer early morning hours."

P.S.—In my last week's report, please read the line "Chatters over stoney ways"; stoney having been printed as "strong."—FRANK GOSDEN.

Ilfracombe.

The weather this week has been most unfavourable for bass fishing, the wind blowing strong, accompanied with heavy showers; however, fishing parties have not been deterred from taking their daily sport. They run down as far as Bird-in-the-Hole, and bring up, and have been rewarded each day with some good catches of bream and e few whiting, in fact, bream have been more plentiful this week than they have been for some time. The fishermen are glad to see the mussel cart coming again, as that and mackerel are the best bait for these fish. A few crabs only have been taken from the holes, the ground sea being too much for them to fish them proper. The fishing from the pier and jetty has not been so good owing to the heavy swell. The trawling skiff has been down in the bay once this week; they brought up very little fish. The weather to-day is a little finer.—E. Comer.

Lea (Ware).

Although rain has fallen during the week, the water is rather bright, and not much to be recorded. On Sunday last, several of the Bloomsbury Brothers were out here; but, with one or two exceptions, the takes were small, one of about 10 lb. (roach and dace) being the best. Better sport is anticipated hereabouts when the weeds are cleared, the river being considerably hampered at present.—"Lion and Wheatsheaf," Ware.

Medway (Tonbridge).

The water during the week has been somewhat thick, by reason of the heavy rains, but notwithstanding this, some good sport has been had. On Sunday and Monday eels bit very well, and there have been some good catches of roach and bream. On Thursday morning a match was fished above the town, when Mr. J. Cox gained 1st prize, with a splendid tench; and E. Holloway was 2nd, with perch. The warm weather will, no doubt, by Sunday if we have no more rain, bring the roach and bream well on.—Ye Medway Water Rat.

Ouse (Littleport).

Water very bright, but overgrown at bottom with flannel weed. Sport here last week was very bad, I had nothing worth reporting. This week it has been a little better, as bream have been feeding a little mornings and evenings. Roach came on a little last Friday, and a few dozens were taken. The following are the best takes:—July 14th, Mr. J. George, Bassingbourne, 37 roach and silver bream; July 16th, Mr. J. Lees, London, 5 good bream; July 17th, Mr. Treadway, Littleport, 5 bream going 14 lb.; July 19th, Mr. W. Thurston, Cambridge, 5 bream going $14\frac{1}{4}$ lb.—C. South.

Rother (Selham).

Cold winds this week have checked roach angling. On Sunday Mr. Mitchell had a bag $10\frac{1}{4}$ lb. A carp 4 lb. has been taken near the Mill, and a nice pike $6\frac{1}{4}$ lb. by Mr. G. Wilson. Mr. Dabbs, a labouring man here, has taken 152 sizeable roach since the 16th ult.—J. Adair.

Taw and Tributaries (N. Devon).

Water very seriously high, but it is hoped as yesterday was dry, and the night, the rain may hold up, and the rivers will settle back, which must take 3 or 4 days for the small streams, and 7 or 8 for the Taw, where there must must be a lot of salmon gone up, but the peal are very scarce. I saw a good dish the other day, taken from the Yeo, one over a lb., and many large fish amongst the 3 dozen. Some few dishes have been taken, but the water was too high for any quantities. Large blue and silver flies are the killers.—Rusty Game.

Thames (Goring).

Water here now a little better; a few fine days will soon get the water in good order. Nothing doing much in the fishing; have been taking some good roach and dace.—John Bush.

Thames (Shepperton).

The water is in better condition than it has been for some time. Very good prospects for all-round fishing. F. Purdne in two days four dozen roach and dace and three dozen gudgeon; H. Purdne three dozen roach and dace in two days. A gentleman fishing with a lad took a trout of $1\frac{1}{2}$ lb.; barbel fishing, a fisherman the same day caught one bream of 4 lb., one barbel of 2 lb., four eels, largest 2 lb., and several fine roach. Barbel fishing in one and a half days ten barbel, largest 4 lb. Bank fishers have been doing well.—W. Rogerson.

Thames (Windsor).

During the last fortnight water has been out of condition, and weather altogether very uninviting to the angler. In quiet waters bags of roach have beeen had, and as many as 43 lb. fell to the rod of a bank angler (Mr. Pond, of Slough) in one week, taken principally from the Romney lock cut. Chub have been very scarce, water being too thick for whipping or the fly, the best fish being one of a little over 4 lb., taken by a bank angler, worm fishing. Several jack have been had, but small. Mr. G. Wright, of Windsor, had a brace last night going about 6 lb. I weighed one this morning picked up in a dying state with a chub of over 2 lb. stuck in its throat, it went just 10 lb. By Saturday water will be in excellent trim if no more rain, and chub ought to rise well to the fly or to the numerous baits used in whipping.—B. R. Bambridge

Trent (Newark).

The water has not been in very good condition most of the week; but it is now improving. Bream have in a few instances been biting very nicely, fairish bags of those fish and roach have been had by various anglers. One bag I saw on Sunday contained something like 28 lb., gentles being the fatal attraction. A few bags of less weight than the foregoing have also come under my notice, cadbaits being the principal lure, while worms have also done fairly among the eels and flounders, &c. The majority of the roach and bream were only in middling condition, being lumpy, slimy, and generally disagreeable, but with fine weather will rapidly improve. Thursday: Water rapidly improving; by this is in print will be in fairish condition for general angling, and with judicious baiting the angler is sure of some sport among the finny tribe.—The Trent Otter.

Trent (Nottingham).

On Tuesday and Wednesday the river in this district was receding. Showers were, however, of frequent occurrence, and not so many rodsters as usual were out. For the last few days I have paid special attention to the Shardlow, Weston, and Swarkestone allotments, and have killed a nice assortment of roach, dace, perch, and bream with worms and maggots. Nearer Nottingham excellent sport has been met with amongst roach and dace with the latter bait; whilst in a few instances bread paste proved successful. Eels have not run so well as last week, and there has been less doing amongst flounders. The barbel swims are still unfishable, and are likely to be until the weather settles down, when a baiting ought by all means to be employed. From the lower reaches the doings do not appear to have been on an extensive scale.—The Man at the Clubs.

Tweed and Teviot.

For the past week little has been done in these rivers. On Saturday last we had a flood of fully 5 feet, and this has been the means of allowing a large number of salmon and bull-trout to enter the upper reaches of the river. On Wednesday last Mr. Kerss on the Edenmouth water killed a brace of salmon, which were 9 lbs. and $11\frac{1}{2}$ lbs. respectively. But no more salmon have been caught since on any of the "casts." On all the rivers, however, good takes of trout have been pretty generally got, the flood above alluded to having in a great measure allowed anglers to kill a dish on the more favourable days. On Monday last, Mr. Kerss, on the Edenmouth water, killed a very nice clean-run sea-trout of some 6 lbs., and the same gentleman on the same day lost two other fish. The netting on the Tweed at the Coldstream stations has been very productive, over a score of salmon, about the same number of grilse, and many trout having been got on the various stations. The Esk river, in Dumfriesshire, has been giving good sport, large quantities of salmon and trout having been got there during the past fortnight. The salmon netting stations of the Berwick Fishing Company have also done well during the week, although grilse have not been in such numbers as the season should warrant. The weather is now much more settled than it has been, and the rivers are in good order. Wind mild and warm, blowing from the south, with slight showers of rain.—MaxWheel, Kelso, July 20.

Wharfe (Yorkshire).

Owing to a succession of heavy freshes down this river the bottom-fishers have been having a fine time, but, except on one evening last week, there has been too much water for fly-fishing; on that occasion I killed three fair-sized fish with red ant. Maggots and wasp grub have been the most successful bottom bait; two dishes of ten and fourteen fish respectively having come under my notice, all of which were taken by this means. A few nice eels have also been caught during the week. To-day (Wednesday) the weather appears more settled, and every prospect seems to indicate some good fly-fishing during the next few days.—Francis M. Walbran.

Welsh Harp (Hendon).

To enumerate each individual take here during the week would monopolise more space and time than would be consistent, but I may say that brisk indeed has been the business this week at the Harp; and should Sawyer, at the end of the season ask for a "few days off," hard indeed would be the fisherman's heart who did not wish him "bon voyage" after his almost stupendous efforts this season to look after his patrons. Fish are still well on, although the weather has somewhat disturbed the waters.—Resident.

DISTRIBUTION OF THE TOURNAMENT PRIZES.

The prizes were distributed last Friday evening at the Forester's Hall, Clerkenwell, by Mr. R. B. Marston. Hearty votes of thanks were passed to the prize-givers, the judges, &c. All prizes not won have been handed over to the secretary of the Anglers' Benevolent Society, Mr. R. Ghurney; and all who did not have their prizes last Friday night are requested to apply to him at the Foresters' Hall, Clerkenwell, by letter.

THE INTERNATIONAL FISHERIES EXHIBITION.

The Prince of Wales presided on Wednesday morning over a general committee of the Great International Fisheries Exhibition of London, 1883. The Secretary, Mr. John W. Mollett, having read the minutes and notice convening the meeting, the Chairman of the Executive Committee, Mr. Edward Birkbeck, M.P., read the report, which set forth the progress already made. Mr. Birkbeck then said that he could add with pleasure that the Netherlands' Government had applied for from ten to twelve thousand feet of space in one block. With reference to the measure that had been taken for promoting the holding of local meetings in different parts of the country, circular letters had been sent from the Lord Mayor of London to the mayors of the different towns, inviting co-operation, and amongst other results an influential meeting would be held at Chester on Monday next under the auspices of the Conservators of the River Dee Fishery Board, of which the Duke of Westminster is president, at which the executive committee would be represented by himself and other members. On this subject the Prince of Wales remarked that he had found when he was at Yarmouth that the mayor was taking a lively interest in the matter, as he did in anything that affected the welfare of the fishermen and fisheries. Referring to the subject of prizes for methods of saving life at sea, his Royal Highness stated that the Deep Sea Committee was at that moment engaged in considering how they should apply an offer from Mr. Edwards of prizes of £50 or £100 for this humane object. Generally reviewing the progress of the work of the committee, his Royal Highness said that it was very gratifying to see that America had come forward so liberally with a vote of £10,000 and the allotment of a special fishery steamer to the use of the exhibitors, which he had no doubt would be on view in the Thames during the exhibition. The action of the Netherlands Government was equally gratifying; they had appointed a central committee under the presidency of his Excellency Count Charles de Bylandt, to work in correspondence with a committee in London, and when he turned to the colonies he found that Canada and New Zealand and New South Wales had already contributed to the fund, and no doubt many others would follow. The Prince of Wales, in conclusion, alluded to the satisfactory arrangements that had been made by the Site Committee, by which they had obtained the use of the Horticultural Gardens without absolutely disturbing the society's own enjoyment of their premises. After some further conversation, in answer to inquiries respecting the detail arrangements of the committee, the Marquis of Exeter proposed a vote of thanks to his Royal Highness for his kindness in coming down to take the chair, which was carried with acclamation, and the meeting then separated.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

The following members have weighed in fish since my last report:—Messrs. Head, Howell, A. Eydman, Cook, Statten, and Taplin, who took a prize on July 11 with a nice show of perch and chub from the Thames. At our meeting on Tuesday last, Mr. Simpson, our secretary, gave us a very interesting description of another day's netting carried out by the Thames Angling Preservation Society at the Chelsea Waterworks, Sunbury, at which he was present, and assisted in the capture of about 5000 lb. of good fish of various kinds, which were turned into the Thames. Such a good day's work reflects great credit on all engaged, and ought to gladden the hearts of all Thames anglers. Our members were of opinion that something more than thanks ought to be given, so voted a guinea to be forwarded to Mr. Brougham for the Thames Angling Preservation Society, hoping richer clubs will send more, if they have not already done so.—Black Bag.

July 20.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on Sunday, the 16th inst., and succeeded in filling our trays with some very good fish. Mr. A. Shakel, bream, 4 lb. 15½ oz.; Mr. T. Bowling, bream, 5 lb 2½ oz.; Mr. R. Smith, 1 lb. 8¾ oz.; bream; Mr. Hale, bream, 2 lb. 3¾ oz.; Mr. B. Powell, perch and roach, 1 lb. 15¼ oz.—D. Davis.

July 19th.

ANGLERS' BENEVOLENT SOCIETY.

The committee desire to express their grateful thanks to those ladies, gentlemen, and angling societies who so liberally contributed valuable prizes to the Second Fishing Gazette Bait-Casting Tournament in aid of the funds of the above society.—R. Ghurney, sec.

BATTERSEA FRIENDLY.

There were several good shows on Sunday last, notwithstanding the inability of many members to weigh-in on account of the delay that occurred on S.W.R. Among those fortunate enough to arrive home in time were Messrs. Anstey, Potts, Sampson, and E. F. Sampson.—H. W. Payne, president.

July 22.

BROTHERS WELL MET.

There were some excellent shows of fish at this club, Mr. Sutcliffe having a brace of splendid bream, over 7 lb, and some well-conditioned roach, 1lb. and upwards; Mr. A. Gunston some remarkable roach, reaching to within 2 lb. each; Messrs. H. Canton, W. Harris, A. Jarvis, H. Memnette, W. Tame, C. Elliott, and J. Marsden capital trays. The Pulborough and Amberley excursions continue to be well patronised, and Mr. Clout, the genial manager, and his nephew Fred, are persevering in their attentions to the wants of the anglers.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 9th:—Mr. Nitz, roach; Mr. Payne, roach and bream; and Mr. Mortimer, one roach, weighing 1 lb. 4½ oz., all from Amberley. Mr. Castell had dace from the Colne on the 16th; Mr. Nitz, roach and bream from Amberley; Mr. Mortimer, roach from Pulborough; Mr. Castell, roach from the Roding; and Mr. Perry, roach from the Thames. —Cas.

CLERKENWELL PISCATORIAL SOCIETY.

The members of the above society were out on Sunday in good force. The following gentlemen weighed in fish:—Mr. Tomkins, roach; Mr. Dochree, roach; Mr. Couling, 8 lb. roach; Mr. Jelleman, 5 lb. roach; Mr. Shearman, roach; Mr. C. Turner, roach. On Sunday next the members fish a pegged down match at Pulborough for eight prizes, value £7. All fish to be weighed at the water side before leaving. Messrs. Stebbing and Jones referees.—R. Stebbings, sec.

CROWN PISCATORIAL SOCIETY.

The above society had their first return visit paid them on Monday last, at their club house—the "Crown Tavern" Clerkenwell Green—which proved very successful, it being a very wet night. The chair was occupied by Mr. Willcockson, ably faced in the vice by Mr. L. Gorsuch. Mr. H. Sterling capitally accompanied on the piano, and Mr. W. Gorsuch doing the same on the violin, while the following gentlemen sang some first-rate songs, and several of whom deserved and got an encore, were:—Mr. Willcockson, 2; Mr. L. Gorsuch, 2; Mr. Brockwell, 2; Mr. D. Howes, 2; Mr. C. Watling, 2. Mr. Raymont a reading from Henry V.; Mr. Sutters, Mr. Rust, Mr. Maythorn solo on the concertina; Mr. Burkett, Mr. Dulley a recitation; Mr. Chapman and the worthy host, Mr. Caddell, sang, "My Heart just as Light as the Wind that blows the Leaves from off the Trees." When the roll was called, there were eighteen clubs numerously represented—viz., Amicable, Waltonians, Acorn, Convivial, Canonbury, Great Northern, Odds and Evens, Reform Star, Sportsman, Anchor and Hope, Barbican, Buckland, Eustonians, Little Independent, Original Clerkenwell Piscatorials, Crown Anglers, Patriotic, and the City of London. Bravo Mr. Castell!—W. R. Burwash, junr.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

The following members showed some fair takes of roach and bream from Amberley:—Messrs. Page, J. Fitch, J. K. Fitch, Young, Parkins, Kirk, Baker, Parrett, Hutchings, and Theobald. From the Thames Messrs. W. Watling and Porter had roach. Mr. Ames jack from the Welsh Harp.—J. A. Fitch, jun., sec.

July 19.

GREAT YARMOUTH PISCATORIAL SOCIETY.

The weekly meeting of the above society was held on Monday at the club house, when several gentlemen, members of London societies, were enrolled, and have since had some good sport on the Bure; Mr. Hewetson, of Putney, especially having been able to send Mr. Hoole a fair sample from Yarmouth to Barnes as a proof that the Yarmouth Society have good angling waters. A fine specimen of bream was also exhibited by Mr. Chapman, measuring 21½ inches long, and weighing nearly 5 lb., caught in the Bure by a gut line, within six miles of Yarmouth, which also proves that the gentlemen forming the Bure Preservation Society have done some practical work in preserving the water; in fact, Yarmouth only wants to be more known to anglers to insure it a perfect successful angling town second to none in the Eastern Counties. The meeting was adjourned till the next Monday to make provision for the contest for the first prize, a cup given by Mr. Lark, the secretary, who will be only too pleased to give every assistance and information to members of other societies visiting Yarmouth, and hope the anglers of Yarmouth will forbear taking unsizeable fish, as has been done at Potter Heyham during the past week, and who, as anglers, should set a better example.

162, King Street, Yarmouth.

GRESHAM ANGLING SOCIETY.

The special meeting of this society, held at "Masons' Hall Tavern," on Wednesday evening, was largely and influentially attended, the proceedings passing off in a highly satisfactory manner, notwithstanding the disappointment occasioned by the absence (through serious illness) of Mr. G. Shephard Page. The Society is greatly indebted to Mr. R. B. Marston, who very kindly undertook at a few hours' notice to read some notes he had made relative to the black bass, which formed a very excellent substitute for the paper so anxiously anticipated from Mr. Page. Mr. Marston gave a very able résumé of our knowledge relative to this fish, which it is now proposed to introduce into English waters, and after an interesting discussion it was unanimously resolved "that the Gresham Angling Society use its best endeavours to promote the introduction of black bass." A vote of condolence with Mr. Page was also passed. A large number of representative anglers and pisciculturists were present, but as a report will probably appear in another column, it will be needless to repeat particulars. The meeting was very enthusiastic and a number of valuable suggestions were made, relative not only to the black bass, but coarse fish culture in general; the proposed new bye-laws for the Thames, and other matters of general interest. It is very satisfactory to find that with all the attention devoted by the society to the numerous questions now engaging attention, the members are not behind in taking fish. Mr. W. Norman has weighed-in one tench of 3 lb. 4 oz., and Mr. G. H. Young some 30 lb. of barbel during the past week, besides several other takes.

KING'S CROSS UNITED ANGLING SOCIETY.

The members of this society on Sunday last, competing for two valuable prizes, succeeded in getting some capital roach from the Thames. Mr. Morley, heading the list with 12 lb., took first prize; Mr. Davis being a good second, with 10 lb.; Messrs. Perkins, Burnett, Baynham, and Bell also had a nice show amongst them.—G. Treadwell, hon. sec.

July 19.

LITTLE INDEPENDENT ANGLING SOCIETY.

On Sunday last our tray of fish presented a very different appearance to the Sunday previous, the most noticeable being jack and roach caught by Mr. T. Scott; tench, roach, and rudd by Mr. J. Keene; and roach and perch by Mr. J. Petrie. Our members wish to remind all friends of the vocal and instrumental concert to take place on Monday, July 31st, at the club house, Russell Arms, Bedford Street, Ampthill Square, N.W., for the benefit of T. Castle, who through serious misfortune is greatly reduced in circumstances.—H. Moore, secretary.

NORTH-WESTERN ANGLING CLUB.

On Sunday last we had another good show of jack, &c., from the Welsh Harp. Mr. Shackell, one very nice fish, 5 lb. 11 oz.; Mr. North, one 5 lb. 8 oz.; Mr. L. Roxbee, four fish; Mr. Marshall, three ditto; and Mr. W. Roxbee, one; Mr. Smart, three bream, 9 lb. 2 oz. during the week; Mr. North weighed in barbel from the Thames.—H.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had a fine show of fish on Sunday last. Mr. W. High headed the list with roach; Mr. Dymond, roach and dace; Mr. Brockett, bream; Mr. Thorn, bream; Mr. Huskisson, roach; Mr. Stanton, roach; Mr. Blackledge, roach; Mr. Hunt, roach; Mr. Dymond, perch; Mr. Morton, a fine perch.—W. High.

P.S.—A book was found at Waltham belonging to the Cavendish; it is at Mr. Wheeler's, at the King's Head, Waltham.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Several members were out on Sunday last, and met with fair success; Mr. G. Drew weighing-in 5 lb. roach and dace, from the Thames; Mr. Obbard, trout and dace, from the Lea; and Mr. J. Drew, bream and perch, both from the Thames. Quarterly night Monday, July 31.—Thos. Wm. Lucy, sec.

July 20.

PECKHAM BROTHERS ANGLING SOCIETY.

The members fished a peg-down match at Weybridge on Sunday last for the president's cup, when the winner turned up in H. Williams. The next match will take place on Sunday, July 30, for two prizes given by Messrs. Genale and Missard—open match.—W. H. Page, hon. sec.

ROYAL PISCATORIAL.

Messrs. Hughes and Hockley have been having some sport out of "Father Thames," in spite of the rumours that have been circulated as to the "Old Gentleman's" condition. On Tuesday he found them sport among the tench, perch, and eels. On Wednesday he was well enough to supply them with barbel, one of which fell to Mr. T. Hughes that turned the scale at 10 lb. —this will be added to that gentleman's collection of piscatorial trophies when preserved. Several of the members have been having some sport from the Lea, Welsh Harp, and other waters.—Pixie.

July 20th.

SOUTH BELGRAVIA ANGLING SOCIETY.

On the 16th inst., J. Smith, jun., had a fine show of bream and roach, F. Allard some excellent roach and bream, and H. Eccarius some pretty dace and roach.—H. Lees.

STANLEY ANGLERS' SOCIETY.

Our members have not met with much success since the last report. Many of them have been out in a variety of directions in hopes of getting sport, but have been disappointed, as the takes all round have been very poor, both in quantity and quality. On the 28th, Mr. Wheatstone, perch, roach, and dace; on the 1st, ditto; 8th, pike, perch, and chub; on the 1st, Mr. Pistrucci, roach and dace; 2nd, ditto; 9th, ditto; 16th, amongst others a nice roach, 1 lb. 5 oz., Mr. D. Humby; on the 9th, roach, one 1 lb. 4 oz.; on the 10th, Mr. Rose, perch; on the 10th, Mr. Scull, dace and trout; 17th, roach and dace; on the 10th, Mr. W. Humby, roach and dace; on 17th, Mr. Walker, perch and roach.

STOKE NEWINGTON ANGLING SOCIETY.

Since my last report Messrs. C. F. Robinson and W. Robinson have done well among the chub and roach, the former gentleman having among others a fine chub weighing 4 lb. 4 oz., which has been sent to John Barretts for preservation. On the 16th inst., Messrs. Harris and Gretton exhibited perch, bream, and roach.—Thos. Gretton, sec.

UNITED BROTHERS.

There was a very fair show of fish at our club room on Sunday last, the 16th. Among those who weighed-in were F. Belton, roach and bream; J. Payne, roach; J. Currans, bream, all of good size. The members of the above society will fish a pegged-down match in the association's waters at Weybridge on next Sunday, the 23rd, for a series of prizes.

WALWORTH WALTONIANS.

On the 16th, Messrs. Piolaine and Gilbert weighed fish for the July competition. The former had some nice roach, and the latter had chub. On the 22nd, a competition will take place for a guinea float, given by Mr. C. Beale, and 10s. 6d. given by Mr. J. Bedford. The special prize list for the season is charming (if variety is charming). There is a silver watch for one kind of fish, pipe, tobacco, spittoon, and a gross of "blazers" for another; half a ton of coals comes next, a spinning rod, hair brushes, scarf pins and last, though not the least, about a dozen guinea and half guinea prizes.—PIXIE.

July 21, 1882.

WALTONIANS.

On the 16th Mr. Malcolm had roach, 11 lb.; bream, 3 lb. 7 oz. Mr. Grace had roach, &c., 5 lb.; Mr. Roland, roach, &c., 4 lb. 10 oz.; Mr. Good, jun., roach and bream (one roach 1lb 2¾ oz), 5 lb. 11 oz.; Mr. Togwell, roach, &c., 2 lb. 13¾ oz.; Mr. Jos. Moore, roach, &c., 3 lb. 2¾ oz.; Mr. Luxton roach, 2 lb. 4¼ oz. (one fish 1 lb. 9 oz., Mr. Watson also weighed in fish.—A. J. MARRIOTT.

WEST CENTRAL ANGLING SOCIETY.

We had an excellent show of fish on Sunday last from Pulborough and Amberley. Mr. Taylor had four roach, weighing 5 lb. 3 oz., and 4 lb. 14 oz. of bream; Mr. Webster, 6 lb. 5 oz. of bream, one weighing nearly 4 lb., and two roach scaling 2 lb. 11½ oz.; Mr. Bradley had four tench, weighing 6 lb. 6¼ oz., which were all in splendid condition, and looked quite a picture on the tray. Mr. White had a fine show of roach and dace; Mr. F. Beard had ditto, as also did Mr. Oliphant. Mr. Donald Smith had some roach, and showed one, a perfect beauty, weighing 2 lb. 3 oz., which he is going to preserve himself. Since the opening of the season we have been very successful with specimen fish, especially with roach.—R. I. BEARD, jun., sec.

July 17.

ANSWERS TO CORRESPONDENTS.

"WEE" BINGHAM.—The best kind of ring for your jack rod would be one nearly half an inch in diameter, with the loose steel ring inside. Any tacklemaker can supply them.

M. LAWRENCE.—We are under the impression that "Freake" is the correct spelling, but in any case a "Freke" bag is meant to be the same thing. You should call at Woolgar and Co.'s, on Ludgate Hill, if you want to see the original pattern.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE WHARFE.

SIR,—W. P. H. is somewhat unfortunate in his advocacy of the fast-waning glories of this once noble river. "Watchet" would have had us believe that this river was no longer contaminated, and would rest his lament on that fact. Then follows "Cinnamon Fly," a resident of Bradford, who speaks with a practical strength to the sewage of Otley; and, to crown all, "Rambler," in last Saturday's *Bell's Life*, has upwards of a column of by no means complimentary observations upon the deteriorated state of the Wharfe. There is no use disguising the fact, this river has seen its best days, and is coming rapidly down to the profligate state of its sister Aire; and all the attempts to call fingerlings, fine trout, or four or five-inch graylings takeable *umbra*, will not deceive those who know the river below Bolton.

But what says F. P. H. "There is a regular and ample supply of water now as in the past . . . . the Leeds Corporation spent £180,000 purchasing land, and making reservoirs for no other purpose than storing water to supply Wharfe's in case of drought."

"For no other purpose" writes Mr. P. H., and twits "Veteran" and myself for not knowing anything about it. "For no other purpose; and the ratepayers of Leeds are denied the right of angling on their own ground and in their own waters, simply because one pompous individual has possession of the sporting right, and keeps it for no other purpose but to prevent any one from angling, &c."

"For no other purpose," I refer again to Mr. P. H's. letter, and there it is plain, and, so far, intelligible enough. Now if your readers care to refer to the act for authorising the mayor, aldermen, and burgesses of the borough of Leeds to make and maintain additional waterworks; and for other purposes, (15th July, 1876), they will find, as I have given it from its title, that there existed other purposes than to supply Wharfe in case of drought. How Mr. H. P. could dare with the same pen, and use the dye-water of the Wharfe to hazard such a statement to humbug your readers he alone must reconcile with truth and consistency—the attempt is as transparent as the Wharfe water is opaque.¶

Instead of Leeds merely undergoing this lavish expense for the welfare of the Wharfe, the purposes as directly set forth in the Bill—Anno Tricesimo et Tricesimo primo Victoriæ Reginæ—were to supply the thirsty population of Leeds with water for domestic purposes, and the mills with hydraulic power, including dying, skin-washing, chemical and other infusions, &c., injurious to fish life. To understand the liberality that is claimed to the Wharfe by the advocates for pollution, it should be understood the Act of Parliament in question and for the obtainance of which the town and neighbourhood of Leeds expended £180,000 was not specially to "supply the Wharfe in time of drought," but should there be any affluent or waste waters left over from the bountiful supply of the tributary Washburn and its several springs—which hitherto did refresh the Wharfe in time of drought—it should be permitted to flow into that river. And it should be further understood (although F. P. H. may not know it), that by the Leeds Waterworks Act of 1862 the corporation were authorised, by means of their works, from time to time to take from the river Wharfe any quantity of water not exceeding six million gallons in any one day, inclusive of another pretty little grant of two million five hundred thousand gallons. But as the preamble tells us, "Whereas the present supply of water is inadequate both in quality and *quality* (mark that F. P. H.!) for the wants of the inhabitants of the town and neighbourhood of Leeds," and therefore they seek authority to bleed the Wharfe in one of its arms instead of its vitiated body, as being a purer source.

Before going any further I will appeal to you, sir, that in this Imperial Act there is sufficient evidence to show that on or abour 1862, when the river Wharfe was found "both in quality and quality" to be deteriorating, the water had arrived at that stage which threatened to become as foul and impure as the river Aire, still closer to Leeds, and therefore fully justifies "Veteran's" statement that during the period he alluded to it was gradually getting from bad to worse.

Perhaps one word is due to an observation of F. P. H. in regard to the "pompous individual" who will not allow F. P. H. and his co-mates to fish in the reservoir. If they will take the trouble to read the Act of Parliament, Section 11, they will find that that gentleman (as do others) has reserved his right to free access thereto for himself, family, visitors and gamekeepers, and it may be F. P. H. &c.'s misfortune and not their fault that they do not find themselves in the above category. As well might my butcher or poulterer expect to be asked to my table because I purchased the viands of them, as the men of Leeds to expect free access to land purchased from private individuals for special purposes; and, moreover, the necessity that the catch basins shall be kept from the remotest chance of contamination. There are others who have very properly reserved their rights besides the owner of Farnley Hall, but all have agreed that nets shall not be used to the disturbance of the water upon the purity of which so much depends, as to the standard of animal life and manufacturing produce.

A question may arise here that the storage of the Washburne is instrumental to the saving of waste; but of this especial locality the late Mr. John Simpson, the civil engineer mentioned in the Act, states that from the natural gradients all the springs ultimately found their way into the Wharfe. CREEL.

THE YORKSHIRE WHARFE.

SIR,—I am sorry to find "Creel" still clinging to the theory set forth by his friend and correspondent, "Veteran Angler," on his observations of the river Wharfe.

I do not intend to write you at great length until I hear what his correspondent has to say, and "Creel" has promised to write more fully as soon as he supplies him with further information, which I hope and trust will be more authentic and true than that which he last gave, and thereby causing this controversy.

The river was not in a woeful condition, as "Creel" asserts, when the great reservoir was made for Wharfe supply, or, as he puts it, "to flush it."

I still adhere to my former statement "that 'Creel' knows nothing of that reservoir" (or, rather, seemingly knows nothing), so I will give him a brief, and I hope explicit, idea of it, and if your valuable space would allow, I would give the whole water scheme, with the plan of the same.

The river Washburn empties itself in the river Wharfe a little above Pool, and eight or nine miles above that it is closed by a dam, or there are two large reservoirs made, as it were, in the bed of the river, these are the supplies for Leeds. The river is divided thence by a conduit to the reservoir at the pumping works at Arthington (not Arthing).

The storage reservoir I mentioned in my last, and which "Creel" has taken upon himself to move to Arthington, a distance of nearly five miles from there), is known as Lindley Wood reservoir, and is sufficiently large to make up the flow of the river Wharfe in such seasons as may require it, and to compensate Pool Mills and others for any loss they may be put to in case of a dry season. It has a capacity of 570 million gallons, and a surface area of 90 acres, and I say again it is for no other purpose but to use as a storage and compensating reservoir, and the shrewd people of Leeds (as "Creel" styles them) have no reason whatever to place a veto upon the disturbance of the water with contaminating substances, while natural filtrations are going on, for there is no filtration at all.

The ratepayers of Leeds can fish in the two supply reservoirs by obtaining a ticket from the waterworks committee, but the storage reservoir is denied their admission by a pompous aristocrat, who, I again say, has the sporting right, but never fishes it; and I do believe, without prejudice, that he would not allow the people of Leeds to look at it if he could stop them; but, Mr. Editor, if I could get twenty anglers to go and fish it, I would do so to test his authority.

I am pleased to find "Creel" acknowledge that the people of Leeds drink the water of Wharfe. Surely he does not imagine us drinking water as black as ink, and that could be used as such, and has on its surface a scum which is palpably offensive—there is not much shrewdness about the people of Leeds if they do.

I am surprised and sorry to find "Creel" has been so misled by his friend, hoping he will give a full account, as promised, I await the same with deep interest and the utmost impatience.—I am, &c., F. P. HAMMILL.

Leeds.

FISHING AT WIMBLEDON LAKE.

SIR,—Visiting Wimbledon Lake last week I was much surprised to see three or four anglers, belonging to London clubs, fishing for carp *without a reel*, and, being rather curious as to how they would proceed in case of hooking a fish 6, 8, 10, 12, or 14 lbs.

Mr. J. Gear, of the Pavement, Clapham Common, is setting up one at the present time, weighing exactly the latter weight, taken by the landlord of the Fox and Dog, Wimbledon, and most artistically landed by the brother of the lake keeper, at least, so I was told.

I approached a likely looking gent, and in my blandest manner asked him what he was fishing, for.

"He was fishing for carp."

"What, with a flagstaff like that?" I replied.

The flagstaff had eight, if not nine pieces. It appeared to me to be endless. It had not a single ring upon it, and you could have knocked down a bullock with the bottom joint.

The line reached about half-way down this formidable prop.

"But," I said, "you could never play a large fish with tackle like that!"

The answer was very familiar to me:

"I should like to get hold of a 6 pounder, and I would soon show you."

I then left him for a considerable period, and, strange to say, he had his wish gratified, for he hooked a fish quite that weight, if not larger, and it simply smashed him all to ribbons; and the keeper told me there were far more carp got away than were landed, owing to this stupid practice.

Anglers fishing in this water cannot do better than use a good strong line and tackle, a rod that would kill a barbel 8 or 10 lb., decidedly springy, but strong, and ledger with paste and worms, using a light weight.

The grand secret of success when fishing from the bank is to get out as far as possible.

By attending to the above, several very clever and knowing gentlemen may save themselves considerable disappointment in the future. N. B. Carter, of St. John's Street Road, supplies medium-sized *triangular* hooks on strong gut, yet which will be found excellent for this kind of fishing. The paste bait will be none too large, when all the hooks are properly covered, and it stops on them much better than on one hook; in fact, he has them quite small enough for roach fishing with paste. Try them.—I am, &c., MARK ANTONY.

POACHING NEAR TONBRIDGE.

SIR,—I should like to give publicity through the columns of your valuable paper to a small portion of what I have lately heard and seen concerning one of the best rivers in England for coarse fishing, viz., the Medway.

On Sunday last I was fishing the river some distance below Hartlake Bridge, when I got into conversation with a man who told me, and which from inquiries made I found to be true, that he was shepherd to a farmer close by. He informed me that the river and back streams—of which there are a great number on the Medway—were netted terribly both by himself, his master, and most of the natives; that if I had been down there a short time before I could have seen his master's son "Frank" and others, shooting the large fish almost daily; and that in particular whilst a young gentleman whom he believed came from Holland, was staying at his master's house it was quite a common thing to see "Frank" out shooting the fish, and this young gentleman diving in and fetching them out. He also informed me that his master had a very large net which was kept especially for a bend in the river—which he pointed out—and that when the river was flooded, and the fish, as was their usual habit, had congregated in this "still" in enormous numbers, they were swept out by hundreds. I told him that I supposed the netting was confined to the water below Hartlake Bridge, as above that it is preserved by the Tonbridge Association, and he assured me that they had no more trouble in netting above than they had below the Bridge, and that once or twice whilst "Old Forster," the Tonbridge bailiff, was kept talking by some of the gang, others were netting the back streams within, comparatively, a few yards.

Now, Sir, a great deal of this may be yokel brag, but from his evident knowledge of the backwaters, the depth of the river in various places, the rocks, &c., in the bottom, of which I know a little, there must be something in it.

As if to verify some portion of the above, I heard from a friend of mine (the secretary of a London angling club) that about 5 o'clock on the same morning at East Peckham he saw three men dragging the river with a large sweep net.

Returning to Tonbridge by the river bank I and the friend above mentioned, saw some pike that had been taken and retained, one at the lock below Hartlake Bridge weighing about 4 oz., another higher up weighing about 8 oz.!

My reason for writing this is to wake anglers up to the way in which this river is being depleted. It may be said that there are now two associations preserving this river. So there are; but what sort are they? One, the Maidstone, allows fish to be taken of any size (my informant was a well-dressed man, who said he was a member of the Maidstone Association, who on seeing a roach measuring 7¾ inches returned to the river, remarked, "What is that for? . . We keep all fish that come to our hooks;" and on being asked the question as to how far the Maidstone Association intended preserving, replied "Nothing near so far as Hartlake Bridge"); and the other, the Tonbridge, although they have put a large quantity of fish into the river above the town allow fish to be taken—in fact, there is no prohibition all, it is simply a request—of such ridiculously small size that the men taking them might very well be denominated members of the Minnow and Stickleback Brigade.

There is one thing more I should like to mention. A native informed me—and I have no doubt he could be found if wanted—that last year he sold a London club man eighty-two roach, some of large size, which he had caught for 30s., and that on Friday last week the same man was down the Medway and informed him that the roach he bought gained him a prize at his club. Now, could not this man be found out? There were very few large takes of roach from the Medway last year, and I expect still fewer anglers (save the mark!) that went down to the Medway last Friday.

Apologising for taking up so much of your valuable space.—I am &c.,

A MEDWAY ANGLER.

P.S.—I enclose my name and address, not for insertion but to show my *bona fides*.

THE TOURNAMENT.

SIR,—Your account of the "Second FISHING GAZETTE Tournament" has interested many an angler in the country, and has made some speculate as to the reason why the attendance was not very large indeed. No one can write himself an angler until he has become quite independent of weather, and hence the threatening morning must not be made responsible to any great extent for absentees. Can it be that there does not exist generally a sound belief in the skilful use of tackle, and that many anglers estimate their own powers by occasional successes under favourable circumstances, instead of sitting in judgment upon their blank days, and hence are content? Surely one of the great charms of fishing is that there is always scope for continued efforts after excellence, and it must have been of advantage to any one to see masters of the rod and line display their skill.

Throwing with a single-handed rod would have been to me the most interesting contest. In carrying out the competition, to make all conditions as equal as possible, ought not some allowance to be made for the height of the angler? Surely the disadvantage of a very short angler would be a positive quantity.—I am, &c., X. Y. Z.

FISHING AT BIRMINGHAM.

SIR,—I am a subscriber to your useful and interesting paper, and have noticed the kind way in which many questions as to angling in certain localities are answered by yourself and correspondents. Would any brother angler, who is well up in the subject, be good enough to write stating where fishing is to be found in this neighbourhood, what kind, and what kind of fish are to be caught?

Why should we not have fishing clubs here as in London, and by joining together, rent some river or rivers and properly preserve them? As it is at present, the anglers of this neighbourhood are singularly divided, and do not seem at all alive to their interests.

If any other Birmingham angler is of this opinion, let him write and express his views on the subject, and something may be done.—I am, &c.,

July 20th. AVON.

["Avon" should call on Mr Gregory, Vyse Street, Birmingham, and he will find there are several clubs in Birmingham. Some of them rent waters.—ED.]

A GOOD SUGGESTION.

SIR,—I should be very glad to hear of an angling club which does not make a practice of fishing on Sundays; and, as I noticed a correspondent (in last week's issue, I think), making a similar inquiry, I thought it might be possible for some of your readers to form a club. Personally, I should prefer that the meetings be not held at a tavern or a public-house.—I am, &c.,

London, July 18th, 1882. T. A.

THE NEW FISHERY SOCIETY.

SIR,—I should like to ask the committee of the United London Angling Association whether they have fixed, or intend to fix, sizes that fish may be taken in their waters? If they have not, but intend to, I hope the sizes will be (at least for roach) something better than they are on the Lea.—I am, &c.,

July 19. MAYFLY.

CLUB AND OTHER JOTTINGS.

By L. B.

FROM the Thames the reports of good takes are few and far between—like the proverbial angels' visits—and the same may be said of the sedgy Lea, beloved of "Honest Izaak Walton." Apropos of the river Lea, and of the river "Lea preservation" that body deserve the greatest praise for having, by the exercise of a judicious and liberal policy secured a really efficient preservation of the river. Among the means they have employed have been freely posting notices, offering and paying rewards, everywhere securing (and with the best result) the active co-operation of the police and of the respectable inhabitants, the legal testing of alleged private rights, &c. When we remember how the river Lea preservation is carried on by a body of working men at a comparative small cost, soliciting no subscriptions, giving no big dinners, boasting no staff of full regularly paid keepers, but depending principally upon the means above-mentioned, it is a source of wonderment how so much has been done out of so little; on such a river as the Lea, too, once in many parts a very hotbed of poachers, where hulking vagabonds were wont to earn beer and baccy by wielding in broad daylight huge cast nets at 1d. a throw. But then those who wonder little know the hard work, the incessant watching, care, and, in many cases, the sacrificing of private opinions to the clear good of the cause. The names of such gentlemen as Messrs. Smith, Baylee, early pioneers of the movement, now bearing such grand fruit; of poor George Oram, who made the preservation of the river his one great object, and whose happiest moments were spent at night or in the day time in long walks on its banks or rowing on its broad bosom, doing efficient duty as honorary bailiff—or of head bailiff Ghurney. As one who has watched the movement I claim to understand and appreciate the means by which the ends have been achieved; and cannot help thinking that for downright hard work, carried out with great unity of purpose, the Lea Preservation Society, now amalgamated with the United London Anglers' Central Committee, might well be pointed out as an example to be followed by many more pretentious associations formed for similar objects.

This (Friday) evening the monthly meeting of the West Central Association of London and Provincial Angling Societies will be held at the Portman Arms, Great Quebec Street, Baker Street. Several matters of importance will be brought forward for discussion, among others the new proposed Thames Conservancy bye-laws, which, if passed as they stand at present, will only too truly be driving the last nail in the coffin of our free Thames—as your correspondent, Mr. Geen, crudely but truly puts it. Appeals to the Conservators, where the defence of ancient public rights have been the end sought, have been so almost invariably unsuccessful, that, though the form of such must again be gone through in this case, that we must not be blamed for having left untried any possible means; yet I fear it will have to come to a public agitation, and an appeal to the Board of Trade.

It is to be sincerely hoped that the Thames Preservation Societies will take the lead in an agitation of this kind. I was told by a prominent angler a few days ago that, with exception of the Thames Angling Preservation Society, the upper river societies were not alive to the seriousness of the danger just now threatening London anglers. I am exceedingly loth to believe this, and, indeed, will not, without the clearest proof.

The new association at Henley seems to be started in the right spirit, and all true piscators will join in wishing it the success it will so well deserve if it continues in the paths it has mapped out for itself; but good wishes and moral support, though they are very great no doubt, are of little use in preserving waters without the sinews of war; and I respectfully commend this fact to the notice of anglers, clubs, and associations. The Thames Angling Preservation Society are greatly to be congratulated on the magnificent haul they made at the recent netting. All true piscators will, I feel sure, join with me in hoping the experiment will be repeated again and again, and with the same success. But we must not allow such immediate success to cause us to lose sight of the great piscatorial problem of the immediate future—I may almost say of the present. I refer to coarse-fish culture, upon the practically successful solving of which depends the replenishing of our rivers, lakes, &c., on a scale with which the most magnificent hauls from reservoirs will not bear the most distant comparison.

HARBOURS OF REFUGE.

A Society has been formed for the promotion of increased Places of Safety on our Coasts for Fishermen and Mariners. The splendid society, the Royal National Life-Boat Institution, saves 500 lives per annum; but, in spite of this, there are about 800 lives lost each year.

It is desired to save as many of this latter number as possible. An influential Committee has been formed to carry out this object, and it is supported by the Duke of Teck, by fifty Peers, the Archbishops, twelve of the Bishops, and nearly 200 members of Parliament.

The purpose of the Society is to direct public attention to the existing national calamity, to arrange deputations and public meetings, and to carry out the work arranged by the Committee. The Prince of Wales, on his recent visit to Hastings, in reply to an address from the fishermen, expressed great sympathy with the movement, he himself having a brother and two sons exposed to the perils it is sought to mitigate. The Rev. James Weller, of Amersham, and the Rev. G. Roy Badenoch, LL.D., Whitehall Gardens, have been amongst the earliest workers for this object; and Mr. F. Johnson, of St. Leonards-on-Sea, the hon. sec., was the original organiser. It is hoped that the public will subscribe liberally in support of so noble and patriotic an undertaking, a work which cannot fail to enlist the warmest sympathy of the English people. If energetically supported, the Committee have every hope and prospect of success.

Subscriptions should be forwarded to Mr. F. Johnson, the hon. sec. Cheques crossed London and County Bank, Hastings Branch.

GREAT EASTERN RAILWAY.

ON MONDAY, 24TH JULY, 1882,

A SPECIAL TRAIN

WILL LEAVE LIVERPOOL STREET STATION

FOR

YARMOUTH

At 7.0 a.m.,
Returning from Yarmouth (South Town), at 6·0 p.m. the same day.

FARE THERE AND BACK:

COVERED 7s. CARRIAGES

No Luggage Allowed.

London, July, 1882. WILLIAM BIRT, General Manager.

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S

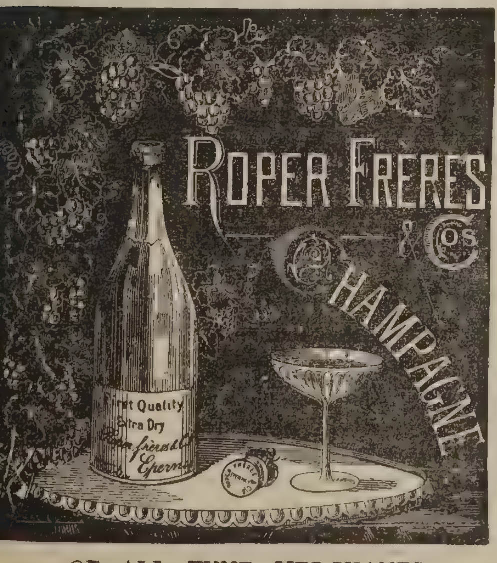
CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT.
22, DORSET ST., BAKER ST., LONDON, W.,
AND WANTAGE, BERKS.

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted), 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract on the right eye." Similar Testimonials from John Lowe, Esq., M.D.; J. P. Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.



OF ALL WINE MERCHANTS.

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY.

CAPTAL ACCOMMODATION AT WARNER'S.

BOATS, PUNTS, &c.

" Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. Davidson, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to George J. Robinson, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS
Of setting the Angling on
BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for " season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. Mullarkey, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.
The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

FISHING—NORFOLK.

Ormesby Broad abounds in Roach, Bream, Perch, Rudd, &c.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

or

Mr. B. R. Bambridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-street, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 1, Sabina-street, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.
Mr. E. Perks. Evesham-street, Redditch.
Mr. J. Walsh, Bookseller, 5, Harpur-street, Bedford,
Messrs. H. and C. Treacher, Booksellers, Brighton.
Messrs. Gaynor and Son, 10, Royal-terrace, Richmond, Surrey.
Messrs. O'Handlen and Co., 48, Victoria and Temple-street, Bristol.
Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons. Midland Tent Works, Loughborough,
Miss G. Wells. 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Briggate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

⁂ The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, JULY 29, 1882.

A DAY AT HAZLEFORD FERRY.

THE breeze blows fresh from the north-east as I leave my house in Mansfield to catch the 9.35 train from Rolleston Junction; and what care I though the sky is covered with leaden clouds, and the cold wind sings through the telegraph wires, as, after a short stop at Farnsfield and Southwell, and a change at the Junction, I leap out at Bleasby Gate, and, shouldering rods and basket, set out with a merry heart for Hazleford Ferry. Yonder are the wooded hills which slope upward for 200 feet above the flat meadows, along which glides the silvery Trent, and there I shall find my dear friend and companion on many a fishing excursion. Now I cross the stile which gives a short cut over a couple of fields to the Fish Inn and ferry-house, and while yet some distance off I almost walk on tiptoe to get the first glimpse of the much-loved river. Ah! there it is, flowing just the same as when 30 years ago I swam my little boats, and with fourpenny hazel-rod of two parts and a complete penny tackle, I tried, mostly in vain, to hook the minnows and little dace which basked in the shallows just above the old Trent Bridge, at Nottingham. But here comes the ferryman, who will soon put me across that deep swift "inway" so dear to barbel and barbel-fishers. Landing upon the steep bank, I make my way across the island to the backwater. Now let me try to describe the place. The Trent at Hazleford is very broad, but just below the ferry-house the stream is divided by an island, which turns the main volume of water down by its left bank, and this is called the "inway," and is the navigable part of the river. The branch to the right of the island is wider than the inway, but it has an almost imperceptible stream which, after flowing for some two or three hundred yards, is blocked by a dam or weir of large stones. At high water the stream rushes over this obstruction with a roar, for the fall is considerable, and after being broken up by gravelly shoals into several small streams, unites and flows in a gentle or strong current (according to the state of the water) till it reaches the river about 300 yards below. It is to the upper reach of water that I direct my steps this morning. Just above the weir, the bank, broken and washed by successive floods, descends abruptly to a lower level, where you can just pass between the trees and the water's edge. As I near the spot, a whistle brings my friend's head above the bank, and, of course, my first question is "Well, have you done anything?" I find he has been live-baiting all the morning, and taken only a small pike, about 2½ lb. Nothing discouraged, I put my rod together, and threw out a live bait for a start. Then we seat ourselves on a sloping ash, which, from the giving way of the earth, is resting on the bank behind, and discuss our sandwiches and drink our coffee, which we have just heated over a spirit lamp. Having finished our meal, and charged our pipes for the post-prandial smoke, we chat for five minutes, all the while keeping a sharp eye on our floats; but though the place looks so fishy, and the wind fresh, and the water just the right colour—that is, next to no colour at all—not a run do we get, though we try close to the rushes, as well as further out. So we decide to try the lower water. In five minutes we are at the spot, and it looks a place for anglers made. The bank here, which slopes down for 10 or 12 yards, has just such a fringe of rushes as pike fishermen love to see; but on the right these rushes spread out into a great bed mixed with tall reeds, and through which it would be next to impossible to land a fish. Having each selected the best landing place we can find, we stand a few yards apart, and are ready for action. But, at the risk of being tedious, I must try to describe the water here. This backwater is about 30 yards wide. Down the middle goes the stream, rather too fast for pike fishing. On the near side there is a back flood, the water gently working up the contrary way of the current. Right across yonder the bank is very steep, and is covered with dwarf trees and brambles, which overhang the water. Under this bank, and for half a dozen yards out, the water is quite still. Now I decide to get out there if possible, as it looks a most likely place, and fortunately to-day the current is not very strong, or the pressure on the line would sweep my float right down the stream. Looking into the can, where I find we have only ten baits for the whole afternoon's work, I select a fair-sized dace, which is soon flying through the air towards the opposite bank. Flop it goes into the water just where I wanted it, but no float appears, and I strike at once, and am soon bringing the struggling captive across the stream. My friend is ready with his gaff, and the next moment I am down on the grass releasing my hooks from the jaws of a nice 5 lb. pike. Having baited again, I naturally throw across to the same spot, and again—in less time than it takes to write it—the float is down again, and I am pulling in. This time the fish is rather smaller, not being much over 4 lb. Having thrown it up the bank I am "at it" again, and drop as near as possible in the same spot. The bait has scarcely time to turn round after its aerial flight and sudden splash into its native element, before the float is gone again, and in a few minutes I am rejoicing over a beautiful 7-pounder. I wonder how long this luck is going to last, and am almost too excited to put on my bait; but ready once more, and "whirr," goes the reel as I throw out. But the float this time shows no signs of disappearing, so I let it be a few minutes and then draw in again for a fresh throw. This also is unsuccessful, but the next time I get a 3-pounder, and now the game is up, as far as I am concerned, for I have used half the baits, and of course leave the other five for the sole use of my friend; but he is sadly out of luck, for, though he manages to get out to the right spot, not a run can he get, and I have to content myself with roach-fishing, which, after getting four pike in six throws, all in a quarter of an hour, I admit was very flat work. Now it is 3.30, and, though there are yet a couple of hours of daylight, we must pack up and be off to the ferry, as our last train leaves the distant station in less than an hour. This was my first bit of luck in pike-fishing, and I confess I have never had such another. The fish altogether weighed 19¼ lb.—no great weight, to be sure—but the sport I shall remember as long as I can hold a rod.

HAZLE.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether the may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

NOTES ON THE 1883 EXHIBITION.

The Americans have voted ten thousand pounds towards the expense of sending their exhibit, and ask for ten thousand feet of space. This is nearly a quarter of the entire amount of space occupied by the great exhibition at Berlin.

* * * * * * *

We are very glad to see that Sir Philip Cunliffe-Owen, K.C.M.G., C.B, &c., has now a place on the Executive Committee.

* * * * * * *

We understand there has been a considerable number of prizes given by private donors for essays on various subjects. We hope these essays and other prizes will be made widely known; in the case of the recent Edinburgh Exhibition most people knew nothing about the essays until the prize winners were announced.

* * * * * * *

Local committees in connection with the exhibition are being established all over the country; this is a most valuable aid in creating interest in the affair.

* * * * * * *

The site of the Exhibition will, in all probability, be the Horticultural Gardens at South Kensington, and we do not know a more suitable place, except the Crystal Palace, which we suggested a year ago nearly. But it appears the Crystal Palace Company's terms are prohibitive. We should have thought it would have paid them to pay for the show, but they know best.

* * * * * * *

Sir B. T. Brandreth Gibbs, the director and secretary, has resigned his executive functions, and the secretarial duties have devolved upon Mr. J. W. Mollett, formerly of the staff of the Royal Commission of the Paris Exhibition of 1878. Mr. Mollett will prove the "right man in the right place."

* * * * * * *

Mr. Mollett will be assisted, and we venture to say, very greatly assisted, by Mr. Harry W. Towse, who at first for a considerable time had the secretarial duties entirely on his own shoulders, and who consequently is thoroughly well up in the history of the undertaking from its very commencement under the auspices of the Fishmongers' Company. His unvarying courtesy has made him many friends in the angling and fishing world.

THE YORE, YORKSHIRE.

It was with great pleasure I perused the very able paper on the above-named stream by Mr. Thomas Ford in your paper some time ago. Mr. Ford must excuse me differing from him in some points. I purpose to give you my experience of the "Upper reaches" of the Yore. When speaking of the "Upper reaches" I mean the extensive length of water under the protection of the Hawes and High Abbotside Angling Association, *i. e.*, from Yore Head to Yore Bridge at Bambridge. From Yore Head to Shaw Paddock is at present remarkably free from fish, owing, it is said, to the continual drain on the stream through the "cowl net." This implement is plied, I am told, most energetically every time there is a heavy water. For the benefit of the uninitiated, I may state that a "cowl net" is a monster "landing net," and in the hands of a professional "cowler" is a very effective means of keeping down the stock in the river. It was no uncommon thing for a cowler to go out when the river was fresh and bring back 4 or 5 stone; but now, I am told, he does well if he gets one stone, From Shaw Paddock to the Moor Cock there are some grand streams; but I am sorry to say—and I can say it on good authority—a good pound fish, instead of being the rule, is the exception. From the Moor Cock to Thwaite Bridge is a remarkably fine length when the water is in proper trim, but the fish run small. The lengths I have spoken about seem never to have recovered the treatment they received at the hands of the navvies employed in the construction of the Settle and Carlisle and the Hawes and Northallerton branch of the North-Eastern Railway. We now come to what in my humble opinion is the best stretch of water *i.e.* from Thwaite Bridge to Mossdale Beck meeting with Appersett Beck. The whole length is most difficult to fish owing to the thickness of the timber growth on each bank; but wading down the middle, any angler, in a fair water, can make a very decent dish. From Mossdale Beck to Hawes consists of fine streams and deep holes, in which harbour many fine fish, both grayling and trout. The fish in this length are extremely shy, and require the finest possible tackle. From Hawes to Bambridge the water is much of the same character as the last mentioned, only there is more of the flat. Good fish is the rule in this length, but are most difficult to catch, although a nice breeze and single hair will hardly ever fail to bring some to the bank. Grayling are very numerous in this length, and seldom are caught under half a pound. I have had many an expedition to Semmerwater, and must think Mr. Ford's remarks, anent the finny inhabitants of this lake, were made in ignorance of the character of the fish. Semmerwater trout are noted in this locality for their biting qualities. Any day with a fair water any expert can make a good dish. I have myself got as few as fifty in an afternoon, and one local angler took 17½ lb. without stirring from his "set." Bream and roach are both numerous in the lake, but are never angled for, as they are considered worthless. I saw a stuffed specimen of a Semmerwater trout the other day, which weighed 7¼ lb. when caught. The trout in Semmer water are fit earlier than their brethren of the Yore. They are snug in the depths during the most severe winter. Feed during the spring months is very plentiful, as the crayfish (with which the lake abounds) are then in a "jelly state," so to speak. With respect to the crayfish, a friend and I took 1700 from nine baits one afternoon. I consider it a great national loss that salmon cannot ascend the Yore any higher than Aysgarth Force. Many miles of the best spawning ground in England would be open to that noble fish if a ladder was erected to enable him to mount the Force. I must ask a plain question: Why is not a ladder erected? Is it to satisfy the proclivities of a favoured few? If so, I think they would best increase their sport by the fish getting over the force, inasmuch as the number of fish visiting the Yore would materially increase yearly. I may say the Hawes and High Abbotside Angling Association is in flourishing condition, and the committee of management are doing their best to protect the river. The funds at present will only allow an occasional watcher, but I trust soon to hear that funds will be forthcoming so as to enable the committee to employ a regular watcher. Owing to the open season we are looking forward to a good season. Tickets are issued to visitors at the rate of 1s. per day.

Tarn.

[Having fished the water "Tarn" describes we can fully endorse his remarks—especially as regards the nets and poaching which goes on between Aysgarth to Bambridge.—Ed.]

THE EFFECTS OF POLLUTION ON THE YORKSHIRE RIVERS.

The Calder.

In my research through the minutes of evidence taken before the commissioners appointed by Government to inquire into the best means of remedying the pollution of streams, I have come across much useful testimony, which few men would care to summarise at the expense of the deep wading one has to undergo through the rivers of text, contained in Blue Books.

Mr. Joseph Rhodes, the Mayor of Wakefield, says:—"In my early days the river here was pure, or nearly so. I am speaking of the river Calder. The water was then sweet and clean, and it was full of fish—roach, perch, &c."

Mr. Henly Morgan, Deputy Town-clerk of Wakefield, says:—"I have seen fish in the river eighteen years ago near the bridge, and people getting them out. And now there is not a fish left, not of any kind, not even eels."

Mr. James Oakes, of Wakefield, was born near the banks of the Calder, a mile above Wakefield, and has a familiar acquaintance with the river from Wakefield Bridge up to Supsett, about two miles above Wakefield; had from a long time to cross the river twice every day, and walk a quarter of a mile down its banks; had frequently bathed in it during that period, and spent many of his Saturday afternoons fishing in it; frequently drunk the water and seen other people drink it; has seen at Wakefield Bridge and in other shallow parts, hundreds of fish at certain periods of the year, and witnessed pike of all sizes taken out during the floods, as well as trout up to three pounds in weight. He confirms the statement of the Town Clerk that the water was as pure as waters ordinarily are. There were fishermen (anglers) to be seen passing through the village up to about fifteen or twenty years ago.

Mr. Samuel Holdsworth, M.D., and alderman of Wakefield, gave similar evidence, stating he used to catch eels, perch, chub, &c.; but not, perhaps, for 12 years has he had a fish, by angling or otherwise, out of the river.

Mr. William Woolass, Wakefield, has fished in the Calder when there were plenty of fish in it, and taken chub, dace and bream, and sometimes caught some salmon trout. Now they have no fish whatever; fish could then be seen in shoals of scores and hundreds. It is now polluted with all sorts of filth—refuse from every place. He has seen more than forty dead dogs pass in a day when a flood has been on; but not regularly, only in a case of flood. To a question whether there were any fish above, the witness replied: "Sometimes I take an occasional walk up that way, but I never, as I used to do, see any fish there; that is as far as Kirkthorpe Farm, about two miles."

Mr. W. Holmes: There are a few gudgeons, I believe, at the Frost Dam and Pen Bank Dam, but none to be seen in the river. In the mountains fish are to be met with, but if they venture down near Leeds they are soon seen floating about at the top to escape the nasty water, and there is certain death for them.

Mr. George Smith, Wakefield: The river, when I first knew it, was full of fish; the water has killed them.

Mr. William Wood, of Dewsbury, would be surprised to see a fish now. Mr. John Charlsworth to the same effect; Mr. Joseph Tattersfield, of Ravenshorpe, to the same effect; Mr. W. Pollard, of Grange, near Leeds, to the same effect.

Mr. Samuel Smith, of Leeds, remembered catching fish in the becks, where the centre of the town now stands; and used to angle from an island called School Close, which at that time consisted of green fields and hedges, with testers, and scarcely an inhabitant in it.

Mr. Robert Garside, of Leeds, corroborated the last witness.

Mr. John Milligan, of Keighley, gave important evidence. He was surgeon of the district for many years, and can recall the time when the trout used to come up to spawn, and, jumping the dam stones, five or six feet, to get higher up the river, where there were sandy beds in which they could deposit their spawn. So plentiful were the trout that the woolcombers used to come and capture the fish at the dam stones—stones so placed as to give the water a direction down to the wheel of his mill.

Mr. Hepinstall, of Pontefract: That they had no other water for drinking purposes up to twenty years ago. I used to take chub, roach, dace, and gudgeon, and such like, and have seen salmon leap at the dam in October and November, up to 1850. Numbers of gentlemen came to this district, fly-fishing. During the last few years of the gradual putrescence of the water, I generally carried a little camphor in my pocket, and applied it to my nose. During that time we generally burnt a little pitch when the stench came from the river into the mill. One year the part of the water mill which runs into the river got coated with a white substance, almost as if you had painted it over; and when you touched it it was white, soapy, and greasy, and it washed off again. The river is going from bad to worse.

I shall leave off here. It is clear that the "Veteran Angler" has noticed in the decadence of the Wharfe the same symptoms that heralded the destruction of the Aire and Calder; and if these splendid rivers must be crushed under the wheels of Moloch's almighty dollar, and the god Shoddy, my poor voice will no more stay their fate than the old lady's broom will keep out the Atlantic.

Surely, here is evidence more than sufficient to sound the alarm. History repeats itself with nations, and so it does with rivers; with this difference: that nations when they are at the worst can recover themselves. Not so rivers; when once polluted, they rarely acquire again their normal state of purity. Therefore it behoves all men, anglers in particular, to watch over the fortunes of the aquatic blessings of Nature with more than heartfelt, soul-inspiring zeal.

CREEL.

NORWICH PISCATORIAL SOCIETY.

THE first match this season of the above society was held on Thursday last, July 20, at Horning. The competitors, who numbered 38, started from the Club House, Walnut Tree Shades (in waggonettes supplied by Mr. Russell, of the Bull Inn, Magdalen Street) at 6 30 a.m. After a pleasant ride of an hour-and-a-half, they arrived at Horning, where the host, Mr. Thompson, accorded them a most cordial welcome. The boats being drawn for, the start was made for the fishing ground. When the boats were all moored, the signal was given and fishing commenced at 9 a.m. At 4.30 p.m. another signal was given, and rods, lines, &c., being packed up, and the boats were soon at the Ferry Inn, where the fish were weighed in. The following are the names of the winners:—1. Mr. Geo. Corbyn (the present holder of the challenge cup), who also took the prize for the greatest number of fish; 2. Mr. E. H. Corbyn, who also took a prize for the heaviest fish; 3. Mr. W. G. Capon; 4. Mr. Mobbs; 5. Mr. W. Page; 6. Mr. Spelman; 7. Mr. G. Cubitt; 8. Mr. Butler; 9. Mr. J. Murrell; 10. Rev. Matthews, B.D.; 11. Mr. A. Sim; 12. Mr. R. Bradley; 13. Mr. Lemon; 14. Mr. R. Smith; 15. Mr. Olivant; 16. Mr. J. D. Turner; 17. Mr. Hinsby; 18. Mr. R. Page; 19. Mr. H. Sutton; 20. Mr. W. Wright; 21. C. Daniels, Esq. After the weighing-in was over the members adjourned to the large room of the inn, where a capital meat tea was provided by Mr. Thompson, in his usual excellent style. Tea being done, a start was made for home, and songs and jokes enlivened the way.

On the following Tuesday the distribution of prizes took place at the club-room, the Rev. Matthews, B.D., being in the chair. The prizes, which were as under, having been selected, toast and song filled up the remainder of the evening. The prizes comprised salad bowl, biscuit caddy, Gladstone bag, breakfast cruet, general rod, butter cooler, cane rod, jam jar, umbrella, tackle book, plated salts, camp stool, enamel salts, creel, silver tankard, tin of biscuits, 1 dozen Bristol snap tackle, tackle case, pike rod, 1 FISHING GAZETTE pliers. Also a breakfast cruet for the largest fish, and a general rod for the largest number.

Songs were sung by Messrs. Midland, E. H. Corbyn, R. Nudds, W. G. Capon, S. Pye, and J. D. Turner, the latter gentleman presiding at the piano, Great credit is due to the committee, and more especially to the hon. sec., Mr. W. G. Capon, for the success which has attended the first match of the season.

ANGLER.

ANSWERS TO CORRESPONDENTS.

B. J., Huntingdon.—The pike-fishing in Norfolk and Suffolk is very good indeed in the rivers and broads in the autumn and winter. Spinning the American spoon is the best plan. Of course you may get fish now here and there; but they get so much natural food now, and the weeds interfere so much with spinning, that it is uncertain work. We should advise you to go in for roach, rudd, and bream fishing on the Yare, either at Cantley or Buckenham, or Brundall. There are comfortable inns at each place; the charge for boat is only 1s. per day; there is no charge for fishing, but every angler is expected to give something to the funds of the Yare Preservation Society. Bad luck attend those who do not.—ED.

G. S., Caledonian Road.—A society, called the Thames Rights Defence Association, exists for the express purpose of defending public rights of fishing. There are very few places where this public right does not exist below Staines. If you want good bank-fishing we cannot advise you, as the river is at the mercy of steam-launches, boating parties, canoeists, &c. Should advise you to go to the Monkey Island Hotel, Maidenhead, to commence with. Mr. Bob Plummer will give you all the necessary information. Good takes are often made by bank angling from this island, as also from Eel-pie Island, at Hampton Court.

Dr. R. T., Bow Road.—We cannot recommend you to go to Ilfracombe for freshwater fishing, as there are only a few small trout streams in the neighbourhood, and the trout are very wee things; but for sea-fishing of all kinds you cannot well go to a better place. There is no regular fishing-tackle shop at Ilfracombe; but Mr. Rowe, fishing-tackle maker, Barnstaple, knows all the streams, and can supply the proper flies, &c. You will get fair trouting at Lynmouth, on the Lyn. The river, we are glad to say, is now preserved by a society, and if they would only fix a standard size below which no trout could be retained, there would soon be first-rate fishing there. The fish will grow to any size, if they only get quiet and plenty of food.

A. E. H., City Road.—The New River Company do not permit angling in the river itself, they issue a limited number of tickets for some of their reservoirs, but there are always far more applicants than tickets. What a fortune any one could make who rented a water (and kept it well stocked with fish) by selling day and season tickets.—ED.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

GROUND-BAITING.

SIR,—In the FISHING GAZETTE, of July 15, is a letter signed "Creel," on the pollution of streams and lakes, and arguing that pertinent question which every genuine angler will acknowledge is a step in the right way, viz., 'against ground baiting." This practice is, I feel confident, only put into operation by the pot fishermen incited by the prizes given by angling clubs. Why, in all reason, do not these members seek the health-inspiring banks of the stream to fraternise in the quiet companionship of their fellow piscatorials, and not for the object of gaining prizes by quantity of fish, captured in most cases by the aid of casting into the water a quantity of that suspicious and disgusting compound, ground-bait. Owners of private waters ought to adopt "Creel's" suggestion when granting angling permits: You may fish, but you shall not pollute the water by using ground-bait.

It is to be hoped ere long that the clubs of that metropolis of bottom-fishermen, London, will make this a hard-and-fast rule in their outings—no ground-baiting.—I am, &c.,

FAIRFISHER.

[We feared that "Creel's" remarks would be misunderstood. He is far too good an all-round angler to join in the outcry against the proper use of ground-bait. In fact, he has written hundreds of times in its favour. All he protested against was the throwing in of stale greaves, carrion, gentles, &c., into waters reserved for drinking purposes; and he is right. We have often protested against some of the nasty mixtures used by some anglers, but should consider the roach, rudd, barbel, bream or carp angler who did not use proper ground-bait as little better than a lunatic. Of course in well-stocked little-fished waters ground baiting is not so necessary; but in Thames, Lea, Trent, Ouse, &c., it is as necessary to know how to ground-bait properly as to know how to fish. Even Izaak Walton found ground baiting-necessary; and we entirely agree with him and all the other angling authorities who treat on float-fishing and know anything about it.—ED.]

NETTING THE RESERVOIRS.

SIR,—I see from the enclosed extract that—thanks to the Directors of the Chelsea Waterworks Company—a large consignment of fish have been placed in the Lower Thames. This is all very well, and gentlemen anglers have much to be thankful for, but how about the poorer brethren, that cannot afford to pay 8s. or 10s. a day for a punt? Why should not the upper portion of the Thames receive its share, such as Shiplake, &c., that can be reached at a small railway fare, and afford excellent bank fishing? Of all the consignments of fish to the Thames I cannot hear one for the upper portions (places that suit the bank anglers best). I find that permission is frequently given to private friends to fish these reservoirs, then why could not our association purchase the right to these or similar pieces of water for angling purposes? It would be far better to obtain water that could be easily protected and thoroughly stocked, than attempting it with rivers that are sure to be poached to death.—A. PORTER.

P.S.—The Welsh Harp is an example of what can be done.

[Our correspondent ought to know that the Thames Angling Preservation Society have no jurisdiction above Staines, and can only apply their funds to the improvement of the river between Richmond and Staines; but surely the bank fishers below Staines will get their share of the reservoir fish. The Preservation Societies of the Upper Thames must look after the Upper Waters. For the benefit of those who, like our correspondent, imagine the T.A.P.S. preserve the whole river, instead of only part of it, we insert this letter. —ED.]

WHO IS THE FATHER?

SIR,—At the Anglers' Tournament Dinner, July 8th, Mr. Geen stated that he was the originator of the Anglers' Benevolent Society. That Mr. Geen has done much for the welfare of the above society all who know him must admit. To him must be given great praise for the success of the inaugural dinner, which gave that society so large a sum to start with. To him the *humble(r)* angler has much to be thankful for. That he has been instrumental in causing many gentlemen to connect themselves with, and give liberally to the above society. Admitting this, and even much more, there is the possibility of Mr. Geen not being the originator, and therefore not the Father, of the above society; for myself and many other anglers have looked upon Mr. Ghurney as holding that honourable position. So, sir, you will see there are two fathers and two originators. No doubt the disappointment to Mr. Ghurney is great, he considering that the honoured name of Pater belonged to him, and him alone. Upon the principle of giving honour where honour is due, I ask which is the legitimate Father of that beloved child, the Anglers' Benevolent Society?—I am, &c.,

83, Maria Street, Kingsland Road. G. MANNING.

THE PROPOSED THAMES BYE-LAWS.

SIR,—I should like to ask our Thames anglers to consider the clause 11 of the new bye-laws proposed by the Conservancy, as published in the *Times* of Wednesday, July 12. If not quite so awful an onslaught as clause 14, to which Mr. Geen has called attention, and which must be resisted by all earthly means—and there is no time to lose; one month, and the shackles will be clapped on—still, clause 11 is one of those villainously innocent laws that afterwards astound one with the powers they confer. It reads that every person following the profession of fisherman shall pay one shilling, and be duly registered, and that every boat, punt, or vessel shall also pay one shilling, and be duly numbered on bow and stern, &c. Now, I beg you mark, the clause read with other Acts conferring powers upon the Conservancy means this: that the Conservancy shall have the power to refuse to register any person, boat punt, or vessel they may deem undesirable from any cause whatever. Now, I can point to more than one place where the local magnate has such a dislike to punts fishing near his grounds that constant quarrelling and petty annoyance is caused to any anglers who persist in doing what they have a perfect right to do—viz., continue fishing. The first use that will be made of that clause will be to refuse more than half the number of punts their license, and so clear their neighbourhood of the nuisance of so many anglers. If this is allowed to become law, we may soon read something like the following report from Mid-Thames:—"On Wednesday last, two well-known London anglers came down here to fish, but on arrival found that the licence had been refused for more than two punts, instead of the six usually here, and those two were engaged; so they went down to the next fishing station, and there obtained a punt, but there being no registered fisherman disengaged, the landlord of the house offered to fix the punt in the swim for them, and has just got a summons for breach of bye-law 11, being an unregistered fisherman. The anglers did not catch anything, as the riparian owner, who cares nothing about fishing, has given his tenant, the miller, consent in writing, under clause 14, to net, and that part of the river he had just dragged clean." Well, now, brother anglers, what shall we do? I suppose the matter is hardly within the province of the Thames Rights Defence Association. I propose that every club secretary shall, in the names of its members, appeal to their respective members of Parliament to oppose those two clauses. Let the Hammersmith clubs appeal to Mr. Firth and Sir C. Dilke—and each other London club may thus obtain the metropolitan members' opposition—and by no means forget to support Mr. Geen in any action he may take. I should be very pleased to subscribe towards defraying any expenses incurred in the struggle for a free upper-Thames.—I am, &c.,

Thames Traveller.

[We intend to print and distribute a petition form for the signatures of London and Thames-side anglers who object to the proposed new bye-laws.—Ed.]

POACHING NEAR TONBRIDGE.

Sir,—I was somewhat surprised at some of the statements contained in a letter from "A Medway Angler," in your last week's issue, on the above subject; though, at the same time, I am very pleased with some of the information he gives. "Near Tonbridge" seems to "A Medway Angler" to be an indefinite distance, somewhere between Tonbridge and Maidstone. I feel it will not be right on my part if I allow the letter to go unanswered. The Tonbridge Association preserves the river to Hartlake Bridge, and no farther, and therefore is not responsible for what takes place below that point. With respect to the stupid brag about "Old Foster," our bailiff, I may say that, knowing the man as I do and also the water, I do not believe a word of it. The only streams about Hartlake that the gang in question would be likely to net, or in fact can net, are the mill stream and one running from the Old Tumblers; and these are where it is possible to net them, quite openly and visible from the towing path. It is quite true that the party in question had a few fish from one of our streams during the close season, but they were within an ace of being caught, and do not like the district a little. The Maidstone Association, when they get into working order, intend to preserve right up to Hartlake; so perhaps my shepherd friend may find his old places as dangerous to poach in as our district.

I may state that we have a difficulty about undersized fish from pot-hunters, not from anglers. Would "Medway Angler" kindly point out how, with no Conservancy Act, we can compel the return of undersized fish to the water? With respect to there being no very large takes of roach from the Medway last year, I must contradict such a statement, as some large and good bags were taken in this fishery.

If, at any time, "Medway Angler" can give me any reliable information about poaching, I should be obliged; but the next time he ventures to grumble through the medium of your valuable paper—not without cause, as far as the Medway below us is concerned—I hope he will be a little more particular as to where he places "near Tunbridge."—I am, &c.,

Edm. Hollomby,
Hon. Sec. Tonbridge Fish Preservation Society.

THE WHARFE.

Sir,—The third report of the commissioners appointed to inquire into the best means of preventing the pollution of rivers, at pp. 44, 45, says:—

"The water-supply of Leeds thirty years ago belonged to a private company, and was obtained from the Aire; it is now in the hands of the corporation, and is derived chiefly by pumping from the Wharfe."

"The *quality* of the present supply (1867)" is also a ground of complaint.

"The water of the Wharfe, liable to occasional discolouration from peat, is now becoming deteriorated by the discharge of sewage and manufacturing refuse from towns and places on the banks above pumping station. In consequence of this, and in anticipation of the increasing wants of a town growing both in population and manufactures, the corporation are now applying to Parliament for powers to resort to a new source, and to bring in a daily volume of twenty millions of gallons of water." Not, mark you, into the river to refresh it in time of drought, but into Leeds, to become converted into diluted sewage, and then poured into the Aire!

If this evidence, printed by authority, is not sufficient to abundantly show the gradual deterioration of the Wharfe, which could not other than culminate in what we now find, I could upon it accumulate a mass of similar facts as given before the commissioner by residents upon the banks of the Wharfe, and citizens of Leeds; and how the diverting of twenty millions of gallons a day from one of its natural tributaries can be for its good, will take more eloquence than Mr. M. is likely to command, to convert those not selfishly interested to his way of thinking—if he does think so.

To give one instance, among many, of how the impurity of the upper waters of the Wharfe is affecting the tidal waters below and about Tadcaster, up to which the tide flows, witnesses remembered "smolts being taken by small mesh nets in that district in such quantities that they were sold by the cart-load to farmers to manure the land with." Analogous facts may be found in Mr. Frank Buckland's and Mr. Spencer Walpole's reports. Let Mr. M., who gives such an unqualified denial to the state of the Wharfe, as asserted, between Ilkley (I had nearly written Inkley) and Leeds, turn to the 13th annual report of the inspectors of salmon fisheries of England and Wales, page 126, and there read, with a blush, that so long ago as 1874 it was reported to H.M.'s Government that "the tanneries and other pollutions at Otley have greatly increased during the past year and have become a public nuisance."

There is something really Milesian in Mr. M.'s logic. To tap one prolific tributary after another, and then declare this diversion of the element from its normal channel was for the benefit of the Wharfe, might be a very good argument for Arabi to advance in mitigation of punishment for damming the flow of the fresh water to Alexandria.

Is there, then, any occasion for the gift of prophecy as to what must be the ultimate fate of not only the Wharfe—which is, as a sequence, following the destiny of the Aire—but the rest of the once splendid rivers and fisheries of Yorkshire; for we know that local engineers have already their eye upon the Nidd, the Ouse, and their tributaries. As far as the doomed Wharfe is concerned, Bradford taps the attenuated and suffering stream by a conduit between Hebden and Kilnsey Craig, and still asks for "more," although it will be found that this conduit is in connection with a second one, called Cholker Reservoir; and which second one, sooth to say, drains a third, called the Grimwath Reservoir.

"Oh," cries Shoddy—who does not desire to see beyond the length of his nose—"it will serve our time. What do we care for posterity?—posterity never did anything for us."

But I will give the best argument I ever heard for the desecration and despoilment of the picturesque Wharfe. It is this—the trade of Yorkshire is the very life of its inhabitants, poor as well as rich, and any measure would be a fatal blunder which should improve the state of the rivers, and the water supply generally, to the serious injury of the trade. Let me grant this, for the nonce. But I contend, that not only is a purification of the rivers and an improved water supply, compatible with the best interests of Yorkshire, but if the worsted and woollen traders are to continue to progress as they have done up to this time—even if they are to hold their own and continue to prosper at their present development—such improved water supply must be found elsewhere, and that without delay, instead of converting the pride of the Yorkshire valleys into fishless channels of fetid mud, poisoning the harmless cattle and innocent inhabitants on the banks.

Leeds is not the only Yorkshire centre of this species of self-inflicted desecration. Let Mr. M. glance at Wakefield, Castleford, Knottingley, Huddersfield, York, &c.

What I wish to assure your readers is that I have fully substantiated my statement that the "Wharfe is going from bad to worse" and that such a charge is neither "ridiculous or false," as boldly enunciated by Mr. M. For the truth of which I refer to the overwhelming weight of evidence I have culled from parliamentary papers and other documents, not relying upon my own personal experience of that shamefully and shamelessly abused once "famous trout stream."

As after the trouble Mr. M. has so foolishly given me to substantiate the real question at issue—Is or is not the Wharfe gradually deteriorating and becoming of the pestiferous character of the greatly neglected Aire?—perhaps he will state where I have accused the people of Leeds of drinking the waters of the Wharfe? I am aware that I made an error in the locality of the catch-basin to supply Leeds, but I maintain this does not in any degree affect the principle, or invalidate my statement, viz., that, in effect, ere long the Wharfe will be no more than a common sewer, as all the evidence of the several parliamentary commissioners have shown the Aire now to be.

Here my part in the controversy must end.—I am, &c.,

Creel.

THE WHARFE.

Sir,—I have read with amusement and also, I am sorry to say, with indignation, the letters on the subject which have appeared in your last four numbers.

I know the river from its source downwards, and I am glad to tell you that it is unpolluted, except in a few instances. The worst pollution which comes into the river is above Otley, and proceeds from Burley Wood Head Bleachworks, and some mills, which destroy all the fish in that tributary beck, and certainly causes the water, where it enters the river, to be as black as ink. There are one or two paper mills lower down, which do not at times improve the appearance of the river in their immediate neighbourhood; but at the same time do not seem to injure the fish, as a very favourite spot for bottom fishers is close to one of them. I do not consider the river Wharfe to be polluted as much as even some of your beautiful chalk streams in the South. There are few trout rivers in England that have not more or less to contend with paper mills and tanneries.

The water of the Wharfe, except during freshes, which bring much peat water down from the moors, is unusually clear and bright—perhaps that is the reason certain of your correspondents complain there are no fish in the river. Let me assure you that there are plenty, if anglers can catch them—there's the rub.

The Kilnsey Club, near the source, hatch out large quantities of trout fry every year, and keep their water amply stocked, as any one taking a day ticket at the Tennant's Arms there, will soon discover.

In the Burnsall Club waters there are plenty. At Bolton still more, though there they do not run quite so large.

As "Watchet" writes (and no one is better able to judge, nor is there a better fisherman in Yorkshire), there are plenty at Ilkley, and so on to Denton, Burley, and Weston; if a man knows how to fish fine he can fill his pannier.

In the Otley Club water, thanks to the indefatigable secretary, Mr. Pratt, there are plenty of trout and grayling, fish of 1 lb. to 1½ lb. being constantly taken.

F. P. H., in his letter of the 8th inst., gives the numbers of fry turned into the club waters, as he writes, between Otley and "Leeds" (I was not aware that the river Wharfe ran by Leeds, the river there is usually called the Aire). These are incorrect. The real numbers are:—For 1878, 17,000; 1879, 21,000; 1880, 27,000; 1881, 26,000; 1882, 26,000. Besides the above 15 000 Malham Tarn trout fry were turned out one year, and nearly 1000 fish, weighing from 2 oz. to ¾ lb., presented by Mr. Francis Darwin, of Creskeld, who kindly rears fish for the benefit of the club. 2000 Malham Tarn fry were presented also by Mr. Fawkes, of Farnley Hall, and 1000 *Salmo fontinalis* fry by Mr. T. W. Stansfeld, of Westwood Grove. He also tells us that an Otley gentleman caught fifty trout in a few hours in April last in a distance of two fields with fly. The correct number was thirty-five or thirty-six. None weighed a pound, and several were under 7 inches—the limit enforced by the Otley Club. So much for the value of F. P. H.'s evidence. I presume he and (F. P. Hammill, who dates from Leeds, is the same person, and I should like to ask you what you think of his remarks respecting the owner of the sporting rights over Lindley Reservoir. They are not written in that spirit in which the author of "The Complete Angler" was wont to address his readers, nor in the manner in which, as a rule, correspondence is conducted in your interesting paper.

The Leeds Corporation, when they purchased the land for Lindley Reservoir, did not include the sporting rights; and, therefore, the Leeds ratepayers—of whom, I suppose, F. P. H. is one—have no claim on the fishing. He might just as well complain if any one possessing game preserves should decline to give him permission to go in and shoot the pheasants if he asked for an order to do so. I wish he and his twenty friends he writes about would pay a visit to the reservoir. I think before the day was over they would all probably be enjoying themselves in Otley police cells.

Mr. Fawkes is a good sportsman, and not the person F. P. H. describes him to be. To him the Otley Angling Club are indebted for their fishing rights on the north side of the river, from Otley Bridge to Weeton, and also for some on the south bank. He gives permission to many anglers to fish in Lindley reservoir, and at the same time opens the doors of Farnley Hall to any one who wishes to see his priceless collection of Turner pictures.

Let F. P. H. fish in Swinsty and Fewston reservoirs, where his Corporation have the fishing rights. There are plenty of fine fish to be caught there. I have myself taken trout in Swinsty over 2 lb. in weight. And let him, when next he writes to the FISHING GAZETTE, use Waltonian language.

In conclusion, I would observe that if the Rivers Pollution Act was carried into effect, we should never see such correspondence as has appeared in your pages. The rivers Clare and Calder are for the most part "inkpots." The Wharfe, fortunately, is still pure—long may she remain so and contribute to the sport and amusement of "true" disciples of Izaak Walton.—I am, &c.,

YORKSHIREMAN.

[Our correspondent is thoroughly acquainted with the Wharfe. We can personally bear out his remarks as far as the head waters of the river are concerned, and only wish that all our streams, as a whole, were as pure as the Wharfe! Mr. Hammil's remarks certainly seem to be unjustifiable, and he evidently knows nothing of the gentleman he attacked, except that he prefers not to permit angling in his reservoir. Mr. H. will have plenty to do if he is going to attack all proprietors of waters who will not let him fish.—ED.]

CANAL FISHING WANTED.

SIR,—Can you or any of your readers inform me if there is any canal fishing for pike, roach, &c., say between Sheffield and Bath, with good accommodation where a lady and gentleman could stay for a few days.—I am, &c.,

Leeds. FRED. MOSER.

FELL BECKS, HOOKS, &c.

SIR,—I think, as I have fished a good deal in Westmoreland, it is incumbent on me, on the one hand, to express my appreciation of that excellent article on fell-beck fishing which appeared in your columns; and, on the other, to assent to a very considerable extent to "Sprint's" statement relating to size of fish in the Westmoreland becks. The average weight of trout taken by the fell-beck fisher, whom "Sprint" quotes as his authority, was in one case nine to the pound, in the other nearly eleven; whilst we are told that eight or nine to the pound is the average weight in the best of the fell becks of Westmoreland. The figures in my diary, however, give slightly different results:

	To the pound.
In Long Sleddale or Sprint beck and burn, Skeggles burn, and the upper sections of the Kent beck and burn ..	7·62
In many burns and becks of the upper waters of Lune and Edena bove Tebay and Kirkby Stephen, including Upper Eden itself	7·08
In the upper sections of the Rawther beck, where it forms the boundary line of Westmoreland, including a few fish taken on one occasion from its tributary the Norr Gill burn, which runs from the Yorkshire side	6 57
The average of two seasons in the first and second of these localities	7·27
The average of the three seasons of fly-fishing in the three localities	7.045

At the head of the Peasey beck I once got a sample of nine fish of about one ounce each, or 16 to the pound, but this was an isolated case. Other examples might be given, but these are sufficient to show that the average size is almost exactly seven to the pound.

In relation to "Sprint's" sweeping assertion that you "may fish a lifetime in them and never take a trout of half a pound," I feel compelled to remark that this is drawing the long-bow with a vengeance. "Sprint" denounces it, preposterous to state that in a fell beck a trout of a pound weight may be caught in a day's fishing; yet Mr. Howard only mentioned one, and not two or three as alleged. I think, however, we shall be nearer the truth if we say that it is preposterous to deny that there are fell becks and burns—and there is a decided difference between a burn and a beck—in such a large district as Westmoreland which do not yield a fair sprinkling of one-pound trout. It is true that I have never caught trout of this size in streams of these dimensions in the county named, but I have often done so in Yorkshire within one to three miles of the Westmoreland border; whilst in the latter county, so late as 1880, I remember one large burn, where on the only two occasions in which I fished in its waters I got several trout on each day, weighing half a pound each, or only a trifle below that amount. In fact trout of a pound in weight may be occasionally taken in almost any beck or burn where there are a few deepholes here and there, where they can escape the devices of the poacher, provided there is a fair food supply, as in the streams flowing from a heather clad and peaty upland.

I endorse "Sprint's" remarks on hair casts, but do not fully assent to his proposition relating to whole hair-lines. The difference in weight between a soaked and dry hair-line is even too great for my approval, as the hair requires a fine silk bedding to fill the interstices between its strands, and render it more nearly solid than when alone. I have never found the hair and silk mixture, when of good material, rot any more quickly than the dressed line; in fact its porosity is in favour of its drying rapidly without rotting, instead of becoming waterlogged in the crannies of a cracked dressing.

Turning to the subject of hooks. I may briefly observe the properties, which it is necessary that a serviceable hook should possess, may shortly be enumerated, each requirement being mentioned separately; even the one and the same conformation may result in two or more concomitant benefits.

1. The direction of the point and barb-piece should be identical with each other, as well as with the lines of impact and of force, in order to ensure penetrative power.

2. A similar identity of the conditions enunciated in the foregoing qualification should exist, so as to reduce strain or pressure on the great bend by reducing resistance to a minimum.

3. It is essential that the point and barbpiece should be prolongations of one and the same line, in order to secure rigidity of this part of the hook.

4. It is demanded that the inflection of the foregoing joint lines be such as to be identical with the line of force, so that by this prevision lateral leverage at the angle or minor bend may be eliminated, at which point the barb-piece should be normal to the extremity of the curve of the great bend.

5. It is requisite that a hook should possess as great holding power as possible and it is found, by making the line of impact of the barb-piece and point correspond with the line of force, the tenacity of hold is far greater than in more eflected implements.

6. As no hook is perfect which readily allows the reception of the narrow mystache of a trout between itself and the shank without resulting in an effective penetration to a point beyond the barb, it is found necessary to carry inflection as far as the line of force. In most instruments it often happens that the mystache is received within the bend of the implement, so as to hit against the cavity of the arc and rebound thence without even pricking the fish, or at least after only futilely glancing along the easily abraded surface. With the lines of force and impact identical, such faulty action is almost impossible; and with a bend such as is advocated, and very similar to the Limerick, which is long and gradual, the rebound without a forcible impact of the point is absolutely impossible. as the mandible, on striking the oblique surface of the bend, is driven laterally still further down, and in so doing the point sinks more deeply into its upper aspect. In Sneck-bent, Pennell and some other hooks, with the ultimate portion of the implement and main bend almost or quite transverse to the line of the shank, this cannot occur with any degree of certainty.

7. It is essential that the barb should not be too rank, and to conform to this requirement it is needful to resort to inflection to the line of force, so as to still further increase penetrative power, by the possibility of an advantageous limitation or reduction in bulk of the beard, which under these conditions is no longer so urgently required of bold proportions.

8. There is a peremptory demand for a degree and form of curvature of the great bend not exceeding that which is absolutely required, in order to ensure the greatest attainable rigidity under pressure. It is necessary that this curve should practically accommodate itself to the law, which determines the length of conjoined point and barb-piece, and which decides that there should be room for the mandibles of a fish, hooked with the full grip of the arc, to turn within the bend, or descend vertically some distance into its cavity, when the point rests in the first case on bone or cartilage, through which it will not easily pass beyond the barb, or in the second or somewhat softer tissues; otherwise a block will over and over again occur, which, in the latter case, directly precludes penetration, or, in the former, may only too frequently cause the hook, after impinging slightly, to lodge in such a position that the line, instead of pulling or striking in the direction, even approximately, of the line of impact, imparts a jerk, sometimes almost at right angles, to the direction in which it should be acting.

9. A practical uniformity of thickness throughout the bend, resulting in a corresponding uniform strength and rigidity of its different sections, has been proved, both experimentally and theoretically, to be—as far as any working purposes are concerned—all that is requisite. Besides this, the act of rendering one part thinner than another is invariably attended by damage of some kind or other to the substance of the wire; whilst the hook is usually rendered extremely weak in the thinner areas, apart from the consideration of any direct injury to the material.

10. It is indispensable that a hook should be capable of penetrating a nearly flat surface, more or less covered with slight asperities, on whichever side it may lie, or rather drag. and not be as in the bent or deflected hooks, which cannot impinge on either side indifferently, when dragging over a plain, and which can only do this when passing a prominent ridge; and then, if simply glancing, with many probabilities of whatever hold is made, being merely an uncertain flesh-hold, when the hook is gliding on that side from which the point is deflected.

11. The length of the straight shank should only be sufficient for the reception of the body of the fly, with the hackles fairly in advance and clear of the point, the wire beyond the body assuming at once a curved contour, in order to reduce the sine of the angle of the arc.

12. It is unquestionable that the curve of bend and grip of hook should be sufficient to receive the mystache of a 1 lb. trout, and still be as small as can be had for effecting a reliable hold when impinging elsewhere in the jaw, and not merely in the flesh.

13. A fine tapering point, which will insinuate itself into cartilage or bone under very moderate pressure, is unquestionably superior to one of short dimensions.

14. Roundness of wire in all parts of the hook wherever attainable, so that, in the case of point and barb-piece, the metal may not cut its way out of the hold, or, in that of the shank, may not sever the gut and wrappings, are indispensable necessities.

15. The minimum length of point and barb-piece is determined to be essentially, not less than the distance from point to shank just opposite, measured along a line falling vertically upon the latter. This minimum extent is required in order to allow the mandible of a pricked fish to turn within the bend, as before enunciated, even if its extremity should touch the shank, a thing not possible in the sproat hook, in which form the great bend of the wire prevents penetration in the case of a fish struck with the full grip of the hook.

16. It is requisite that the barb-piece should not be quite normal to the sections of the great bend, which are not close to its root, and which, although formed by a slightly more open curve, are still only trivially dissimilar from the latter in that respect. This provision, owing to the barb-piece and point being jointly a trifle longer than the distance between the latter and the shank, whilst ensuring a greater rigidity of the arc still admits of the turning of a pricked mandible within the bend and also increases the certainty of a successful impinging of the point through the side of the mystache when falling edgewise into the cavity of the hook.

As inflection beyond the line of force is out of the question; the strain brought to bear upon the wire of a hook, as far as the nature of the curve is concerned, is pre-eminently controlled by the distance of the crest or bulge of the bend from the nearest part of the line, joining the end of the shank and the point produced indifferently beyond the latter and by the total length of the hook; these two dimensions determining the value of the size or the cord and arc.

17. It is essential that the barb-piece and point should be of an inflection such as will admit of the instantaneous transmission of the hold to the main bend in those cases in which the point and barb-piece have only just covered their fine and cutting edges in the flesh—by this action converting a precarious flesh-hold into a reliable and serviceable loop encircling the thick and rounded wire.

18. Black is, unboubtedly, the best colour for the metal, as being least conspicuous and reflective; while, perhaps owing to optical conditions the most natural appearance of opaque and floating bodies passing between the fish and a bright sky.

The hook which I brought out some years ago was designed so as to conform to all the foregoing requirements. In a subsequent pattern, however, by abnegating the advantages of the 12th essential, I have been enabled to produce a small double fly-hook lying in a single place, but possessing only a very small grip and, consequently, far more inconspicuous than otherwise would be the case. This hook is suitable for burn fishing, hair-tackle, and a very deleicate hand, as the hold is often merely in the flesh; but at other times cartilage is easily penetrated, and occasionally both jaws are clamped together—whilst I have, even by means of these hooks with such narrow grip, landed two good fish at once.—I am, &c.,

ROBERT BALDERSTON.

SPECIAL NOTICE.

IN CONSEQUENCE OF SOME OF THE ILLUSTRATIONS

Not being ready, we have BEEN OBLIGED TO POSTPONE OUR

TOURIST AND HOLIDAY DOUBLE NUMBER

UNTIL NEXT WEEK.

IT WILL BE PUBLISHED ON AUGUST 5, AND WILL CONTAIN

Articles of Special Interest and Several Illustrations.

Mr. R. B. MARSTON'S Paper on the "PROPAGATION OF COARSE FISH" will appear in this Number with Illustrations. As this Number will be widely advertised and distributed beyond the large ordinary sale, it will be a most valuable medium for all

ADVERTISEMENTS

addressed to a well-to-do and sport-loving section of the community.
APPLICATIONS FOR SPACE should be sent in to

THE MANAGER, "THE FISHING GAZETTE,"
12, FETTER LANE, LONDON.

RIVER REPORTS.

MID-THAMES.

"There see the sun both rise and set;
There bid good-morning to next day;
There meditate my time away;
And angle on, and beg to have
A quiet passage to a welcome grave."—WALTON.

The river should be seen just now at sun-rise and set, and any man with a soul beyond the pedal ones would be glad to "meditate his time away" on the banks of the English river, which is a thin silver streak in Wiltshire, and becomes a thing of beauty and a joy for ever in Berks. and Bucks. Fishing is now in the cream of perfection, and with a little more of the present fine weather will become butter, or, in the language of the day, "real jam." Barbel are as hungry as hunters, and can be brought to book with a liberal diet of worms. Chub are "on the fly," and can be obtained in quiet waters by dapping with a blue-bottle, or by deftly casting a black palmer in the early morning, or a white moth in the dewy eve. Roach are still shy, but perch and gudgeon are not backward in coming forward. From Mapledurham, I hear of nice bags of miscellaneous fish by both bankers, campers, and punters. At Hurley, Mr. Davis, who is the worthy host of the "East Arms," has been getting well amid the perch. Mr. Davis will be pleased to cater for brother piscators in these quiet and unfrequented bits of the Thames at fair prices—butter, eggs, and milk brewed on the premises. Marlow, Bourne End, and Maidenhead reports all favourable as to past, present and anticipatory sport.

Thursday evening, 7 o'clock: river perfection for any seasonable fishing. I advise anglers to bring baits down from town, or possible disappointment may accrue.—MARLOW BUZZ.

THAMES (Above Locks).

AT KINGSTON.—John Johnson, sen., has been getting roach of a good size, and bream up to $2\frac{1}{2}$ lb.; John Johnson, jun., has been catching a few jack, the largest 7 lb. The bank anglers have been getting plenty of bream up to $4\frac{1}{2}$ lb. each.

AT HAMPTON COURT WEIR.—Charles Davis, on Tuesday, 4 jack, 2 of them going 6 lb. each.

AT HAMPTON DEEP.—The punts have been taking about 6 dozen of very good roach each in the day.

AT SUNBURY.—Thomas Stroud, 5 barbel and 2 chub; Alfred Stroud, 6 dozen and 2 barbel; John Stroud, 4 jack, the largest 4 lb.; Abraham Stroud, 4 dozen roach and 5 chub; Mr. Lundy, a small trout with a fly, which was put back again.

AT WALTON.—George Hone, one day, 8 dozen of roach, a bream of 2 lb., and one chub; and another day, 4 dozen of roach and a bream of 5 lb.

AT HALLIFORD.—J. Strudwick, in one day, 7 good chub, and G. Strudwick, in two days, 11 dozen of roach.

AT SHEPPERTON.—David Hackett, in two days, 2 dozen of roach, 5 barbel, 4 perch, and 2 chub; H. Curr, during the week, 15 barbel; W. Rogerson, in two days, 3 dozen gudgeon, 2 perch, and 5 barbel; W. House, a trout of 5 lb.; F. Purdue, in four days, $6\frac{1}{2}$ dozen of roach and dace, 8 dozen of gudgeon, 8 perch, and a jack of 2 lb.; H. Purdue, in one day, 8 dozen of gudgeon and 5 perch.

AT CHERTSEY.—James Poulter, in two days, 7 dozen of roach, 1 chub, a trout of 1 lb. 2 oz., and one perch; and another day, 5 dozen of roach and dace.

AT STAINES.—Samuel Scott, a trout of 3 lb.; John Keene, sen., one day, 11 dozen of gudgeon, 2 perch, and a jack of 3 lb.; and in three other days, 18 dozen of roach and dace; C. Hone, in two days, 6 barbel and a jack of 7 lb.; and John Keene, jun., 5 jack.—H.

Ancholme District.

Just as I sent off my report last week, I received an invitation to spend an afternoon on one of the best trout streams in the county. One of my sons accompanied me. We arrived at our destination about two o'clock, and between then and five caught fourteen beautiful fish. The two largest weighed $3\frac{1}{2}$ lb., and were both caught by my son. Our operations were, however, brought to a premature close, owing to a terrific thunderstorm, which burst suddenly upon us. Despite the clearness and lowness of the water, I have no doubt that we should have doubled our take if we had been able to fish up to twilight. The water in the Ancholme has been but little affected by the occasional storms, but it remains of a fine colour for pike-fishing, and some good catches has been made. One gentleman had sixteen one day to his own rod. A party went over from Caistor the other day to Brandy-Wath, bottom-fishing, but they only caught about a score. I had some fine sport whipping for roach on Saturday last, catching occasionally two at a time. But the best success followed from charging the fly-hooks with small gentles.—THOMAS FORD.

FAIRBANK, BRIGG.—Very little bottom-fishing has been done in the Ancholme this week. Bream are biting very fitfully; one or two good catches, however, were made near Brigg a day or two ago. Half a-dozen fine bream fell to the rod of a native, varying in weight from $1\frac{1}{2}$ lb. to 2 lb. A very fine bream, weighing 3 lb. 9 oz., was also taken by Mr. C. Spright, of Brigg, a little higher up the stream; but, with these exceptions, nothing worthy of note has been done. No pike worth mentioning has been landed, though the junior members of this class have been making themselves very prominent. The water in the neighbourhood of Brigg is of a fairly good colour, but much spoiled by weeds, which have been mown from the bottom, and are now floating on the surface. Three good perch fell victims to the allurements of artificial minnow, and these were well fed and clean. Large shoals of bream were seen near the surface on Monday close to Brigg, but these were unwilling to nibble. Prospects are good with regard to quantity, but all anglers must wait patiently. We had a small contingent of Sheffield rodsters at Brigg on Monday.

Ballynahinch.

Still heavy floods for the three days in the earlier part of the week, it being very stormy; but the latter three it seems to have settled into fine weather, strong sunshine with light winds. The following are the takes for the week:—On the 19th, Messrs. Eades and Houlgrave, 30 trout; same date, Mr. W. H. Banner, 18 trout; Mr. C. C. Johnstone, 1 salmon, $5\frac{1}{2}$ lb., and 17 trout; Mr. Blandford, 1 salmon, 7 lb., and 11 trout; Mr. Beuamont, 1, 8 lb., and 11 trout; Messrs. Annadale and Hone, 1 salmon, $8\frac{1}{2}$ lb., and 43 trout; Mr. Bury, 13 trout. On the 20th, Messrs. Eades and Houlgrave, 32 trout; same date, Mr W. H. Banner, 6 trout; Mr. C. C. Johnstone, 7 trout; Mr. Blanford, 14 trout; Mr. Beuamont, 3 salmon, $7\frac{1}{2}$, $7\frac{1}{2}$, and $6\frac{1}{2}$, also 23 trout; Messrs. Annadale and Hone, 48 trout; Mr. Bury, 21 trout. On the 21st, Messrs. Eades and Houlgrave, 43 trout; same date, Mr. Blanford, 25 trout; Mr. Beuamont, 17 trout; Messrs. Annadale and Hone, Messrs. Moser and Grayson, 58 trout; Mr. Bury, 21 trout. On the 22nd, Messrs. Eades and Honlgrave, 68 trout; same date, Mr. Blanford, 14 trout; Mr. Beuamont, 1 salmon, $17\frac{1}{2}$ lb., and 26 trout; Messrs. Annadale and Hone, 55 trout; Messrs. Moser and Grayson, 33 trout; Mr. Bury, 14 trout. On the 24th, Messrs. Eades and Houlgrave, 53 trout; Mr. Blanford, 2 salmon, 6 and $7\frac{1}{2}$, also 14 trout; Mr. Beuamont, 21 trout; Mr. Annadale, 42 trout; Mr. Hone, 50 trout; Mr. Bury, 1 salmon, 12 lb., and 17 trout; Major Carnegie, 12 trout. On the 25th, Mr. Blandford, 15 trout; Mr. Beuamont, 10 trout; Messrs. Annadale and Hone, 16 trout; Mr. Moser, 24 trout; Mr. Bury, 1 salmon, 6 lb., and 11 trout; Major Carnegie, 1 salmon, $6\frac{1}{2}$ lb., and 14 trout. Weather and water is most favourable.—WALTER BLACKADDER.

Camel and Inny (Cornwall).

Mr. J. Ford, of London, caught on Thursday in last week, between 9.30 and 4.15, forty-four splendid fish on the latter river. Only two or three were under $\frac{1}{4}$ lb. each. On Saturday last he and Mr. J. Allen, of Davidstow, visited the Lank River, a tributary of the Camel, which rises between Roughtor and Brown Willy. The fish were very numerous, but small. Mr. Allen had 76, Mr. Ford, 66.—THOMAS FORD, Caistor.

Chichester.

Recent rains have somewhat improved the condition of water in the canal, which was previously bright, for piscatorial pursuits, it now being all an angler can desire. Fish are coming well on the feed, especially in early morning, when many *habitués* of the Goodwood race meeting may be seen indulging for awhile in innocent sport before flying at higher game with the stentorian "Two to one, bar one." Takes have during the past few days been highly satisfactory, some good bream coming to hand. Mr. Wickenden had a handsome fish of $2\frac{1}{4}$ lb., while Mr. Summers and Mr. Young have made good bags. Light tackle seems now useless, several anglers losing good fish. Gentles seem the most killing bait, while small roach have secured some good eels. Fish are fast improving in condition.—GEORGE F. SALTER.

Coquet (Welden Bridge).

The sport still very poor, and the weather is very unsettled. The best creels, G. Wilson, 8 brace; T. Dixon, 7 brace. From 3 to 4 brace are about the average baskets at present.—A. GLASS.

Dove.

This river has been running very high and strong during most of this week, but to-day (Thursday) it has gone down a good deal, and there is less colour in the water. I consider that the river on some days has been too thick even for the bottom fishers, though a fair quantity of roach, dace, bream, perch, chub, and eels have been killed with the maggot and cockspur worm. We certainly want a spell of fine weather now. It has been almost interminably wet for weeks, and our anglers are heartily sick and tired of such abominable weather. The flies that have been, and are now, killing best are the July olive, the golden spinner, and the honey-dun bumble, while in the brooks Gregory's Gresham, and the universal have done best; one take of $4\frac{1}{2}$ brace of big trout being secured in the tributary, Henmore, with the aid of the former. Grayling are now getting well over spouting, and river watchers assure me that the season will be a good one.—THE SPLODGER.

Gowla.

The above has only been fished two days this season. On the 24th inst., by Messrs. Moser and Grayson, who succeeded in killing forty-two trout in four hours; and on the 26th, it was fished by Messrs. Eades and Houlgrave, who killed fifty-three trout.—Walter Blackadder.

Ilfracombe.

Sea-fishing has been going on with little variation since my last report; fishing parties are out every day and their catches of bream, whiting, pout and pollack average from 20 to 40 lb. per boat per tide An amateur, fishing from the rocks, brought a large bass to the surface, his gear not being strong enough it parted his line and disappeared. Fishing with rod and hand lines from the jetty has been very good for pollack, whiting, pout, and a few grey mullett have been caught. Yesterday mullett were seen in the harbour almost jumping out of the water. Several fine lobsters and crabs have been brought in from the pots and a few taken from the holes, Weather at present very fine, blowing a steady breeze from the S.W.—E. Comer.

Leicester.

Anglers having been favoured with about the first fine week of the season, have taken advantage of it and been out in large numbers, and but for the waters being drawn off for improvements in two of the large ponds of the local society's preserves, there would no doubt have been some good fish shown during the week, as both perch, roach and chub have been biting freely. Some fair takes of roach have been had from the river Soar with the wheat, whilst some good chub have been taken with the fly early in the mornings and evenings. A few fair-sized pike have been captured, the largest being one about 6 lb. From Aylestone reports show that some good fishing has been had. Several baskets of roach have been shown, and nearly all have been taken with wheat or malt. The Barrow-on-Soar waters have received a fair share of support during the week, the more-favoured bream holes being well looked after, and takes ranging from 5 to 20 lb. have been had. The Marlborough waters also have been well fished, and most of the subscribers to this water have had some good sport, as roach, perch and some moderate sized pike have been taken.—Alert.

Medway (Tonbridge).

The water is still in condition for all river angling, though somewhat dirty at the upper reaches. From, I suppose, the unsettled weather and cold nights, the finny tribe do not "hang on" as they should do. Bream and roach continue to be taken in fair quantities on the best baited swims, but they bite in the most erratic manner, one day taking almost anything, and the next not biting at all. All that is wanted is some warm weather, and then we shall be busy.—Ye Medway Water Rat.

Ouse (Littleport).

There is very little to report. I suppose they will come in time, but up to the present the blanks are too numerous for my liking. A few bream have been taken, but owing, I expect, to cold nights they have not shown up much. The best catch was by Mr. Wm. Thurston, Cambridge, with nine bream, going 23 lb. the lot; two largest turning the scale at $7\frac{1}{2}$ lb, on morning of 20th. On the 21st two gentlemen from Newmarket got eight good bream going 22 lb. But very few roach have been taken —C. South.

Thames (Goring).

Water in good order for all-round fishing; in good order for jack, perch, and chub. Friday eight jack, largest 5 lb.; Sunday eight chub, largest 3 lb., and some good perch; Wednesday seven jack, largest 4 lb., and some good perch. —John Rush.

Thames (Halliford).

The river is now very low and bright. Different gentlemen fishing with me since my last report; their takes have been as follows: Mr. Field, 4 barbel, 12 fine roach, 4 perch and 2 bream, (the perch and bream we returned to the river again); 2nd day: Mr. Innis, 2 barbel, 4 nice roach, 4 perch, 8 dace and 2 chub. 3rd day: Mr. Carter and a friend, 12 bream, the seven largest weighing $21\frac{1}{2}$ lb. and 2 perch; 4th day: Mr. Gibson, 5 bream, 3 chub, and 2 perch, all the above fish taken ledgering.—George Rosewell.

Thames (Richmond).

Mr. Francis in two days, 19 lb. of roach and dace; Job Brain in four days, 27 dozen and a barbel of $8\frac{1}{4}$ lb.; E. Brown, in one day, two dozen, and in addition five perch; C. Brown in one day, six dozen of roach and dace; and J. Bushnell two dozen.

Thames (Teddington).

J. Kemp in two days, $4\frac{1}{2}$ dozen of roach and dace; and Joseph Baldwin in four days, $11\frac{1}{2}$ dozen and a brace of jack weighing 9 lb. The netsmen below Richmond Bridge are reported to have taken some trout in the nets, and others are doomed to similar destruction. No netting ought to be allowed above Kew Bridge. One of the netsmen who has frequently been fined for illegal netting, it is said, was seen hawking strawberries for sale last Sunday. Is "Othello's occupation gone?"

Thames (Twickenham).

J. Hammerton in three days 16 dozen of roach and dace; James Coxen in one day $4\frac{1}{2}$ dozen; R. Coxen, 5 dozen and a barbel of 4 lb.; John Coxen $5\frac{1}{2}$ dozen; G. Coxen in four days, 43 lb. and a jack of $5\frac{1}{2}$ lb.; Pert Hammerton in three days, $14\frac{1}{2}$ dozen and a barbel of $3\frac{1}{2}$ lb.; J. Dobin in three days, 13 dozen and a couple of barbel; S. Cole in three days, 11 dozen; and H. Chamberlain in the same time, $12\frac{1}{2}$ dozen and three barbel.

Trent Newark).

The water has been in fairish condition most of the week, and sport has been fairly good. A friend and I have been out one day this week; but the weather was against us. Our bag consisted of half-a-dozen chub, two dozen roach and dace, about the same quantity of eels and flounders, and a bream or two; the fish are now in fairish condition, and rather inclined to take a bait; wasp-grubs are our most successful lure; but gentles, cadbaits, and worms have all been successful in killing fish; water now in capital condition All kinds of fishing can now be practised by the angler with some chance of success. —The Trent Otter.

Trent (Nottingham).

The weather in this district has again been of an unsettled character, but a very large number of anglers appear to have visited the river, which for once in a way has yielded a fairly large take of barbel. This pleasing bit of news reaches me from Shardlow, where on Monday a Derby gentleman, operating on a four-foot swim, succeeded in killing nine very fine fish, besides a quantity of dace and large eels. Reports are also more favourable from the water above—namely, Weston, and several capital hauls of roach (taken with bread) are to hand from Sawley and Trent Lock. At Hazleford a large otter has been caught in the eel nets, and four others are said to have been seen in the river over which Sir Henry Bromley enjoys the right of fishing. The sooner they are shot the better. On Wednesday the river rose nearly eighteen inches, and the bream contingent were again in high glee.—The Man at the Clubs.

Welsh Harp (Hendon).

Fine weather has prevailed here during the past week, and the water having settled again, fishing has proceeded uninterruptedly, and good baskets have been the result. The jack have for the most part been taken spinning, but, curiously enough, the largest of these fish have been taken with live bait. Several fine carp, including one of 7 lb. and another of $11\frac{1}{2}$ lb., have fallen to the lot of our fishermen; and, as I write, the banks around the lake are crowded with our subscribers, while Sawyer's flotilla of punts are dotted about in favoured spots.—Resident.

Wharfe (Yorkshire).

Another heavy flood came down this river early last Saturday morning, but the fish had got so thoroughly glutted with bottom food that very little was done on that day—the best dish that I heard of being ten fish, taken with maggot somewhere down in the Harewood district. On Monday evening a gentleman killed a nice dish of trout near Pool, with minnow; but fly has not been of much use, owing to the evenings coming in cold and misty. To-day (Wednesday) the water is getting into capital order for fly, and if no more rain falls, I anticipate some good sport. The August brown should appear shortly, when it will kill a fair share of fish. The red ant, shining black silver horns, and snipe bloa are also good flies to depend on.—Francis M. Walbran.

Wye and Derwent.

We have had first-class bottom waters on the Derwent the whole of the week, and I am pleased to say that the groundbait fishers, one and all of them, as a rule, have done exceedingly well all up and down the Derwent, and baskets averaging from 6 to 15 brace per angler have been made. The killing baits have been wasp grubs, gentles, and small dew worms, the wasp grubs proving the best baits used; and some heavy trout and eels have been landed. Mr. Fred Reeves killed a most splendid well-fed trout of 3 lb. 11 oz., with worm, close to Matlock town; besides a 4 lb. eel last Friday. On the Derwent, we have had a very many large fish killed lately. Grayling have been nicely on the feed, and a good many ground fish have been killed, chiefly with maggots. Trolling with the artificial Derby trout-killer and the natural minnow on the Derwent, below Rowsley, has also been followed with fair success, and some handsome trout have been landed. The fly-fishers have done pretty well on the Derwent, both yesterday and to-day (Thursday). The fish have rose the best close to the sides, and the honey-dun bumble, dotteril, and sand flies have all killed a fair quantity of fish. Sport on the ponds has been A 1, both bottom and top. The night-line party are killing a good number of large eels on the Derwent. Quiet now.—George James Eaton, Starkholmes, Matlock Bath.

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on Sunday the 23rd inst., and met with indifferent sport. Brothers A. Shakel, bream 4 lb. $6\frac{3}{4}$ oz.; D. Davis, roach; H. Scott, bream; T. Bowling, bream. A peg-down match will take place on Sunday the 13th August at Amberley.—W. Davis.

BATTERSEA FRIENDLY.

The contest for three prizes presented by Sir Trevor Lawrence, M.P., took place at Weybridge on Sunday last, in the association waters. The takes were far above average, considering the best parts of the day (morning and evening) are unavoidably lost. The following were the successful competitors:—Mr. Ansty, first; Mr. H. W. Payne, second; Mr. Mumford, third; Mr. Martin also had some very pretty roach (nearly 1 lb. each.) The winner of the first prize secured a fine bream, opposite the White Hart, at the last moment, weighing $3\frac{1}{2}$ lbs., which brought him to the front.—H. W. Payne, President.

BERMONDSEY BROTHERS ANGLING CLUB.

Messrs. Gofney and Owles weighed-in bream at this club on Sunday last. All communications to be addressed to the secretary, A. G. Croker, 163, Southwark Park Road, S.E.

CROWN PISCATORIAL SOCIETY.

The members of this club were out in full force last Sunday, Mr. Willcockson heading the list with a very handsome show of rudd, several going three quarters of a pound. A pegged down match will take place at Cheshunt next Sunday, July 30, for two valuable prizes given by Messrs. F. Long and Saundy; and on the following Sunday, August 6, a roving match at Waltham for Mr Wright's prize.—W. H. Burwash, jun., sec.

July 26.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

On Sunday last Messrs. Stephens and Tracey had a nice show of roach: Mr. Collyer, a pretty perch of 1 lb. $4\frac{1}{4}$ oz.; and Mr. Sellwood a tench. Mr. Snooks gave two prizes to be fished for. Members are requested to attend on Wednesday next, that being quarterly night.—W. G. Gardnet, sec.

July 27.

GOOD INTENT ANGING SOCIETY.

There was a good show of fish brought up last Sunday, Mr. Maybury having a good show of roach, Mr. G. Huggett bream, and many others roach, dace, perch and chub. It is with extreme regret that I have to record the death, after a short illness, of our esteemed treasurer, Mr W. Roberts, aged 23 years. He was beloved by every member of our club for his kind and generous disposition towards every one he came in contact with, and also for the deep interest and zeal he always took in the prosperity of our society. We hope our loss will be his gain. He will be buried at Abney Park cemetery this day, Friday 28th inst.—R. Murphy.

July 28.

GREAT NORTHERN BROTHERS.

The following members weighed fish on Monday, from Amberley: Messrs. Young, Walker, Burness, Kirk, Baker, Hutchings, Hewett, J. Fitch, J. R:

Fitch, Theobold, and Parkin, the latter having two fine roach, weighing respectively, 1 lb. 8½ oz. and 1 lb. 4½ oz. Mr. Watley, bream from Welsh Harp; Mr. W. Watling, roach from the Thames· It is with great sorrow I inform you of the death of Mr. W. Phillips, which took place on Tuesday night. The meeting already called for his benefit will be held, and the proceeds handed to the widow.—J. FITCH, sec.'

GREAT YARMOUTH PISCATORIAL SOCIETY.

The above Society had its weekly meeting on Monday, at the Club House, when the secretary, Mr. Lark, presented a good report of the past week's work. It was decided to fish for the first prize on Tuesday, the 1st day of August, on the Bure, W. Hewetson, Esq., of St. Helier's, Putney, being elected as chairman. The secretary called attention to the past year's report of the Bure Preservation Society, when it was proposed by A. Mitchell, Esq., M.D., and carried, that the Piscatorial Society should contribute to the Preservation Society, whereupon W. Hewetson, Esq., entered his name as a subscriber to the Society for £1 1s.; A. Mitchell, Esq., 10s. 6d.; Mr. Laurance, soda-water manufacturer, 5s., and that the secretary inform Mr. Harmer of the fact at once. It was also mentioned that a fine basket of fish had been sent to the secretary of the Brentford Society, as a specimen of what could be got at Yarmouth, or within a few miles. A vote of thanks to the president and chairman closed the proceedings.

GRESHAM ANGLING SOCIETY.

The weekly meeting of this society was held, as usual, on Thursday evening, J. T. Long, Esq., in the chair. The secretary read the correspondence, including a letter from G. S. Page, Esq., thanking the society for the vote of condolence passed at their special meeting on Wednesday last, in reference to his recent illness; and a special resolution was afterwards passed to the Marquis of Exeter, thanking his lordship for the good wishes he had expressed on the same occasion for the success of the society's meeting to promote the introduction of black bass into English waters, a matter in which his lordship had long since taken great interest; some fish from his lordship's lake being then shown to the society. A discussion on the proposed new Thames byelaws followed, which it was strongly felt required considerable amendment, especially those clauses referring to netting, and the dangerous innovations giving power to so-called riparian owners, putting them practically in a position which the law would not at present recognise. The secretary mentioned that he had received a very nice note from the Yarmouth Piscatorial Society, and wished them every success, it being most desirable to establish an angling society in that neighbourhood. A general discussion afterwards followed, in which Captain Alfred, Mr. Jardine, Mr. Crumplen, and others took part, and the proceedings closed with a hearty vote of thanks to the chair.

HAMMERSMITH UNITED.

On the 22nd Mr. Geen headed our weights for the season with a take of twelve barbel, scaling 40 lb. 4 oz., in addition to some chub and roach. On Sunday a match was fished for four prizes, presented by various members. A good muster went out, and, with the exception of two, were content to trust their fortunes to Old Father Thames. The following is the result:—1st Mr. H. G. Penney, 7 lb. 7 oz.; 2nd, Mr. Pitts, 5 lb. 13 oz.; 3rd, Mr. Steadman, with a splendid bream, weighing 4 lb. 5½ oz., taken at Hampton; 4th, Mr. Miller, with chub, roach, &c. The following gentlemen also had fish:—Messrs. Peachey, Hitchcock, Elms, Lewis, and Reynolds. The two last named vieited the Mole.—VORTEX.

HEARTS OF OAK ANGLING SOCIETY.

We had nice trays of fish this evening, amongst others being Mr. B. Cox, 11 lb. roach; Mr. R. Ford, 5½ lb. bream and 4¾ lb. roach; Mr. A. Fish, 4 lb. roach.—C. F. MILLIE, sec.

July 23.

HIGHBURY ANGLING SOCIETY.

There was an excellent show of fish at this society on the 23rd inst., the most prominent captors being Messrs. Anthony, Thomas, Howell and Ballard, the three former having between 30 and 40 lb. of nice bream.—J. E. WHEATLEY, sec.

IZAAK WALTON ANGLING SOCIETY.

Several members were out on Sunday last, only one had a take of any note, that was Mr. T. Dennison, sen., who had some beautiful dace. On Wednesday, the 26th inst., we had a good display, Mr. G. Bliss had a tray of very handsome roach. Mr. G. Rolt also had roach. Mr. T. Dennison, sen., roach and dace. Mr. T. Dennison, jun., roach and dace. The two special prizes given by Messrs. A. Salmon and J. Wiltshire will be fished for on Wednesday, August 9, the usual conditions.

LITTLE INDEPENDENT ANGLING SOCIETY.

Many of our members went out on Sunday and returned home with some very nice fish, which quite decorated our table. Messrs. Scott and Keene weighed-in roach, tench, perch, chub, and rudd; Messrs Letch and Hopton, bream, jack, and perch; Mr. Barr, bream; Mr. Castle, jack and roach; Mr. Petrie, perch and roach, and H. Moore, perch. We wish to remind all friends of our vocal and instrumental concert on Monday next, for the benefit of Mr. Castle, to take place at the club house, Russell Arms, Bedford Street, Ampthill Square, N.W.—H. MOORE, sec.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

Mr. Thorn had a fine show of bream; Mr. High had some fine bream; Mr. Brockett some bream and roach; Mr. Atkinson had roach; Mr. Morton some fine perch; Mr. Pearce perch.—E. DYMOND, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The trays of the above society were well adorned with a variety of fish on Sunday last. Mr. Laundy having a nice show of Bream from Amberley, one scaling 4¼ lb.; Mr. J. Drew, roach and dace from the Thames; Dr. Lavender bream from the Ouse; Mr. Obbard roach, perch, and dace from the Lea, one roach weighing over 1 lb; Mr. Crafford bream, and Mr. T. Longman bream, roach, and perch; both the latter from the Ouse. Members are particularly requested to attend on Monday next, at nine o'clock to transact important business.—THOS. WM. LUCY, sec.

QUEEN'S ANGLING SOCIETY.

Mr. Pearce had a nice show of bream, 8 lb.; Mr. Walford some bream, Mr. Morgan some roach. Several other members had small shows of roach.—L. WALFORD, secretary.

SOUTH BELGRAVIA ANGLING SOCIETY.

We had an excellent show on Sunday, all the trays being well stocked. The following gentlemen weighed-in:—Mr. Mandry, bream, roach, jack, and perch; Mr. Collins, bream and roach; Mr. Fulton, barbel and perch; Mr. Smith, jun., roach; Mr. Eccarius, roach and bream; and Mr. Usher, bream and roach.—HARRY LEES.

July 27.

SOUTH LONDON ANGLING SOCIETY.

On the 20th, Messrs. Boorman and Graning weighed in over 35 lb. roach and bream from the Mole. Messrs. Head and Brenrod about 6 lb. roach, from Amberley. On Sunday, Mr. Graning 6 lb. roach; Mr. Boorman, 7 lb. roach. On the 25th, Mr. Goodey, from Chertsey, some nice roach, and to-day, Mr, Bate some nice chub and roach, from Richmond.—G. H. FIELD.

July 27.

STANLEY ANGLERS' SOCIETY.

I regret I have not a more satisfactory report to send you as the result of our piscatorial researches. Since last week's notice our worthy president, Mr. C. P. Wheatstone, had a nice show of jack, perch, roach, and chub, making a total weight of 24½ lb., including a roach of 1 lb. 5 oz. Mr. Pistrucci has been amongst the roach, and Mr. W. R. Humby chub and roach. Mr. Walker secured a splendid chub, weight, when landed, 5 lb. 8 oz., and the fish when returned from the skilful hands of Sanders will doubtless make another valuable and handsome adornment to the club room.

STOKE NEWINGTON ANGLING SOCIETY.

We had some very good shows of fish last week. Mr. E. Tomkins, our host, having a nice tray of dace, and our old friend, J. Wakett, about 8½ lb. of roach. Messrs. Read, Pring, Martin and C. F. Robinson also exhibited bream, roach and dace. The second annual dinner will take place on August 13, at the Pied Bull, St. Margarets, Herts. Tickets to be had at the club house, or of the secretary, not later than the 9th inst. Quarterly night, Aug. 2.—T. GRETTON, sec.

July 24.

TRAFALGAR ANGLING SOCIETY.

The members of the above were well among the bream on Sunday the 23rd. Mr. Humphries, seven fish weighing 8 lbs. 4 oz.; Mr. Lord, 3 lbs.; Mr. Morris, 2 lb. 9 oz.; the above from Amberley. R. Gaze, two bream 7 lbs.; Mr. Richardson, one ditto 3 lb. 10½ oz. from Mr. Lake's New Ham Fishery. Mr. Wilson, 3 lbs. 4½ oz.; Messrs. Goldstine, Williams, Dewen, and Ally Sloper roach and bream from the Mole. Owing to the train being delayed on the South Western Railway on Sunday the 16th, some of our members did not arrive in London till past 12 o'clock, therefore could not weigh their fish in the club.—J. GAZE, secretary.

TESTIMONIAL TO MR. GREVILLE FENNELL.

Subscriptions are invited, and will be received by the Treasurer, Mr. Thomas Spreckley, 13, Cannon Street, E.C.; or by the Honorary Secretaries, Mr. W. H. Brougham, Swayfield Villa, Hounslow, and Mr. P. Geen, Lowther Lodge, Lonsdale Road, Barnes.

ABUSE OF RAILWAY PRIVILEGE TICKETS.

IN the interesting report of last meeting of the West Central Association, which appears in our columns this week, will be found some reference to the above. Anglers cannot be too careful in guarding these privileges, and all abuses of them should be shown up and punished without one atom of sentimental feeling in favour of culprits.

THAMES FISHERY CONVICTION.—Alfred Turner, of Surbiton, was fined in the sum of 10s., and 12s. costs, for snatching fish off the parade. The conviction was made by the County Bench, at Kingston, on Thursday last, and Mr. Alfred Nuthall and Mr. W. H. Brougham attended on behalf of the Thames Angling Preservation Society.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

THE ordinary monthly meeting of this association was held on Friday last, the 21st instant. There was a good attendance, thirty-one societies being represented. On the chair being taken by Mr. Bonvoisin, the business of the evening was at once commenced. The minutes of the meeting, held on the 16th June, were confirmed as read, after which the hon. sec. proceeded to read the correspondence, this being, as usual, voluminous. The reading of one letter gave great satisfaction to all present, being the notification of acceptance of Messrs. Crumplen and Sachs as representatives of the angling fraternity of London, on the sub-committee of the International Fisheries Exhibition, 1883. The correspondence being disposed of, the next matter laid before the meeting were applications from R. Relf, river-keeper, and J. Rush, fisherman, for convictions obtained by them for illegal fishing, &c. The particulars of each case being to the entire satisfaction of all present, the sum of £1 1s. was unanimously voted to each applicant. Relf obtained the conviction of three lads, who were each fined 6s. 6d., or seven day's imprisonment. Rush obtained the conviction of a gentleman for fishing in the fence months. The defence set up was that defendant was trout fishing; but, as he was using cheese paste, the magistrates convicted, the defendant being fined £1 11s. 6d., and a like amount for costs, making together £3 3s.

The Critchfield Angling Society was, on the proposition of Mr. Crumplen, seconded by Mr. Field, enrolled with the association. With such sponsors as these two gentlemen, the members of the Critchfield may be relied on to uphold the prestige of the West Central Association.

The hon. sec. then proceeded to introduce Mr. Pottle to the meeting, stating that that gentleman had addressed a letter to him on the subject of obtaining the privilege of fishing in the waters of the various parks in the metropolis, and he had invited him to attend the meeting to lay the matter before the association in person. Mr. Pottle, who was cordially received, in a carefully prepared speech proceeded to state broadly what was possible to be done in obtaining the privilege of fishing in the lakes in the various parks. He was certain, from careful observations which he had made, that these waters were teeming with fine fish, and that if the West Central Association saw a way of dealing with the matter, and succeeding in obtaining the sanction of the authorities to fish these waters, they would thereby earn the thanks and gratitude of the more humble brethren of the rod, and enable them to follow their sport with more success in the future than in the past. The vice-chairman (Mr. Beckett) followed, and was, as usual, listened to with great attention. He warned the Association against asking too much at one time, of the powers that be, and suggested that they should only ask for permission to fish during certain hours of the day, and also as to regulating the practice of ground-baiting. Mr. Murphy suggested that a deputation be formed to wait on the Parks' Commissioners, and ask leave to net the lakes, and place the fish so obtained in the metropolitan waters, at present open to anglers. After some remarks from the hon. sec., it was proposed by Mr. Adean, seconded by Mr. Starr, "That the matter be referred to the United London Angling Association Fishery Society, for them to take such steps in the matter as were thought necessary to carry out the suggestion."

Mr. Adean (Kingfisher Angling Society), taking advantage of an interval in the routine business, brought before the notice of the association, the capture, at West Drayton, of a net 30 yards long, by three members of his club, they being assisted by a native of the place. The matter was brought before the meeting with a view that some slight remuneration might be granted to the last named, as he was in a great measure instrumental in the capture of the net, and was subjected to a great deal of trouble and annoyance in consequence of his rendering such assistance. The matter was referred to the committee for investigation, and no doubt, if found satisfactory, a small sum will be voted, in recognition of the services rendered.

The remaining, and by far the most important, business of the evening was next brought forward. It was a reported case of abuse of the privileges granted by the London and South Western Railway. It appears a ticket (No. 1453) was presented at the booking office at the main line, Waterloo, on Monday, the 3rd inst., about five p.m., and a ticket for Walton was issued by the booking clerk. Immediately after the same privilege ticket was again presented, and another ticket for Walton asked for; this was not, however, issued, the booking clerk very properly detaining the privilege ticket. On the railway authorities informing the association, a special meeting was held, on the 14th instant, to investigate the case. The holder of the privilege ticket not being present, owing to his professional engagements, the matter was adjourned for his attendance. That gentleman being in attendance, he, in answer to interrogations, stated that on Sunday, the 2nd instant, he went to Shepperton, and must have lost his ticket. He did not know of his loss until communicated with relative to the fraudulent use made on the 3rd instant. As, however, the hon. sec. was making inquiries in the matter, and intimated that for several reasons it would not be prudent to state what was being done, the matter was further adjourned to the Committee of Investigation.

Cases of this description are subject to the most searching inquiry, as indeed they deserve to be, affecting as they do all anglers, as the railway will not continue the concessions made by them to the associations, if they are abused in any manner.

The hour being somewhat late the chairman claimed the attention of the meeting on a question of grave importance to London anglers. He referred to the proposed new bye-laws of the Thames Conservancy. He had at the last moment been asked by the president of the association (Mr. Geen) to bring this matter before the meeting. Not being furnished with any data he could not however place the matter fully before the meeting, but stated that the utmost despatch was necessary. After some little discussion taking place, the matter was left in Mr. Geen's hands, with the satisfaction of knowing that the interests of anglers would be zealously looked after by that gentleman. Mr. Ghurney intimated that a meeting was to be held on the 25th inst. on the subject.

A hearty vote of thanks to Mr. Pottle for his attendance and the trouble he had taken in bringing the waters of the London parks before the notice of the association, and one to the chairman for his able presidency, brought a busy evening to a close.

The following societies were represented on the calling of the roll:—Acton and Ealing, Bostonian, Battersea Friendly, City of London, Cambridge Friendly, Cobden, Critchfield, Duke of Norfolk, Duke of Cornwall, Golden Barbel, Good Intent, Gresham, Hammersmith Club, Hammersmith United, Hampstead, Knights of Knightsbridge, Kings Cross United, Norfolk, North Western, Prince of Wales, Piscatorial, Portsmouth Waltonians, Peckham Brothers, Queens, Savoy Brothers, South London, Sussex, St. John's Wood Piscatorials, Trafalgar, Waltonians, Westbourne Park Piscatorials, and Messrs. Ghurney and Chambers, representing the East Central Committee.

26th July, 1882. GABRIEL TREADWELL.

OXFORD THAMES ANGLING PROTECTION ASSOCIATION.

A MEETING of this Association was held in the Council Chamber on Tuesday the 18th, under the presidency of Ald. Galpin. There was a good attendance, and amongst those present were Messrs. J. Embling, T. W. Mallam, F. R. Hall (vice-president), W. J. Mayo (hon. sec.), Allen, Wyatt, E. S. Sheard, Innes, Clifford, Kelson, Hammond, Merckel, Cooper, Corbett, Heavens, Fell, Simmonds, Burrows, Barton, Ball, Riddington, &c., &c.

The Chairman said they had held a meeting, and it was determined to form the Thames Angling Protection Society. Since that time no less than seventy gentlemen residing in the locality had signified their willingness to belong to the Association. At the previous meeting he had the honour of being appointed president. He was always glad to do what he could for the innocent enjoyment and recreation of the people, and this was not only for them but for all classes of the people, and therefore he the more readily accepted the post. A vice-president was appointed in the person of Mr. Ryman Hall, and he was sure he would fulfil the duties with zeal and efficiency. Mr. Mayo had undertaken the more onerous duties of secretary, and he would continue, as he had done up to the present to his knowledge, to be indefatigable in his exertions to promote the interests of the Society. A committee had also been appointed, and it was thought at this stage of the business a public meeting should be called, and the result was now before them. The objects they had in view, as he took it, were not to interfere with existing rights; those who had rights, so long as they could be substantiated, they did not propose to interfere with, unless they could by negotiation obtain the enjoyment of fishing. But, on the other hand, they intended to protest most strongly against people assuming rights that did not belong to them. He must say he was strongly impressed that was going on at the present time to a considerable extent in the Thames. Now the Thames was a navigable river, and while there might exist a doubt as to the right of going on people's land to fish, or fishing from the towing path, it seemed to him that fishing in the Thames proper from a boat was a public right, and they as part of the public ought to do all they could to protect that right, and prevent anyone taking it from the public. He was not going to mention names, as he thought it would be wrong at a public meeting, but he had seen landowers along the Thames advertising fishing in the Thames, because their land abutted on the river. He had seen two or three cases tried where that claim had been most successfully resisted, and he could not but think that it could be resisted with an equal amount of success in this district if they only put their shoulders to the wheel and tried it. He might say they did not intend to take water for the purpose of fishing, or to issue tickets for angling. The object of this Association was pure and simple to protect the rights of public waters, It must not be thought for a moment that they were striving to act adversely to the interests of the angling society recently established in Oxford. The object that society had in view was by taking water to provide the means of encouraging angling in a legitimate and proper form. They might find it necessary to act in conjunction with other societies of a similar character along the Thames, but that could be considered hereafter. He thought they should take care to do so, inasmuch as they would secure their assistance, and also secure the benefit of their experience in the past.

Mr. Mallam, with the view of laying before the association the points they had to consider, read an article from *The Justice of the Peace* bearing upon the subject.

Mr. J. Embling said they doubted whether they were treated legally as far as the Thames was concerned. He fished it as a boy more than half a century ago, and he was never stopped in any way, and his sons fished it until two years ago without question. The landowners on the one side were determined to protect their rights, and where they (the public) to surrender their rights and privileges that they had enjoyed. He thought they ought not to yield in a moment, and he believed it was the intention of the society to test the matter, and in doing so he thought if they associated themselves with other bodies along the river they would get half England to support them.

A short discussion followed, and several gentlemen joined the society. The proceedings terminated with a vote of thanks to Ald. Galpin for presiding.

PRESERVATION OF THE UPPER WENSUM.

We are glad to state that a public meeting was held in the Corn Hall, Fakenham, on July 20, to consider the desirability of forming an angling association, and for preserving the river Wensum. A considerable number of gentlemen and tradesmen attended. Sir W. Jones, Bart., presided, and in a few well chosen observations recommended the movement, remarking that Captain Hamond, R.N., had kindly interested himself in the matter, and had written to several gentlemen thereon. Lord Leicester, Lord Hastings, and Edward Birkbeck, Esq., M.P., had replied most favourably, and their letters were read to the meeting by the Chairman, who also produced a letter from I. Howard Taylor, Esq., containing valuable suggestions to encouragement. Mr. Taylor regretted his inability to accept Sir Willoughby's invitation to be present, expressed himself very warmly upon the subject, and enclosed a copy of the rules of the Yare Preservation and Angling Society, Mr. C. Horsley, jun., acted as secretary *pro tem.*

After a lengthened deliberation, in which several gentlemen took part, and which served to show that the waters of the Upper Wensum are particularly favourable to the breeding of trout and other first-class fish, it was proposed by Captain Hamond, seconded by A. Digby, Esq., and carried, "That it is desirable to form a fishing association at Fakenham, to acquire the right of fishing in the Wensum and other waters, to be called "The River Wensum Preservation Society.'" Mr. Digby spoke in high terms of the capabilities of the river. He knew something of the other rivers of Norfolk, but none of them were more favourable than the river Wensum for the production of good fish under proper management. The fish, however, had been badly used by netting, poaching, &c., and it would take the soctety three or four years to secure success. He would move "That a committtee of management be appointed to carry on the affairs of the society."

Mr. W. B. Cowles said that he had fished in this river thirty years, and always found trout, and he was informed that one weighing 4 lb. was caught on the common part of the river by fair angling a day or two ago. He believed he now knew where there was one weighing 5 lb. He had had as good sport on this river as he had enjoyed on some of the Irish rivers and in other countries. He would, therefore, with pleasure, second Mr. Digby)s motion.

This was carried unanimously.

The Rev. R. Rackham said that in the neighbourhood of Bintry his rights were frequently infringed by persons who began to net the river on the Saturday night and continued doing so until early on the Sunday morning, and he was glad that such a society as this was about to be formed. He had himself caught very fine fish in the river, and all that was required was proper preservation. He should be very glad to support the society in any way he could. He concluded by moving "That a general meeting of the members of the association be held in the Corn Hall, at noon, on the 16th of August, to receive the report of the committee, and arrange for carrying out the same."

This was seconded by Mr. E. W. Southwood, and carried.

Mr, Charlton, in a few appropriate remarks proposed "That the thanks of the meeting be given to Sir Willoughby for presiding on this occasion, for the interest he has manifested in the movement, and for the kind offer of the use of his manor waters for the association."

Captain Hamond seconded, and the resolution was carried unanimously.

Sir Willoughby Jones, in acknowledging, said it gave him great pleasure to be present at so representative and unanimous a meeting as the present. He would cheerfully do all he could to support the movement, and though he was by no means an experienced angler, he did not know but what he should, in his old days, take the pleasure of fishing for some of those splendid four and five-pound trout that had been referred to. He always had felt pleasure in doing what he could for Fakenham, and he should continue to do so.

Mr. M. W. Hodgett offered some valuable hints as to the desirability of enacting a graduate scale of charges of membership, so that all classes may alike reap the pleasure and benefit of legal fishing, and Mr. Horsley replied that he believed there was a general wish to admit the humblest persons as members by charging the lowest possible rate that would cover the necessary expenses. Preservation, not exclusion, will, therefore be the motto of the association, and it is to be hoped that netting, poaching, and unfair treatment of these native finny tribes will speedily become a thing of the past.

The following gentlemen were appointed a committee of management, viz., Captain Hamond, R.N., Mr. W. B. Cowles, Mr. C. Horsley, jun., A. Digby, Esq., Charles Hamond, Esq., Revs. R. Rackham, and E. W. Duwell, Messrs. E. W. Southwood, M. W. Hodgett, T. Charlton, F. Atkinson, W. Tuthill, and G. Tillson.

A FISHING EXCURSION IN EWCROSS.

It has often been to me a source of no small amount of surprise why Yorkshire anglers do not patronise that part of their country known as the Wapentake of Ewcross, as they ought to do.

I often go into the dales of Ewcross when following my piscatorial pastime, and I can assure any of my readers who may be fond of the "gentle art" they will travel many days before they find a better district for sport. Fish are plentiful in all the streams, and in the larger ones are of good size.

The particular part to which I would have my readers transport themselves is to the foot of that "monarch of hills," yclept Ingleboro'; and I purpose to give them an account of one day's sport whilst visiting in that locality. I chose the small town of Ingleton as the centre from which to work. Ingleton stands at the junction of two mountain streams, tributaries of that queen of streams, the Lune. Having permission to angle in a stretch of water down the river from the town, I started early one morning, the water being in fine trim for the fly. Rain threatening, I put a supply of worms into my bag before starting. Down the whole length of my liberties I only landed three fish. I thought this was exceedingly bad, considering I had fished nearly a mile of water. However, on reaching the extremity of my liberties, rain began to fall, so I made for a disused lime-kiln, in which to shelter, and judge my surprise on entering to see an old friend of the angle sitting quite comfortably on a large stone, enjoying his pipe. After the usual salutations we found on comparing notes that we were about equal with respect to luck. "It's the rain, man," said my friend, "we're ga'an to hev it reet." After a few minutes' chat, my friend says, in the peculiar dialect of the district: "A'll tell yo' what a think, I kna a spot where we can hev some reet sport, if it'll nobbut rain reet." "Well," said I, "I think it will do that. "Well, then, come on," said my companion. "We'll fish this runner up to't 'Church Style' (a public-house, by the way), where we'll hev a glass for 'Auld Lang Syne,' and a drop in a bottle, for we'll need it afore we get to 't far end; it's a dree road to't Buck Becks." Off we started, and before we got to the "Church Style," I had increased my catch to seven. After some bread, cheese, and beer, and getting something into a bottle, off we started on our journey. The rain now came down in torrents, just as it does sometimes at Keswick, where Bobby Banks says, "When it does rain, it rains reet, and yo' mun' do as we do—let it come." We shall just manage to get there in time to catch the becks coming," said my friend, breaking the silence for the first time since we left "Church Style." The road was a regular "constitutional," and I was not sorry when we reached the far end, just before the flood came. I had just "tackled up" when my friend calls out "Look out, here it is;" ano sure enough, on looking up, I saw the water coming down a yard at a burst, and what before was a small mountain stream, was quickly turned into a raging torrent, sweeping all before it in its fury. I cannot find words to describe to you the terrific grandeur of the spectacle. After the rush of water was over, we commenced operations, and it was hardly possible to drop into any likely spot without getting, a bite or a fish. We plied our rods with great gusto for over an hour and I succeeded in landing thirty-five fish, mostly about "quarters," and my companion thirty-nine of the same description. The "fresh" having gone, we started homeward, and on coming along the road we crossed a moor, and fished a beck which runs into a cave. We passed and tried several other becks, with more or less success, but as the "fresh" was gone and the water cleared we did not do so well. I was not sorry when I again saw Ingleton, I can tell you; I was properly tired. On counting up our catch we each had over fifty, varying from 3 oz. to ½ lb.

A LADY'S ANGLING ADVENTURE.

The family of Count Emanuel Andrassy, at present residing at Betler, amuse themselves ardently and very successfully with angling in the fine waters on the estate. The Countesses were recently fishing in the Sajo, near the mouth of the Szalova brook. The Countess Caroline, who had selected a place on the bank over a round, deep hole, suddenly felt such a violent tug at her line as betokened a heavy fish. After playing it until it was tired, the Countess wound up her line to land the fish, when, just as the latter was near the surface, the fair angler felt the strain increase considerably, and, leaning over the edge to see the cause, to her terror saw that an enormous otter had hold of her fish in its jaws. The Countess screamed, and this caused the otter to release its prey and make off. The fish could now be landed, and proved to be a splendid trout which weighed 6lb.—*Deutsche Fischerei Zeitung.*

"We are pleased to observe the well-known firm, Robinson and Cleaver, Belfast, have been appointed, by special warrant of the Imperial Chamberlain, Household Linen Furnishers to her Imperial Highness the Crown Princess of Germany, Princess Royal of Great Britain and Ireland. This special mark of favour is the result of the manner in which several orders from the Imperial household have been executed by Robinson and Cleaver (specially appointed to supply H.M. the Queen some years back), who are to be congratulated upon receiving such an additional recognition of the taste displayed in their designs, and of the excellence of the workmanship, for which they have been so long famous both in England and on the Continent."—*Belfast News Letter.*

Taking Undersized Fish in the River Lea.—A member of our society fishing at Broxbourne on Sunday the 18th inst., noticed four persons fishing at the Fish and Eels Weir, taking small perch, jack, &c., one man having in his possession 17 perch which would not weigh more than 1 lb. altogether, another having small jack about 6 inches in length. Surely this should be put a stop to, but where are the water bailiffs, to allow such a thing to be carried on.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.].

CLUB AND OTHER JOTTINGS.

By L. B.

About the advisability of introducing black bass into our waters, opinion is undeniably divided—personally, I may say, I unhesitatingly give the proposed movement my hearty adhesion—but it is as well to hear both sides of every question, and among those who are of a different opinion some such arguments as the following are adduced: "The bass is a very hearty feeder indeed, grows rapidly, and to a great size; is admittedly a cannibal; is not only very prolific, but from its habit of watching its eggs, and guarding the young when hatched until they are able to take care of themselves by which an enormous percentage are saved which would otherwise infallibly be lost, as is the case with every other kind of British freshwater fish—it is self-evident that—particularly in waters of extremely limited area, as are our waters as compared with those of the American continent – the bass must, by the inevitable laws of multiplication soon outnumber all other fish; and next, by the equally inevitable law of the survival only of the fittest, proved by its rapid growth and prolificness and other favourable attributes above enumerated, utterly depopulate any water into which it has been introduced. Now, I have no doubt, all these statements, and others in the same vein which I heard made the other evening, only very much more forcibly put, could be very readily and satisfactorily answered; indeed, in one or two cases, they are touched upon in the capital article, "Black Bass in England," which appeared in last week's Fishing Gazette; but they nevertheless sound very feasible, and are of a kind likely to gain ground, particularly when taken in conjunction with a certain insular prejudice against the introduction of anything foreign. Though, as I stated, I cordially approve of making the experiment of introducing black bass into certain of our waters, yet I cannot agree with the remark recently publicly made, that by clearing a water of all other kinds of coarse fish they would, from an angler's point of view, be proving themselves the superior fish, thereby justifying an experiment leading to such results. The following up of such a proposition to its logical conclusion, would justify the deliberate introduction of jack and perch into well-stocked trout preserves.

A No. 1 District West Central Association district visit will be paid the Norfolk Angling Society, Norfolk Arms, Burwood Place, Edgware Road, on Monday evening next, 31st July, and as the notices have all been out some time, and publicity otherwise given to this gathering, a strong muster is confidently anticipated. The tench are not really moving at Elstree, and several friends who have tried after them have failed to score. I am glad to hear, upon the best authority, that the Upper Thames River Preservation Societies are keenly alive to the fatal blow angling interests would receive if the new Thames Conservancy bye-laws were allowed to pass. I hope the opposition they are organising will receive such support, not merely from the London anglers' clubs and associations, but from the thousands living along the whole Thames valley, as will not only carry this point, but clearly show the Conservators what the British public, whether anglers or no, think of this and similar attempts at curtailing undoubted rights of the many for the purpose of increasing the already far too numerous, and in almost every case, more than doubtful privileges of the favoured few; whether brother conservators or personal friends, etc., matters not. A few good takes of roach have been had from the neighbourhood of Pangbourne, but have been kept very quiet indeed.

Haslett writes:—"I was out three days last week, 3 bream, 5 chub, 3 perch, 2 dozen roach and dace. Out yesterday (Tuesday) afternoon, 4 dozen gudgeon, 5 perch; perch put back. Soon as I wake the barbel up will let you know."

[The *natural* food of the black bass consists of water insects, shrimps, and various other crustacea and creepers, larvæ, &c. The bass will not attack other fish if it gets plenty of natural food. We shall refer to this point again.—Ed.]

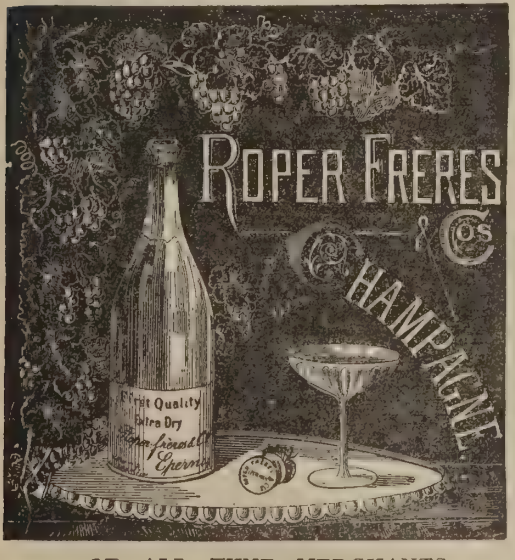
FISHING RODS and TAKLE
of every description.
The Angler's Handbook and Catalogue of Prices, with highty Illustrations of Rods, Flies, Baits, Tackle, &c., post tree,, Three Pence.

SPECTACLES versus BLINDNESS.—One-fourth of those suffering from blindness can trace their calamity to the use of common spectacles or lenses imperfectly adapted to the sight. Mr. HENRY LAURANCE, F.F.S., Oculist Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endsleigh Gardens, Euston Square, London, daily (Saturdays excepted), 10 to 4. Sir Julius Benedict writes:—"I have tried the principal opticians in London without success, but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late Surgeon-Major W.E.M., writes:—I could not have believed it possible that my sight could have been so much improved and relieved at my age, 82. I can now read the smallest print, although suffering from cataract of the right eye." Similar Testimonials from John Lowe, Esq., M.D.; Lynn, Physician to H.R.H. the Prince of Wales; Ven. Archdeacon Palmer, Clifton; Lieut.-Gen. Macmullen, Brentwood; the Rev. Mother Abbess, S. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurance's pamphlet, "Spectacles, their Use and Abuse," post free.



OF ALL WINE MERCHANTS.

JAMES OGDEN 28, Winchcomb Street, Cheltenham.
PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE,
Solicits a trial of his

Should try a day's fishing in the 350 acres of water strictly preserved, belonging to

THE WELSH HARP FISHERY.

CAPTAL ACCOMMODATION AT WARNER'S.

BOATS, PUNTS, &c.

" Pike, perch, roach, &c., are numerous."—Angler's Diary.

Frequent Trains from all Metropolitan stations to Welsh Harp.

(Book for the Welsh Harp Station.)

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

W. G. DAVIDSON, Manager.

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season —Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

FISHING.

Anglers can now obtain excellent sport in the far-famed DYSYIN RIVER, unsurpassed for trout and salmon; also capital bass and eel fishing near hotel, where comfortable quarters can be had on moderate terms.

Apply,

CAMBRIAN HOTEL,

Towyn, Merionethshire.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Weusley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

BANKS OF THE THAMES (opposite Mapledurham Wood), three miles from Reading.—THE ROEBUCK and TILEHURST STATION HOTEL, was OPENED on WEDNESDAY, JULY 5, having been completely furnished by Messrs. Maple and Co. Private sitting rooms with balcony, and bed rooms with charming views overlooking the river.

Mrs. BURNARD, Manageress.

BEDDGELERT.

The ROYAL GOAT HOTEL.

This Establishment is beautifully situated in the midst of some of the finest scenery in Wales, and is within a mile and a half of the Aberglaslyn Pass. It has undergone a most complete repair; is newly and handsomely refurnished; and the intention is that a reputation for attention, comfort and moderate charges shall be permanently earned. Coaches will run during the season between Carnarvon, Portmadoc, Llanberis, Bettws-y-Coed, and the Hotel.

It has an excellent Coffee-room, Drawing-room, Billiard-room, Smoke-room, &c.

Fishing on the Lakes Gwynant, Dinas and Cader.

THOMAS LEWIS, Manager.

The Fishing Gazette.

SATURDAY, AUGUST 5, 1882.

THE PROPAGATION OF COARSE FISH.

(Paper read at the Society of Arts Room, Adelphi, June 26th, by Mr. R. B. MARSTON. Mr. Edward Birkbeck, M.P., in the chair.)

MR. CHAIRMAN, LADIES AND GENTLEMEN,—The title of the paper which I have prepared to read to you this evening, the Propagation of our Coarse Fish, is one covering a very wide and important subject.

Ever since I have been in any way interested in angling, and more especially during the last few years as Editor of the FISHING GAZETTE, the most important angling question which has ever come before me has been—"Where can I go to get some good fishing?" This is a question which I am quite sure has over and over again occurred to each one of you. Now this is a very simple question to ask, but I put it to you whether it is such a very simple one to answer?

Every angler knows that good fishing anywhere in the neighbourhood of our large towns is a most difficult thing to get. I have no doubt many of you have often been amused by reading in the sporting journals such queries as this—"Dear Mr. Editor, can you, or any of the readers of your valuable journal, inform we where I can get some good perch and roach fishing within twenty miles of London. I want a nice quiet place, not disturbed by boats and steam launches, and not frequented by London anglers, who seem to monopolise all the swims I have tried near town. I should prefer some spot near a good inn, and not far from a railway station.—Yours, etc., Timothy Flatfish. P.S—I want big fish." I get a great number of such inquiries as these, and I insert one now and then, just to see if any such place exists, and if any large-souled piscator will be generous enough to tell all the world about it! Only the other day we read a tantalising account of a splendid take of trout by Mr. Alfred Jardine, which occurred, we were generously informed, somewhere "to the west of Salisbury,"

This wise reluctance on the part of anglers to let everyone know where they get their fish arises from the fact that, however good a water may be, directly it becomes generally known, its fate is sealed—in a very short time it will be fished out, so immense is the army of anglers and so limited is their field of operations.

But I need not impress upon you the fact that good fishing is most difficult to get, and is becoming more difficult to obtain every year. You are all aware of this, and your presence here this this evening is a sufficient proof of it. Of course, you will understand I am referring more especially to public waters, and to those private fisheries which are open to the angler on payment of a small fee. If you ask any old Thames or Lea angler if the fishing has improved or declined since he first knew it, he will most certainly tell you that twenty years ago he could catch ten times as many fish as he can at present, and that blank days were then the exception rather than the rule.

If we go back to days which some here may remember, we find, according to the angling writers of fifty years ago that fish were very plentiful. Here is an extract from Salter's "Angler's Guide" published in 1825. He says:—"Shepperton deeps are well stored with fish, full of heavy barbel, chub, roach, and dace; there is also good bank fishing below for perch, roach, dace and chub," and he speaks in equally high terms of nearly all the fishing stations from Staines to Blackfriars Bridge on the Thames, and from Ware to West Ham on the Lea. It is amusing to read that, "At Stratford Bromley, and West Ham, a great many good roach, dace, flounders, etc., are taken, but it is very unpleasant fishing, the tide leaves the banks extremely dirty and slippery: and the angler is continually annoyed by the many passengers asking as to 'What sport?' 'Do the fish bite?' and other rude interrogations." I think you will agree with me, gentlemen, that the manners of the non-angling public have not improved since Salter's day, and that, if he were to fish from the Thames or Lea towing paths to-day, the "rude interrogations" addressed to him, would, in comparison with the above, be rude indeed!

Before going into the special question which has called us here this evening, I should like, with your permission, to say a few words on the subject of fish-culture generally. If there is one thing more certain than another it is that, as regards fish-culture, we English, who usually lead the way, are very much behind some other nations of the world. This is not flattering to our insular pride, but all the same it is a fact, and one which the sooner we look in the face and acknowledge, the sooner shall we be able to alter it.

Two years ago there was held in Berlin an International Fisheries Exhibition, which was a grand success, almost every nation under the sun sent exhibits. Now the only class of exhibit in which England can be said to have excelled was that of appliances for angling; but as regards fish culture, fish breeding apparatus of all kinds, fish passes, and fish transports,—England was far behind the Continent and America. The fact was patent to all impartial observers. Now, I do not for one moment forget the great and praiseworthy efforts in the way of salmon and trout breeding which have for many years past been carried on by private enterprise in England and Scotland. I do not forget that many streams in Tasmania and New Zealand are now well stocked with splendid trout sent out in the egg state by English pioneers in fish-culture. All honour is due to such men as the late Mr. Frank Buckland, the late Mr. Ponder, Mr. Francis Francis, Mr. Youl, the Marquis of Exeter, Mr. Charles Capel, Mr. Oldham Chambers, Mr. Andrews, Mr. Littlewood and others, who have done so much, and who are doing so much, for the increase of salmon and trout.

But these bright exceptions of private enterprise only prove more strongly the fact that we can point to no such general interest in fish-culture as is found among the Germans and Americans, and even in our own foreign dominions. I feel certain that our great International Fisheries Exhibition next year—an exhibition which we owe principally to the exertions of our worthy chairman—will give an immense impetus to fish-culture in this country. Let us for a moment look abroad and see what is being done. In 1873 there was not a single fish-breeding establishment in Canada; since that date no less than *nine* extensive Government fish-breeding establishments have sprung up, and in one year alone (1879) the young fry planted in the waters of Canada numbered over twenty-one and a half millions, and the eggs laid down in the autumn of the same year numbered over twenty-eight millions, thus showing the successful manipulation, at the Canadian Government fish-breeding establishments of a grand total of nearly fifty millions of young fish and fish eggs of the salmon family during the year 1879. Well, indeed, may Mr. Samuel Wilmot, superintendent of fish-culture for Canada, be proud of such results, for it is to his initiative and enterprise that they are due. I trust, gentlemen, the day is not far distant when a superintendent of fish-culture in Great Britain can report that fifty millions of eggs and fry are being annually placed in our rivers. Then we shall get salmon at a price within the reach of all.

Let us turn to the United States, and I have the pleasure to inform you, gentlemen, that we have present here to-night Mr. George Shepard Page, the President of the American Fish Cultural Association, and representative in Europe of the United States Fish Commission, and I trust, before we separate, he will address us. I am sure he will bear me out when I say that in the United States fish-culture has become a national institution; the United States Government gives hearty support to it, appropriates large sums annually for the express purpose of breeding fish and stocking rivers, not only does the Government do this but the whole nation supports fish culture, and is proud of such men as Professor Baird, Messrs. Livingstone Stone, Seth Green, Page, Mather, Gill, and many other hard-working scientific and practical enthusiasts. It would require far more time than I can ask you to give me to describe a tithe of the good which has in a very few years been accomplished by the United States Fisheries Commissioners, they have distributed to many hundreds of rivers over many thousand miles of North America, millions upon millions of young fish and eggs. I will mention only two examples of the good that has been effected. A few years ago many of the rivers on the United States Atlantic sea-board had been depopulated of salmon—not a fish was to be seen in what formerly were prolific salmon streams. The Commission set to work to remedy this, and in 1878 in the Connecticut River alone no less than five hundred salmon, ranging in weight from ten to twenty pounds, were captured in the shad nets at the mouth of the river, and were sold in New York market at from 3s. to 4s. per pound. If the fishermen had used proper salmon nets the catch would have been very much larger. A similar good result was effected in the Delaware, the Merrimac, and the Susquehanna Rivers. The second example is the stocking of the Hudson with shad—this fish is superior to our European shad; in fact, it ranks almost before the salmon, in America, as a food-fish. Well, the Hudson River fisheries had got into such a poor state that it no longer paid men to work them—the fish were almost extinct; through the exertions of Mr. Seth Green the Hudson has been re-stocked, and over a thousand shad have been taken at one haul of the net. Such a result speaks for itself.

Having thus glanced briefly at what has been done, and is being done, in the higher and more difficult branches of pisciculture, in order to show you what grand results may be achieved by perseverance and well-directed effort, I will now give you a few facts which ought, I think, to remove all doubt as to the possibility of the successful propagation of our commoner kinds of freshwater fish, which go under the general name of *coarse* fish. (It is a great pity we cannot find some better and fairer general name for these fish which give us so much sport than this word "*coarse.*") The carp is one of our so-called coarse fish, a few years ago there was not a single European carp in America. In the year 1877 Mr. Rudolph Hessell, acting for the United States Fish Commission, obtained 227 leather and mirror carp, and 118 scale carp from Germany, conveyed them safely over four thousand miles of land and sea and deposited them in the ponds of the Maryland State Hatching House at Baltimore. Subsequently Government voted a sum of money for the purpose of establishing the Government carp pond at Washington. You see the Americans do not think coarse-fish propagation beneath their notice; and from this pond fish for breeding purposes have been distributed all over the United States, and now there are millions of carp in America. Is not that sufficient encouragement to those who think of re-stocking our English rivers—nearly all our coarse fish belong to the carp family.

It may not be known to some here present, that our common English carp is what is known as the scale of the carp on the Continent, and is not nearly so good a food-fish as their leather and mirror carps, which are scaleless, or almost scaleless, varieties produced by judicious cultivation of the scale carp. We must get these superior kinds introduced into our waters and I would respectfully suggest to our chairman, Mr. Birkbeck—who is, I believe, president of the Norfolk and Suffolk Fish Acclimatisation Society, that that society—instead of introducing the pike, perch, and wels, as has been proposed, should introduce the German mirror-carp, and the American black bass; they would prove infinitely more valuable additions to our waters. With regard to the black bass, you know I have strongly advocated its introduction for some years past. Mr. Wm. Senior, who I am delighted to see here this this evening, has also advocated it. As a food-fish and as a sport-fish, it is considered by the Americans fully equal to the salmon and superior to the trout. It will thrive in any water and take any bait, from the artificial fly to the lowly gentle. We all know with what contempt many of our aristocratic trout and salmon anglers look upon other freshwater fish. Now I firmly believe, gentlemen, that the black bass would place coarse-fish anglers on a par with their wealthier brethren as regards sporting qualities of their game. But Mr. Geo. S. Page, who has recently safely brought over several pairs of this splendid fish, will, I hope, tell us something more about it presently; he is most anxious to introduce it to English anglers.

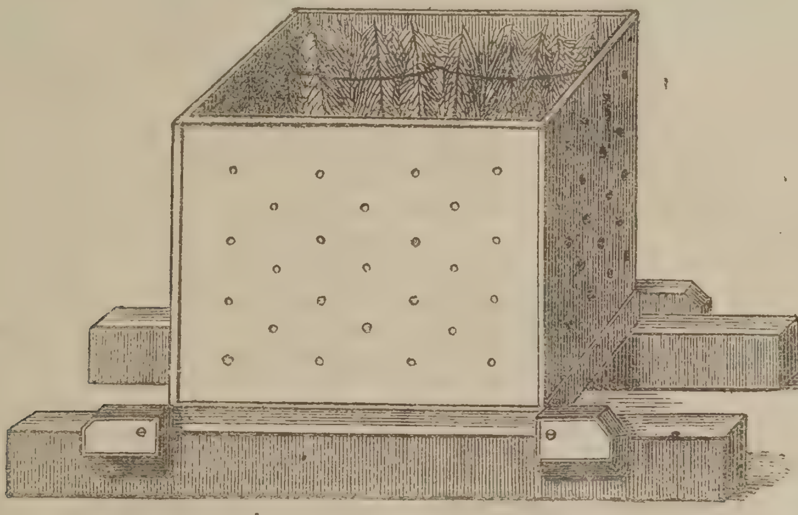
Coming now to the special subject before us this evening, I have for some time past been collecting all the information I could find bearing on the question of coarse-fish propagation. I need hardly tell you there is no English work describing this branch of pisciculture. We have never attempted anything of the kind in this country, and I have had to obtain my information from Sweden and Germany. I must acknowledge the kind assistance given me by Dr. Zenk, President of the Wurzburg Piscicultural Society. Dr. Zenk is a leading German pisciculturist—he was one of the jurors at the recent Edinburgh Exhibition; he called on me when he was in London and gave me some most valuable hints. Also I have specially to thank Mr. Rudolph Lundberg, superintendent of Inland Fisheries for Sweden. (I trust, before long, we shall have a superintendent of Inland Fisheries in this country to look after our coarse fish!) Also the editor of the German Fishing Gazette, who kindly inserted inquiries for me in his valuable journal, also to the official German Reports of the Berlin Exhibition, and to many German works on pisciculture. I mention these names because it is only right to do so, and that you may see I am not giving you merely my own theories of what we might do, but actual results of what has been done.

The conclusion I have come to after examining all the information I can get, is that we must not attempt to cultivate the summer-spawning or coarse fish in the way the winter-spawning salmonidæ are cultivated—that is, by means of troughs and trays and hand rearing—artificially in fact. We must not attempt it, because in the first place, it is far too expensive and uncertain, and because, as you will see presently, it is quite unnecessary, there being much simpler and more certain methods. In fact, it is the extreme simplicity of the thing which is its great recommendation. Anyone who has a piece of land with good water flowing through it can breed coarse-fish; and I am perfectly confident that if the matter is once practically taken up in this country, coarse-fish culture will become general wherever fish are wanted for sport or food.

The first method I shall describe to you involves only the use of what is known in Sweden as Lund's Hatching Box. At present its use is confined entirely to Sweden and it was invented in that country more than a hundred years ago by a Mr. Lund.

We have here a diagram of Lund's Hatching Box, which has been made by Mr. Hobden from a tracing sent me by Mr. Lundberg. Mr. Lund may, I think, be fairly considered the pioneer of coarse-fish culture, and I will now read you the letter in which the superintendent of Swedish Inland Fisheries describes Lund's apparatus to me. He says:—

"Replying to your letter on the 25th February, in which you request me to give you some particulars respecting Lund's hatching apparatus for the propagation of our summer-spawning fish, I herewith hasten to give you all the information I can. Lund's apparatus is remarkable on account of its being, for aught I know, the first attempt in Europe to promote the propagation of the above mentioned kind of fishes with human assistance. As you rightly suppose, the box is to be placed in shallow water near the bank, so that the water does not flow over it. Enclosed please find a true copy of Lund's original drawing, as it is to be seen in his memorial to the Royal Swedish Academy of Sciences, respecting his invention for the cultivation of fish, which memorial is inserted in the Academy's Records for the year 1761. Lund has not given any dimensions for his box, which may be of any size. The sides of the box are hinged, so that they can be let down and they are perforated with numerous small holes, so that the water circulates through. The inside of the box should be charred by fire to preserve it. The bottom of the box and the sides are lined with fir branches. As you will see from the drawing, the box is not to be placed directly on the bed of the river, but stands upon blocks. Lund was a member of the Town Council of Linkoping, situated near Lake Roxen, in East Gothland, a province of Sweden. During the summer, Lund lived at his villa on the banks of this lake and here he made his experiments in the cultivation of coarse-fish. His invention attracted but little attention until recent years. With some modifications (for instance, it is not only unnecessary, but prejudicial to let down the sides of the box, as he advised, in order to verify the spawn). With some modifications Lund's method has been adopted here in Sweden with success, and, in my opinion, for the hatching of perch, it is the most practical that has yet been invented. In a box of this kind six feet square and with sides two feet high, we place fifty female and from twenty to thirty male fish. These parent fish must be placed in the hatching box as near their spawning time as possible, and are taken out again as soon as the spawning is finished. The fish, of course, deposit the spawn on the fir branches. It is of great importance that the sides are closely perforated to ensure free circulation of the water. As I have mentioned before, we use these boxes principally for perch, but they can equally as advantageously be used for bream, roach, &c., &c. They are sometimes made to float on the stream by means of wooden buoys at the sides, where the water is subject to a rise and fall."



LUND'S HATCHING BOX FOR COARSE FISH.

In answer to a subsequent letter of mine, in which I inquired about the transport of coarse-fish spawn, Mr. Lundberg replied as follows:—"In reply to your letter of the 24th of March, in which you ask if it is possible to remove the fecundated fish-spawn deposited on the boughs from one water to another, I beg to state, that, if undertaken with the necessary care, it is very easily transported. In order to effect this, it is only necessary to place the spawn-laden branches in a fish-carrier filled with water, placing a canvas tray over and under them, so that they are, as it were, suspended in the water, and thus protected from the effects of shaking. To pack the spawn in the manner the ova of salmon and trout is packed (in damp moss), has not succeeded well, but I do not consider it impossible. With regard to the distances to which spawn can be carried, our experiments here have never necessitated a longer journey than two hours, because perch is a very common fish with us, and longer journeys have been unnecessary. As a matter of fact millions of fish can be hatched by means of Lund's box. Of course the success of any attempt to stock certain waters depends entirely on their suitability to the fish put into them. If the fish are over-crowded and have insufficient food, they will be seen in immense numbers, but never grow to any size. Such pigmies, our fishermen call by the expressive name of "Thousand Brothers." In concluding his letter, Mr. Lundberg says: "At all events the method is so simple and cheap, that it is well worth a trial, and if left to persons with some judgment, there is no doubt, the trial will succeed. The most practical experiment would be to establish several of these hatching boxes, rather than distribute spawn from one central apparatus. I have been a subscriber to the FISHING GAZETTE since 1879, and I wish you, English anglers, great success in your attempts to cultivate the summer-spawning fish, which seem to have been very much neglected."

I am sure, gentlemen, you will agree with me that we are much indebted to Mr. Lundberg for this most interesting information; coming as it does from such a practical source, it is, I think, most encouraging. I remember the last time I was present at a meeting of anglers in this room, one gentleman, a Lea angler, got up and gave us a most doleful account of the decrease of perch in the Lea; in fact, he said before long he expected to catch the last perch! If the Lea Protection Society—some of the officers of which are present, I see—would only put down a few of Lund's hatching boxes next spring, and procure some parent perch, they will soon be able to restock the Lea with perch; or any other fish.
